How YOU CAN HELP WIN THE WAR!

NOT ALL OF US CAN SHOULDER A GUN OR MAKE A PLANE, BUT ALL OF US CAN DO SOMETHING TO BACK UP THE BOYS AT THE FRONT. BELIEVING THAT EVERYONE, YOUNG AND OLD, IS ANXIOUS TO KNOW WHAT TO DO, THE MENNEN COMPANY VOLUNTARILY SUBORDINATES ITS OWN ADVERTISING TO FURTHER CIVILIAN WAR EFFORTS. HERE ARE A FEW WAYS YOU CAN HELP—

RENT SPARE ROOMS TO WAR WORKERS. INADEQUATE HOUSING IS HAMPERING PRODUCTION IN MANY AREAS. PHONE OR WRITE PERSONNEL DIRECTORS OF PLANTS IN YOUR VICINITY.

GIVE A LIFT TO OTHERS. IT COSTS NO MORE TO CARRY SEVERAL PEOPLE - AND SAVES PRECIOUS TIME AND TIRES. WORK OUT A "SHARE-THE-CAR" PLAN WITH NEIGHBORS AND FELLOW WORKERS.

NOTHING TOO GOOD FOR OUR BOYS!
ALL BRANCHES OF THE ARMED SERVICES ARE USING LARGE QUANTITIES OF MENNEN SHAVE PRODUCTS TO MAKE LIFE A LITTLE EASIER FOR OUR FIGHTING MEN. DON'T BLAME YOUR DRUGGIST IF HE HAPPENS TO BE TEMPORARILY OUT OF YOUR FAVORITE MENNEN SHAVE PRODUCTS.

Post this page on bulletin boards of offices, plants, schools, churches, clubs, etc.

3-STEP MENNEN SHAVE

① WHISKERS OFF!

Mennen Brushless. It's the fastest-growing Brushless. In tubes or glass jars.

Lather, plain or Menthol-iced (best-seller of its kind).

② FACE PEPPED-UP!

Skin Bracer — America's best-selling shave lotion. Cools, refreshes. Everyone likes its manly odor.

③ PERFECT FINISH!

Talcum for Men. Neutral tint, doesn't show. Most popular men's talcum.

The Mennen Co., Newark, N. J., San Francisco, Toronto

CARRY PARCELS TO SAVE GASOLINE, OIL, TIRES, AND MANPOWER ON DELIVERY TRUCKS — YOU'LL BE HELPING TO DELIVER MORE BOMBS ON THE ENEMY.

SAVE EMPTY TUBES FROM SHAVE CREAM, TOOTHPASTE, ETC. THEY HAVE A HIGH CONTENT OF BADLY NEEDED TIN. LEAVE THEM WITH YOUR DRUGGIST WHO WILL FORWARD THEM TO A CENTRAL DEPOT.

GROW VEGETABLES

IN YOUR OWN BACK YARD FOR YOUR FAMILY. START A COMMUNITY-GARDEN MOVEMENT TO MAKE VACANT GROUND PRODUCE. THIS WILL RELEASE FOOD FOR OUR FORCES AND ALLIES.

DON'T BLAME YOUR BLADE

If you get poor shaves too often . . . if your beard doesn't always "come clean", or your face feels raw and tender and irritated, don't be too quick to blame your blade. Blades today are really well made. It might be simply a matter of getting the right cream for your face, so

Change your cream. Try Listerine Shaving Cream with the same blade you were complaining about! No matter how tough your beard, no matter how sensitive your skin, if you're not 100% satisfied with Listerine Shaving Cream, just send the partly used tube to the Lambert Pharmacal Co., St. Louis, Mo. Your money will be promptly refunded. *That's* how sure we are that this *different* shaving cream will delight you!

LISTERINE SHAVING CREAM
Brushless and Lather

GIANT VALUE

Prices of other well known brands have jumped way up. This famous quality brush—still at yesterday's low price!—is easily today's "Biggest Tooth Brush Value."

ANY WEEK

THROUGH Mrs. Gail W. Milligan of Victoria de las Tunas, Cuba, we are kept in touch with the activities of Negro society in the British West Indies. In turn Mrs. Milligan is informed by Professor Leonardo Bryan in his excellent column in the Havana Post. This time it has to do with a concert which was "given under the auspices of Moss Mills' Day School, leaving nothing short of what was anticipated despite the inclement weather. Gaiety, rhythm, drama and melody beamed in their supermost splendor intermingling incessantly with laughter and meditation. The musicians deserved much praise and this was not minced . . ." This does not remind us of an invitation we received in Boise, Idaho, from Judge Hooker (Sawtooth) Fingree. The judge was throwing a soiree to celebrate the election of James K. Polk to the Presidency. This honor to Mr. Polk was somewhat belated, the party being given in 1936. But the judge explained that he was celebrating the elections of all our Presidents, one a month, and had started eleven months before: "You are invited with fervency to assist with measured dignity, liquidly and vocally, in celebrating the election of the Honorable James K. Polk, eleventh President of the United States. A collation provided anxiously by the guests will be freely offered. If your presence is not accounted for on the stroke, the brethren will come and procure you."

AND Mr. Jonathan Rollicks of Sewickley, Pennsylvania, knows a lady who has been taking first-aid training against the day when many of us may be very glad that she knows what to do for air-raid victims. Her enthusiasm knew very few bounds. Nobody in all Sewickley, no matter how insignificant his ailment, was quite safe from her. Driving home from a lecture on artificial respiration, she saw a man lying face down on the sidewalk. She leaped from her car and pounced upon the fellow. He came to with flattering alacrity. Rolling away from the manhole he was peering into preparatory to making some repairs below, and tossing his first-aider off, he roared, "Lady, you ought to be ashamed of yourself, attacking a married man in broad daylight."

IT WILL be good news to the readers of this magazine that W. B. Courtney,

who quit being one of nature's noblemen to become a war correspondent, has departed for journalistic duties with our armed forces beyond our shores. This means that we don't know just where he will fetch up—only that he is going by sea. We helped inspect his equipment before he left and may say that he has a sufficient variety of gear to match any climate and meet any geographic emergency. We noticed however that Mr. Courtney had a list of last-minute purchases on which was the note, "One set of boxing gloves." When we asked why, Mr. Courtney explained that he might get to Australia and meet a few kangaroos which, he said, were enthusiastic boxers.

SOME TIME ago we published a letter from Corporal Cyril William St. Brave. The corporal asked that American girls write to him. Therefore he sent his address: Tillsbury Service Flats, Hyacinth Gardens, East Fleury, Herts, England. Miss Rosie O'Grady of Riverside, California, wrote to the corporal. Six weeks later the letter returned to Miss O'Grady stamped: Insufficient Address. Miss O'Grady would like to know how much address the British post office wants. "Next time," complains she, "give the English post office something to work on. What's the number of his room? Does he share a bed with someone? Let's be specific. If you can't tell me exactly where this St. Brave gent lives, never mind. Some time ago I was given the name of an American soldier, told to drop him a line. I dropped him four patriotic pages, closely written. His reply almost collided with my letter. This boy was on his toes. I will quote his reply in full: 'Thanks for your letter, baby. What gives with you? Let me know quick. My outfit is moving soon. Be nice and I'll bring you a Jappie to wear on your hat. I mean quick.'"

NO MATTER what they tell you, don't believe too completely that this conflict is wholly different from the first World War. We, for example, have received not fewer than a dozen letters informing us that the war will not last more than six months because So-and-So, who never held a job for more than that, is now in the Army.

Give both old and new addresses.

This letter need never have been written...

It took Eddie's Dad three hours to write. It came the afternoon of the big game. And it just about broke Eddie's heart.

"I'm afraid this means the end of college, son," the letter said. "You'll have to go to work and help our mother and me. We'll need all the money we can scrape together to pay that judgment."

Eddie's Dad had been a careful driver all his life. But that wasn't enough. He wasn't able to pull out of a skid one rainy night, and the damages to both cars were heavy—staggeringly heavy to a family like Eddie's.

No, Eddie's Dad didn't carry auto insurance. If he had, everything would have been all right. If he had realized that what happens to scores of drivers every day could some time happen to *him*—then he would have been prepared.

It's Easy to Prevent Tragedies Like This

explained by G. J. Mecherle
Founder and Chairman of the Board

Years ago, auto insurance cost a lot of money. When a group of us founded State Farm Mutual Automobile Insurance Company back in 1922, we

set out to better this situation.

"We aimed to make auto insurance so reasonable in cost that every self-respecting driver could afford to own it.

"We pioneered new economies that could reduce the cost of auto insurance. State Farm Mutual has since become the largest automobile casualty company in the world! We do business now in 40 states through 7,000 licensed representatives.

"Yes, more than a million drivers have enjoyed the security of State Farm protection. And we figure these drivers have saved in excess of \$50,000,000 in the cost of their auto insurance during the last 20 years.

"Here's one of our economies: Your State Farm Mutual policy is renewed from year to year (so long as the risk remains the same) instead of being re-issued. Hence you pay the acquisition cost of your policy *once a lifetime* instead of *once a year*.

"Economies like this make it possible for State Farm Mutual to offer you *more insurance for your money*—broader protection and better service.

"Whether your car is now insured in another company or whether you carry no insurance, you should get the facts about State Farm's *More Protection for Your Money Plan*. Just mail the coupon today."

*"My hair looks better
since I checked dry scalp!"*

"I USED TO DOUSE IT!"

"Like lots of men, I used to douse my hair in order to comb it. Result: a plastered down look! When the dousing evaporated my hair would be all haywire. Then I found something you don't have to douse on. A preparation that goes to the root of the trouble and checks dry scalp; leaves my hair looking natural and well-groomed all day long.

"BOY! WHAT A CHANGE!"

"With 'Vaseline' Hair Tonic, all I do is put a few drops on my comb and run it through my hair several times. Sometimes I put a little on my fingertips and apply it directly to my scalp. What a difference! My hair looks natural for a change. At the same time I've checked loose dandruff; stopped that dry, itchy feeling. Of course, I give my hair a thorough massage with plenty of 'Vaseline' Hair Tonic whenever I wash it, because it supplements the scalp oils that soap and water wash away. I've got better-looking, healthier-looking hair, and a lot healthier scalp in the bargain. My advice is to try it."

'Vaseline' Hair Tonic is different, containing no ingredient that has a drying effect.

● FOR DOUBLE CARE... BOTH SCALP AND HAIR!

KEEP UP WITH THE WORLD

By Freling Foster

Recently two German spies rowed across the Channel from France to England and established themselves in a vacant farmhouse. A few days later, one of them, speaking faultless English, walked into a local tavern during the period when drinks are not served and ordered a beer. The bartender, becoming suspicious of anyone ignorant of the liquor regulations, telephoned the police, and the spy and his accomplice were captured.

The only foreign sovereign ever portrayed on a coin of the United States was Queen Isabella of Spain, whose head appeared on a quarter dollar minted in 1893.—By R. C. Charles, Hollywood, California.

General Kikuzo Otani of Japan was the commander in chief of the ten thousand American soldiers who, with smaller contingents from the British, French and Japanese armies, were sent to Vladivostok in August, 1918, to help restore order in Russia.—By T. Duncan Ferguson, Halcyon, California.

Until recently, dairymen annually discarded millions of gallons of milk contaminated by the cows' consumption of garlic, onions and foul-smelling weeds. Today such odors are removed by adding a small quantity of white oil and agitating the mixture. After standing, the oil, which has absorbed the particles of fat containing the offensive substance, rises to the top and is siphoned off.—By John B. Tuttle, New York, New York.

Various species of deer constitute nearly ninety-five per cent of the 5,800,000 big-game animals in the United States. The other five per cent consist chiefly of antelopes, peccaries, wild boars, mountain goats, bighorn sheep, and black and grizzly bears.

The streamlining of airplanes has been developed to a point where, for example, the wind resistance of a modern single-engine pursuit machine, at any speed, is no greater than that of a flat plate twenty-two inches square.—By Toivo A. Kauppi, Midland, Michigan.

One of the closest finishes in automobile racing occurred on October 12, 1926, during the running of a 200-mile race on the Rockingham Speedway in Salem, New Hampshire. After the winner, Harry Hartz, had crossed the line, Pete Dreis followed in 3.91 seconds and Leon Duray followed Dreis in 3/100ths of a second. In other words, these first three cars in the race crossed the finish line in less than four seconds.

A skeleton of a deer, discovered by miners digging iron ore from a bog in Virginia about a century ago, was found to be "ferrified," not petrified, having turned to iron from long immersion in iron-bearing water.—By F. D. McHugh, New York, New York.

A public school in Central City, Colorado, meets the cost of furnishing hot lunches to its students by leasing out gambling slot machines, while the schools of Hart County, Georgia, help pay their general expenses by selling display advertising space on their report cards.—By J. V. Cooper, Elizabeth, Colorado.

Several dictionaries of animal vocabularies, which alphabetize and define "words" that animals use in communicating with one another, have been compiled. These include one on wolves by Pfungst, cats by Romer, horses by von Maday, monkeys by Learned, hens by Schmid and reptiles by Landois.—By Sheldon D. Klein, Springfield, Illinois.

A recent demonstration of the minute work that can be done with a certain pantograph engraving machine was the engraving of the sixty-odd words of the Lord's Prayer on the point of a pin whose diameter is scarcely 1/1000 of an inch.—By Malcolm Harner, Lawrence, Kansas.

Five dollars will be paid for each interesting or unusual fact accepted for this column. Contributions must be accompanied by satisfactory proof. HERE'S HOW TO SAVE YOUR TEETH FROM THIS INJURY—

ARE YOU ONE OF THE MILLIONS SLOWLY BRUSHING CAVITIES INTO THE EXPOSED, SOFTER PARTS OF TEETH?

Scientific Research Now Reveals Cause of Injury
—And Tells How You Can Escape It

Scientific tests prove this damage is caused by regular brushing with dentifrices containing abrasives. You may be exposed to this danger. For 8 out of 10 adults examined in clinical studies* do risk this serious injury because softer part of one or more teeth is left exposed (usually due to shrinking gums) with no hard enamel to protect it.

It's easy now to escape this trouble. Make this test to see if dentifrice contains abrasives that do the damage. Stir your dentifrice into glass of water. Let stand overnight. White sediment at bottom shows your dentifrice contains an abrasive which can injure teeth.

How to tell if
Dentifrice contains
abrasives that
cause trouble

Teel Liquid Dentifrice leaves no sediment, proving it contains no abrasives. So change to safe, new Teel at once and avoid serious injury to your teeth.

*AS REPORTED IN AUTHORITATIVE SCIENTIFIC JOURNAL

You Can Avoid This Trouble With New Liquid Dentifrice It Beautifies Teeth Safely - Without Abrasives !

Dental scientists have recently made an important discovery. They now know that millions of people are innocently brushing cavities into softer parts of their teeth along the gum line.

You may be running this risk to *your* teeth. In fact, clinical studies show the odds can be 4 to 1 that people 20 years of age or older actually have one or more teeth exposed to this danger by shrinking gums. So read carefully to learn the *cause* of this needless injury and how to *avoid* it.

Expert research has proved this serious trouble is definitely caused by brushing teeth regularly with a dentifrice that contains abrasives.

Many suffer unknowingly. For the abrasive particles that do the damage are so small you can't see or feel them. Yet they are so hard that water won't dissolve them. (Test given above shows how to avoid dentifrices which contain them.) As you brush these abrasive particles back and forth, they slowly but surely wear away the softer, exposed part of your teeth.

How Teel Safely Reveals Beauty of Your Smile

You can save your teeth from this costly injury simply by changing to the revolutionary new dentifrice for brushing teeth—TEEL. For Teel is different

than any tooth paste or powder you ever used. It is a ruby-clear liquid and contains *absolutely no abrasives*. Tests show that it cannot injure teeth in any way.

The reason is simple. Teel does not depend upon abrasives for cleansing your teeth. Instead, Teel uses a new-type, patented *liquid* cleansing discovery that bursts into thousands of tiny, surging bubbles—actually multiplies over 30 times in the mouth. These bubbles instantly go to work to help remove the daily accumulation of decaying food particles and dulling surface film. Thus your teeth look so much brighter, cleaner, more thrillingly beautiful!

Start This Safe Liquid Way Today

What's more, Teel's amazing liquid action gives your whole mouth a glorious beauty bath—a refreshing clean "feel." It helps sweeten bad breath. You will also find that a few drops of Teel in ½ glass of water is truly delightful as a mouth wash. And children love Teel's grand taste.

Teel is also easy to use and so economical. A bottle lasts and lasts. Get Teel today at any drug, department or 10¢ store. Begin at once to follow this safe, new-day way in tooth cleansing. And visit your dentist regularly for his professional care. Procter & Gamble.

HOW TO REMOVE STAINS

Most people are lucky. Daily brushing with Teel removes ordinary surface stains from their teeth the safe, *liquid* way—without abrasives, without danger of injury shown above.

A few are not so fortunate. Due to unusual mouth conditions, it is harder to remove surface stains from their teeth. These people may need an *occasional* abrasive scouring.

For them, we recommend this easy method of removing those unusual surface stains: (1) Use Teel daily. (2) Use salt and soda or any ordinary dentifrice—not more than once or twice a week. Remember, regular use of any abrasive may be dangerous and cause trouble.

CHANGE TO
Teel
LIQUID DENTIFRICE

Use Instead of Tooth Pastes and Powders

"Cheer up, dear! We can't buy a car. So what? Let's fix this one for the duration and put what we save in U. S. Defense Bonds for Junior."

**WING
TALK**

First Officer Warren Wilkerson, of American Air Lines, being readied for X-rays as part of the "pilot maintenance" program

ARMAY, Navy, air-line and commercial pilots are required to submit to rigid physical examinations at least twice a year. Pilots used to look upon such checks with disdain and frequently accused the medical examiners of trying to find something that would ground them (which meant no pay). Now the idea of physicals has been accepted by them as "pilot maintenance" and placed in the same class as airplane maintenance. Rigid maintenance of the plane is undertaken to prevent accidents; careful maintenance of the pilot's health is to discover little things that later could result in grounding, or might suddenly manifest themselves in the air and jeopardize the lives of the pilot and others aboard. These pilots now understand that, for instance, abscessed teeth, if not eliminated immediately, can result in rheumatism, damage to the eyes and to the heart valves—and provide a good long rest on the ground.

Dr. Hodges McKnight, flight surgeon for American Air Lines, typifies the current attitude of the medicos toward pilots in these reassuring words: "The flight surgeon realizes that his success is measured not by how many defects he finds, but by how many pilots he can keep flying safely as long as possible. This is the purpose of the periodical examination of the flying personnel and fortunately there is more and more mutual confidence in this respect."

However, the private pilot, who is prohibited from engaging in commercial flying, is required to submit to a physical examination only once every 14 months. Since he does not have to fly unless he wants to, as contrasted with Service and commercial pilots, the burden of more frequent examinations and the cost involved were never imposed. Nevertheless, Drs. H. Dorwin Hinshaw and Walter M. Boothby, of the Mayo Foundation (Dr. Boothby was co-winner of the Collier Trophy for 1939), have a few thoughts for the private pilot. They say: "Every pilot should realize that it is unsafe for him to pilot an airplane if he has taken any type of sedative drug in any dosage. This includes the barbiturates, bromides, alcohol and possibly such salicylates as acetylsalicylic acid (aspirin). No sulfonamide compound should be taken within at least two or three days before piloting

a plane. Some persons have vestibular disturbances from quinine and other drugs such as may be included in remedies for infection of the respiratory tract.

The doctors also warn the private pilot not to fly on an empty stomach and, conversely, large and heavy meals may result in considerable discomfort, especially from certain types of food, flight involves high altitude where intestinal gases expand appreciably.

PLANES equipped for night flying carry a pure white tail light. Follow one of these into a landing with a lighted city below and see how readily it can blend in with street and other white lights on the ground. Even on the ground, at the edge of a runway ready for take-off, the white light, under certain combinations of airport boundary lights, can merge with them and give a sure warning that it is attached to an airplane. Several ground accidents of this nature and potential flight accidents have brought forth the need for a more distinguishing tail light as air traffic increases. Latest proposal for adoption, first by the air lines, is a tail stallation, with red and white flashing lights of high intensity.

RATS, termites and snakes do not exclude airplanes as they work the way through life. A mouse was directly responsible for a recent fatal accident because he had a strong appetite for the doped fabric on an aileron. He had gnawed it neatly along the piano hinge causing failure in flight. Termites prefer wood construction, and snakes while displaying no appetite for any particular part of the plane, like to coil in a corner and sleep out a flight.

One famous commercial pilot who has to hop around the country is mortal afraid of snakes in or out of airplane. When his ship has to be in the war South he never takes off without first going over the interior with a flashlight from nose to tail. Though he has never jumped from an airplane in the 25 years he has been flying, he would bail out once if he saw a rattler or a copperhead dozing away in a corner of the cockpit. We won't tell you his name for fear a practical joker will deposit a novelty store snake in the plane some day and really cause trouble.

F. R. I.

"TO PROVIDE FOR THE COMMON DEFENSE, TO PROMOTE THE GENERAL WELFARE"

Reykjavik off the port bow!

TONIGHT, in the chill waters near Iceland, or perhaps somewhere in the phosphorescence of the Pacific, a man stands on the bridge of a freighter with the lifeline of a nation in his hands.

From the wind-blown flying bridge the skipper strains his eyes for a landfall . . . the islands that are our country's first line of defense. To these islands must be transported huge quantities of guns, ammunition, food, and material. And the only answer is ships, ships, and more ships.

How is America meeting this tremendous responsibility? You can get the answer if you'll look at the shipyards from Maine to Oregon, at such great factories as the Westinghouse plant where the machinery to drive many of those supply ships is being built, or at the huge Westinghouse-operated Maritime Commission plant which is now being erected alongside it.

The "know how" that works 24 hours a day
We're proud that the Maritime Commission has chosen Westinghouse to aid in this vital task. For there, in dramatic terms, is an example of how Westinghouse "know how" is doing a job for National Defense.

What is this "know how"? It is the ability to get things done in the best possible way. It's industrial ingenuity and individual craftsmanship . . . hard-earned experience and never-ending research. It's the very essence of the Westinghouse way of doing things—learned in building products for the general welfare and now used in building materials for the common defense.

The same skill and ingenuity that are building those turbines for the merchant fleet, not long ago built more efficient electric refrigerators and washing machines. Again, the research skill that developed intricate new radio equipment has found ways of utilizing that equipment in important defense work.

At 17 Westinghouse Divisions, and in the plants of more than 300 sub-contractors, our energies today are

almost exclusively concentrated on the creation of \$400,000,000 worth of defense materials. It's our way of speeding the day when our "know how" will be serving you again—in the home, the farm, and the factory.

Westinghouse

A UNITED NATION

The nation is united—and Long Distance telephone lines help to tie it together for war's work. . . . You can keep materials moving, wheels turning, men working — if you can reach any one, anywhere in the land, in a hurry. . . . It takes a lot of telephone

calls to build fighting planes, freighters or factories—to move men and machines around the map. . . . If the rush of war interferes here and there with the accustomed smoothness of regular Long Distance traffic, we hope you will understand.

SERVICE TO THE NATION

IN PEACE AND IN WAR

Thunder Road

by Sidney
Lerschel Small

ILLUSTRATED BY EARL CORDREY

he education of an honest man. Goddard learned that eachery is no less deadly if hides itself in friendship

THE most difficult thing for Dr. George Goddard to realize was that Bob would follow the radiogram in short a time. Patients waited in the reception room, but Goddard did not press the buzzer to tell his nurse to send another of them to him. Instead, smiling, he walked to the window and looked up, as if the gleaming transpacific plane might already be circling for its landing. He saw thin clouds, white, pearly gray, and silver. Honolulu morning. How was it to the east? Would Bob be able to see Mauna Kea?

Returning to his desk, he pressed the buzzer twice, the nurse's own call. Mary was probably worried, because the message could have contained some bad news; but when she stepped inside and closed the door behind her, Goddard saw the happy color of her cheeks. Her honest breathlessness added to his contentment. She would be a splendid wife for Bob.

He said, "How did you guess, Mary?" "I heard you say 'Bob!' and then you whistled, Doctor," Mary Hinman said. It had to be something good. I hoped that he was coming home."

Dr. Goddard said, "He is. This afternoon. Tomorrow," he added grimly, "is Sunday. Someone else shall make my calls." Almost shyly, Goddard continued, "I didn't think we would see him for at least a year."

He was so proud that he wanted to shout, "Lawton Aircraft is sending him to check on the new fighters. Interceptors, he calls them. Those marvelous 80s we read about." He wondered if Mary would ask why Bob was coming. When he looked at her again he understood that the reason made no difference to her, and that the fact was sufficient. Goddard liked that.

"We'll clean everything up this morning," he said, "and then we'll meet him. Dr," he teased, "will you be too busy?"

Mary Hinman put a hand to her hair, as if it were already wind-blown while he waited for the plane's descent; the doctor's broad smile caused her to adjust her cap in hasty defense of the in-

Bob opened the gifts, Mary exclaiming, the Japanese deprecating. Red lacquer bowls, the sacred badger, porcelain dogs

stinctive gesture. Then, when he winked, she began to laugh. "How long can he stay, Doctor?" she asked.

"Quite some time," Dr. Goddard hoped aloud. "Remember how he wrote that Lawton engineers are sent where they have planes? Men who've been trained at the plant and who can recommend changes as well as check performance. That is what Bob wanted to do, although he expected it would be years before he was qualified. He figured it as a way in which he could come home. All of this war talk," Goddard snorted, "has undoubtedly shortened his training."

"Yes, Doctor," said Mary. "Shall I send in the next patient?"

AS GODDARD nodded, he was thinking that the time between this moment and the arrival of the plane must be all too long for the girl. He himself was enveloped in a sort of peace which was like being up in the high hills where Bob and he, as father and son, had learned to stand together after Angela had died. He decided suddenly that they must spend a night there. Why not this very one?

We'll sit out on the lanai, Dr. Goddard thought, as his nurse held the door open for a patient, and they will be handclasped. Bob and Mary will prefer that to a noisy homecoming party. Yes, it's the thing to do.

Before Mary closed the door, and went back to her desk in the reception

room, Goddard could see that he had a busy morning ahead. There were several Americans. A Filipino with her baby. The Hawaiian foreman of the cane plantation, who, not so long ago, would have gone for treatment to a kahuna, a witch doctor. Several Japanese, sent to him by their own physicians. Good diagnosticians, those Japanese doctors; they knew when to send their patients to a specialist.

He got on with his work, but despite his intention not to waste a moment he was unable to refrain, when he knew the people, to remark that Bob was returning. When it was noon, Mary entered instead of one of the remaining patients. "Mr. Kamagoshi would like to see you for just a moment, Doctor," she said.

Dr. Goddard leaned back in his chair. "I'll never forget the time you and Bob hid under his tea house on the ridge near our cottage. Bob was six. We looked everywhere. When we finally found you, you said—"

"Stop teasing, doctor," pleaded Mary. "It was something silly, or you wouldn't be reminding me. Mrs. Kamagoshi was always horrified when we played house. A boy and a girl. But weren't they dear, kind people?"

"Absolutely," Goddard said firmly, "and they can't help all of this Asiatic turmoil. Anyone who thinks I'll allow events to change my attitude toward them is utterly insane. By all means ask him in, Mary."

Goddard met the bowing stocky Japanese with outstretched hand. "How are you?" he asked. "It is nice to see you. Sit down."

"I are hoping," Kamagoshi said, smiling all over his broad face, "that I are first to carry congratulations for coming of Bob. I—"

"How the devil did you know?"

"You are fixing hurt for Muragawa today," the Japanese explained, "and he arrived afterward to visit me for business affair. Happy news are thus furnished me. I rush to offer wishes for nice vacation for your son."

"It is better than a vacation. Bob will be here for some time."

Kamagoshi jiggled the keys and coins in his pocket. "He are now expert engineer, Doctor? How proud for you!"

"He must be pretty good," said Dr. Goddard, "or his company wouldn't let him fuss with their newest plane. I didn't know that any of them were here. Proving that we don't know what is going on."

"No," agreed Kamagoshi. "Airplane," he announced, "are appearance such as big dragonfly. I am not ever observing

variety coming from Bob's factory. picture it owns two back ends. W rapidity it must possess!"

"It has two tails and must be v fast," said Goddard. Could Kamagoshi possibly be pumping him? What could he tell anyone about the 380 who hadn't already been publicized? Jok he said, "Haven't you fellows copie yet?"

Kamagoshi protested, "How ma own such information?" He continued, "We are kamaaina, friend. We m again have kurata card game for Bob. I come for ask it. Some time w party to cerebrate return are over."

"I'm selfish," Dr. Goddard said. "going to keep Bob and Mary to my even tonight. We're going to the Th der Road cottage." Goddard laugh at the way Kamagoshi was goggling him. "In spite of custom," he said. "Road are bad," said Kamagoshi earnestly. "Suppose you ride back qu to Honoruru for sick person? Oh, not."

Dr. Goddard said, "I can drive t road with my eyes closed. Another c tor will handle my calls, anyhow." wanted to finish up. "I've got to done. Perhaps we can have a sukiy dinner like in the old days."

Kamagoshi rose. "Perhaps," he s "Ah, yes."

WHEN the Japanese had gone, Goddard went on with his own w

Later, after lunch, he left Mary the car outside the hospital. When came out, and they were driving off said, "Dr. Matsuzuki wanted my o ion about a fellow who can't be mov It would take hours to get there; M suzuki was exceedingly distressed at refusal."

"Couldn't you go tomorrow, Docto

Goddard shook his head. Matsuz was operating on both Sunday morn and Sunday afternoon; they sim couldn't get together. He drove rapi as if the speed of the car would b Bob's plane the faster.

He listened contentedly while M told him what arrangements she had ready made about food and the tra portation of a houseboy and the co A machine had to be hired to take th But everything would be in reading

When the ocean swung into vision thought, *I like it better when one lo down on it from the hills. You d see the small turmoil. You see the v ness of it, and the peace. If there v more oceans between hotheads, th would be more peace, too. Take present situation. The Pacific forme*

(Continued on page 25)

As Goddard took the slim bronze silver haft, he thought, "I can s a life again. My son's!" He waggled the knife so that Bob co figure out what he intended to

fighting ships must take it as well dish it out and America's quick-service naval repair yards geared to heal their wounds and put them back in the line—fast

BATTLE DAMAGE

By Paul Schubert

HERE are two ways of looking at battle damage. One is the point of view of the "patient"—an intensely personal viewpoint, in which a torpedo in the starboard side abreast Frame hurts every officer and man aboard if his own entrails had been gouged

The other is a detached, surgical point of view. That's the navy yard's viewpoint. The torpedo rip at Frame to the navy yard, is just another in just another ship—a "job order," much welding, so much riveting, the usual hurry. Why are these naval men anxious to get back to sea?

If you're a naval man, battle damage is intolerable. A seafaring guy may be happy when it comes to shooting crabs; may forget the bridge conventions, but be a trial to all his gal friends because he won't follow the rules of love. Aboard ship he is a perfectionist. His battlewagon of his is always being painted, shined, scrubbed, made a little sprier than any other battlewagon in or any other man's navy—

When along comes a battle and leaves battle damage.

The three main causes of battle damage are hits by shells, bombs and torpedoes. All three mean explosions. The explosions usually cause fires. Battle damage is a conglomerate of rips and holes left where the projectiles and their splinters strike, terrific damage done by the explosions, and devastation done by fires. Especially when the fires are fed by that highly inflammable stuff, smokeless powder.

An Unsung Hero of Jutland

At the Battle of Jutland, still a classic of modern naval warfare, the British battle cruiser *Lion* was belching out smoke from her turret guns when a heavy German shell smacked down a hit on one of the waist turrets, crashed through the armored roof and exploded inside, killing every man of the loading crew. The breech plug of a 12-inch gun jarred open; the full charge of powder and shell slid back out of the breech and down into the turret pit, where the powder instantly caught fire. That furious blaze had worked its way down through the turret and reached the magazine, the ship would be lost. The turret officer happened to be mortally wounded. He also happened to be a marine. In the last thirty seconds of his life he gave the order to flood the magazine, localizing this particular bit of battle damage to one turret out of action.

The heat of a fire like that is so great that it melts electric wiring into sagging festoons; the explosion leaves jagged sharp metal edges, and the devastation afterward looks like a portion of hell in which the fire has gone out. During the action fought by the British cruisers *Exeter*, *Ajax* and *Achilles* against the German pocket battleship *Admiral Graf Spee* early in the present year, the *Exeter* and the *Spee* were slug-ging it out at 9½ miles range when an 8-inch shell from the *Spee* hit the *Exeter* in B-turret—a rather lightly armed 8-inch turret through which the 14-inch pound projectile plunged like an egg through an egg. The explosion not only put the turret and both its guns out of action, but swept the ship's bridge with deadly shell splinters that wrecked

(Continued on page 55)

INTERNATIONAL

American workers swarm over H.M.S. Warspite in a U.S. naval yard, reconditioning the famous battleship after one of her many engagements. Hoses supply air conditioning for men repairing the ship's below-decks damage

A torpedo hit is usually fatal to a destroyer, but the U.S.S. Kearney survived one and made port—in this condition. Only deck damage is visible; good construction and good luck saved the Kearney after the underwater hit

PRESS ASSOCIATION

First move is choice of the proper fly. The proper fly, of course, is the one that brings 'em in

Equipment makes the fisherman. It includes a pair of stout waders made of thick, waterproofed cloth; hobnailed wading shoes to assure a firm footing; and a multipocketed sleeveless jacket to carry his fish-fooling equipment.

Removing the embedded fly is no job for a girl—those sharp-toothed jaws can still hurt a finger or two

What are the others feeding on down there? A smart fisherman will open his last trout and take a look at the contents of the stomach, determining his next choice of fly accordingly. This is also no job for a girl.

How to Catch a Trout

By Edmund Gilligan

He's a creature of moods—mostly belligerent; a fast-water wise guy with unflattering opinions of you and all your works. You play it his way if you want to do business with him, and if you bring him in you're smarter than he is—no mean compliment

THE first thing to do in fly fishing is to get dressed for it.

Trout worth catching are smart enough to stay in deep, fast water, where craven robin-cheaters can't dunk a worm. Therefore, the fly fisherman must go out after the fish, must take his stand in water that flows hard and strong, that pushes with spring strength against legs and hips. To do the job properly, he pulls on a pair of stout waders. This notable garment, made of thick, waterproofed cloth, is drawn over the feet and legs and pulled in comfortably at the waist by a belt. Braces hold the upper part snug, thus keeping the tummy dry and warm when the squalls of opening day slap across the pools.

Hobnailed wading shoes come next.

The pool you are going to fish is rocky bottom and hobnails take a hold and keep it when the going is rough. These boots are made of a skin that, like the mule himself, is tough and pliable, and they dry out cracking.

The fly-man then puts on his sleeveless jacket. It has more pockets than a sieve has holes. He distributes to his person the tools of his fine art: creel, dry-fly boxes and wet-fly boxes, leader boxes, extra line, a vial of oil for flies, scissors, tweezers, knife. These he may add his fly-tying materials (feathers, silk threads, fox fur, vises, hooks for fly-tying on the stream), even a pair of binoculars, very handy for a stealthy approach. Included is a good fly rod and a tapered line

PHOTOGRAPHED FOR COLLIER'S BY LARRY MADISON

ing Royal Coachman, tied on the spot, brings
py beauty who was more angry than hungry

He's a beauty, and a wise one, hard to handle. Inch by inch he comes into shallow water. She is now
ready for the most delicate, most dangerous trick of all—netting him. He'll make his best fight here

Best moment of the day is the lunch in the open. Into the pan, one by one, goes the reward of your skill—fresh-caught trout fried with
bacon, to make the best of all possible dishes for the fisherman. Lots of piping-hot coffee makes the perfect accompaniment to this dish

land, the fly fisherman is worth
at \$200 on the hoof.
d set up, line run through—and
ne a well-soaked nine-foot leader to
be knotted to the line's tapered end.
The leader, made of Spanish silkworm
as fine as a hair, cannot be seen by
the trout. It will fall so lightly upon
the water that it won't frighten him
when he darts toward the fly knotted to
its end.
Nothing now remains, before the
contest begins, except the choice
of proper fly, the one pattern that will
bring the trout up with jaws open for
the gobble. There's nothing haphazard
about this selection. A sharp eye will
solve the problem and fill the creel.
At this time the sharp eye may belong to
the distaff side of the expedition.

Screened behind the alders, she sees the
feeding begin downstream and whispers:
"A small one. Out of the water twice."
Again the young, uneducated trout,
who has never felt a hook, flashes clear
out of the water to snatch an insect.
Older and wiser trout, knowing that
enemies are always watching, make no
such fuss. They swim slowly under the
floating insect, size it up deliberately
as if to make sure there isn't a steel
hook hidden under the wings. Then they
suck it down without breaking the
water. Such adroit feeding makes a
"dimple" on the surface, a little circle
that soon vanishes. There's no splash
to catch the eye of fisherman or heron.
But those insects have not yet be-
come the floating, winged flies that bring
on the real rise of the trout. These

are mere grubs of the May fly called
nymphs. They have crawled in burrows
and under rocks for two years. Some
still crawl about below the water and
the trout seek them out. Others have
ascended to the surface, ready for their
brief span of flying life. Trout dashed
at them, caught them on the way up to
the sunny air, but hordes of May flies
escaped the onslaught, broke out their
wings through their hard shells, and
flew to the forest, there to shake off the
last skin of the nymph stage.
That young trout is still feeding on
lagging nymphs. The other flies are al-
ready in the alders waiting for a new
life to begin. That is the moment for
which the angler waits and watches.
Sun heat now beats down into the
forest and pours a dazzling energy into

the newly hatched insects. They dart
among the leaves a while, then seek out
the water and return to it. There they
soar and begin a dance. This new, real
life is all one brief dance, a mating
dance, a marriage in the air. The male
soars from below, finds the female,
clings to her. She beats her wings, glides
heavily onward. In this glide and clasp,
her eggs are fertilized.
The male flutters away to fall and
die. The female descends, brushes off
her eggs by lightly touching the water.
Then she, too, falls and dies. The trout,
driven frantic by the dancing of flies,
slide out of their protecting shadows,
swirl and feed ravenously.
Now is the time to take up one of the
struggling flies, look at its transparent,
(Continued on page 57)

BORN TO ACT

by Kyle Crichton

...somewhat businesslike
...er of Señorita Maria Mon-
...or an interesting lesson on
...v to become a moving-
...ture star and no fooling

CLEVER labor lawyer could
make out a marvelous case for
Miss Maria Montez. If she acted
the age of ninety and were paid full
for every minute's work in the
studio, she would still be getting only
pay. Miss Montez acts twenty-
hours a day.

When she arrived in Hollywood, com-
pletely unknown, she knew exactly what
was going to do.

"Three mawnts' time and every-
body knows me," she predicted.

On her first day at Universal she
received an entrance into the commissary
promptly at twelve noon. She wore a
hat that had obviously been constructed
by a maniacal furrier and a dress which
was spectacular to the point of ecstasy.
She sat at a table in the middle of the
room by herself and began to peruse a
trade paper.

She read with intensity. Some items
seemed to distress her and she twisted
her lovely face into a grimace; at other
bits of news she tossed back her
head and laughed merrily. She made
large little cries of distress and pleas-
ure; she leaned on her beautiful elbow
and peered at the paper almost menac-
ingly; she leaned far back in the chair
and gurgled.

At this juncture, a waitress managed
to convey the information that the more
important executives rarely presented
themselves for food prior to one o'clock.

"Oh," she said in the slightest, Miss
Montez rose and swept out. Promptly
at one o'clock she returned and made a
grand entrance. She had changed her out-
fit entirely. This time the hat was even
more outrageous and piquant; the gown
in the nature of a political demon-
stration. She glided between the tables
to her own table in the middle of the
room. She propped up the trade paper.

She read it with utter devotion. At one
particular paragraph, she threw back
her head and filled the room with the
tinkling laughter. By two o'clock
the leanest minion of Universal Studios
was unaware of Miss Maria Montez.

Whatever plans Universal had in
mind for her—and subsequent research
has established that they were entirely
correct—it was inevitable from this first
moment that she would soon be a Holly-
wood actress. After a few abortive at-
tempts in which she played the menace,
she was finally cast in *South of Tahiti*,
wearing a sarong. This proved to be of
great importance. Theater owners
came out in perspiration, there was the
clank of silver on box-office ledges
and writers were set to work changing
living-room scenarios into jungle
scenes.

"The Dorothy Lamour of San Fer-
nando Valley," said the cynics bitterly,
but Miss Montez was not chagrined.

"They talk, eh?" she asked. "They
mention my name?"

There have been other campaigns cal-
culated to impress a personality on
Hollywood but none more successful
than that carried out by Señorita
Montez. The studio press department
runs panting in her rear; her personal
publicity agent is in the position of a
general who tries desperately to catch
up with his army. When a mixup pre-
vented a photographer from getting
pictures of her during the day, she

suggested that they be made at night.

"Very pretty, the moonlight," ex-
plained Maria.

It was while her father, the late
Ysidoro Garcia, was Spanish consul and
Embassy Delegate to the Dominican
Republic that Maria was born. The
family home was in the Canary Islands
and Maria attended the Sacred Heart
convent in Santa Cruz de Teverite dur-
ing one of the brief periods when the
family was in Spain. Her father had
consular posts in South America,
France, Belfast and England.

"Liverpool," says Maria, as if about
to hold her nose.

**Maria Montez has a flair for pub-
licity, real acting talent and a
knack with clothes—all of which
add up to success in Hollywood**

The Belfast post was important be-
cause it was there she married a gentle-
man named McFeeters and went to live
on the estate of his parents. For the
later movie personage, Belfast was ex-
actly as exciting as Erie, Pa. During the
winter they had a flat in town and went
to the movies. In summer they lived on

(Continued on page 54)

The Way Back

By Roderick Lull

**The story of a dog and a man
—and how the dog solved
a problem for each of them**

FOR a long minute the dog lay by the side of the road, where he had rolled after the fall from the car. He lay with his eyes open, whimpering, feeling with all his being the dull pain in his shoulder. While he lay there fear stabbed at him, deep inside and sharp. There were two fears, strangely mixed up together, separate yet related, and one was as sharp as the other—the fear born of his hurt, and the fear born of the knowledge that he was alone and lost, that they had gone on and left him.

He was an English setter of the Llewellyn strain, white with black markings, and he was eight years old. After the long minute he stirred and came slowly to his feet. He stood trembling, though the pain was leaving now and he knew out of instinct that he was not seriously injured. He stood by the roadside, staring down the highway the way the car had gone. It was evening, with the coolness of night coming on. There was nothing at all in sight, and there was no sound.

Fear swept over the dog in a wave now, though the pain in his shoulder had lessened until it was no more than a minor annoyance. They were gone out of sight, gone from him forever. Vaguely,

the dog's mind recalled what had happened. He had been in his accustomed place in the steel-and-wire dog box that was bolted to the running board. He had been standing up, stretching, before lying down again. The car had swerved to avoid another car and he had been thrown roughly against the door. Then there had been a brief time of darkness and he had come to his senses lying by the roadside.

The dog whined deep in his throat. He had been born in a kennel; they had bought him when he was five months old. The kennel was long since forgotten and all he knew was the house and the grounds where he had lived for all but five months of his life. They had left it often enough, to go hunting or traveling, but always they had returned; he had again smelled the familiar smells, and been fed from the familiar dish, and gone to sleep in the familiar place. Always, until now.

The dog felt a stirring deep inside him. He lifted his head. Whatever now commanded him was as if one of them had given a spoken order. The dog trotted down the road, keeping well to the side of it. Whenever he heard a car he left the road and hid himself in the brush until it passed. The impulse deep inside him told him to keep out of sight, to approach no one, to be seen by no one. He obeyed without question. . . .

Taylor turned the car off the highway and let it glide to a stop before the small frame building marked "Rosegarden Auto Court: Office." There were the

usual gasoline pumps, the odds and ends of canned goods in the single window and the battered wooden sign on which "Vacancy" was printed. Taylor and his wife got slowly, stiffly, out of the car. He noticed her from the corner of his eye as she stepped through the door. She looked, he thought suddenly, as alive and almost as youthful as she had fifteen years ago. He had been thinking that a great deal lately. And whenever he thought it he felt anger and weariness and the harsh knowledge of his own failure.

"It's been a long ride," he said, trying to make his voice sprightly. "I'll guarantee Jinx can do with a little exercise."

TAYLOR saw the dog box then, the door open where the flimsy catch had rusted through and at last broken. She saw it at the same moment. Neither of them said anything, beyond the little gasp she gave. They were back in the car at once and turning around. The proprietor of the auto camp hurried toward them from one of the cabins, but they gave him no attention.

"He was there when we stopped for gas at Olneyville," Taylor said. "That's about seventy miles." He looked at her and saw her white face. He had often teased her about Jinx—"I'll be hanged, Jane, if I don't believe you think as much of Jinx as of me." Then they had laughed together and she had accused him of a similar affection for the dog. And in all truth, he knew, both were

pretty close to right; though, of course, it was foolish. That was the trouble with a dog, particularly with a child's couple. He was apt to be beloved of all reason. It was silly and sentimental and didn't make sense. But it was true.

He touched her hand for a moment. It was warm and dry. He put his hand back on the wheel.

"We'll find him, all right," he said. "Don't worry. He'll stick to the highway. Darned smart dog, Jinx."

They went to Olneyville, tooting the horn at intervals, occasionally calling the dog's name out of the window, never missing an inch of the road. They found nothing. They came back to the auto camp. It was dark on the highway back and he thought that even the sound of the horn had become dispirited, and there was no hope of finding the dog.

He rented a cabin. It was all right was the kind of cabin you described "neat and clean and quite comfortable, very fair mattresses and all; and, of course, an auto court's so convenient your car right beside you; no bells to fool around with and—"

Now, he hated it. He thought he hated it as much as he had ever hated anything.

(Continued on page 37)

Hunger was forgotten and there was only the desire for water. Even the hurt of his pads was forgotten, so great was his longing.

ILLUSTRATED BY HARRY MORSE MEYERS

HEART of Poland

By Alice Leone Moats

Josef Stalin reads the amity pact with Poland's former soldiers who will fight once more against Germany under General Wladyslaw Anders (left). Others are Poland's General Sikorski and Russia's Foreign Minister Molotov

patience, efficiency, realism, energy, tact, determination, executive ability and power to inspire faith in men and, above all, knowledge of Russian psychology. This is a tall order, but Anders fills it and withal emerges as one of the few truly romantic figures in this war. Even his appearance counts in his favor. He is tall, erect, with a shaved Germanic head in contrast to his completely Slav face, which has remarkable hazel eyes as a dominating feature. Wherever he goes he draws immediate attention.

The Man Without Enemies

So many qualities assembled in one man might almost make him seem something of a super Rover Boy who is rather irritating to his fellows. Anders is saved from this because he is so very human and such a completely swell guy. "When General Sikorski appointed Anders," a Polish officer who had been in London at the time told me, "there was no question as to who was the right man for the job. There was no feeling on the part of the other generals that they had been slighted. He is the only man I have ever known to reach a high place without making a single enemy on the way."

When Anders left Lubianka he was on crutches, still suffering from a serious leg wound received in Poland in 1939 and which had had no medical attention. The commandant of the prison broke the news to him that he had been named commander in chief of the

Polish forces in Russia at the same time as he announced his release. Anders answered that, owing to his ill-health, he doubted whether he would be able to accept the appointment. Two weeks later he was walking with a stick and flying around Russia in a small plane, visiting Poles in prisons and camps as well as establishing his headquarters at Buzuluk and ranging over a thousand miles or so selecting sites for the other camps to quarter troops.

When he hesitated to take over the command the general realized he was to be faced with some of the most difficult problems that had ever confronted a military man. It was only later when he began to work that he realized just how serious and numerous they actually were. To date the Polish embassy in Kuibyshev has been able to ascertain that there are 1,500,000 Poles in the Soviet Union, but information gathered from released prisoners indicates the figure may be well over 2,000,000. Only about seven hundred thousand of these have turned up so far. The rest still have to be located and among them there are known to be over 5,000 officers and a dozen generals, including Haller. They are in prison camps all over the U.S.S.R., from Franz Josef Land to Murmansk, from Murmansk to Kazakhstan. Every possible assistance in the search is being given by NKVD (modern name for OGPU). But there are several thousand square miles to be combed and with communications and transport being what they are in Russia

(Continued on page 50)

After spending two miserable years in Soviet prisons, General Wladyslaw Anders emerges triumphantly to lead an army of 150,000 seasoned troops against the Nazi horde. One of the most amazing stories of the war

IS NOT always that a historical axiom turns out to be one hundred per cent correct. One of the great exceptions is the axiom that the Poles are indestructible. Those who form an army in Russia are more proving it. Since August of last year, when the Russo-Polish treaty was signed in London, granting general amnesty to Poles imprisoned in the U.S.S.R. and permitting them to organize an army on Soviet territory, they have been coming out of the prisons and

labor camps by the thousands, all with the fixed idea of seeing Poland rise again. They are gaunt, hollow-eyed, half-starved and dressed in rags, but their spirit is magnificent. All they ask is to get back in there and kill Germans.

Their commander in chief is Lieutenant General Wladyslaw Anders, who was released from Lubianka Prison in Moscow after an 18-months sojourn, to take over the job of forming an army. "When I had to choose a leader for you," General Sikorski told his compatriots in the U.S.S.R. in a radio speech from England, "I gave you Poland's bravest soldier."

Sikorski also gave them one of Poland's most experienced soldiers, for Anders has fought in four wars, and above three rows of decorations on his breast, there are eight stars embroidered in silver. Each one stands for a wound received in battle.

Courage and experience are the two necessary attributes of a commander, but alone they would not be sufficient to accomplish the gigantic task which has been set General Anders. It requires

RUSH JOB

By Hurd Barrett

ILLUSTRATED BY EARL BLOSSOM

When the history of this war is written, a chapter should be devoted to a lady in San Francisco, who is our greatest single force for efficiency to date

AN UNUSUALLY hot California sun beat balefully down on the repair depot's tin roof. The temperature inside the Third Echelon maintenance office stood at a round ninety-five degrees; and the humid San Joaquin Valley air brought the perspiration out on a man wherever it touched him. This, despite the fact that the month was December.

Corporal Henry Jones, however, was not dismayed. As a matter of fact, he was whistling. Corporal Jones was an essential cog in the Matériel Division of the U. S. Army Air Corps, and justly proud of his duties. Moreover, it

was Saturday, and he was looking forward to spending a week end in the company of a certain Miss Louise Williams, who was a keen babe, and whose status as a resident of San Francisco made it unnecessary for a soldier to arrange for more than his own transportation to the metropolis. . . . Corporal Jones, in short, felt that he was sitting—if not on the very top of the world—at least more than halfway up it.

He was engaged in typing up a list of the repair parts that would be needed the following week for Third Echelon's repairs to damaged service equipment Third Echelon (no one but the brass hats had ever been able to determine why it was called that) was nothing more or less than a small airplane factory—complete with civilian mechanics, craftsmen, machinists, welders, sheet-metal workers and design engineers—whose job it was to keep in operating condition the several thousand airplanes—training, transport and combat—that made up the Sixteenth U. S. Army Air Force.

The corporal whistled and typed steadily. It was just as he got to an item

that said: "Fourteen Only Type 3-U Generators, Supreme Electric Company," that Sergeant Wallace came into the office. The sergeant was small, wiry, tough and dour. He had been fifteen years in the Army. And he was Corporal Jones' rival for the affections of Miss Williams.

There was a gleam in the sergeant's eye. Seeing it, Corporal Jones felt a shudder of apprehension. He attempted cordiality: "Something you wanted, Sarge?" he inquired.

"Yeah," said the sergeant coldly. "I want that Fleetwing engine. When's it going to get here?"

JONES ruffled through some papers on his desk and came up with a teletype message. It was from the Matériel Division headquarters at Wright Field, in Dayton. It said succinctly that the one-only Fleetwing engine required for the repair of ship No. 681 would be undeliverable before December 20th—which was the following Tuesday.

Jones handed the message to Sergeant Wallace. The sergeant read it, slammed

Mullins gave a zany grin. "He maybe if you stuck your head in main it would swell up and stop leak. Ha-ha! That's funny, ain't it?"

it back on the desk and glared at him. "Nuts!" he said. "I got to have ship in service Monday." He fished Jones with a fishy eye. "Are you got right on it?"

"Sure!" said Jones. "I had a teletype message in Dayton in ten minutes. All Fleetwing engines are held up on changes. They won't ship 'em out until they've got the new-type supercharger. You got a copy of the bulletin, did you?"

Sourly, the sergeant nodded. "Yeah, got it all right. But that isn't going to keep the captain from being awful, awfully sore. We've got a war on, and that ship needed Monday down at Mojave Field. He's not going to like your not getting in for him."

"What could I do?" protested Jones plaintively. "If Dayton won't give me an engine, they won't give me another one."

"That's right," said the sergeant. "Maybe if you hadn't had your head damn' full of women, and getting a woman on leave and stuff, you could 'a' got them to release one for us."

Jones grinned. "So that's what's eating you?" he said.

"There's nothing eating me," said Wallace. "It's just that I can't understand why any woman would give me an unprintable like you a date, when I could get a man."

"Meaning you, I suppose?" said Corporal Jones, amiably.

"Meaning me," said the sergeant, cocked an eye at Jones. "When are you leaving for Frisco, Jonesy?"

The corporal hated to be called that. People he didn't like had been calling him Jonesy ever since his grammar school days. But today, somehow, it didn't mind. Today, somehow, was a day. "About five-thirty, six o'clock," said cheerfully. He was commencing to enjoy himself hugely. "Want me to say hello to her for you?"

"Arph!" snorted Wallace. "Don't bother. But," he added grimly, "you better be quite sure you got that woman cleaned up. If I come in here and find one piece of paper in that basket of yours, you're not going anywhere."

Jones felt a sudden recurrence of that feeling of apprehension. "Okay," he said. "Okay." Rapidly, then, he resumed his typing.

BY THREE that afternoon, Jones commenced to realize that there was a plot on foot. The parts requisitions were coming in at a rate out of all proportion to the normal state of affairs. Each of them was countersigned with ubiquitous initials of Sergeant Wallace. By a supreme effort, however, Corporal Jones was managing to stay ahead of things.

But he was far from out of the woods. At three-five, the more or less quiet of his office was shattered by a shrill cry—the cry—personified—was Private Mullins. Mullins was a long, angular, am's-applied individual who answered to the name of Yardbird. And he cried continuously. Not that he hadn't good reason to, for he was charged with dispensing across the counter of the stock room those items that mechanics need for the repair of aircraft. And sometimes he didn't have those necessary items to dispense. Whereat, he frequently came in for looks and curses. . . .

"Jonesy," he wailed. "We're out of rags. We got to have rags."

Corporal Jones ceased typing.

GAY AND EASY

By Ruth Carson

Manufacturers work ahead of time to provide the clothes you wear. So the stores are a riot of color and variety in women's shoes. Pre-priority shoes. Have a fling, but don't think it's your last. There'll be more shoes coming for a while, at least

TODAY a shoe can be a flat, a chopine, a sock, a ballet slipper, a clog, a moccasin, a boot or just a whimsy. It can wear a high heel or none at all. It can have a thin sole or one inches thick. It can carry you forth practically barefoot or conceal you to the ankle. It can be fuchsia pink or any color, made of felt or straw or any material, and no one will look astonished.

No one will look shocked, either, and call you a flighty, wasteful female in such footgear. Variety is exactly what the government wants in your clothes. It puts no great strain on the supply of any one material.

Variety on your feet, amounting to a whole shoe wardrobe, makes good practical sense, too. It distributes wear and tear, prolonging the life of each pair of shoes, and dresses you appropriately for each occasion. You'll wear your polished leather and welt-soled shoes when you have a good stint of walking and hard work to do. But you'll cherish them, too, as leather prices mount, and supplement them with fabric, straw, all kinds of lighter footwear. You'll save your delicate suèdes for afternoon, and be giddy as you like with fanciful designs and gay colors for evening and for lounging around the house, and to wear with play clothes. Each is so important a part of the shoe picture that it is to be had at every price level, so that your total shoe budget need be no cause for complaint. And such variety of heel heights, sole thicknesses, shapes and materials gives you a sure foothold on comfort.

You Needn't Be High-Heeled

We see the possibilities of greater eye appeal, too, since we've discovered feet don't have to be tiny to be effective. It's our pretty ankles the gentlemen like to admire, anyway, and there are more ways than a spike heel to draw attention to them. Of course, low heels at night used to mean only that you were taller than he was, poor girl, and were trying to come down to grade level. Your shoes, from the junior miss department, looked it, too. Now the main shoe salon displays dancing moccasins, ballet slippers, a whole flock of down-to-the-dance-floor shoes. And if one of these looks best with your new waltz dress, and displays your ankle prettily, you'll have it no matter what his height, or yours.

This sweet reasonableness on the part of the general public has been very profitable for the shoe designer. In the old days of ten years or so ago, there were pattern cutters who made the patterns for the individual pieces that go into a shoe, and sold them to shoe manufacturers. But the pump, which is of very simple design and does not require intricate pattern pieces, began coming in so far ahead of all other fashion entries that that was the end of the big pattern companies. And the beginning of the Julianellis, shoe designers.

The Julianellis, Mabel and Charles, who were not then Mr. and Mrs., had met in a pattern factory. Charles who, in the best shoe-craftsman tradition, is Italian-born, and who is handsome enough to rate a movie contract, was an artist. Studied portraiture. Mabel, pretty product of (Continued on page 53)

The De Marcos, famous dancing team, pause during a new number to give you a still view of the shoes made by the Julianellis for Sally—red crepe with gold nailheads to match her costume

CLEAN SLATE

By Hugh Mac Nair Kahler

ILLUSTRATED BY GEORGE DE

THE idea hit Joe Mellick as he watched Milly Britt going into the cheap little lunchroom where Red Scanlon worked. That had been happening too often to suit Joe Mellick, but he hadn't seen any way to do anything about it. He was a little sore at himself, now, because he hadn't. This idea, simple and sure-fire, had been in plain sight all along. He ought to have thought of it the first time Milly had turned down a chance to eat with him and had spent her noon hour, instead, on a high stool across the counter from Red Scanlon.

Mellick allowed himself a chuckle as he beckoned to a taxi. Now that he could stop worrying he could see that there'd never been any real reason why he should have worried. Besides her looks and her voice Milly Britt had brains. Plenty. There'd never been a chance of her passing up Joe Mellick and falling for a big, dumb tramp like Red. She'd just been sorry for Red, that was all, just standing by an old friend who was out of luck. But it wasn't going to hurt Joe Mellick's feelings any if she did her standing by, after this, at long range. And that, he promised himself, was just how she would have to do it.

Joe didn't figure in city politics but he knew people who did. The right people. He didn't have much trouble about getting in to see the Big Fellow. The Big Fellow hadn't got that way by letting little fellows waste his time, though. He gave Joe the fish-eye.

"Boil it down," he said.

Joe boiled it down. "A pardon. A punk named Red Scanlon. Lunchroom stickup. Took a plea. Two-four at Stillburn. Out on parole since—"

The Big Fellow's head began a slow swivel on a cushion of red, nested chins. Mellick had expected that. The governor had been taking a going-over in the newspapers about a couple of the boys he'd pardoned to oblige the Big Fellow.

"Wait," Mellick said. He put a typed paper on the desk. Milly had written it for him when she'd asked him to use his pull to get Red released from parole. He'd filed it in his pocket, never guessing how much good it was going to do him. "Five'll get you five hundred if the governor doesn't slip you this on a gold platter."

THERE was a little aliveness in the fish-eyes. The Big Fellow had a weakness for little bets at long odds.

"Look," Mellick pushed the paper across the desk. "This one's different. This punk makes his right-hand turn and makes it the hard way. Minute he's paroled he hot-foots around to the quick-and-dirty he stuck up and talks the owner into letting him work out every dime he took. Still working there. Natural friend-maker. Brings in so much business the boss is slipping him a piece of the joint. No drinks, no dice, no—"

"Not till he's off parole." The head was beginning another swivel.

"Hold it. Wait for the pay-off. It's a natural. The papers will eat it up. Headlines. The kind you can use right now, you and the governor both. Look. Why would this punk want a pardon? He's sitting pretty, isn't he? The draft's grabbing off other guys, half as fit to fight as he is, but it can't grab him. Not unless he's dumb enough to want it to grab him, dumb enough to stick his

neck out and ask for a pardon that'll wash his slate and—"

The Big Fellow hadn't got big by waiting for diagrams. His jaw made a dent in the chins as he nodded. One hand reached for the paper and the other jerked its thumb toward the door. Mellick saved up his laugh till he was on the far side of it.

He allowed himself a good one then, and a few more in the taxi, heading back uptown. It couldn't lose. The governor'd go for it even harder than the Big Fellow and the papers would go for it hardest of all. And Milly'd be lonesome again, even lonelier, maybe, than when Red was up the river. Lonesome enough to be glad of some company and a few good times. And with Red out of the picture—well, if absence made the heart grow fonder it hadn't done it when Joe Mellick was looking.

THE story broke in the early editions of the afternoon papers, two days afterward. It got headlines. Bigger and better ones than Joe had hoped for. He waited a while, after he'd read it, so as to be sure there wouldn't be any laugh left in his voice when he talked to Milly. He needn't have worried about that. When he rang up the office the telephone girl said Milly had gone out in the middle of the morning and wouldn't be back till tomorrow.

Joe went around to the lunchroom. There was quite a mob on the sidewalk in front of it, and a newsreel truck at the curb. The crowd was singing "You're in the Army Now." Mellick hurried. He hadn't foreseen this. He managed to hate Red Scanlon a little harder than ever because he couldn't help feeling

There was quite a mob on the sidewalk in front of the lunchroom—and a newsreel truck. The crowd was singing "You're in the Army Now." Joe Mellick hurried. He hadn't foreseen

almost sorry for him. Taking a jolt like this one would have been tough enough without having to stand up in front of a crowd and a camera and pretend like it.

Red was making a pretty fair job of that, though. When Mellick elbowed enough into the mob to see him his was just about cutting his head off. Mellick didn't have time to do anything about that, because the news crew yelled for quiet and got it, the man with the microphone was holding it in front of somebody at Red's side somebody Mellick couldn't see.

He could hear a voice, though, wailing and round and husky, with a little quaver in it, saying something about never being able to thank the governor enough for what he'd done for Red.

"And for me," the voice said. "It would have happened long ago if I'd been my way. But Red had made up his stubborn mind of his that we were going to wait and keep on waiting till his slate was clean."

Joe Mellick didn't hear the rest of it. He didn't believe it was really Milly's voice until he saw her running across the sidewalk with Red, toward the taxi. Red's boss was throwing so much at them. Some of it hit Joe's before he realized that it was rice.

"HMMM, VALUABLE! GUESS WE'LL SHIP BY PULLMAN"

OUR TICKET AGENT, was joking that day at the station. But believe me, it was no joking matter when we found that Nancy's first trip away from home had to be *without us!*

Fortunately, her Aunt Helen could go along. Even so, you can imagine how we felt.

We decided on Pullman, of course. And I don't think I ever *really* appreciated the safety and comfort of Pullman travel until that moment.

For Nancy, she was so excited—as the train pulled out—she excitedly shoved her little nose through the Pullman window, waving goodbye and grinning from ear to ear.

Well, you can imagine what my husband and I talked about all evening. He said he could just picture Nancy, making the most of everything you get in Pullman. What a kick she'd get out of the friendly porter and the way

he'd see to her comfort, bring her a drink of water if she wanted it, and help her off the train in the morning!

And wouldn't her eyes *pop* when he'd make up that *grandest of beds* in her Pullman berth, with those sparkling white sheets and snuggly blankets and two squishy pillows! She'd *love* the two reading lights—and *especially* the roomy shelf-space and

hammock for her clothes and books and Panda! She's *so* prim about having everything *just so!*

Tom said *sure* she'd love her berth and would sleep like a cub, but if *he* knew Nancy, she would probably see to it that her Aunt would take her back to the lounge car, read the funnies to her, and, maybe, treat her to a glass of milk. Nancy would curl up in one of those big, soft chairs, and simply *revel* in it!

She promised not to stay up beyond her regular bed-time, and we could see her in her little blue robe and pajamas, washing her hands and brushing her teeth in the dressing room, and going on and on to someone about the "millions of snowy white towels and great, big mirrors!"

Yes . . . Tom and I rambled on about Nancy and her trip. But before we went to sleep, Tom said, quietly, "Now I think I know why you've always insisted on *me* going Pullman."

Thunder Road

Continued from page 12

oat thousands of miles wide. What could Japan do to the United States? Nothing. Therefore the conference in Washington was bound to be successful just as soon as ways were found which could allow both nations to save face. "What makes me happy," he said without introduction, "is that we can't about a table and act like civilized people. Darn it, the Japanese like us. Like Kamagoshi, so good a friend that we feared we might have car trouble in driving up or down Thunder Road. Or like Matsuzuki, so disturbed because he couldn't have a look at the sort of case which he knew I would find interesting. . . . Mary, are you listening? I'll wager that you weren't."

Mary admitted, "I wasn't, Doctor. I was hoping we'll have a real island arise in the morning. It is so beautiful, so peaceful, then, that one can hardly believe that everything is real." When they left the car, time dragged more slowly; again and again Dr. Goddard's ears fooled him, although whether the sounds he heard were from planes leaving or arriving at Hickam field he didn't know. When at last there could be no mistake, he found that he was nervously anxious.

HE eastward flash of silver grew and grew and assumed shape, first dropping lower, and then surging into the sky as the pilot sought more altitude. Minutes passed before the plane turned and started to come in. The roaring of the motors, tuned to landing control, made Goddard hope that nothing was wrong; and at the end of the glide, when the plane splashed down and taxied inshore, to be towed to the dock, Goddard's hands were cold with excitement. He said nothing, nor did Mary, until Bob was off the plane and with them. When he said, with their hands tight, "Well. Ah. You're thinner." Other words wanted to be spoken, but it wasn't necessary to utter them. Bob's other arm was around Mary's shoulder. "Have a good trip?" asked Dr. Goddard.

"Grand. The number one engine kicked up. The left outboard. The captain used it to pump gas to the other free. He cut off the automatic pilot and flew manually. Gosh," Robert Goddard said, "it's good to be home!"

"Good to have you," Dr. Goddard said, so huskily that he added, "How does that plane compare with those you like, Bob?"

Robert Goddard said, "Much the same. Bombers, basically, are commercial jobs. But interceptors are a different story! Wait until you see the 10 perform. When I take one up, you won't believe what you see. It—"

"Eh? You mean you fly it, son?"

"That's part of the job," Bob said. "I want to check in by phone," the engineer went on, "and make sure where the ships are. Then I'm set."

Dr. Goddard suggested "We thought you might like being at the cottage tonight. Tomorrow is Sunday."

He didn't miss the way Bob's arm drew Mary closer.

"I'd like it better than anything else in the world," Bob said. "Thunder Road! I've thought of it when the machines were banging. How peaceful and quiet it always is up there. Mary, remember the time when we were kids, and you—"

"If you must remember things," said Mary quickly, "how about your doing everything which the native boys did? Like riding a bundle of sugar cane down the flume to the mill? And Kamagoshi saw you, and told your father—"

"And talked me out of proper punishment with a lot of *hoomalimali*," chuckled Dr. Goddard. "By the way, Kamagoshi asked for you. He was all upset because I have violated custom in not giving a homecoming party."

"Your way is better," said Bob. "I'll phone, and then we'll go."

Dr. Goddard insisted on sitting alone in the front seat, saying that he needed elbow room; and while he smiled knowingly to himself as the road wound up the narrowing valley, he paid attention to driving when the mountain walls pressed on either side. A sharp curve, a gap between rocks, showed him the plain below, and the ocean. Honolulu. Startlingly black islets rose like prongs in the bays.

Most of the color was strong. The

children. So, if they should be looking, don't shock them." It was Dr. Goddard who was laughing now, because there could be no retort. "However," he added, "no one will be up here at this season. Kamagoshi is in town."

THE tea house seemed to grow out of the ridge, weatherbeaten to the color of the rock. Flat stones led up to it from the road; and, with infinite pains, a garden had been accomplished, rocky planes and curves, dwarf trees and shrubs. An old stone lantern cut into the sky; there was a tiny stone bridge below.

"Is someone standing near the lantern?" Bob asked.

Dr. Goddard looked. "No. Guilty conscience. If anyone were here, Kama-

"Nice try, Holloway!"

CHARLES CARTWRIGHT

greatest variation was in the greens; *kukui* trees were savage and clear green, wild guava had a yellowish sheen, pineapple fields a blue hue, and the sugar cane, marching right up into the hills, was green and silver. Rice and taro patches were darker. Newly cut earth was rusty red; the streams were white. But it was where surf ran up the yellow sand that the contrast was most remarkable. Blue sea, white surf, yellow sand.

GODDARD heard quick laughter just before he saw the high trestle that carried a flume over a jagged rocky gulch. There was a long silence after the laughter. It was unbroken until he drove through another gap, when an echo like thunder rolled out, the sound which gave the road its name; and through the sound Dr. Goddard heard Mary and Bob laughing again.

He said, "We'll be in sight of Kamagoshi's tea house when we round the next turn." Slyly, he added, "The Japanese consider the *kissu* is very immoral,

goshi'd have said so, and offered his services. If . . . ah, here we are."

The cottage was well below the ridge. As Dr. Goddard parked the car where a space had been gouged out of the hill, Mary fumed, "The shutters aren't down. The boys have opened a bottle that was with the supplies, and haven't done a single thing. I should have known better—"

"The door is still padlocked," comforted Bob. "We've arrived first. How about sitting on the *lanai* and talking? Maybe you'll see something."

The view from the porch was breathtaking. Shadows were becoming purple as the sky was stained with sunset gold, soft as the stamens of Night-Blooming Cereus. Sun still glinted on the checkerboard fields, the white tower of a school on the plain, the trestle that bridged the nearer ravine, the stack of a sugar-cane mill. But what held the three pairs of eyes was the harbor beyond.

The battle fleet lay at anchor. Gray battleships and battle cruisers, swift light

cruisers and slim destroyers, submarines beside their tenders. The huge air-plane carriers. Mathematically spaced on the blue water.

"It does something to you, doesn't it?" said Dr. Goddard.

Bob said, "Yes. And because of them, Honolulu can drowse in the sun." He winked at Mary. "But what a target they'd make, Dad!"

"*Kulikuli!* What enemy can get here? What d'you think we'd be doing? Haven't we Hickam Field and Wheeler Field and Fort Weaver and—"

"He's caught you, Doctor," said Mary, "and don't try talking your way out of it. I wish," she said, "that our boys would come."

A half-hour passed before Dr. Goddard heard a machine. Mary was standing, peering down at the lower curves of the road, when Bob said, "It's a car. Or more than one. There's another sound, too. Plane motors. Since they haven't the hum of G717s nor Hawk-Ferriers nor Lamcolms, they might be those with which our 380s are powered. The 380 is twin-engined."

Dr. Goddard and Mary followed Bob's pointing finger. A feeling of disappointment swept through the doctor when he could see the plane; why, it wasn't large at all. He could see the two tails, making the plane like no dragonfly ever hatched. Then he began to observe the speed, and how the 380 gave the illusion of turning at right angles; and, by George, when it went higher, it seemed to climb right straight up! He glanced at Bob, and the pride in his son's face made him take a deep breath. That was how a man should feel.

"WHEN I phoned," said Bob, as the 380 fairly dropped out of the sky, "I learned that there is a little field, a private one, at the Howes' plantation below us. If the ship were flown there, I could look at it tomorrow, and still have a lot of time here. The Lawton people," Bob said, "are grand."

"So you knew it was coming," jeered Dr. Goddard, as the 380 kicked up dust and then taxied behind trees, "and that talk of engine sounds was to show how *akamai* you are." He said seriously, "Yes, it was thoughtful of the Lawton company. Now if the boys and the food and a drink will just show up—"

Mary said, "I don't hear the machine at all now. I'll bet they stopped at Kamagoshi's."

"It's not our boys at all," said Bob.

Japanese appeared around the bend of the road, Kamagoshi at their head; all carried packages. Kamagoshi cried, "Aloha! *Komban wa!* Surprise!" as he reached the *lanai*. He bowed as he placed his own gift in Bob's hand.

How friendly these people were, Dr. Goddard thought, and how sincerely they congratulated Bob as they made their presentations. He watched while Bob opened the gifts, Mary exclaiming and the Japanese deprecating what each had given. Red lacquer bowls. The sacred badger Tanuki, a lamp in his bronze left paw and a bottle of *sake* in his right. Porcelain dogs. The thin blade with which *samurai* once gave enemies the *coup de grâce*, and which Dr. Goddard decided would make Bob an excellent paper cutter. A silk cigarette case. A wallet.

"*Arigato*," thanked Bob. "You are very kind. But—"

"We ought to have a drink," growled Dr. Goddard. "The boys have the liquor, and they haven't shown up yet, Kamagoshi."

Kamagoshi said, "Not arrive?" He

GINGIVITIS

OFTEN CREEPS UPON US WITHOUT WARNING!

rubbed his chin and clucked sympathetically; he looked around at his companions, who nodded violently and spoke in Japanese. "I am agreeing," said Kamagoshi. "It must be! We go to my house."

"I'll drive down the road and look for them," Bob suggested.

Kamagoshi protested, "We do not see them, Bob, as we come."

"The devils undoubtedly sampled my liquor and are sleeping it off," Dr. Goddard said. He smiled at Kamagoshi. "We'll be delighted to come to your house."

As they walked in a group, Dr. Goddard glanced once more at the harbor, where the battle fleet lay; then he lowered his eyes and saw the fields and schools and peace. And friendliness. He linked his arm through the nearest Japanese's.

INSIDE, in the long bare room furnished in Japanese fashion, an even greater contentment grew in the doctor. All was well when men met like this; all was better when he saw Bob and Mary, side by side on flat cushions on the matting. Emptying his second glass, Goddard said, "This is grand Scotch, Kamagoshi."

"Kanaya-san are bringing it," said Kamagoshi, nodding at a thin Japanese. "It produce appetite. Cerebration must be, even if your boys are drunken." He clapped his hands. "You do me honor," he said gravely, as a pair of Japanese girls hastened in and placed low stands before everyone.

"This is an imposition," declared Dr. Goddard. "You have your own dinner guests. We mustn't interfere. We—" Kamagoshi said solemnly, "We are friend!"

Dr. Goddard could find no answer for that.

The maids brought trays, placing one on each of the stands. A scarlet lobster, halved, made the most vivid color as it lay across a black plate. Next to it was a divided blue and white dish, half filled with thin slices of raw fish, half with shredded vegetables. Two lacquer bowls contained soup, one a broth with mushrooms, the other of fish, lotus root, and sea weed covered with a thick salty custard. Immature purple eggplant, pickled and stewed, glistened on an oval white plate. An empty porcelain bowl was for tea, another for rice, and a smaller one for the sake which the maids were pouring. Chopsticks of bamboo, only partially separated to prove no previous

use, showed through transparent paper. Kamagoshi cried, "Ho! Are you f got to use chopstick, Bob?"

Splitting his pair apart, Bob lifted bit of lobster and dipped it into his bowl of sauce. "You taught me how to use them," he said. "I haven't forgotten anything." He pointed to the food. "*Suio namasu, chawan, ko-no-mono*—"

Kanaya, the thin Japanese, asked "You speak Japanese, Mr. Goddard?" "Just a few words," said Bob. He lifted his tiny sake bowl, bowed Kamagoshi, and drained the mouthful; it was immediately refilled.

Mary said, "It's fun. I'm glad boys didn't show up."

As the dinner progressed and bowls were refilled, Dr. Goddard was pleased with the way in which the men seemed to be letting themselves go; he never seen them laugh so much, nor enjoy themselves more.

When Mary and Bob said that they were going outside, Goddard saw a look between Kanaya and Kamagoshi which the latter responded with a nod as if telling Kanaya that the pair were young and therefore should be allowed to violate custom by leaving the feast. Kamagoshi himself hurried out of the room to bring back a kimono for Mary. The Japanese, Dr. Goddard knew, was thoughtful in everything.

It was a noisy half-hour later when the pair returned. Bob said, "That fine light in the stone lantern, Kamagoshi."

"Wind sometime blow out for one," said Kamagoshi. With almost same breath he hissed, "*Shiro hadzu nai*," to Kanaya.

Since this sounded to Dr. Goddard if it meant that Bob couldn't know the lantern had been improved, he wondered a little at it. Kamagoshi satisfied his curiosity by stating that perhaps the morning Bob would give his opinion about the way the lantern had been changed, or suggest further improvements.

How pleasant everything was, Goddard finally thought, when 1 good nights were finally said, and sak cherry-blossom tea drained; he mentioned this when on the *lanai* again. Surely no people were so thoughtful the Japanese; why, when it was morning they wouldn't forget to send shaving water.

"What I didn't say," Bob said then, "was that the lantern's arranged so can be used as a signal. It has been glassed for it, and—"

"Of course, on the other hand, a sleeping bag has its disadvantages, too!"

GARDNER RE

"At least you could wait until your father and I finish eating!"

TONY BARLOW

The Japanese pride themselves on being modern," Goddard said. The atmosphere in the aircraft plant had made him suspicious; but Bob's earnestness and Goddard from jeering that possibly Kamagoshi was going to signal to the landing fleet of a nation with which the United States was negotiating.

"That's exactly what I told him," said Mary.

"The glass was warm," Bob insisted. The light had been on. Someone covering and uncovering it would make a signal visible at great distance. Mightn't Kamagoshi have stopped the signaling when he went for a kimono for Mary? This was too much. "Signaling for frozen eggs?" chuckled Dr. Goddard. "Nonsense, Bob." He paused. "Now I'd better get some sleep. If I know my host, we'll have some delightful surprise for Sunday morning breakfast." Yes, there would be something inviting. Goddard felt, as, with Mary in the next room and Bob in the room with him, just off the lanai, he prepared for bed. He could see a star through a rift where the clouds were gathering for morning, reminding him that Bob would be with him on Christmas. Sleep came rapidly.

At first he thought that he must be dreaming, and that he should have had no sense than to eat lobster. Then he knew that a hand was on his throat, that he was pinned to his bed. Those dirty houseboys? Were they adding robbery to their failure to show up, knowing that he would probably be discharged? He heard the quick sound of a blow, heard a cry, "Dad! Mary! Run!" although he couldn't see what was happening. Then, as the pressure on his throat increased, and the night-color of the room became blackness, he heard the thud of a body....

WATER brought him to consciousness; he was pulled to his feet before his senses had returned, to sway until someone grabbed him. Without pause he was half shoved, half dragged to the lanai, where Bob was already being held pound, by the Japanese. Not until Dr. Goddard tried to speak did he realize that he was gagged, with his arms tightly bound behind him.

The two men were hurried to the tea house. Those Japanese who had not attacked them were squatted in a semicircle, Kanaya in the center. The instant that the gag was jerked off, Dr. Goddard sputtered, "What the devil—"

"*Shita no iro*," ordered Kanaya; Goddard was knocked to his knees. "Bind their legs. Where is the girl?"

A stocky Japanese said, "The son shouted. She ran. Men look for her."

"So?" said Kanaya. "You were in charge. You failed."

THE man who had led the assailants said, "Ah," and his breath whistled through his nose. He bowed and left the room. There was a long silence, followed by the hissing sound of steel ripping through silk.

"I," said Kanaya, "do not intend to fail in task assigned me. Therefore, Mr. Goddard, what made you suspicious of the lantern?"

Robert Goddard said, "You'll look fine in jail."

"No," said Kamagoshi. "You are not reporting events. You are being found some day in wrecked automobile."

Dr. Goddard thought, *And that was Kamagoshi! A fellow I've known most of my life. What can it all mean?* It came to him then, while the Japanese were allowing what Kamagoshi had said to sink in, that Kamagoshi himself had attempted to keep him from coming to the hill cottage. Was Dr. Matsuzuki's invitation to be elsewhere on the island a part of all this? Had the houseboys been deliberately prevented from arriving? Had it all been done to prevent anyone from observing the lantern? And the possible purpose of the lantern, of signaling, turned Dr. Goddard cold as the stone from which it was made. This couldn't be happening, his whirling head insisted. *In a moment*, he thought, *I'll wake up.*

But it was real. He saw the stark reality of it in Kanaya's colorless face, in the burning black eyes, the lips like gray mold.

Kanaya jumped suddenly to his feet. "The girl," he said. "*Itta ga yokatta!*" He examined the white men's bonds, gagged them again, and had them

How's your "Pep Appeal"?

—by Siegel

Wife: There—now you're my handsome hero! Let's have a big going-to-a-party smile!

Hubby: That *sounds* okay, but gee, Peg, I guess I'm just not the party type.

Wife: That, my pet, is a lot of nonsense. All you need is a little more of the old 'oomph.' You know—a little more *pep appeal!* You haven't been eating right lately; I'll bet you're not getting all your vitamins. And say, that gives me an idea. You pop down to the kitchen with me right now.

Wife: I just want you to taste *this!* It's KELLOGG'S PEP, a crunchy cereal made from choice parts of sun-ripened wheat. What's more, it contains extra-rich sources of two of the most important vitamins—B₁ and D. You know what they say—vitamins for pep!

Hubby: Whoa! All that chatter, and hardly a word about how *good* it tastes! By golly, if getting the rest of my vitamins is as much fun as eating PEP, I'll expect to be wearing a permanent party smile!

Vitamins for pep! Kellogg's Pep for vitamins!

Pep contains per serving: 4/5 to 1/5 the minimum daily need of Vitamin B₁, according to age; 1/2 the daily need of vitamin D. For sources of other vitamins, see the PEP package.

"I'm for a quick start, a fast finish and COOL SHAVES!"

• "I'm a judge of pace and a judge of lather—horse or shaving. And to every man who's losing time and skin in harsh, burning shaves I say: 'Switch to Ingram's cool, quick-action shaving cream!'"

• "With Ingram's, shaving is just a breeze from start to finish. You get a flying start with a cloud of lather—cool, planned cool to condition your skin for shaving while it wilts your whiskers."

• "Ingram's makes the track fast for your razor. It glides along so smoothly that you shave minutes off your shaving time—and finish cool, refreshed, ready for the day's business or your evening date."

• "You can see in your girl's eyes how Ingram's increases your face value! No expensive lotions or tonics needed. Your skin is smooth and cool—and feels that way for hours. Warn off shaves that burn you! Get a tube or jar of Ingram's—concentrated for economy—today!"

INGRAM'S

SHAVING CREAM

dragged to opposite corners of the room. "All of us, everyone, must look for her. It is five o'clock, and although she has not time to go anywhere, we want her."

Dr. Goddard stared at Kamagoshi as his old friend passed him, but the Japanese gave no sign of recognition.

They are raving mad, thought Dr. Goddard. Then he looked at Bob, and it came to him that Bob's entire life should have been ahead and not ended. Mary was somewhere in the hills she knew so well, so much better than the Japanese; but what could the girl do? It was hours to a settlement. Nor did she dare run along the one road. *I must think of something,* Goddard felt.

He took in everything in the room, as if he might find some answer. Close by the alcove were the presents which the Japanese had given Bob just hours before, all to maintain the illusion of friendliness. A slow rage began to burn in Dr. Goddard as he saw them, bowls, lacquer, wallet, cigarette case, samurai death knife, porcelain dogs . . . and then, with the ropes cutting into him, he tried to move toward the alcove.

Ten minutes to move a foot, he thought bitterly as he made a useless violent lunge in place of the patient, painful way in which, squatted, bound, he had been edging toward the alcove. *They're certain to return before long.* But he nodded again to Bob, who was also inching his way nearer the alcove.

He was doing better. He was sure of it. Halfway, by George! His forehead was wet with sweat. Another six inches. A foot. A yard. Almost there! Bob was there already.

Then he could, had he bowed, touch the presents that had been placed near the alcove. Instead, he managed to turn so that his back was to them, and he was able to touch them with his fingers. The cigarette case. The wallet, the porcelain dogs for good luck. Ah . . . the knife.

As he took the slim bronze-and-silver haft in his fingers, he thought, *I can save a life again. My son's.* His hands were wet with perspiration; he took a deep breath, and then waggled the knife so Bob could figure what he intended to do.

When father and son were against each other, Dr. Goddard began to describe as large an arc with the blade as his constricted hands permitted.

The blade was taken from him; a single slash released his own hands as Bob cut away the rope. The two men, without hesitation, pushed open the nearest outer panel, stepped through, closed it behind them, and ran.

"You did it," Bob said. "You did it! Take it easier, Dad. We don't want to run into them. I'll bet," he said, exultation in his voice, "I know where Mary's hiding. Go along the ridge, the far side, until you reach the ravine—"

Dr. Goddard said, "You'll take the car?"

"No. Don't dare try." He seized the older man's hand. "Got a better way. Nice going, Dad. Take care of Mary."

He was gone, running low.

WHAT'S he up to, wondered Dr. Goddard; and then, as he lost sight of Bob in a thicket, he knew. And so as he took the course Bob had suggested, he kept his eyes on the aqueduct.

Once he hid behind a rock until two Japanese were out of sight; then he went ahead. He found the ravine, scrambled down to where there seemed to be a sheer drop, impassable, but with a handhold that, as Bob had said, allowed one to continue. He heard a voice say, "Bob?" and saw the shelf, the indentation.

"It's me," said Dr. Goddard. "You can put down that rock." He sat down; he was weak all over. "It's going to be all right," he said. "We got away. I . . .

there he is! See him? Climbing up to the aqueduct! Look!"

"Doesn't he know that they can see him?" whispered Mary.

"It may be safer than climbing it where it's lower," the doctor said. He stared at the slender wooden structure. The rocks of the gulch below it seemed suddenly to be terribly jagged; then, as Bob was a hundred feet up, the watching pair heard a shot, and another, and saw how the climbing figure clung tighter to the long upright. "If they've only revolvers," muttered Goddard, "they'll never hit him. He's climbing again . . . he's up!"

Now Bob wasn't to be seen, since he had reached the aqueduct's trough. There were more shots, more shouts, and then a huge silence.

Mary asked, "What does it mean, Doctor?"

"Your guess is as good as mine."

They sat without speaking after that, and as the dawn changed to morning the sun slanted through the light clouds and turned Pearl Harbor's water to a sheet of silver and blue, with toy ships motionless on it.

"He must be almost there," Dr. Goddard said finally. "He—"

Mary asked, "What makes the red glow, Doctor? Down the ravine?"

Goddard saw it; he said briefly, "Comes from in back of us," and went to the edge of the rocky ledge to look up. On either side of the stone lantern of the tea house, on the ridge, a fierce yellowish red flare was burning, with the figures of the Japanese near it; but before Goddard could say a word, Mary was crying that she saw other red lights on the hill behind the harbor. . . .

Mary Hinman choked, "Oh, look, look!"

In that one look Goddard saw the gray battle fleet on the hyacinthine water, and the city, and the fields . . . and the planes. Ten. Fifty. A hundred. Black. With the emblem of the rising sun.

Black vultures. He saw them swoop and heard the horrible thuds; he saw "God," without irreverence as the flame swirled like the fingers of flow. "Damn them!" he cried. "Oh, damn them!"

He was unable to take his eyes from the horror; and then rising across it saw a two-tailed plane, nearer, su up. He shouted, "No, Bob! No! What can you do with an unarmed plane?" Up, higher and higher, the interceptor shot; now it was seen. Japa fighters peeled off from formation swooped at it, but the 380 swerved darted away at what was almost a right angle, and then streaked up toward true sun.

"He'll dive on them," whispered Mary. "I can't look."

Dr. Goddard said, "Yes. There be one less." Two less. A Japa plane. And Bob's.

THE two-tailed interceptor hovered. *It's about to dive,* thought Goddard. *We're watching, Bob. We who love you son.* As his hands balled to fists, he saw that the 380, instead, had turned toward, and saw why. Great bombs, American, unarmed as they winged Oahu, were approaching in a series of V's, unable to realize what was happening. Flying to destruction. To as the men below were dying because of treachery. The interceptor was turning toward them, to cause them to veer to turn, to roar to a safe landing elsewhere and, if the attack lasted long enough, to be supplied with bombs. The 380 must have been ordered to accompany them, for it slashed through sky above the bombers.

Mary was shaking. Her hands covered her face. Dr. Goddard lowered his eyes to savage destruction and the flare and the smoke, but his fists were clenched over his head. "We'll be back," he cried. "This is just the beginning! We'll be back!"

"No, lady, it wasn't made in Japan!"

Rush Job

Continued from page 20

scowled. "Don't call me Jonesy," he said. "I don't like it!"

"Okay, Hank," said the Yardbird. "I didn't mean nothing. But we ain't got no rags, Jonesy."

Corporal Jones gave it a delayed take. "Out of rags?"

"Yes," said Mullins. "The sergeant checked out a bale this morning, and now he says he don't have none; and that Frog machinist, Dupont, is going nuts. You know how he is. He uses about twenty rags a day. And if you don't give 'em to him, he don't work. He goes on a sit-down strike just like he done now. He's nuts. . . . I asked the sarge to gimme some rags back; but he wouldn't."

Corporal Jones sighed. "How come you gave that rattlesnake a whole bale of rags, Yardbird?" he asked. "You know we got a shortage."

MULLINS ran a wild hand through his hair. He was caught between two authorities. "He asked me for a bale," he said. "You wouldn't want I should argue with him?"

"And now he says he's used them all?" asked Jones. "In one day?"

Yardbird nodded. "He says if you asked me how come, I was to say they's been a broken water main. He couldn't get a plumber and he put the bale over the main to keep it from flooding his floor." He eyed the corporal dubiously. "He says something else, too, Jonesy," he added, "but maybe it's better I don't tell you about that."

Corporal Jones set his teeth more firmly. "Go ahead. Tell me."

Mullins gave him a zany grin. "He said maybe it was better if you stuck your head in the main instead. He said maybe it would swell up and stop the leak. Ha! Ha! That's funny, ain't it?"

"Very!" said Corporal Jones. The plot, by now, was quite transparent. Briefly, it amounted to this: Everybody at the post knew that Dupont, the French machinist, was a cranky old coot who wouldn't work unless he had clean rags. Furthermore, Dupont was on some ticklish experimental work for Major Andrews, the chief of the engineering branch.

The following equation was dreadfully simple. If there were no rags for Dupont, Dupont would do no work. If Dupont did no work, the major would be acutely displeased. The major's displeasure would result in inquiry from the major as to why there were no rags. Which inquiry from the major would disclose that Corporal Jones had failed to order rags two weeks before, because of the press of more important things. Following the discovery of that fact, the major—piqued—would immediately cancel Corporal Jones' leave. . . . Very simple! thought Corporal Jones. Well worthy of a side-winding rattlesnake like Sergeant Wallace. Almost Japanese in its ingenuity. . . .

He gave Mullins a firm glance. "Listen," he said, "I want you should keep your mouth shut, Yardbird. I'm going to get the Frog some rags."

"Okay, Jonesy," said Yardbird. "I guess you better."

"Don't call me Jonesy!" said the corporal. "Now, hold down this phone a minute. I'll be right back."

AT GREAT risk of getting himself shot by the sentry, Corporal Jones rounded the corner of the bachelor non-coms' quarters, entered a window, and approached Sergeant Wallace's bed. With a swift jerk, he removed its lower sheet. Quickly he smoothed and re-

touched the top sheet, and rearranged the pillow.

Rapidly, then, he departed. Outside he paused long enough to tear the sheet into twenty squares of cloth, which crammed hastily inside his shirt. Then he made his way rapidly toward the machine shop. "That snake Wallace got me broke for this," he told himself. "I may even make the guardhouse destroying government property. The side-winding thus-and-so won't let out about it until after I've left for city. They can't take that away from me!"

Corporal Jones, of course, had had hundred-mile-distant Miss Louise Williams in his arms. Figuratively, that was still a keen babe, and they were dancing. Likewise, she felt soft around the edges. The game, he thought despite its enormity—was well worth the candle power.

In the machine shop, he found Dupont standing beside his lathe with his shirt folded. He was out of rags and on strike. He was a tall, cadaverous individual with a gift of speech, a dramatic sense, and a nasty temper. He was, in fact, old boor, with his boorishness founded on an overconsumption of California sweet wine. . . . He clung to his job only because he could do the work with metal and machine tools that other man on the post could make. Otherwise, certainly, someone long since would have tied a can to him. It was only because Corporal Jones was tactful and by instinct courteous to any older than himself, that Dupont considered him a friend. Jones was, in fact, only one in the plant who could do a thing with Dupont at all. Dupont, in other words, was a temperamental pain-in-the-neck. . . .

As the corporal approached, Dupont saw him, and his dour face broke into a grin. "Ah, ha, my friend!" he exclaimed. "And how are you today?"

"Okay," said Jones. "How are you doing?"

THE old Frenchman's face darkened and he threw out his hands in a dramatic gesture of futility. "With me is not so good. I have no rags. Not I go to the stock room, and they tell me there are no rags." He shrugged. "So," he concluded, "I cannot work. A situation impossible, *mon vieux*. Completely impossible!"

Jones gave him a confidential smile and drew the rags from his shirt. "How about these?" he asked.

The old man threw up his hands. "Zut!" he said. "You see? You can't give me rags! Always!" He placed his hand grandly on Jones' shoulder. "My boy," he stated solemnly, "you are a friend of the most true." He wiped his face with one of the fresh rags, and threw the other in the scrap box.

Jones shuddered, and turned to leave. "Well, see you Monday," he said.

"Monday," said Dupont, puzzled. "Third Echelon was on a seven-twenty-four-hour shift."

"I'm going up to the city tonight," Jones explained. "Got week-end leave and a date—with a girl. First date since the war started," he added.

Dupont assumed an air of the deepest gloom—like Barrymore playing Hamlet. "My boy," he said, "you have gotten me. What will I do for rags? He indicated the remains of Sergeant Wallace's sheet. "These you brought me will last only today. Tomorrow, I must work overtime, without rags that is clearly impossible. Jones cursed himself for having

opened his mouth. "I'll get you some more before I leave," he promised hastily.

Dupont smiled. He was completely satisfied. "Excellent!" he said. He turned magnificently toward his lathe. "And now," he concluded, "I must complete the experimental gear of the major. It is," he added proudly, "the men of skill like me who will, in the end, win the war."

When Corporal Jones got back to his office, he found Sergeant Wallace waiting for him there. The sergeant had a happy gleam in his eye. He handed Jones a stack of requisitions, half an inch thick. "Here's a few more orders for you," he said. "Clean 'em up before you go, Jonesy."

"Okay," said the corporal happily. "Anything for a pal, Sarge." He sat down at his typewriter, and commenced cheerfully to whistle, "I Got a Date Tonight with Lou!"

The sergeant frowned. "Cut that out!" he said irritably. . . . "By the way, somebody said the Frog was out of rags, and had gone on a sit-down. I told you last week that forgetting to order rags would get you in a jam—"

Jones gave him a smile. "It won't," he said. "The Frog's got plenty of rags. I—r—dug some up for him just now. He's working again."

"Dug some up?" Wallace was puzzled. "Where? I used the last bale in the plant this morning. I'd have sworn—"

"I promoted some," said Jones. He looked off into the distance with a pseudo-absent look. "I'm sure looking forward to seeing Louise tonight. What a babe! Too bad you can't come along, Sarge. Too bad!"

"Argh!" snarled Wallace. "I hope a cable car gets you!"

"Aw, Sarge," said Jones. "You wouldn't wish nothing like that." The phone rang, and he picked it up. "Yes, Sir!" he said. He handed the set to Wallace. "It's for you—Captain Riley."

Simultaneously, the siren of the crash wagon commenced to whine outside on the blinding white concrete apron. Jones went to the window. There was a sound of motors in the air; and, as he watched, a slim, long torpedo of a bi-motored interceptor-pursuit plane swept across the field, banked in a wide turn, and came in for its approach on the north runway. . . . The crash wagon, and an ambulance were tearing toward it across the shimmering asphalt.

For a moment, the unseasonable California mid-winter glare prevented Jones from determining what was wrong with the plane. Then he saw what was the matter. One of the ship's main landing wheels was jammed in the "Up" position.

"Jimminy!" he cried. His enmity temporarily forgotten, he turned hastily to call Wallace to the window. The sergeant, however, was still talking on the phone.

Jones turned back to the window. The ship was over the far end of the runway, coming in, with its flaps down, for a landing. Twenty feet from the ground—at eighty-five miles an hour—the pilot suddenly cut his switches, and the big, three-bladed propellers ceased to turn. He put a wing down, and the wheel that was down touched the ground and commenced to roll.

Then the right wing-tip scraped the asphalt. There was the shriek of metal and of a suddenly applied brake, and the ship ground-looped to the right, turned sideways on its castored nose-wheel, started to turn a somersault, changed its mind and slid to a grinding halt.

CORPORAL JONES leaned weakly against the window frame. He discovered that Sergeant Wallace was beside him. "Gosh!" he breathed. "What a landing that was!"

"Sure!" said the sergeant acidly. "Why not? That was Major Reynolds, the test pilot from Dayton. He's been flying for twenty years. . . . Oh, Jonesy," he said. His tones were dulcet, but somehow ominous. Jones glanced at him swiftly, and saw that he was smiling. It was a malicious smile. The corporal had a sudden feeling of horror. "What gives?" he asked.

"The captain wishes the corporal to remain on duty tonight," said Wallace, with mock formality. "That crate out there is the new X-YP-101. Frisco radioed the captain a little while ago that she couldn't get her right-hand wheel down, and that she was coming here to crack up. That way, they wouldn't have to send her in on a truck. G.H.Q. says she's got to be in Dayton Monday noon; and I'll be needing parts over the week end; and you got to stick around here and get 'em." He paused for emphasis; and a crowd of sheer triumph came into his voice. "Better send Louise a wire, Jonesy boy!"

Corporal Jones gulped. "You mean

For a FRESH START... take an IVORY BATH

"I can't go on my leave tonight?" he asked incredulously.

"That's just what I mean," said the sergeant blandly. "And now, if you'll excuse me, I'll just trot out there and take a look at the damages."

Dumbly, Jones watched him vanish through the door leading out onto the apron. The sergeant was whistling: "I Got a Date Tonight with Lou!"

Jones cut loose with a few choice adjectives, and waited for the sergeant to drop dead. The sergeant didn't; so after a few minutes, Corporal Jones proceeded bitterly to the Post Exchange pay phone, and put in a call for Miss Louise Williams. He explained to her just why he would be unable to keep his appointment with her that evening. It hurt him to do it, something hideous. But duty was duty.

Miss Williams was cold. Very cold. After she'd hung up, Corporal Jones relieved himself of a few more adjectives. In hell, at that moment, Sergeant Wallace wouldn't have stood the chances of a dropped snowball.

THE Thompson X-YP-101 (which meant, in code, Thompson Aircraft Company's Experimental Pursuit Interceptor, Model 101) was the latest thing. She was powered by two 2,000-h.p. radial engines, had a speed and rate of climb so fast that headquarters wouldn't release it, and was reputed to be the most heavily armed and armored ship of her type in the world. She was the first experimental model of her type, and as such had just been accepted by the Army for quantity production. She was now getting service tests to iron out the bugs in her, so that necessary changes in her structure could be made. They wanted more ships like her pretty badly, to help win the war.

When Jones got down to the special repairs section, the X-YP-101 was squatting in the center of the cement floor, propped up on handling dollies. Her damaged right wing was off, and mechanics were already tearing it down to see what parts had to be replaced; and her right propeller, with its bent blade, was being dismantled. . . . Major Reynolds, her pilot, Captain Riley and Sergeant Wallace were bending over a workbench, on which lay the right-hand landing-gear retracting cylinder. . . . As Corporal Jones came up, Captain Riley said, "Oh, there you are, Jones!" He was a short, slim man, who was ordinarily easy and pleasant in his manner; but now, Jones noted that he looked worried.

"We've a problem here, Corporal," he said. "This ship must be tested and ready to go out no later than Monday morning; and it's up to us to do the job."

"Yes, sir," said Corporal Jones. He waited.

"Ordinarily," continued the captain, "that would present no problem at all, but in this case—dealing with an experimental model ship—we're going to have some trouble. I'm depending on you, Corporal, to get all necessary replacement parts for us."

Jones said, "I'll do my best, sir." He took the paper, and glanced sidewise at Wallace, who was standing slightly behind the captain. Wallace had a fatuous smirk on his face, and was gazing innocently at the landing-gear cylinder on the workbench.

"I'd welcome this test under ordinary circumstances," continued the captain. "It's the sort of thing that will be happening frequently under combat conditions with, of course, this difference: On standard service equipment we would have replacement parts available, and we could even use interchangeable parts from other damaged ships. Here, we can't do that. This plane's the only one of her kind."

"Yes, sir," said Jones again.

"I've given orders to the message center that you have authority to handle any matters pertaining to this affair. I want a full set of blueprints for all parts on this list flown here today from Thompson in Los Angeles, by special plane. Wherever possible, they are to send us duplicate parts. They will also inform us by telephone if any parts on this list cannot be furnished. The propeller will be straightened and balanced in our own propeller shop, but all other parts are your responsibility. You will report directly to me. Any questions?"

"No, sir," said Corporal Jones.

Major Reynolds spoke for the first time: "I'd lay particular stress on this cracked casting, Captain. You're liable to have trouble there."

"Yes, sir," said Captain Riley. "You'll emphasize that casting, Jones. If Thompson hasn't a finished part, tell them to send along their spare casting. They always make an extra one on experimental work, and we'll have it machined up here."

Major Reynolds looked at the casting on the bench, and frowned. "It's a shame," he said. "This casting is practically identical with the one on Thompson's P-275! The P-275 is steel, of

"I see," said the captain. "Well, that's that." He turned to Jones. "You've got the setup, Corporal?"

"Yes, sir," answered Jones.

"Let me know immediately if you run into any difficulty."

"Yes, sir," said Jones. He saluted, and departed.

THE casting was what stopped them. Otherwise everything was fine. Jones determined by telephone that Thompson Aircraft had an extra set of formed, sheet-metal parts that could be used to repair the wing. But they didn't have a casting for the right-hand landing-gear retracting cylinder. . . . Yes, they'd had two blanks cast to begin with, but a machinist had ruined one on his first attempt to make the part. . . . Where was the die for the casting? . . . Why, it was in San Francisco, at the Alcast Company. . . .

Jones thanked them for the information, got their assurance that the parts would be on their way north within the hour—it was then 4:15 P. M.—and went back to report to the captain.

The casting was lying on the bench. . . . It was made of aluminum alloy, and was about four inches long, and three in diameter. It was in the shape of a cup;

followed them. The sergeant's eyes were glued on the rag in Dupont's hands. . . . Hastily, in the best military manner, he created a diversion. "The casting die is in San Francisco, sir," he said quickly. "At the Alcast Company. Couldn't we save time by having a couple of raw castings made up? With the Captain's permission, I could go down there tonight. They're on twenty-four-hour shift; and if they ran the casting tonight, I could have it here in the morning."

The captain snapped his fingers. "That's the answer, Corporal! Leave at once. You'll take a car from the pool. I'll phone Alcast's general manager myself and have them get started right away! You'll stay on them, and see the job is completed by morning."

"Yes, sir!" said Jones. He shot Sergeant Wallace a triumphant look. The sergeant glowered. . . .

But triumph was brief. The captain snapped his fingers again. "Wait a minute, Jones! I'd forgotten something. You're up on this office detail. I'll need you around when those parts and prints come in from the south. I'll have to send someone else. It'll have to be a good man, of course. Someone who can make certain we get the right castings and who'll push the job through for us. Can you suggest anyone?"

Sergeant Wallace gave a discreditable cough. "Sir, I could go. I won't be needed here until we start to install the propeller and landing gear. The civilian night foreman can handle the rest of the job, sir."

THE captain raised an eyebrow at him. "It seems to me there're a lot of people around here who are very anxious to get to the city tonight. However go ahead, Jones, let me know the minute that ship gets in from L.A."

They left Jones there, with his teeth clenched, muttering imprecations about Sergeant Wallace's forebears. . . . He had completely forgotten Dupont when the Frenchman said, "Of what great importance is this casting, *mon ami*?"

Jones told him.

"Ah!" said Dupont. "*Quel dommage*! And because of this accident, you do not get to see your girl tonight?"

"That's right," said Jones. "I do not get to see my girl."

"Ho, ho!" said Dupont. "I begin to understand. This Wallace knows your girl also?"

"Yeah," said Jones, savagely. "He knows her!"

"And tonight, perhaps, while he is waiting for the casting—?"

"Yeah," said Jones, even more savagely. "Tonight while he's waiting for the casting, he'll be dancing with her."

The Frenchman gave a lugubrious sigh. "It is life," he said dramatically. "It plays many tricks with those who are in love." He shrugged. "But, no matter, my boy. Be of good heart. Perhaps we can do something." He cocked his head at Jones. "You have not forgotten you promised to bring me more rags?"

Corporal Jones did not answer. He went rapidly away from there, with Dupont calling after him. "Eh! Jones! Jones! Come back! I have something to say!" Jones didn't come back.

THE transport from the south got in at seven P. M. It carried a set of sheet-metal repair parts for the X-YP's wing and a blueprint of the cracked cylinder casting. Corporal Jones supervised the unloading and had Yardbird put the parts on a parts truck for transportation to the special repairs floor. Then he phoned Captain Riley.

The captain's voice sounded glum. Jones knew why. The wing repair at the propeller were in the bag. The casting, though, was something else. Even with Sergeant Wallace's raw casting work from, it would take five or six

course, and this one's aluminum alloy, but otherwise there's little difference between them. Unfortunately, the P-275 casting is about one-eighth inch longer. Just enough so that the head of it won't clear the landing gear support bulkhead in the wing."

"Couldn't we turn down the flange of the steel casting one-eighth inch, sir?" inquired the captain. "We've plenty of them in stock. It would fit, then; and chrome moly steel has so much greater strength that I'd think it would more than compensate for the material we took off. After all, this flange on the aluminum alloy casting isn't a great deal over a quarter-inch thick."

THE major laughed and shook his head. "You'd think that, wouldn't you? But it won't work. The two materials are entirely different in quality. The steel's much stronger, as you say. There wouldn't be any actual failure, because it doesn't crack like aluminum alloy. But that's just the reason it won't work. Chrome moly is flexible. When you pulled the flange up tight with the hold-down bolts, it would give slightly, and you'd have ripples all the way around it. It would leak oil. It requires the full quarter-inch thickness to get a tight joint. . . . No, Captain, we can't do that. No more than we can take a chance on welding the crack in the aluminum alloy casting."

and had a quarter-inch flange at its bottom, with recessed holes for twelve retention bolts. In its top was another threaded hole from which the hydraulic line led into the retracting strut. Altogether, thought Jones, one of the fanciest little gadgets he'd ever beheld.

"If the Captain will permit a suggestion, sir," he said politely, "perhaps the Frenchman could make one of these out of bar stock."

"H'm!" said the captain. "Good idea—let's go see!"

Dupont was standing surlily by his lathe with his arms folded.

The captain handed him the cracked casting. "How long would it take you to hog one of these out of bar stock?"

The Frenchman held the casting up. Sensing the drama of the moment, he examined the piece of metal carefully from all angles for a matter of two minutes—meanwhile pursing his lips and frowning, and occasionally saying, "Ah!" . . . Finally, he laid the casting on his workbench and wiped his hands on a fresh piece of cloth.

"Twenty-four hours," he said with dignity. "Thirty-six. Perhaps more. Who knows? It is a work of the most difficult, *M'sieu!*" He turned his back on the captain, pulled the lathe-cutter off his work, and wiped his hands again.

Jones had a sudden horrible thought, and shot a look at Sergeant Wallace. He was suddenly sorry the sergeant had

Chas. Lindbergh

YES—COMBAT TIRES! Even an anti-tank gun won't put these Goodyear combat tires out of action. They're used on military vehicles.

It puts the finger on U-boats *...fathoms deep!*

In this nation's battle for the freedom of the seas, no ship performs a more unique and vital duty than the non-rigid airship—the familiar Goodyear “blimp.” Its specialty is spotting submarines and mines.

The blimp's great advantage is that it can fly slow enough to see a raider lurking as deep as 90 feet below the sea; then hover motionless to drop its depth charges with bull's-eye certainty.

Today the Navy is operating new squadrons of Goodyear-built blimps over our sea lanes and in shore patrol. These new air scouts are the largest ever built. They can cruise for thousands of miles, stay aloft for days without refueling—their gasoline consumption is so low.

Our ability to produce these ships quickly and in larger size than ever before is due to Goodyear's years of pioneering in *all* branches of aeronautics. Since the last war proved the effectiveness of blimps in shore patrol, Goodyear built, maintained and operated its own fleet of airships—to be in readiness for just such an emergency as confronts the nation today.

Similarly in many new products we are now building to speed victory, ranging from bomber wings to combat tires for military vehicles, we are pioneering new advances in construction and design that will benefit the public when times return to normal. Goodyear is building for tomorrow—today!

BUYER YELLS WHEN BRIAR SMELLS

—but Salesman Sam is out of the dog house now!

"GIVE YOU AN ORDER? Don't make me choke! I wouldn't trust a man who smokes such devilish tobacco! The only order I'll give you is: Take that stinky pipe out of here fast!"

WHAM WENT THE DOOR! "Was the old dear cross with you?" smiled the sweet young thing at the desk. "Cross? Say, he darn near threw both telephones at me and my favorite pipe!"

"YOUR PIPE GOT HIM, EH? Then why don't you try some of his brand? He makes me keep a big supply of Sir Walter on hand. He swears it's the best-smelling tobacco you can buy."

SCENT MAKES DOLLARS! Sam switched to this mild blend of burleys and the orders began to bloom! Does your pipe make friends for you? Try Sir Walter for a big success!

hours of machine work to make a finished part. And after that, it would take several hours more to inspect it, and give it anticorrosion pickling and paint. . . . Which meant that the captain could not expect to have a finished part until Sunday morning. Too late to have the ship tested and ready to fly Monday. The ship, therefore, could not possibly be ready to leave for Dayton until early in the afternoon—six hours later than G.H.Q. wanted her. . . .

"I have the casting print right here, sir," said the corporal. "Would the Captain wish to see it?"

"No," said Riley. "I wouldn't give a hang if I never saw any part of that ship again. Take it down to Dupont. And make arrangements with the personnel office to have him in on overtime tomorrow morning at seven."

"At seven, sir?" asked Corporal Jones. "Did the Captain know he was working overtime tonight for Major Andrews?"

"No," said Captain Riley, resignedly. "The Captain didn't, but I'll get hold of the major and make arrangements for the man to go home at ten o'clock. By the way, Jones, you'll have to stay on deck tonight. I'd like to have you relieved, but I've no one to replace you. Catch what sleep you can in the office. And if Wallace should get back before morning let me know immediately."

"Yes, sir," said Jones.

When the captain had hung up, Jones sighed, picked up the blueprint of the casting, and spread it out on the desk. He regarded it with extreme disfavor. "A lousy eighth of an inch," he told himself. "Otherwise, I'd be in Frisco." He had a very vivid vision of Miss Williams held in the enthusiastic arms of Sergeant Wallace while they danced at the Chinese Gardens, and he forthwith said a few more unprintables about the sergeant's antecedents. He was in the midst of this when Yardbird Mullins appeared.

"What do you want?" said Jones.

Private Mullins looked disturbed. "Listen," he said. "I know you're sore, but—it's Dupont."

"What about him?" asked Jones.

"He wants to see you," said Yardbird.

Corporal Jones' language reached a pitch of high frenzy. Yardbird listened with admiration. "Just the same," he said, when Jones had finished, "I think you better see him. He's talking maybe worse than you. In French. But he told me, in English, he ain't gonna do another thing till he does see you."

JONES got up from the desk, folded the blueprint, and went down to the machine shop. Dupont was standing beside his lathe. His arms were folded. Quite obviously, he was on strike again. When he saw Jones, however, his face broke into a smile.

"At last, you have come!" he said with drama.

"Yeah," said Jones. "What do you want?"

"Moi?" said Dupont. He threw his hands at the roof. "If it were not youth, I would not be so patient. Ah, youth and love!"

"What do you want?" said Corporal Jones grimly. "Listen, I've had just about all I can—"

The Frenchman gave a shrug. It was a fine shrug. It expressed futility. "My boy!" he said. "It is only that I am attempting to help. This casting . . . for a moment I became enraged. That, of course, is because of the captain. The captain was not polite. So I told myself, 'Jean, we will say no more.' Ah, but then, I am thinking about you, and your girl. Then I say, 'Jean, such a thing cannot be allowed to occur.'"

"What are you talking about?" asked Jones.

"What am I talking about? It is I have the solution to the casting." I turned to his workbench, opened a drawer, and pulled out a piece of metal. He showed it to Jones.

Jones recognized it. It was one of chrome moly castings that fitted on P-275. "So what?" he asked.

The Frenchman was bidding his time. There was a holy look in his eyes. "on," Jones said.

"It is because of the rags," said Dupont. "Myself, I am an old man. you, you are young. When I hear you are to have a night with your girl, I am glad, for it is only you who bring me the rags. Then comes the captain and for a little moment, I—I am myself. But behold, my boy—I have done it for you! The top of this casting non? You see?"

Jones looked at the casting. In an ordinarily smooth surface of it, there was a dimple. As if a giant thumb had been pushed into it. The dimple was about half an inch deep, and it was precisely the spot that the P-275 casting would contact the support structure of the wing. For a moment, he didn't understand. Then he smiled. He looked at Dupont. The Frenchman was smiling too.

"Why, you old son of a gun!" said Jones. "You mean this thing will fit X-YP?"

"My boy," said Dupont, with great dignity, "I guarantee it with my life. His brow clouded. "But the rags—I will not forget the rags?"

Jones grinned. "You're gonna have rags, Frenchy, if I personally have to buy you a bolt of pink satin. . . ."

CAPTAIN RILEY was asleep. His feet were propped up on his desk and his mouth was open. Jones touched him on the shoulder. The captain woke up.

"It's Jones, sir," said Jones. Hastily he added, "I've got a casting here that will work, sir."

The captain was instantly awake. "Where did you get it?"

"Sir, Frenchy—I mean, Dupont made it for me. Sir, the Captain remember that the major said this afternoon that chrome moly was flexible. Frenchy—I mean Dupont—took a hammer and made a dent in it. It'll do the support fitting now, sir."

Captain Riley looked at the casting. He said, "Splendid!" He handed the casting back to Jones. "Get Wallace back to me. Right away. Have him in this in the ship."

"Sir," said Corporal Jones, "the sergeant is in San Francisco."

"I forgot," said the captain. "So is!"

"Sir," said Corporal Jones, "if I were to give me permission, I believe I could locate him down there. Suggest that the captain detail a plane to fly to San Francisco, to bring the sergeant back."

Captain Riley looked at him for a moment, then he said: "We'll do just that, Jones." He laughed. "I believe I state earlier this evening that there were quite a number of people around here who seem to be in an almighty hurry to get down to the city. You, however, seem to have earned it. Be out on the airport in ten minutes. You'll send Sergeant Wallace back. I'll have a ship ready for you."

"Yes, sir," said Corporal Jones. The war was looking up.

"And," added the captain, "be darn sure you're back here by Tuesday morning. . . . By the way, is she a blonde, Corporal?"

"Yes, sir!" said Corporal Jones. He was thinking, "I'll have just time to get down to Wallace's quarters. My friend Dupont will need that other sheet of the week end."

The Way Back

Continued from page 18

life. He thought Jane hated it in equal hate, and he felt ashamed she looked at him and smiled and as if it were really all right and just she wanted.

"I'll advertise in the local papers," he said. "I'll see about that first thing morning. And there's his license collar. We'll get him back."

"I'll see about that first thing morning. And there's his license collar. We'll get him back," she said. She smiled again. "I'll see about that first thing morning. And there's his license collar. We'll get him back."

"I'll see about that first thing morning. And there's his license collar. We'll get him back," she said. So they had a sandwich sitting at an oilcloth-covered table in a room thick with the smell of the cooking oil stored in one corner.

The dog missed them because he had the highway. He had come to a narrow wagon road went off through the tall trees. He stopped, sniffing the air, indecisive, wondering. Then the dog came again, clear, indubitable. He followed the road up a hill and there was a meadow with a brook. He drank of the clear water for a time. Then he took to the road and followed it at a steady, enervating trot, along the edge of a ravine. Once more the road dipped and he was in another, smaller valley, freed from the winds. He wanted to go on, but another order came—he must rest and be strong for the morning. It was dark and late. He went into the brush, turned about a half-dozen times and lay down, his muzzle snug between his forepaws, his body bent in a semicircle. He had his back to a tree, and he slept.

The morning he felt hunger for the time. He drank from a pool, then he looked about for food. He nibbled berries and spat them out. He saw a rabbit and pursued and lost it. He turned to the road and trotted on.

That night, Taylor didn't sleep, though the bed was comfortable enough. He lay, wanting to move and not moving, as not to disturb her. He knew she was doing the same thing—not moving, just lying still, controlling her nerves for his sake.

He thought it all through again—because there was nothing else to think of, not because it could possibly be good. And again for the thousandth time he came to the same inevitable conclusion: He was through. He was

broke. And there was nothing left for him.

He remembered the talk with Claridge. The long office with the hand-carved desk, the view of the river where the shipyards were now working twenty-four hours a day, the air of opulence and money. He had made the trip for this, spending money he could not afford, and he had been sorry for it as soon as he had entered the office, before a word had been spoken. Claridge, in his fine flannel suit, standing up and smiling, his hand outstretched—and in his eyes the certain question.

Taylor remembered with shame the first thing he had said: "How are you, Jack? I'll come to the point—I'm one of the boys the war boom seems to have passed by. The truth is, between those priorities and what's happened to the foreign markets, I'm squeezed thin as paper." He had been very hearty about it, as if it were quite a joke—a harsh joke, but a joke, nevertheless. And Claridge had smiled too; Taylor had known at once what that smile meant. He wondered, now, how many times he had heard similar stories before.

It was no longer possible to lie in bed, and he got up. Jane turned at once, looking at him with eyes which had no brightness at all. She said, "I don't see how people can sleep outside of their own beds. I never could."

"I'm the same way." He thought that it was almost as if two casual acquaintances were talking.

He dressed and sat in a chair while she made coffee on the stove that had one dead burner. The coffee tasted good; he drank two and a half cups of it steaming hot, and then the pot was empty.

"About Jinx," he said then, "I can find out from this fellow here what papers to advertise in. I can telephone them."

Her eyes were completely expressionless when she looked at him now. He knew precisely what she felt. The loss of the dog was the greatest thing in their lives. It was something neither of them could talk about. It had taken on a cruel symbolism, out of all reason to its real importance. They had to get the dog back.

He made the calls, telling each paper that he was mailing the money for the ads. He knew while he was doing this that it was useless; all but one of the papers were weeklies, which would not publish for days. But it had to be done.

When he returned to the cabin she was ready, the bags packed. "We might go to Olneyville and back again," he said. "Before we go on. Just in case."

"We should do that," she said.

Going out to the car she put her hand

and a HALF DONE overhaul won't stop Oil Pumping—
Replace Worn Engine Bearings!

WHEN YOUR CAR pumps oil, don't split the overhaul job and do just half of it—because new piston rings alone can't cure motor-fouling oil waste caused by worn connecting rod bearings.

Worn connecting rod bearings let excess oil flood the cylinders and combustion chambers, fouling the best of new piston rings with carbon, fouling the spark plugs and valves, too, so that the engine demands more and more gas and oil to operate. Soon the worn bearings also lose their protective oil cushion, make metal-to-metal contact with the crankshaft and collapse, causing even more costly damage.

Your car has to last for the duration—help it give you peak performance, help the national war on waste by eliminating wasteful oil pumping. Have the engine overhauled right and do it right now—replace those worn bearings with a set of Federal-Mogul Oil-Control Bearings to restore power, pep and economy for the long run!

FEDERAL-MOGUL CORP., DETROIT, MICH.

Worn Engine Bearings Cause Oil Pumping!

REPLACE WITH GENUINE
FEDERAL Mogul
OIL-CONTROL BEARINGS

FOR VICTORY

Anti-aircraft guns, mortars, gun mounts, gun carriers are but a few defense units equipped with Federal-Mogul bearings and other precision parts. Federal-Mogul's expanded factories are on 24-hour production of bearings and precision parts for planes, tanks, boats, trucks, motorcycles, for defense—and bearings to service the millions of automobiles carrying armament workers and materials to their jobs!

GIVES YOUR ENGINE AN EXTRA MARGIN OF SAFETY

on his arm. "That offer Mr. Claridge made you, Don—it might be—"

She stopped in midsentence of her own accord. They had been over this before. He didn't answer. What it amounted to was a clerkship. Claridge had been very kind. Too kind. "It's this way, Bob. You've got to learn. After all, it's a new kind of business to you. In this job you'll get an idea of all the phases of it. Find out what you're best adapted for. And in time—well, there's no telling what might turn up. If you were ready."

He smiled. He was forty-five years old. In middle age. It was that phrase—"in time"—how much time? How much? He had been his own boss almost all his life, and he had made good money. And now—

He put the bags in the car. He slid in behind the wheel and started the motor, watching for the temperature gauge to show that it was warming up. He knew what the end would probably be. What it had to be.

THE dog had lost all sense of time. He did not know how many times he had slept hidden in brush by a roadside, or how many times he had sought for food—usually in garbage dumps. He was aware that now the character of the country was changing. The trees were smaller and fewer, their branches thick with dust. The sun's heat was intense. And the ground was no longer soft and cool and yielding. It was hot and dry and sandy, and it hurt his pads.

He no longer hid when cars went by. He had no energy to waste. He trotted on, looking to neither side. Occasionally cars stopped and people called to him. He paid them no attention unless they approached. Then he dodged away and always they left him alone.

At last the trees were behind him. He was in a flat country where the air was thin and clear, and the heat was still increasing. There was no vegetable life save for small gray bushes, scattered in clumps at wide intervals. The dog's tongue lolled out of his mouth and he felt hunger and thirst. Then the hunger was forgotten and there was only the desire for water. Even the hurt of his pads was forgotten, so great was his longing for water.

The dog's breathing was raucous when he came to the house with the high, peaked roof and the long, covered porch. He approached it slowly, sniffing the air for the miraculous scent of water.

A small boy came from the house. He ran toward the dog. The dog stood his ground, growling low in his throat. The boy stopped and cried, "Mother—dog!"

A woman appeared then and the dog eyed her, the hair on his back standing straight up. The woman said, "Don't go near him, Bill." And then, "He's thirsty. Terribly thirsty."

She went back into the house and the dog waited. When she returned she carried a pan of water. She put it on the ground and withdrew a dozen steps.

The dog drank his fill, watching them. When he was done his hunger came back. He lifted his head and looked at her.

"He's hungry, too," the woman said.

Again the dog waited. This time she brought him a plate of food—bread crusts, cooked vegetables, even some meat. He ate it all. And now his hunger and his thirst were ended and he felt deeply the pain in his pads.

The woman approached him slowly. She held out her hand. He liked her smell. It was a good smell, a kind and friendly smell. He knew that if he stayed he would be given a place to sleep. And tomorrow more food and all the water he wanted.

"Here, boy," the woman said gently.

But the dog looked at her once, then turned and trotted off. The woman did

not call after him. He looked back as he reached the road again. She was standing watching him, the boy by his side.

THE Taylors had been home days now and it had been five since they had lost Jinx. At least of the papers in which they had advertised had been published, but there had been no word.

They did not speak of the dog more. Taylor had gathered up the bare evidences of him—the hard ball, the other leash, the ancient rowbones—and put them out of sight.

Taylor sat at his desk, looking over a pile of meaningless mail—advertisements, letters from relatives, and, most astonishing and ironic of all, an offer from an old business associate he had not seen for years, a man he would be interested in a deal in British Columbia—"We will keep this in only a few hands—some men who will put up ten thousand apiece. Of course, it's completely speculative, but the engineer's report is immensely encouraging and—"

Once, he thought, he would have felt that.

Jane came in and sat on the bed and asked for a cigarette. She looked neat and well dressed and tired. "You written Mr. Claridge?"

He shook his head. "Not yet. There's no great hurry—he told me that tomorrow, maybe."

He stood up then and said, "Jane—yes?"

"The point is, when you hate a man when you know you aren't up to it, when you know you're going to flop—" He stopped short. "I guess you're old as I am you haven't got guts any more. You haven't got what it takes. It's just too terribly hard rather clerk in a department store—there's no chance of ever being anything else, no faint hope of rising to something better to prey on your mind... stopped again."

She was looking at him and there was something in her eyes that made him turn quickly away. A question—a question—a wonder? It could be a question, or none.

He said, "I'm sorry and all that—that's the way it is."

"I know," she said. Now even the ticking of the clock was loud and pleasant in his ears.

THE dog had left the desert behind. He had ended suddenly—there had been the eternal plains of sand, cactus bunch grass; then, an hour later, coolness and the shelter of the firm. He went very slowly now. His pads were raw and even when he licked them it did little good. His coat was dirty and matted, and his flanks were thin. The dog went his way with head down, wanting to stop, to surrender completely to weariness, the strange thing inside him still and it drove him on.

It had been a day and a night since he had eaten anything at all, and a day since he had drunk water.

He looked up when the car stopped and a man's voice called to him. He stood hesitating, watching the door of the car open and the man step out. He wanted to go to him. There would be water. And after that there would be food. There would be rest and his hands would tend his pads. He returned to the full now his dependence on people. All of them were powerful. Most of them were good.

The man's voice was kind and he went toward him slowly, hand outstretched. Suddenly the man turned and fled. He put a hundred yards between himself and the road, crouched against the ground. Soon

rd he heard the car drive off. He lay
re a long time, and now he felt only
eliness. It went even beyond thirst,
yond hunger, beyond pain. They
uld have cared for him. There would
ve been food and water and the touch
gentle hands. Only, it was not pos-
le for him.

The dog rose and it was a minute be-
e he felt strong enough to go on. He
ted down the lines of trees to the
hway and turned west.

OR the second time, Taylor read the
letter. He had shown it to Jane; he
1 waited for her opinion. She had said

1 seen through the flimsy camouflage.
y man of reasonable astuteness,
aylor knew, could have done that. He
1 been almost as transparent as a
tch crystal. A man who was desper-
and frightened, trying to be non-
ulant. He looked back upon it and
pised himself.

ane had left the room. He heard her
he kitchen, preparing lunch. He had
answer Claridge, of course. After all,
t had been mighty decent. He had
tten first when he didn't have to,
en the obligation and the duty were
the other way. And there was only
e answer. Taylor had, at least, to be
rest. It was almost the last luxury
had left. He couldn't accept. As for
future—well, there were always jobs
a sort.

He leaned back in the chair and closed
his eyes. He opened them suddenly—he
1 heard the soft sound of a dog's feet
entering the room. But the room was
empty.

He closed his eyes again, and now
he could not rid himself of the pic-
ture of Jinx. They had trained them-
selves not to speak of him and, in theory,
not to think of him. That, too, they had
told themselves, was a closed episode.
Et now, in his mind, he saw the dog
with all the clarity and color of life.

JINX stood on the hilltop, looking down.
His muzzle quivered as he drank in
the scents that were both new and old.
Again the country had changed—there
were fields where the earth was deep and
fragrant, broken by stands of fir. The
dog remembered. He stood trembling,
while his mind went back along the eight
eternal years of his life. He knew that
it was all here, in the scents borne by
the small wind, but the details were not
plain. He knew he had been often in a
country like this, but the how and the
why of it escaped him. The dog stood
still a long time drinking in the air.

He had found water and his thirst was
satisfied. He had found some food, but
not enough. His coat was staring and the
dog stood out stark against it. Long
since he had taken for granted the great
pain that began in his pads and ran
through his body—taken it for a thing
inevitable and certain, for which nothing
could be done. When he licked his pads
his tongue always tasted blood, and now
he took that for granted, too.

The dog lay down for a little while.
Then he rose and shook himself. He
went to a small stream and drank again.
He drank more than he wanted, storing
the water up against emergency. For the
hundredth time he returned to the high-
way and turned west. The thing inside
him, that drove him on, had lost none
of its power. And now in this new coun-
try that was old, the dog went faster. . .
Taylor tore the letter up. He

dropped the pieces into the waste-
basket. He walked up and down the
room and smoked a cigarette that had
no taste, and sat down at the desk again.
It should be such an easy letter to write,
he thought. He would say he wished
matters might be otherwise, and he
would politely refuse. A very simple
letter. . .

It was then he heard it—the scratch
on the door. And that was no doubt
imagination, too, like the time he had
thought he had heard a dog's feet on
the rug. He heard Jane leaving the
kitchen and going down the hallway.

It wasn't imagination, then. Prob-
ably some very diffident caller. Or
maybe even a dog that had lost its way
and had turned in desperation to a door,
any door. He hoped Jinx had done that.
And had found a good home. It was
sentimental and silly, of course, but he
felt it deeply.

He heard the latch click as Jane
opened the door. Then her voice, high-
pitched: "Don! It's Jinx!"

HE WAS on his feet then, running. And
he was on his knees, his arm under
the dog, half lifting him. There were red
smears on the light hall carpet, and there
was the touch of the dog's lank tongue
on his hand. There were the staring coat
and the pitifully thin flanks. And there
was more than that—the sight and
knowledge of the dog's courage, the
dog's determination.

"Good fellow, Jinx—good, good fellow
—why, he's starved, Jane! Get him some
food—wait a minute, we'll have to feed
him slowly at first. He's almost done
in!" Always the dog's eyes looking at
him, bright and grateful and happy, the
whites bloodshot.

He needed bathing and brushing, but
that would wait. They fed him and gave
him water and he ate and drank. Be-
tween each mouthful he lifted his head
and looked at both of them. It was as if
he wanted to be certain again and again
that they were really there.

They didn't talk until the dog was
lying in his usual spot before the fire-
place. Taylor sat down, feeling uneasy,
and played with a cigarette he never
lighted. He said, "It's the strangest thing
I ever heard of. He came almost a
thousand miles. And some of that's the
toughest on the continent. No water,
nothing to eat—you can drive fifty miles
without seeing a house in places. At his
age. He's eight years old."

"At his age," she said. It was very
quiet in the room.

He looked at her and she was smiling
faintly. He smiled, too, and it was all
fixed now, and it had been the only thing
to do from the beginning but he had been
too blind and stupid to see it. It was
clear and at the same time confused in
detail, but there were no two ways about
it. It was bound up with a dog's courage
and stubbornness and with the knowl-
edge that beings of flesh and blood could
at times do more than it was possible to
do. And it was something more than
that still, but he hadn't quite figured it
out in his mind.

Jane said, "Have you written Mr.
Claridge?"

He looked her straight in the eyes and
thought that this was the first time in
weeks he had been able to do that. He
said, "I'll do it tonight and mail it in
the morning. You can start packing
whenever you want."

He stood up and went toward the desk.
He leaned down and ran his hands gently
over the dog's long, relaxed body. Jinx
opened his eyes and stared up at him
and his tail thumped the floor. Taylor
went to the desk and got paper out
of the drawer and unscrewed the cap
from his fountain pen. He wrote, quickly
and firmly: "Dear Jack." There wasn't
any problem at all about what to say.
The letter seemed to write itself.

April showers awaken flowers . . .
but Briggs' choice golden tobaccos
sleep on undisturbed
in fragrant casks of oak,
season after season, until all harshness
turns to bite-free mellowness.

Briggs is cask-mellowed for years
. . . (longer than many luxury-priced
blends) . . . to create a miracle
of rare flavor . . .
a supreme pipe treat
for only 15¢
a tin.

CASK-MELLOWED EXTRA LONG FOR EXTRA FLAVOR

BOWL ON THE SAME CHAMPIONSHIP EQUIPMENT USED AT THE A.B.C.!

Over 30,000 stars—the pick of America's 16,000,000 bowlers—gather at Columbus, Ohio, to compete for over \$250,000.00 in prizes at the 42nd Annual Tournament of the American Bowling Congress. They will again roll on Brunswick Centennial Equipment—the championship equipment used at A.B.C. International Tournaments for over 40 years.

NATIONAL MATCH GAME CHAMPION, NED DAY, holder of the record A.B.C. ten-year average of 204.23, takes you on a personally conducted tour of the A.B.C. equipment on which the championships will be decided.

"This new, streamlined Brunswick Centennial Masking Unit," says Ned, "hides the pin boy from view, eliminates the distracting background. Brilliant, glareless illumination spotlights the famous Brunswick King Pins for championship accuracy."

"... the Brunswick precision pinsetter, fastest and most accurate ever designed, assures maximum pleasure and tournament scores because bowling is more rapid and pins are faultlessly spotted."

Columbus, Ohio, March 3—The opening squad roll their first ball in the 42nd Annual A.B.C. Tournament before a crowd of 2500 bowling enthusiasts and officials.

You Too

CAN ENJOY GREATER BOWLING PLEASURE ON BRUNSWICK Centennial EQUIPMENT

As you read these words, the 42nd National Tournament of the American Bowling Congress—world's greatest bowling event—is in thunderous action. Thousands of bowling balls propelled by thousands of sturdy American arms are writing bowling history.

The equipment used in this great annual event is the famous new Centennial—Brunswick, of course—as the A.B.C. National Tournament choice has been for over 40 years. It isn't equipment built better for this one special event. It isn't something that only tournament bowlers can enjoy. Every day,

bowlers in all sections of the country are bowling on the same fine Brunswick championship equipment—designed by bowlers for bowlers.

Stop in at your nearest Brunswick Centennial establishment tonight. Enjoy its new comfort, new convenience, new colorful streamlined beauty. Have more fun and bowl better scores where pins are rapidly and accurately set, where you and your fellow bowlers can relax comfortably between frames. And you'll have the satisfaction of howling on the same equipment chosen for the world's most important championship competition.

★ ★ ★ LOOK FOR THE RED  CROWN WHEN YOU BOWL

"... The new Brunswick Octagonal seating arrangement provides convenience, privacy and comfort for that all-important relaxation between frames."

"... and here is the new Safe-T Ball Return—latest 1942 innovation completing the over-all beauty and design of new Brunswick championship installations. Select the finest when you bowl."

Our Fighting Men

SALT LAKE ARMY AIR BASE. The War Department thought maybe a combination parachutist and skier would make a practical soldier, but the question was whether he could be supplied and could function effectively in snow-covered mountain country. After going through a 60-day experimental period (ending March 1st) in the Wasatch Mountains near here with a parachute outfit, Detachment Commander Capt. A. F. Giam reported the idea a success. Infantrymen who had originally volunteered for the never-dull parachute service made good guinea pigs; they started from scratch and were all for trying anything. Mostly Southerners, many saw snow for the first time, yet spent days in it and even bivouacked a few nights at 10,000 feet with the mercury reading minus 50°. Only paraskiers who ever had feet were those who neglected to keep their boots in their sleeping bags at night. In the morning they resembled concrete galoshes.

After learning to ski, all made sky jumps except those in the hospital with fractures and sprains. Paraskiers don't carry their skis down with them. These are ski repair materials, weapons, rations, extra clothing and other stuff, attached to brightly colored chutes, are shoved out of the ship first. The soldiers follow, guiding their descent so they'll land near the equipment. In the high altitude they found they fell faster and experienced more difficulty in controlling the chutes, but landing in deep snow was pretty soft compared to the bare ground of the parachute school. The paraskier's pack isn't standard yet, although they know they can carry up to 80 pounds, including a pair of small snowshoes for reaching their equipment after they plunk down into three to six feet of snow. It's up to the air support to hurl sleeping bags, gasoline stoves and short-wave radios from the air after the boys have landed. The ski-sky troops wear reversible uniforms, white on one side for snow camouflage and o.d. on the other for work in forested terrain.

Like any Army bunch tackling something new the flying snowbirds cooked up a dish of slang so they wouldn't have to call a ski a ski. "Torture boards" they called them. Spilling by running into a frozen ski tracks was "Hitting the switch." Instead of using the regular term "Track" for "Clear the way," the boys yelled "Timber-r-r-r!" And when a soldier slipped in a cloud of snow his pals yelled "Powder div." If the guy answered "Let 'er buck," the medical detachment was told not to bother hauling out the stretcher this time.

COWEN FIELD, Idaho. Purpose of the Screwball Inventors club here is to foster little ideas for getting the pants off the enemy. Staff Sgt. Clayton Sprungman became eligible with his plan for a submarine which couldn't be spotted from the air and Sgt. Alva Knowles made the grade by whipping up a ship-saving device consisting of big tanks of compressed helium which would inflate a balloon and all but make a dirigible out of a torpedoed boat. We trust the Navy won't object to our spilling this.

WOLD-CHAMBERLAIN FIELD, Minnesota. Personnel of the Naval Reserve Aviation base here would like to arrange a three-way huddle between its officers, Walt Disney and the weatherman, because . . .

When Disney was asked to design an insignia for the station he took stock of the geographical factors. "They're Navy fliers," mused the maestro of the mouse, "yet they've been set down about as far from an ocean as they could be and still be in the United States. And they're up North where their ships will have to land on skis in winter." Having reasoned this Mr. Disney gave out with a penguin, soaring through the air on skis and wearing a little white air hat. The future Navy fliers were very pleased indeed. Then the weatherman fell down on them. All winter the ground was bare more than half the time, and what snow fell wasn't deep enough to interfere with ships on wheels; so the only place Mr. Penguin got frosty all season was around his picture on the sides of glasses in the Officers' Mess and Ward Room.

TANK GUNNERS. Men in the Gunnery Dept. at Ft. Knox, Ky., practice marksmanship with an electric-eye gun before going out on the range. U. S. now has seven armored divisions

Armored Force School Men are given their "land legs" by learning to sight and fire guns while standing on "wobble plates" which simulate the jiggle of a tank in motion

The Gunnery Dept. practices economy in target shooting by loading 37-m.m. shells (\$4.35) with .22-cal. cartridges (less than a cent each)

The old lady stood looking at her with almost affectionate interest. "Do you not wonder how I came here?" Elaine asked

China Gold

By Pearl S. Buck

ILLUSTRATED BY MARTHA SAWYERS

The Story Thus Far:

ONLY and restless following the death of her mother—"the richest woman in the world"—Elaine Brian secretly leaves New York City and goes to China. There, in the Japanese-held city of Ta-ming, she finds peace in assisting a priest—Father Valerian, her mother's one-time dearest friend—in his mission and hospital labors.

Two men are in love with her: Young Larch Corpran, whom she had met by chance in New York, and Father Valerian's aide, Rudolf Helgel. A third man—Elton Field, an American who lives in Shanghai—hopes to marry her for her money. His advances repelled, he thinks he may win her by trickery. So he sends her father, Paul Brian, a cablegram in which he says that Elaine is in peril and should be forced to return to America.

In New York, Brian receives the cablegram, reads it. After which, he persuades Larch Corpran to go to China for the purpose of finding Elaine and bringing her home. He tells Corpran that Elton Field will meet him in Hong Kong, take him to Ta-ming. . . . Meanwhile, Field's Eurasian mistress—Helen Kung, whom he had cast aside after meeting Elaine—has gone to Ta-ming and opened a "house of amusement." One of her girl entertainers, Mei-su, is the sister of a young Chinese guerrilla leader, Captain Siao, who, advised by Rudolf Helgel, is preparing to attack Ta-ming. Mei-su tells Helen Kung, to whom she is devoted, what Helgel and her brother are up to.

The Eurasian woman now has Helgel in her power. She proceeds to make use of him. . . . A Japanese captain visits Helen's establish-

ment, Mei-su plies him with strong wine and asks him questions. Becoming intoxicated, the captain raves about "fighting the Americans." Finally he mumbles, "We will bomb their ships—in the harbor." But, try as she will, Mei-su cannot induce him to name the harbor.

Informed by Mei-su of what the Japanese had told her, Helen wonders what she should do. She can come to no decision. . . . Early the next morning, Li-hua, her manservant, awakens her. He says, "Your big-man (meaning Elton Field) has come back. This time he has brought with him a young man—an American."

Helen gets out of bed, she washes her face in rose water, she brushes her long black hair. And all the while she is making her plans carefully.

IX

IN THE clinic Elaine looked up from a woman whose arm she was bandaging. It was one of the curious wounds that people came with these days to the hospital. She had tried by signs and by her few words of Chinese to discover what it was that had torn a gutter in a woman's soft upper arm and had left a strip of flesh hanging from the shoulder. But she had not been able to discover. She had even asked Chen, but he had only grunted. Whether he knew or not he would not tell. He had stood watching her put on the bandage

and then he had told her that Rudolf wanted to see her.

"Where is he?" Elaine asked.

"He is in the drug room, making up disinfectant."

She laughed. "He loves that job," she said. The mild affection she felt for Rudolf was warm in her voice. "I think he loves to make war at least on germs. He is still a soldier."

Chen did not laugh but she was used to his gravity, and after the woman's arm was bandaged and she had been told to come back tomorrow, Elaine went toward the drug room. There Rudolf was, a coarse white apron wrapped around his sturdy body. He was measuring liquids carefully, his lips pursed, his face red with effort. When he saw her he put down his beaker.

"Chen said you wanted me," she said.

"So I do," he replied. "Come in, please—and leave the door open, else all the Chinese will think I am making love to you."

She smiled at that and left the door open. But he did not smile even at his own little joke. Instead he stood with his back to the table where he had been working and looked upon her as she

sat down on a window sill opposite him. Outside that window she could see the flat roofs of Ta-ming and beyond the mud-colored plain, gray with coming winter. The brilliant green that stayed late through the autumn had disappeared overnight. There had been intervening autumn between green and winter gray. She would have been cold if she had not put on the sheepskin jacket that the Chinese women now wore underneath their outer robes. Over her sheepskin she had put a plain dark red silk.

"You are the only white woman I ever saw who looked well in Chinese garments," Rudolf said.

She turned her face toward him and smiled. "Is that what you wanted to know?"

But still he would not smile and when she saw that gravity she asked outright, "What is the matter with you, Rudolf?" "I want you to go away," he said thickly.

She was amazed and cried out in amazement: "Why, Rudolf—what do you—why do you—"

"It is not safe for you here," he said. (Continued on page 59)

"Gee whiz, Mr. Jessup, a DOUBLE-DECKER!"

Billy's age, in Billy's shoes, you'd be excited. His nickel is buying *twice* the amount of ice cream he expected.

You can see and smile at Billy's double-decker. There's another kind of double-decker you *can't* see, though you enjoy it every month.

Is in your electric bill—the fact that the average amount of household electricity is only about half of what it was 5 years ago.

"Wait a minute!" you say. "If the rates have been reduced that much, why hasn't my bill been cut in half?"

The answer is, of course, that you use more electricity than you used to.

While the price of electricity was going down, you were adding useful new electric appliances.

Right now, for a nickel a day, about $\frac{1}{3}$ of all American families light their homes, play their radios, run their vacuum cleaners.

For two nickels a day, about $\frac{2}{3}$ of all American families operate lights, radio, cleaner, toaster, percolator, clocks and washer.

That makes the electric nickel just about the biggest double-decker in the world!

How was it done? By good business management of the nation's electric companies. By the same planned production of power that today is turning the wheels that turn out the guns to keep America *free!*

Hard of Hearing

find new
confidence
with this new
HEARING AID

Here's why...

This new Western Electric vacuum tube Audiphone has relieved thousands of users from the tiring nervous tension of straining to hear. By helping them to hear easily, it enables them to *live fully*—to face these trying times with renewed energy and courage.

Features you'll like

Users are enthusiastic about the Ortho-
tronic Audiphone's clear, natural tonal quality—made possible by the revolutionary "Stabilized Feedback" circuit. They find they can understand speech easily even in noisy places by use of the Tone Discriminator—that the Audiphone is easy to regulate, easy to wear.

An audiometric test enables the Audiphone dealer to recommend the model best suited to your needs—either the Ortho-
tronic vacuum tube type or the Ortho-
technic carbon type. Dealers in principal cities afford you nation-wide service when away from home.

Hearing is Believing!

Hear for yourself how much the Audiphone can help you. Look under "Hearing Aids" in the Classified section of your Telephone Directory for your local Western Electric Audiphone dealer's name and address—or mail the coupon.

had the usual feeling of surprise, because Mrs. Dane Calthrop's progress resembled coursing more than walking, thus according with her startling resemblance to a greyhound, and as her eyes were always fixed on the distant horizon you felt sure that her real objective was about a mile and a half away.

"Oh!" she said. "Mr. Burton!"

She said it rather triumphantly, as someone might who had solved a particularly clever puzzle. I admitted that I was Mr. Burton and Mrs. Dane Calthrop stopped focusing on the horizon and seemed to be trying to focus on me instead.

"Now what," she said, "did I want to see you about?"

I could not help her there. She stood frowning, deeply perplexed. "Something rather nasty," she said.

"I'm sorry about that," I said, startled.

"Ah," cried Mrs. Dane Calthrop. "Anonymous letters! What's this story you've brought down here about anonymous letters?"

"I didn't bring it," I said, "it was here already."

"Nobody got any until you came, though," said Mrs. Dane Calthrop accusingly.

"But they did, Mrs. Dane Calthrop. The trouble had already started."

"Oh dear," said Mrs. Dane Calthrop. "I don't like that."

SHE stood there, her eyes absent and far away again. She said:

"I can't help feeling it's all wrong. We're not like that here. Envy, of course, and malice, and all the mean spiteful little sins—but I didn't think there was anyone who would do that. No, I really didn't. And it distresses me, you see, because I ought to know."

"Why ought you to know?" I said.

"I usually do. I've always felt that's my function. Dane preaches good sound doctrine and administers the sacraments. That's a duty of the clergy, but if you admit marriage at all for a cleric then I think his wife's duty is to know what people are feeling and thinking, even if she can't do anything about it. And I haven't the least idea whose mind is—"

She broke off, adding absently, "They are such silly letters, too."

"Have you—er—had any yourself?"

I was a little diffident of asking, but Mrs. Dane Calthrop replied perfectly naturally, her eyes opening a little wider:

"Oh, yes, two—no, three. I forget exactly what they said. Something very silly about Dane and the schoolmistress, I think. Quite absurd, because Dane has absolutely no taste for flirtation. He never has had. So lucky, being a clergyman."

"Quite," I said, "oh, quite."

"Dane would have been a saint," said Mrs. Calthrop, "if he hadn't been just a little too intellectual."

I did not feel qualified to answer this criticism, and anyway Mrs. Dane Calthrop went on, leaping back from her husband to the letters in rather a puzzling way:

"There are so many things the letters might say, but don't. That's what is so curious."

"I should hardly have thought they erred on the side of restraint," I said bitterly.

"But they don't seem to know anything. None of the real things," Mrs. Dane Calthrop said.

"You mean?"

Those fine vague eyes met mine.

"Well, of course. There's plenty of

wrongdoing here—any amount of shameful secrets. Why doesn't the writer use those?" She paused and then asked abruptly, "What did they say in your letter?"

"They suggested that my sister wasn't my sister."

"And she is?"

Mrs. Dane Calthrop asked the question with unembarrassed friendly interest.

"Certainly Joanna is my sister," I answered.

Mrs. Dane Calthrop nodded her head. "That just shows you what I mean. I dare say there are other things—"

Her clear uninterested eyes looked at me thoughtfully, and I suddenly understood why Lymstock was afraid of Mrs. Dane Calthrop.

In everybody's life there are hidden chapters which they hope may never be known. I felt that Mrs. Dane Calthrop knew them.

For once in my life, I was positively delighted when Aimée Griffith's hearty voice boomed out:

"Hullo, Maud. Glad I've just caught you. I want to suggest an alteration of date for the Sale of Work. Morning, Mr. Burton."

She went on:

"I must just pop into the grocer's and leave my order, then I'll come along to the Institute if that suits you."

"Yes, yes, that will do quite well," said Mrs. Dane Calthrop.

Aimée Griffith went into the International Stores.

Mrs. Dane Calthrop said, "Poor thing."

I was puzzled. Surely she could not be pitying Aimée!

She went on, however: "You know, Mr. Burton, I'm rather afraid—"

"About this letter business?"

"Yes, you see it means—it must mean—" She paused, lost in thought, her eyes screwed up. Then she said slowly, as one who solves a problem, "Blind hatred... yes, blind hatred. But even a blind man might stab to the

heart by pure chance. . . . And v would happen then, Mr. Burton?"

We were to know that before another day had passed.

PARTRIDGE, who enjoys calan came into Joanna's room at an hour the following morning, and told with considerable relish that Mrs. Symington had committed suicide on preceding afternoon.

Joanna, who had been lost in the of sleep, sat up in bed shocked awake.

"Oh, Partridge, how awful!"

"Awful it is, Miss. It's wicked taking your own life. Not but what was drove to it, poor soul."

Joanna had an inkling of the then. She felt rather sick.

"Not—?" Her eyes questioned Partridge and Partridge nodded.

"That's right, Miss. One of the nasty letters."

"How beastly," said Joanna. "absolutely beastly! All the same, I see why she should kill herself letter like that."

"Looks as though what was in letter was true, Miss."

"What was in it?"

But that, Partridge either couldn't wouldn't say. Joanna came in to looking white and shocked. It seemed worse, somehow, that Mrs. Symington was not the kind of person you associated with tragedy.

Joanna suggested that we might Megan to come to us for a day or Elsie Holland, she said, would be right with the children, but was the of person who would, almost certainly drive Megan half mad.

I agreed. I could imagine Elsie land uttering platitudes after platitudes and suggesting innumerable cups of A kindly creature but not the right son for Megan.

We drove down to the Symington house after breakfast. We were of us a little nervous. Our arrival looked like sheer ghoulish curiosity. Luckily we met Owen Griffith just

Just THE KISS OF THE HOPS

none of the bitterness

IN BROWN BOTTLES, IN CANS, ON DRAUGHT

That famous flavor found only in Schlitz gives you all of the fine savor of the hops with none of the harsh bitterness. Schlitz methods of brewing control capture *only* the delicate flavor of finest selected hops—then discard the hops before their bitter end-taste is reached. It costs more to produce a beer with *just* the kiss of the hops. But Schlitz spares no expense to brew America's most distinguished beer. Once you taste Schlitz you will never want to go back to a bitter beer—you'll always want SCHLITZ.

HOW TO GET THE MOST OUT OF YOUR CAR

*Helpful Wartime Suggestions
sponsored by General Motors
and General Motors Dealers*

Here's the Answer to your Questions about TAKING CARE OF YOUR CAR IN WARTIME — this Profusely Illustrated 64-page Booklet shows you How to Use your Car and How to Service It to Get the Longest Possible Life. And it's FREE — yours for the asking.

OUR entire production effort in General Motors is now concentrated on building the weapons of victory.

We are not making any new cars for your use. But, with your GM dealer, we are definitely interested in helping you get the most you can from the car you already own.

Months before Pearl Harbor, the General Motors Customer Research Staff was busy on this booklet which has that purpose.

Now that national need requires all of us to make the best possible use of our cars, this booklet earns a place alongside your First Aid manual, Civilian Defense pamphlets and other special wartime literature.

HOW'S YOUR CAR "I. Q."?

Answers to these questions represent just part of the helpful information to be obtained from this book. How many do you know?

- What are 20 things affecting gas economy?
- Does motor oil ever "wear out"?
- What is the purpose of the Octane Selector?
- What things should never be oiled or greased?
- What is the most common cause of tire failure?
- How do you make an accurate gasoline mileage test?
- Why should you "idle" a hot engine before turning off the ignition?
- What is "sludge" and how can it be prevented?

It covers everything from gasoline mileage to the care of the upholstery—it tells you how to get the maximum use from tires, batteries, brakes, clutch linings — gives hundreds of tips and you'll find mighty useful in wartime driving.

This booklet will show you how to cut the cost of operating any automobile—*whatever the make or model*—how you can

do your full part in saving time and gasoline, oil and other essential materials. Our dealers stand ready to back up its suggestions with prompt and efficient service.

It is offered to you entirely without cost and General Motors feels that it is the kind of helpful, informative manual every person now driving should have.

Ask any General Motors dealer for *your* copy today or mail coupon below.

SEE ANY GENERAL MOTORS DEALER OR MAIL THIS COUPON TODAY

Customer Research Staff,
11-222 General Motors Building, Detroit, Mich.

I would like very much to have a copy of your booklet, "The Automobile User's Guide," which I understand you offer without cost or obligation on my part. My car is a 19___ model

NOW BUILDING ARMS FOR THE NATION

it. He greeted me with warmth. "Hello, Burton, I'm glad to see you. What I was afraid would happen or later has happened. A damn-business!"

"Good morning, Dr. Griffith," said Joanna, using the voice she keeps for her deaf aunts.

Griffith started and flushed. "Oh—good morning, Miss Burton." "I thought perhaps," said Joanna, "you didn't see me."

Then Griffith got redder still. His eyes enveloped him like a mantle. "I—I'm so sorry—preoccupied—I didn't."

Joanna went on mercilessly:

"After all, I am life-size."

"Merely kit-cat," I said in a stern tone to her. Then I went on:

"My sister and I, Griffith, wondered whether it would be a good thing if the time and stopped with us for a day or so. What do you think? I don't want to butt in—but it must be rather in for the poor child. How would Symmington feel about it, do you think?"

Griffith turned the idea over in his mind for a moment or two.

"I think it would be an excellent idea," he said at last. "She's a queer, unusual sort of girl, and it would be good for her to get away from the whole thing."

Holland is doing wonders—she's got a excellent head on her shoulders, but she really has quite enough to do with her own children and Symmington himself.

He's quite broken up—bewildered. "I was"—I hesitated—"suicide?"

Griffith nodded.

"Oh, yes. No question of accident. She wrote 'I can't go on,' on a scrap of paper. The letter must have come by yesterday afternoon's post. The envelope was down on the floor by her chair and the letter itself was screwed up into a ball and thrown into the fireplace."

"What did—"

I stopped, rather horrified at myself. "I beg your pardon," I said.

Griffith gave a quick, unhappy smile. "You needn't mind asking. That letter will have to be read at the inquest."

No getting out of it, more's the pity. It was the usual kind of thing—couched in the same foul style. The specific accusation was that the second boy, Colin, was not Symmington's child.

"Do you think that was true?" I exclaimed incredulously.

Griffith shrugged his shoulders.

"I've no means of forming a judgment. I've only been here five years. As far as I've ever seen, the Symmingtons were a placid, happy couple devoted to each other and their children. It's true that the boy doesn't particularly resemble his parents—he's got bright red hair, for one thing—but a child often throws back in appearance to a grandfather or grandmother."

"That lack of resemblance might have been what prompted the particular accusation. A foul and quite uncalled-for blow, at a venture."

"But it happened to hit the bull's-eye," said Joanna. "After all, she wouldn't have killed herself otherwise, would she?"

Griffith said doubtfully:

"I'm not quite sure. She's been ailing in health for some time—neurotic, hysterical. I've been treating her for a nervous condition. It's possible, I think, that the shock of receiving such a letter, couched in those terms, may have induced such a state of panic and despondency that she may have decided to take her life. She may have worked herself up to feel that her husband might not believe her if she denied the story, and the general shame and disgust might have worked upon her so powerfully as to unbalance her judgment temporarily."

"Suicide while of unsound mind," said Joanna.

"Exactly. I shall be quite justified, I think, in putting forward that point of view at the inquest."

Joanna and I went on into the house. The front door was open and it seemed easier than ringing the bell, especially as we heard Elsie Holland's voice inside.

She was talking to Mr. Symmington who, huddled in a chair, was looking completely dazed.

"No, but really, Mr. Symmington, you must take something. You haven't had any breakfast, not what I call a proper breakfast, and nothing to eat last night, and what with the shock and all, you'll be getting ill yourself, and you'll need all your strength. The doctor said so before he left."

Symmington said in a toneless voice, "You're very kind, Miss Holland, but—"

"A nice cup of hot tea," said Elsie Holland, thrusting the beverage on him firmly.

Personally I should have given the poor devil a stiff whisky-and-soda. He looked as though he needed it. However, he accepted the tea, and looking up at Elsie Holland, said:

"I can't thank you for all you've done and are doing, Miss Holland. You've been perfectly splendid."

The girl flushed and looked pleased.

"It's nice of you to say that, Mr. Symmington. You must let me do all I can to help. Don't worry about the children—I'll see to them, and I've got the servants calmed down, and if there's anything I can do, letter-writing or telephoning, don't hesitate to ask me."

"You're very kind," Symmington said again.

ELSIE HOLLAND, turning, caught sight of us and came hurrying out into the hall.

"Isn't it terrible?" she said in a hushed whisper.

I thought, as I looked at her, that she was really a very nice girl. Kind, competent, practical in an emergency. Her magnificent blue eyes were just faintly rimmed with pink, showing that she had been soft-hearted enough to shed tears for her employer's death.

"Can we speak to you a minute?" asked Joanna. "We don't want to disturb Mr. Symmington."

Elsie Holland nodded comprehendingly and led the way into the dining room on the other side of the hall.

"It's been awful for him," she said. "Such a shock. Who ever would have thought a thing like this could happen? But of course, I do realize now that she had been queer for some time. Awfully nervous and weepy. I thought it was her health, though Dr. Griffith always said there was nothing really wrong with her. But she was snappy and irritable and some days you wouldn't know just how to take her."

"What we really came for," said Joanna, "was to know whether we could have Megan for a few days—that is, if she'd like to come."

Elsie Holland looked surprised.

"Megan?" she said doubtfully. "I don't know, I'm sure. I mean, it's ever

"Suddenly, I suppose, you have had quite a rush on tickets to Chattanooga"

CLEANS OUT RADIATORS

**Kidneys Must
Clean Out Acids**

Excess acids, poisons and wastes in your blood are removed chiefly by your kidneys. Getting up Nights, Burning Passages, Backache, Swollen Ankles, Nervousness, Rheumatic Pains, Dizziness, Circles Under Eyes, and feeling worn out, often are caused by non-organic and non-systemic Kidney and Bladder troubles. Usually in such cases, the very first dose of Cystex goes right to work helping the Kidneys flush out excess acids and wastes. And this cleansing, purifying Kidney action, in just a day or so, may easily make you feel younger, stronger and better than in years. A printed guarantee wrapped around each package of Cystex insures an immediate refund of the full cost unless you are completely satisfied. You have everything to gain and nothing to lose under this positive money back guarantee so get Cystex from your druggist today for only 35c.

so kind of you, but she's such a queer girl. One never knows what she's going to say or feel about things."

Joanna said rather vaguely, "We thought it might be a help, perhaps."

"Oh, well, as far as that goes, it would. I mean, I've got the boys to look after (they're with cook just now) and poor Mr. Symmington—he really needs looking after as much as anyone, and such a lot to do and see to. I really haven't had time to say much to Megan. I think she's upstairs in the old nursery at the top of the house. She seems to want to get away from everyone. I don't know if—"

Joanna gave me the faintest of looks. I slipped quickly out of the room and upstairs.

THE old nursery was at the top of the house. I opened the door and went in. The room downstairs had given on to the garden behind and the blinds had not been down there. But in this room which faced the road they were decorously drawn down.

Through a dim gray gloom I saw Megan. She was crouching on a divan set against the far wall, and I was reminded at once of some terrified animal, hiding. She looked petrified with fear.

"Megan," I said.

She stared at me, but she did not move, and her expression did not alter.

"Megan," I said again. "Joanna and I have come to ask you if you would like to come and stay with us for a little."

Her voice came hollowly out of the dim twilight:

"Stay with you? In your house?"

"Yes."

"You mean, you'll take me away from here?"

"Yes, my dear."

Suddenly she began to shake all over. It was frightening and very moving.

"Oh, do take me away! Please do. It's so awful, being here, and feeling so wicked."

I came over to her and her hands fastened on my coat sleeve.

"I'm an awful coward. I didn't know what a coward I was."

"It's all right, funny face," I said. "These things are a bit shattering. Come along."

"Can we go at once? Without waiting a minute?"

"Well, you'll have to put a few things together, I suppose."

"What sort of things? Why?"

"My dear girl," I said. "We can provide you with a bed and a bath and the rest of it, but I'm darned if I'll lend you my toothbrush."

She gave a very faint weak little laugh.

"I see. I think I'm stupid today. You mustn't mind. I'll go and pack some things. You—you won't go away? You'll wait for me?"

"I'll be on the mat."

"Thank you. Thank you very much. I'm sorry I'm so stupid. But you see it's rather dreadful when your mother dies."

"I know," I said.

I gave her a friendly pat on the back and she flashed me a grateful look and disappeared into a bedroom. I went on downstairs.

"I found Megan," I said. "She's coming."

"Oh, now, that is a good thing," exclaimed Elsie Holland. "It will take her out of herself. She's rather a nervy girl, you know. Difficult. It will be a great relief to feel I haven't got her on my mind as well as everything else. It's very kind of you, Miss Burton. I hope she won't be a nuisance. Oh, dear, there's the telephone. I must go and answer it. Mr. Symmington isn't fit."

She hurried out of the room.

Joanna said, "Quite the ministering angel!"

"You said that rather nastily," I observed. "She's a nice, kind girl, and obviously most capable."

"Most. And she knows it."

"This is unworthy of you, Joanna," I said.

"Meaning: Why shouldn't the girl do her stuff?"

"Exactly."

"I never can stand seeing people pleased with themselves," said Joanna. "It arouses all my worst instincts. How did you find Megan?"

"Crouching in a darkened room looking rather like a stricken gazelle."

"Poor kid. She was quite willing to come?"

"She leaped at it."

A series of thuds out in the hall announced the descent of Megan and her suitcase. I went out and took it from her.

Joanna, behind me, said urgently, "Come on. I've already refused some nice hot tea twice."

WE WENT out to the car. It annoyed me that Joanna had to sling the suitcase in. I could get along with one stick now, but I couldn't do any athletic feats.

"Get in," I said to Megan.

She got in, I followed her. Joanna started the car and we drove off.

We got to Little Furze and went into the drawing room.

Megan dropped into a chair and burst into tears. She cried with the hearty fervor of a child—bawled, I think, is the right word. I left the room in search of a remedy. Joanna stood by, feeling rather helpless, I think.

Presently I heard Megan say in a thick choked voice, "I'm sorry for doing this. It seems idiotic."

Joanna said kindly, "Not at all. Have another handkerchief."

I gather she supplied the necessary article. I re-entered the room and handed Megan a brimming glass.

"Go around the block once more, Chief—someone is bound to pull out!"

REARER KELLER

"What is it?"
 "cocktail," I said.
 "Is it? Is it really?" Megan's tears
 instantly dried. "I've never drunk
 cocktail."
 "Everything has to have a beginning,"
 I said.
 Megan sipped her drink gingerly, then
 a smiling smile spread over her face,
 she tilted her head back and gulped it
 down at a draught.
 "So lovely," she said. "Can I have
 another?"
 "Yes," I said.
 "Why not?"
 "About ten minutes you'll prob-
 ably know."
 "All right," I said.
 Megan transferred her attention to
 me.
 "I really am awfully sorry for having
 had such a nuisance of myself, how-
 ever, I like that. I can't think why. It
 was awfully silly when I'm so glad
 to be here."
 "That's all right," said Joanna. "We're
 pleased to have you."
 "You can't be really. It's just kind-
 ness on your part. But I am grateful."
 "Please don't be grateful," said Jo-
 nna. "It will embarrass me. You're our
 friend and we're glad to have you here.
 That's all there is to it. . . ."
 She took Megan upstairs to unpack.
 P. Tridge came in, looking sour, and
 said he had made two cup custards for
 her and what should she do about it?

His inquest was held three days later.
 The time of Mrs. Symmington's death
 was put at between three and four
 o'clock. She was alone in the house,
 Symmington was at his office, the maids
 were having their day out, Elsie Hol-
 land and the children were out walking
 and Megan had gone for a bicycle ride.
 The letter must have come by the
 afternoon post. Mrs. Symmington must
 have taken it out of the box, read it—
 then in a state of agitation she had
 gone to the potting shed, fetched some
 cyanide kept there for taking
 out nests, dissolved it in water and
 drank it after writing those last agitated
 words. "I can't go on. . . ."
 Dr. Griffith gave medical evidence
 and pressed the view he had outlined to
 Mrs. Symmington's nervous con-
 dition and poor stamina. The coroner
 was suave and discreet. He spoke with
 the condemnation of people who
 do those despicable things, anony-
 mous letters. Whoever had written that
 kind and lying letter was morally
 guilty of murder, he said. He hoped the
 law would soon discover the culprit
 and take action against him or her. Such
 a cowardly and malicious piece of spite
 deserved to be punished with the utmost
 of the law. Directed by him, the
 jury brought in the inevitable verdict:
 "Megan Symmington died while tempo-
 rarily insane."
 The coroner had done his best—Owen
 Griffith also, but afterward, jammed
 in the crowd of eager village women, I
 saw the same hateful sibilant whis-
 pering begun to know so well: "No
 smoke without fire, that's what I say!"
 "It's been something in it for cer-
 tainly. She wouldn't never have done
 otherwise. . . ."
 For a moment I hated Lymstock
 and its narrow boundaries, and its gos-
 sipy whispering women.
 Beside, Aimée Griffith said with a
 shrug.
 "Well, that's over. Bad luck on Dick
 Symmington, its all having to come out.
 Whether he'd ever had any sus-
 picious."
 I was startled.
 "But surely you heard him say most
 emphatically that there wasn't a word
 of truth in that lying letter?"
 "Of course he said so. Quite right. A
 man got to stick up for his wife. Dick
 Symmington." She paused and then explained:

"You see, I've known Dick Symmington
 a long time."
 "Really?" I said, surprised. "I under-
 stood from your brother that he only
 bought this practice a few years ago."
 "Yes, but Dick Symmington used to
 come and stay in our part of the world
 up north. I've known him for years."
 I looked at Aimée curiously. She
 went on, still in that softened tone, "I
 know Dick very well. . . . He's a proud
 man and very reserved. But he's the
 sort of man who could be very jealous."
 "That would explain," I said delibera-
 tely, "why Mrs. Symmington was
 afraid to show him or tell him about the
 letter. She was afraid that he might not
 believe her denials."
 Miss Griffith looked at me angrily and
 scornfully. "Good Lord," she said. "Do
 you think any woman would go and
 swallow a lot of cyanide of potassium
 for an accusation that wasn't true?"
 "The coroner seemed to think it was
 possible. Your brother, too—"
 Aimée interrupted me:
 "Men are all alike. All for preserv-
 ing the decencies. But you don't catch
 me believing that stuff. If an innocent
 woman gets some foul anonymous letter,
 she laughs and chuckles it away. That's
 what I—I—" she paused suddenly, and
 then finished, "would do."
 But I had noticed the pause. I was
 almost sure that what she had been
 about to say was: "That's what I did."
 I decided to take the war into the
 enemy's country.
 "I see," I said pleasantly. "So you've
 had one, too?"
 Aimée Griffith was the type of woman
 who scorns to lie. She paused a minute
 —flushed, then said, "Well, yes. But I
 didn't let it worry me!"
 "Nasty?" I inquired sympathetically,
 as a fellow sufferer.
 "Naturally. These things always are.
 The ravings of a lunatic! I read a few
 words of it, realized what it was and
 chucked it straight into the wastepaper
 basket."
 "You didn't think of taking it to the
 police?"
 "Not then. Least said soonest mended
 —that's what I felt."
 An urge came over me to say
 solemnly, "No smoke without fire!" but
 I restrained myself.
 I asked her if she had any idea how
 Mrs. Symmington's death would affect
 Megan financially. Would it be neces-
 sary for the girl to earn her own living?
 "I believe she has a small income left
 her by her grandmother and of course
 Dick would always give her a home.
 But it would be much better for her to
 do something—not just slack about the
 way she does."
 "I should have said Megan is at the
 age when a girl wants to enjoy herself
 —not to work."

AIMÉE flushed and said sharply,
 "You're like all men—you dislike
 the idea of women competing. It is in-
 credible to you that women should want
 a career. It was incredible to my parents.
 I was anxious to study to be a doctor.
 They would not hear of paying the fees.
 But they paid them readily for Owen.
 Yet I should have made a better doctor
 than my brother."
 "I'm sorry about that," I said. "It was
 tough on you. If one wants to do a
 thing—"
 She went on quickly:
 "Oh, I've got over it now. I've plenty
 of will power. My life is busy and active.
 I'm one of the happiest people in Lym-
 stock. Plenty to do. But I do go up in
 arms against the silly old-fashioned
 prejudice that woman's place is always
 in the home."
 "I'm sorry if I offended you," I said.
 I had had no idea that Aimée Griffith
 could be so vehement.
 (To be continued next week)

The same Imported
Briar you've
always smoked

Imperial

\$1.50

Billiard shape

Yes sir, it's an IMPERIAL. No substitute woods, no artificial wood graining on the surface, but as ever, made of that fine imported Mediterranean briar though hardly any has come to America now for two years. We can still give you this sweetest-smoking, best-tasting, most dependable of all pipe woods, because we have enormous stocks, being the world's largest pipe makers. As long as we have it, you get it. At the same old IMPERIAL price (since 1933) \$1.50! Even "a beginner" will find that IMPERIAL gives him a mild, gentle smoke—because it has the exclusive IMPERIAL Honey-Treatment (real honey, in the bowl, makes first smoke mild, and keeps mellowing the pipe as you smoke it).

this cannot be accomplished within a few days or even months.

Strictly speaking, the job of getting the Poles out of prison is the embassy's, still it falls on Anders. Russians always prefer to deal with a person they feel is at the top and nothing happens unless he pushes it. In other words, the entire business is being carried through on the strength of his personality.

The hardest part of the work isn't over, once men, women and children have been freed. It has just begun. The men who are fit to be soldiers and the women who are sufficiently strong to be capable of work in the auxiliary services must be selected and sent to Buzuluk or one of the other camps. The others get pushed on farther east and south. The Soviet authorities have arranged to settle them mostly in the Tashkent region. This entails many conferences and many conversations with NKVD, besides making financial arrangements.

In the final analysis it is always Anders who has to do the negotiating, and make decisions. Such questions as what to do with the thousand prostitutes just released come up. That was one with which he refused to deal. "All I ask of you," he said to the ambassador, "is that you keep them far from my troops, at least until the army is organized."

Miserable But Determined

The condition of the people when they arrived from the camps was pitiful. By dint of much hiding and sneaking around I managed to be on hand when a trainload of 2,000 came into Kuibyshev. There were sixteen corpses in the cars—men and women who had died of hunger on the way. Those who survive are more often than not in bad health or greatly weakened from nearly two years of hard labor with insufficient nourishment. Many were formerly professors, lawyers, members of the nobility, government officials, and the women were not all prostitutes; in fact the majority came from respectable families and had good educations. They were thrown in with criminals, murderers and other scum. They were working twelve hours a day, often in snow up to their armpits, at heavy manual labor such as loading ships and trains and cutting wood in the forests. In the way of food they received six hundred grams of black bread a day, a glass of tea for breakfast, a glass of soup for luncheon and a glass of groats for dinner. Those who didn't fulfill the working requirements were given smaller rations, which made them weaker and less able to work, in which case their rations were cut again, and so on in a vicious circle.

A doctor who had been allowed to treat his compatriots in one camp told me that all had dysentery from hunger, one in three had scurvy and fifty per cent of those under twenty had tuberculosis. This was confirmed by others I spoke with. I asked one if many people in his camp had died. "Oh, no," he replied. "The mortality was low—not over ten per cent."

The less said about hygienic conditions the better. Beds were wooden bunks placed one on top of another like shelves, where prisoners slept huddled together for warmth in clothes soaked from working in snow and which froze stiff by morning. Rats would snatch any pathetic morsel of food saved out of the day's rations. Bedbugs covered the sleepers like brown blankets, the only blankets they had. Usually the

prisoners received a monthly wage ranging from twenty to forty rubles to spend at the local store. It sold only bread and tobacco; bread cost ten rubles a kilo package, tobacco cost forty. In all fairness it is necessary to add that the Poles were not segregated. They were in with Russians who received exactly the same treatment.

The only way I could obtain this information was again by playing detective, going off when nobody was looking to interview Poles as they came into the station. It wasn't easy, as Russians were determined no outsider should see the condition of these people, and General Anders insists the veil be drawn over the entire question of the sufferings endured; in fact he has given orders to his troops to forget the last two years completely. "Our task now is to help beat the Germans," he said. "We have no time for personal rancor or self-pity."

In the same way he has forbidden anti-Semitism in the army and accepts into the ranks any Jew who looks as if he might have the makings of a good soldier. The general may order his men to forget their tragic experiences but every day, in one form or another, he is confronted with the results of those hard times. Still he never grows discouraged. What makes him so optimistic is the morale and spirit shown by his soldiers.

As an illustration he tells the story of a Mass he ordered held when the original batch of 16,000 assembled at Buzuluk. Although a Protestant himself, he realized what the holy service would mean to the devout Catholics who had been deprived of the consolations of their church during the two years, and he arranged it at the first possible opportunity. He describes how he reviewed his men as they went by—one in four had a shirt, one in ten shoes, one in twenty a coat. "It was with difficulty that I restrained my tears, for they marched past like guardsmen," he adds.

He insists that this superb spirit is due to their patriotism alone. His officers assured me that it is also greatly due to the fact they feel they have a leader in whom they can place full trust and respect. In Kuibyshev I had many

opportunities of seeing him with men and it was always clear how felt toward him. Whenever he went into a hotel restaurant all the other men rose and waited until he had taken his seat at his table. When he went they again rose. It was homage to the man as much as to the two stars on his shoulders.

No stern disciplinary measure needed in his army. It is enough "Our General Wladek," as they call him, to issue an order. As a good executive he picks the right man for the job and sends him out to do it. He has to interview fifty or sixty people before he cannot afford to waste time in detailed instructions, but so far he has never failed to come back with what he was sent to get.

A Lifetime of Preparation

The general's own theory of what can command men is that he has to be in every capacity from private soldier on up, and they realize he knows his job thoroughly. Born near Warsaw, April 11, 1892, he began his military service as a private at the age of seventeen. His father, whose ancestors had come from Saxony (this heredity probably explains Anders' extreme efficiency) was a to-do landowner who could afford to give his children a good education. There were five in all—four boys and a girl. Two of the general's brothers are now colonels, are prisoners in Germany; the third is a captain serving in Poland. His sister is in Warsaw.

When the thirteen months of military service were up, Anders went to the United States where he studied four years at the University of California, Berkeley, as a technic with the intention of becoming an engineer. A British officer in Moscow told me he remembered Anders well in the Riga days when he was the handsomest man there, he cut a fine figure as the leader of cotillions as the best mazurka dancer.

At the outbreak of the World War Anders, being a lieutenant in the Russian army, was called into the Russian army. At first he served with a cavalry regiment in East Prussia, but that was only the beginning. In 1915 his regiment had the Baltic on its right flank.

"Regardless of what you saw in the movies, Alfred, not every woman in a long black dress is the secret agent of a foreign power!"

F. HUMFREY

No Time For College

The Story of a Man Who, Not Being Able to Go to College, Nevertheless Found a Way to Obtain a Liberal Education and Make a Notable Success of His Life

MET BOB WILLIS on the train from Boston to New York, a week or so ago. Bob finds it necessary to travel a great deal in the interest of his very successful wholesale coal business. I have known Bob for several years socially and as a long companion, but, under such circumstances, one is not inclined to get below the surface of superficial pleasantries.

He was sitting in his seat in the Pullman on this day—and I stopped casually to have a friendly word with him. I made one or two remarks about his golf game, and then my eyes happened to fall upon a book which he had in his hand. I said, "I see that you are following the teachings of the advertisements—'When traveling bring along a good book.'"

He laughed and replied, "I was not conscious of the advertisements, but I agree with them—particularly if I can choose *my* book."

I ASK A LEADING QUESTION

"Why I be so bold," I said, "as to ask what you are reading?"

"Oh," said he; "it is a volume of The Harvard Classics."

"?" said I, with just a suggestion of surprise in my voice.

"Why the astonishment? I think that I have enough time on The Harvard Classics to read the whole fifty volumes at least a dozen times."

"Wow!" I ejaculated. "Aren't you a glutton for knowledge?"

"I get a lot of satisfaction in reading books that stay with you. I would no more think of starting off on a trip without a volume

of The Harvard Classics than I would without my toothbrush or my shaving kit."

"But I was under the impression that they are pretty heavy reading."

NO LONGER WASTES TIME

"Never! On the contrary. The Harvard Classics is the most fascinating collection of reading that I know of. I used to while away my time on trains by reading newspapers, or looking at magazines. My time was wasted. I was bored. Now my problem is solved with The Harvard Classics."

"Perhaps you are right," said I.

"But this is not the whole story, by a long shot," continued Bob. "To while away the time pleasantly is only a very small part of the value I have gotten from The Harvard Classics. I went into the coal business just out of High School. I had no time for a higher education. I had to have a job. As I had rather a natural talent for selling, I got along. But I always had some sort of inferiority complex. Nearly all of the other men in our organization were college graduates. They had an educational background. I didn't. I felt that I was not on the same level with my associates, either in the office or in the suburban town in which I lived."

A FORTUNATE DAY FOR ME

"But one day, on one of my trips, I happened to be leafing through a magazine, and my eyes fell upon an advertisement for The Harvard Classics. I tore out the coupon and when I got home I mailed it to Collier's. Eventually I bought the library of fifty volumes. That was something like ten years ago. Today I am one of the principals of our company. I am received

on an equal plane with associates in my office and in my clubs. I have acquired that something which I missed by not going to college—a combination of general knowledge of the liberal arts and self-confidence in my ability. Man, I wish

that I could shout from the housetops to the hundreds of thousands of boys handicapped like myself in starting life. I wish that everyone could have The Harvard Classics, and profit from these magnificent volumes as I have."

Bob Willis's experience is by no means unusual, for 25,000,000 volumes (500,000 sets) of The Harvard Classics have been purchased by ambitious men and women. Other boys and men and women have sensed their needs as acutely as has Bob Willis. By pleasant and profitable reading, they have overcome the handicaps that were holding them back, and have made for themselves happy and useful lives.

TRAINING IN LIBERAL ARTS

You, too, can do the same, for The Harvard Classics is probably the greatest collection of inspirational literature ever conceived for education. It contains the great masterpieces of all time, written by the supreme thinkers of every age. It contains the basic texts of university training. Every man, no matter how limited has been his formal education, may obtain from this superb library a liberal background and acquire self-confidence. With such an educational background, men are able to advance in their work, obtain a better social position and more enjoyment from life.

THE ELIOT FOUNDATION COURSE

And now the Eliot Foundation Course of Adult Education is included with The Harvard Classics at no extra cost. This course, prepared by noted university authorities and based upon The Harvard Classics, brings to you modern instruction in subjects of the liberal arts.

We urge you to send for the famous booklet "Fifteen Minutes a Day" which will show you how to obtain a liberal education by spending but fifteen minutes a day of your leisure time reading The Harvard Classics. This booklet is a literary gem and you will be proud to have it in your home. We will gladly send it to you without cost or obligation on your part. Simply fill out the coupon below, as Bob Willis did, ten years ago, and we will mail the booklet to you at once, free and postpaid. This simple action may mean for you an entirely "new deal" in life.

THIS COUPON ENTITLES YOU TO FREE BOOKLET

P. F. COLLIER & SON CORPORATION
250 Park Avenue, New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books, (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot. Also please advise me how I may become the possessor of this library on your liberal terms of payment. HQ 732

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

(The Harvard Classics)

1916 it had the Black Sea on the left flank. In the three years that he fought with the Russians he received every decoration they had to give, including the very rare cross of St. George. This was awarded him in 1915 after he and his men broke through the German lines to operate behind them. Knowledge of terrain is Anders' forte and he proved invaluable directing guerrilla warfare in the Polish marshes. During the course of these operations he captured the general staff of the group and took a general prisoner. This was the only German general taken prisoner by the Russians during the entire war.

By 1917 there was a shortage of staff officers in the Czarist army, due to heavy losses and the increase in army size. One officer from every corps was selected and sent to Petrograd to study. Anders was one of those chosen. After graduating he became chief of staff of the seventh division of chasseurs and at the time of the Russian collapse he left the army with the rank of lieutenant colonel. He was then twenty-six years old.

That same year, during the revolution, when the Polish army was organized, he served in the First regiment of uhlans and afterward was chief of staff in the First division of Polish infantry. After the war he remained in Poland, where he worked as a member of the underground organization which eventually succeeded in throwing the Germans out of Poland. At the end of December, 1918, Paderewski arrived in Posen and the nationalist movement broke out. Anders was there and assisted in disarming the Germans, which took just twenty-four hours.

Another Unheard Prophet

He became chief of staff of the Posen army, then he commanded the crack First regiment of uhlans, which later was known as the Fifteenth. With it he fought against the Germans and Bolsheviks in 1919 and 1920. His regiment was one of only five to receive the order of the *Virtuti Militari*, Poland's highest award. Anders also got the *Virtuti Militari* to add to two others he had received for courage in the field. One cross of bravery was given to him four times. His other medals he shrugs off as "peacetime decorations." He never wears the Czarist ones.

When things had calmed down he went to France, where he finished a two-year course at the *Ecole Supérieure de Guerre*, and then he returned to Poland to act as chief of staff to the inspector general of cavalry. He became a full colonel in 1926.

As an officer under oath to serve the government, he fought against Pilsudski during the revolution of 1924. When Pilsudski won and took over power, Anders remained in the army, taking command of a brigade. Eight years after he attained the rank of major general.

Between 1926 and 1939 the general spent his most quiet period of adult life living in Warsaw with his wife, whom he had married in 1918, and their three children, two boys and a girl. With the same foresight as shown by De Gaulle he devoted his peaceful years trying to persuade the powers that were of the necessity of mechanizing the army. As an experienced cavalryman he realized that tanks could be used in the same ways as horses but to better effect. How unsuccessful his pleas were was too apparent during the German invasion of Poland. These were the years when he could fully enjoy the sports at which he excelled particularly, riding, boxing, swimming and shooting. In 1925 he was on the Polish riding team that went to Nice. Three years later he rode for Poland at the Olympics in Amsterdam. Twice he received the first prize of the

Paris government for pistol shooting. He started a racing stable which, formed with knowledge rather than money, eventually became the third most important in the country.

It all came to an end on the day the Germans attacked Poland in September, 1939. Anders was immediately placed in command of several divisions and started fighting near Litzbark on the East Prussian frontier. Three weeks later he had retreated as far south as Sambor. There, with very little ammunition left, it was his intention to make a last stand against the Germans before taking his troops over the border into Hungary. He had counted without the Russians, in fact he'd been moving so fast he had never heard about their taking over part of Poland, and he backed right into them. His men went on fighting until the last bullet was spent, but the general was in the hospital by that time with a severe wound, the third he had received in three weeks.

excellent and that he was able to catch up on his reading. He got through several historical and other serious works in eight or ten volumes which in ordinary active life he would never have had time to finish. However, I have several Russian friends who are Lubianka graduates (in the Soviet Union most of one's friends have served time) and they assured me his stay there couldn't be regarded as a rest cure.

On August 4, 1941, General Anders was released from prison. From one day to the next his life changed completely. One moment he was nothing more than one prisoner among many others, next he was a person to be treated with respect. His suitcase was carried out of Lubianka by the commandant of the prison himself; the car that drove him away belonged to none other than Beria, head of NKVD and politically the most important figure next to Stalin. A four-room apartment had been furnished for him in a new

walking in rubble. The same treatment has continued. The Poles, who are constitutionally used to doing anything without evasion, protest and complication, are much surprised by Anders' frankness in his ability to make immediate decisions. They don't know quite what to do of these qualities, but they respect them and they like him.

They also trust him as much as any Russian ever trusts anybody. He has greater freedom of movement than any other foreigner and when he goes on a mission with a letter in his signature is enough to get the matter into any factory or around any of the countryside, studying the terrain. The staff tells him more than tells any member of the Allied or Allied missions, and it has faith in his judgment. In October it had an opportunity of seeing how good his soldier's instinct is. Two weeks before there was any sign of a German push on the central front Anders gave warning that the enemy was going to attack the city of Briansk. "I have no reason to suppose this is true," he said. "But my nose tells me it is."

The Russians had undoubtedly scented this out themselves; nevertheless it was impressive that, with far less information than they had, Anders called the turn correctly.

A Ready-Made Army

At this moment the Polish army in Russia could number 150,000 men. To the difficulty of obtaining uniforms, it amounts to less than 50,000. At Buzuluk the soldiers are in barracks in other camps they are under conditions not exactly ideal living conditions. The Russian climate, but the men have survived so much can probably survive this also. Their uniforms (British style dress) and other kits have arrived from England for a hundred thousand. At least now they have warm clothes.

Anders plans to organize an army with every sort of unit—infantry, and so on, except for aviation. He has shipped some 800 pilots to England to form squadrons there. With this the Polish army could be extraordinarily valuable, even though small. Its greatest asset is the fact that it is made up of men who are not only brave but seasoned soldiers. They need no training and if they had the necessary equipment 150,000 could go into tomorrow. The great question is whether the equipment is coming from.

The Soviets have armed one division and are supposed to arm the rest. The Harriman-Beaverbrook mission has no special provision for sending arms direct to the Poles.

There is another angle which was explained to me by the British and American experts who may be regarded as Russian experts. They feel that there is a doubt whether—no matter how much their faith in Anders—the Soviets will really ever allow a large force of armed Poles in Russian territory. The ingrained distrust may prove too strong coupled with the fear of what a force might do in case of a debacle.

In the meantime Polish troops could be used to advantage elsewhere. Very exactly, must be left to the imagination of the reader. The same Russian experts, having reasoned thus far on to wonder whether Soviet authorities would permit the Poles to leave the country and decided it could be accomplished if enough pressure were brought to bear. If these experts are right means that the only way a trained force of fine soldiers led by a great general can get in a blow at the Nazis is outside help. That seems to put the case to Great Britain and America.

"I'm not worried about meeting his father. His mother will be the problem"

LOUIS PRISCILLA

It was there that the Russians picked him up and put him in a hospital train, ostensibly to return home. On the way, early in December, he was arrested and taken to prison in Lwow, where his wife was allowed to visit him only once. He has neither seen nor heard from her since. All he knows is that until recently she was living in Warsaw with their daughter and younger son—the elder was killed fighting against the Germans. Once, happening to listen in on the German radio (he speaks fluent German as well as French and Russian) he heard that the day after he was appointed commander in chief of the Polish forces in Russia the Gestapo had visited Mrs. Anders' apartment in Warsaw. It was a vain search, for she apparently had been warned in time and was gone.

At the end of February, 1940, the general was transferred from Lwow to Lubianka, Moscow, where he spent the first seven months in solitary confinement. It is impossible to get him to talk about his prison experiences—all he will say is that the library of Lubianka was

building complete with an excellent cook and maid. Supper for eight people awaited, an impressive spread of caviar and every other delicacy, including huge pats of butter. This for a man who hadn't seen butter for twenty months. There also was champagne and several other kinds of wine. He was wise enough to eat sparingly but nevertheless he was very ill the next day.

Uniforms were made for him by the best NKVD tailors from the finest materials, exactly to the right shade of khaki complete with silver embroidery. It doesn't take genius to figure out how the Polish cloth happened to be available in Moscow. Even his three most prized medals, which had disappeared with his clothes, were suddenly found for him. He happened to mention that he liked dogs; a few days later not one but two of the finest police dogs in the country were produced as presents.

The cement pavement opposite the entrance of his building was laid down in a few hours. The general mustn't run any risk of hurting his bad leg by

York City, with blond hair and brown doe eyes, had studied commercial art at Pratt Institute. They both saw opportunity for practical application of their art in, of all things, shoes. They set up business together, and were able to sign up four designing contracts immediately. The Julianellis work under contract. The shoes they sell anywhere from \$6.50 to \$20 a pair and up to \$90. One of their best manufacturers produces 13,000 pairs of shoes a day, which are sold in all parts of the country and are famous for their style with comfort, at low cost. Mabel makes shoes for one of the largest New York stores, where Julianellis shoes are sold by name and include some of their most fanciful and original creations.

An Idea That Paid Off

The chopine, for example, is an exotic shoe consisting only of a platform sole, and an ankle strap which is anchored at the instep and swoops gracefully around the foot and sole together. Worn closed and open like that, or over a brilliant suede sock. Modified for a touch of sexiness by the addition of a broad strap across the toes, following the metric line of the ankle strap, the chopine has turned into what they call the "luxe sandal," a popular seller that has proved success.

"Charles," says Mabel, "thinks up our original, unexpected ideas. But I do most of the credit, because it's chiefly I who are in this business. And you know how they are."

"Mabel," says Charles, "does just as much designing as I do, and she sees away how to adapt and work out an idea to make a good shoe."

The Julianellis operate very successfully in this Alphonse and Gaston fashion. Each defers to the other, they work out their designs in the most felicitous manner, and they agree exactly one hundred per cent.

In the Julianelli workroom, where they employ three artisans, only samples are made, on the lasts provided by the various manufacturers for whom they design. The last is a wooden mold of a foot. It wears size 4B, and other sizes are scaled up and down from there. Molding and the reproduction in quantity from the sample are, of course, the job of the manufacturers, after the Ju-

lianellis have worked out the design.

Look at the lasts lined up in the Julianelli workroom, and you'll see why size isn't the only measure for your shoe. They vary from a fragile-looking, high-arched thing, standing on tiptoe, obviously built for high heels, to the corrective last, more solid and flatter, meant to wear low heels. Some are a little broader in the instep, some longer in the toe. They differ by subtle variations that match those in human feet. That's why you need to find your right last in a shoe. Styles will change, but those built on that last will fit your foot.

The Julianellis design directly on these wooden molds. A piece of colorful fabric may be the start of a design. Mabel will drape and twist and tack the material to the wooden foot until it takes shape as a workable and effective shoe. Consultation with Charles, final decisions, and then Charles draws the pattern from which the sample shoe is to be cut—a highly technical job which he knows from his factory days. One of their artisans will then cut and make the shoe. If a corrective shoe, to be made of leather, is the design problem, Mabel will work it out on the mold with her pencil. There are special needs to keep in mind, like good support, and lines that can give grace to even a heavy foot. The Julianellis have done this job so successfully that they have contracts with three of the best-known manufacturers of such shoes, whose products are worn all over the country.

Working now on fall designs, the Julianellis see more closed toes coming in, more low heels, more comfortable looking, casual shoes. "They suit our lives today," says Mabel, "and they look right with cotton stockings."

"And cotton stockings look right with leather and low-heeled shoes, and with casual clothes," put in Charles. "Women never should have worn silk and nylon with everything."

The Julianellis aim to supply your lighter fall moments, too. "We are going to design some irresistible shoes," says Mabel.

Shoes will keep on changing, fashion—and women—and priorities—being what they are. But one thing is sure. No matter what material shortages occur, they won't stymie the designers now that the bars are down, and anything goes to make a shoe. They'll always think of something.

"Right FROM THE CYPRESS CASKS OF GOEBEL!"

OUT OF Michigan comes one of the finest beers . . . right from the cypress casks of Goebel. One of the three costliest beers to brew, its popularity is spreading like good news . . . far and fast.

The fine reputation of Michigan's National Beer is causing thousands more to try it every day . . . North, East, South and West.

After you try Goebel, you'll know if you like it better than your old favorite brand. But you'll never know until you try Goebel. Pride in our product urges us to suggest that you try Goebel next time. Goebel Brewing Company, Detroit, Mich.

the estate, rode to hounds during the day and played bridge at night with the old folks.

"Auction bridge," says Maria, shuddering.

At intervals she fled to London and Paris and eventually she reached New York. Mr. McFeeters kept cabling her to return; she answered that things were very pleasant and she would bide a while. Eventually he arrived by boat to reclaim his spouse. She met him at the dock. On the way to the hotel in the cab she broke the news to him. She was in love with another, she wanted a career, she was not going back. Mr. McFeeters proved to be a gentleman; he refrained from kicking her out of the cab. He smiled through his tears, gulped several times bravely and wished her luck. In due course he returned to Erin and that part of the Montez legend was finished.

Her New York campaign was a rehearsal of what was to come later in California. Through European friends, such as a duke and duchess of Bavaria, she met all the eligible young men of town. What was better, she was seen with them in the proper places. The news photographers, long sick of looking at the same inane faces, fell upon her with relief. Her pictures began appearing in the papers with regularity. McClelland Barclay, the artist, selected her as a model of the complete cosmopolitan woman.

The Lady Was Willing

That brought her some money but she had no idea of settling on modeling as a profession. By chance (and a discreet word spoken to the headwaiter at "21") she found herself one day sitting at a table next to George Schaefer, president of RKO Pictures. The Montez personality went into high and Schaefer was a gone gosling halfway through his soup. Mr. Schaefer's card came along in due course, the introductions were made and the question was popped: Would the young lady consider a screen test?

The young lady leaned her lovely head on her hand and gazed at the rafters and mused.

"Moving peectures?" she said as if in doubt. Then she shrugged as if to say "What harm can it do?" and the affair was arranged.

The only hitch was that before a formal contract was signed she was to take a three-months course in speech to correct her accent. Her agent was asking \$750 a week for his client; the studio was allowing her plenty of time to cool off. Rumors reached La Montez that their figure was in the neighborhood of \$100 a week. At this juncture Universal entered the bidding with an offer somewhere in between, the contract was signed and RKO implored the heavens to witness what an injustice had been wrought.

Whether it would ever be possible to separate the real from the manufactured Montez is a question. She is tall and beautiful and honestly ambitious. She has aspirations as a writer and has had poems published in Spanish. Not knowing the language, deponent can only say that they sound musically beautiful when recited by the lady herself. Since the sarong incident (Universal insists on calling them "slen-dangs" as being the proper Malayan word for the garment), her progress has been rapid. She is now to be featured in White Savage, with such important gentlemen as Brian Donlevy, Broderick Crawford and Andy Devine in support. Although her friends previously be-

longed to the nobility, she plays the democratic game in Hollywood and is popular at the studio. She has a small apartment in Beverly Hills, drives a small car, and entertains constantly. Whenever she hears of a great star's new contract for the usual thousands a week, she says matter-of-factly:

"I'll soon be doing that."

She rides and swims but really likes nothing but dancing. She doesn't smoke or drink and she is rather a trial for the young men who take her out for the evening.

"If I miss a dance, I feel awful," she says, making it very difficult for romantic gentlemen who would prefer to sit in a dark corner. By the time she is through with the ninth rumba, they have lost all notion of romance and are anxious merely to get home alive.

She is frank in saying that if her father were alive she wouldn't be in Hollywood and most certainly wouldn't be in the present ferocious glare of the limelight. To suggestions that the emancipation of women might have led her to revolt against parental authority, she says only:

"Oh, I wouldn't dare."

She has five brothers and four sisters, who look on her with a mixed gaze of pride and horror. According to the studio publicity she lays great stock in her family heirlooms, including a set of Goya prints and valuable antique jewelry claimed to have once been part of fifteenth-century Queen Isabella's gems. However that may be, it is true that she has a very important set of topaz gems and aquamarines. The typical Hollywood assumption that her jewelry was paste was shattered by a local jewel expert who watched Maria on the set one day.

"That little bauble on the wrist," he said quietly. "You could easily duplicate that for about sixty thousand."

She is intelligent, quiet-spoken and agreeable. When the Harvard Student Union selected her last fall as its annual guest, the Harvard Crimson was set for its usual barbecue. It ended with her

complete triumph and an edito the paper laying the collective h the staff at her feet. She keeps i stant touch with exhibitors, will any length to popularize herself w public and takes pride in her suc

If the public wants her to clim and jump from airplanes, she'll do White Savage she consorts with plows through jungles and escap aster in a regular Perils of F script. It will have lots of thril lots of Montez leg art. She is saic very good in the gamis.

Well-Dressed Businesswoman

She seems to be a strange t, vamp because women like her, seductive and clever but entirle ple. She has the largest collect hats in Hollywood and can we most outlandish creations with s Her wardrobe is very large and s great collections of shoes and ac ries. Most of her gowns are cu low. Battle Damage

Continued from page 13

wheel-house communications and d or wounded all but three of the or ge's personnel.

plinters, either steel, wood or shell ments, are the curse of explosions. etimes the explosion itself does lit- damage, but a splinter may rupture am main forty feet away, or even e down through the bottom of the h. The Graf Spee, up against ships lighter guns at the Battle of the R Plate, escaped spectacular dam- ag. Yet her forward control tower was led by the holes of shell and splinter tration which seriously affected her ing qualities.

he concussion of explosions warps al like a giant hand. Sometimes it s pranks, such as blasting its way ecks up a ventilator to jolt a heavy oing a couple of feet to one side.

Two Kinds of Shell Damage

he worst shell damage in the inter- of ships is the result of armor- ing projectiles. These long-nosed iles have a "cap" of metal softer h the shell itself. They arrive with an ct velocity of a mere 1,200 miles per o, and the weight of the shell (the 6 inch shell weighs one ton) squashes h "cap" in what amounts to a double h at the armor. If the armor is e y enough it may grunt, groan and oice the shell off, suffering little more age than badly scarred paint. But e shell penetrates. A de- ad-action fuse holds up the explo- until the projectile has crashed its eep inside the ship, where the uting charge of TNT, cordite or other explosive goes off, scattering dam- n all directions.

"common" shells are different. They ot meant to penetrate. They have her walls, and a fuse set to go off on ct—even a bit of the superstruc- or a smoke-pipe stay does it. These h's work devastation on the upper es, clear away antiaircraft gun crews n other topside personnel, and wreck e finders, gun directors and the in- nents needed for gunfire and navi- on.

omb damage is simply shell damage o from overhead, the great difference e g that the maximum speed at which mb can arrive—the maximum speed f falling object—is only about half mpact velocity of a shell fired from gn. In other words, bombs have con- idably less penetrating power than he same weight of shell.

hen bombs hit lightly armored ob- ed, they go right through. One of the es unpleasant surprises has been the umber of times bombs, on hitting light his, have plummeted down and ex- ded in the fuel-oil bottoms. The ob damage wasn't serious, but in e than one instance the fuel-oil fire o the ship.

h the other hand, the oft-predicted o devastation to capital ships can e aid, on the whole, not to have ma- ialized. Both the battleships in the ing of which bombs have played a eor role—the Arizona and the Ha- ur—were exceptions rather than the ul because they were both unusual as.

he Arizona was struck by a bomb h went down her smoke pipe. We've ead a lot about dropping bombs in uel baskets, but just the same a hit on a battleship smoke pipe is one of e things that you don't go out and upicate in a hurry.

battleship smoke pipe is protected, e, by very thick armor bars form-

ing a sort of grid across the uptakes at the base of the stack. Those bars pre- sumably detonated the bomb in the fun- nel. The explosion struck downward and exploded a boiler in one of the fire- rooms below. The boiler explosion was worse than the bomb explosion, and led to something still worse. It penetrated the ship's forward magazines, and that finished the Arizona.

Boiler explosion is one of the most serious casualties that can befall a man- of-war. Escaping live steam is sure and sudden death to anyone who breathes it. On the assumption that fireroom per- sonnel will be killed in such a case, all important valves have emergency ex- tensions that can be operated from out- side. But the loss of a main fireroom means the loss of a good part of a ship's speed.

As for magazine explosion, with tons of powder blowing up, the usual result is to blow a ship in two.

The Haruna was struck by a bomb de- livered by the U. S. Army's Captain Kelly, rest his soul, and the bomb did the business. The Haruna-class ships are thirty years old. They were origi- nally battle cruisers, and though re- modeled, rebuilt, and reclassified as battleships, the suspicion remains that they are still battle cruisers.

Bombs do damage. But it is not bomb hits, but "near misses," that have the grimmest effect. A "near miss" is a bomb which explodes in the water alongside a ship, close enough for the explosion to take effect through the bot- tom. This does damage about as serious as that of a mine or torpedo.

The torpedo is the most deadly weapon of naval war. It socks the hard- est—and it socks in the most embarrass- ing place.

Armor won't keep a torpedo out, no matter how thick it is, and for that reason there is no armor on ships' bottoms. A torpedo explosion, down underwater, breaks its way into the ship in spite of hell and because of high water—that is, water is incompressible and weighs 62½ pounds per cubic foot; it is so heavy that the torpedo explosion, 25 feet deep abreast the turn of the bilge, finds it easier to puncture the hull than to jet up a geyser of water. The explosion has to go somewhere, quick, because a tor- pedo war head full of one of these modern superexplosives is simply ma- levolent with kinetic energy.

Some Ships Are Lucky

Torpedo damage varies extensively. The destroyer U. S. S. Kearney survived a torpedo hit—partly good con- struction, partly luck. The German battleship Bismarck absorbed a num- ber of them, as any well-built modern battleship should if she has her water- tight doors closed and her damage- control party on the job. And yet one particular torpedo hit (by a "tin fish" dropped from a plane launched from an aircraft carrier) was the Bismarck's un- doing—one that hit her, way aft and put her rudder and screws out of business. After that the German battleship was barely able to crawl. The British brought up dreadnoughts with superior fire power and battered her with gun- fire until her turrets were out of action, then sent in a cruiser for the kill with a final wallop of torpedoes.

Had anyone predicted a "retake" of this particular casualty to rudder and screws, with the second of the world's newest battleships as the victim, he'd have done well to predict something easy, like two straight royal flushes in

JITTERBUG

fascinates fish and fishermen!

Hebren Bowen of Texarkana, Texas, writes: "Enclosed is a picture of my wife and myself with recent catch on the famous Jitterbug. This string weighed 52 lbs. after it had been out of water for several hours. Although we got the fish, the man that was responsible for this string was Mr. Tom L. Brown of Texarkana, Texas. He gave us instructions as how to fish them and the kind of bait to use."

The Jitterbug is especially effective for night casting or day-

time when the water is calm. Then its noisy surface action kills bass.

Send for Free Catalog

It's written entirely by fishermen about their experiences with Jitterbugs and Hawaiian Wigglers. Tells where and how remarkable catches were made. Write for your copy.

2 NEW WINNERS! 2 PROVEN CHAMPIONS!

By **TRUE TEMPER**

MAKERS OF THE ROD OF CHAMPIONS

● Once in a decade a bait is born that takes fish with ease and in unprecedented number. Result—it sweeps to universal popularity with the speed of a grass fire on the prairie.

Already, more than 20,000 anglers have used and acclaim the new True Temper Shad Lures as "the most effective bait ever created"—not one dissenting vote.

The small shad minnow is the natural food of game fish. The True Temper Shad Lures are a perfect replica of this natural food.

The True Temper Crippled Shad is a floater with perfect wounded minnow action for top water fishing.

The True Temper Speed Shad is a deep running bait with fast, snappy swimming action of unequalled attracting power.

These baits are equipped with a new rock and stump jumper (patent applied for) which prevents hanging up on underwater obstacles. The five-coat baked enamel finish is unequalled in iridescent beauty. Treble

hooks are best quality. The exclusive design and action of these baits are protected by patent applications. In results, they are unexcelled.

PROVEN CHAMPIONS

The True Temper Al. Foss Shimmy Wiggler, now in its 24th year of continued success, is probably found in more tackle boxes than any other single bait. Year after year it delivers hundreds of prize winning fish to its users. The new, improved model is easier casting—weedless—and more deadly than ever before.

The True Temper Bass Pop is a unique surface bait. To the fish it is an awkward live frog—its noisy, splashing action calls in the big ones from yards around—bass, pike, and musky smash it hard.

For fishing success in 1942, equip yourself with these True Temper Baits, the Lures of Experts. Produced only by the Makers of True Temper Products, Cleveland, Ohio—Address Sporting Goods Division, Box 30, Geneva, Ohio.

"Your True Temper Shad is tops for Michigan small mouth," says Mr. Aho of Mich. Average weight of this string, 3 lbs.

one poker game. But just about six months after the Bismarck battle, the same misfortune hit the big British Prince of Wales off Malaya, when Jap torpedo bombers caught her without aircraft protection and gave her the works.

A battleship's defense against torpedoes is largely built into her—bulges, double bottoms, triple bottoms, water-tight compartmentation so intricate that it takes a newcomer anywhere from a week to a month to learn his way around the interior of a capital ship. It takes longer still to learn the network of piping, drains, valves, floodcocks and pumps by which the damage-control party equalizes the flooding and fights to maintain buoyancy after a torpedo hit.

As for lesser ships, when they have the misfortune to be caught by torpedoes or mines, the term "battle damage" is more or less academic. The British cruiser Galatea took three torpedoes from a German submarine, one after another, and lasted just three minutes after that.

The aftermath of battle is just as tragic aboard the prosaic, unsung work horses of the sea, such as the little Canadian corvette which found her way into a big East Coast navy yard after taking a lot of punishment on convoy duty in mid-Atlantic.

Navy yards are specialists in the repair of battle damage.

We have ten principal navy yards, nine of them along the East and West coasts. The tenth is at Pearl Harbor, but under the conditions of the present war that is more an operating base than a repair base.

Ships are usually assigned to their "home yards" for the repair of battle damage. These yards do all their repairs during peacetime, have full sets of their blueprints and special spare parts, and know their idiosyncrasies (including the boatswain's habit of borrowing any odd bits of hawser he can get his hooks on). When a voyage to the "home yard" is impossible, a ship goes to the first best yard available, and her special equipment comes overland by freight (or overseas, if she happens to be a Britisher putting into a Yankee yard, or a Yank getting help from the British).

Wartime navy yards work in an atmosphere like the pits of a 500-mile

speedway race. Workmen totaling the thousands swarm over a ship, her decks with air hose, crouch corners with oxyacetylene to hammering, wiring, cutting, lifting what looks like the original machine but has a peculiarly efficient scheme of its own. The ships come in from ends of the earth, with the habits of the sea and the fleet still on them; the ficers and crew look at the work with the kind of alien watchfulness that knows how to deal with U-boat but not with repair.

In the navy yard a ship gets with grime and refuse. The dockside her is cluttered with steel pipes, spare guns and gun shields, some a new torpedo tube or a new chair to replace the one that got knocked out of the ship's barbershop; the two inches of gundeck plating.

In one of our East Coast yards long ago, a British battleship from eastern Mediterranean was tied up opposite a big American cruiser from North Atlantic patrol; a converted was being hauled out of dry-dock to make way for a destroyer fresh from convoy duty. They were painted 7,500-ton light cruiser with a new of camouflage paint to get her ready for sea, and chipping the paint off until she was measles-speckled with lead.

In peacetime that batch of would have stayed in the yard months. But a week later every ship was gone, and a fresh batch taken their places.

Hot spots of the moment are West Coast yards at Bremerton, Mare Island. They're doing a good thing, one of the epics of the war, a service the big battle fleet.

"Hey, Pop!" yaps a sailor on a stage hung over the ship's where he can clean anti-fouling paint the old girl's bottom. "Don't use wooden rivets! We gotta go back them yella-bellies!"

"Okay, boy!" says the veteran fitter. "We rivet 'em. You sock 'em."

As for the injured ship, you can see her lift her head, inch by inch, as battle damage receives its steel help.

One of these days, shrouded by mists, she will go back to sea, back to the fleet, ready for another crack in the business of making history.

"No, she's not in. Would you like to try one of the others?"

How to Catch a Trout

Continued from page 15

on-streaked wings, its lemon-yellow and three fine, gray tails. What hatch it?

Answer: The Green Drake.

There are six well-tied Green Drakes in the fly box. A new one is knotted to the leader. It is lightly touched with a drop of oil (gasoline and paraffin) to keep it floating higher and longer. Then a few false casts to dry off excess moisture and the rod tip begins its smooth, rhythmic action.

At the lower end of the pool, where there is room for a long cast, the line flies when it comes slowly back into the retraction. The left hand strips more line off the reel and releases it for the forward movement of the tip, a clockwise-counterclockwise movement—from 12 to 3, then 3 to 12, then 12 to 3, gain. At last the line shoots far ahead. The leader falls lightly down forty feet. The Green Drake flutters away onto the water, floats among the reeds, flies passing downstream.

Twenty feet, twenty—and then a burst. A violent shadow speeds from beneath a sunken boulder, straight to the trout. He strikes. His strong, curved back arches above water for an instant. A quick thrust of the butt sends the tip snapping backward, drives the iron into the water. The battle is on.

Give Him the Iron!

The plunging trout at once feels the pressure of the hook cutting into his mouth. It maddens him. He breaks water and lunges upward, glittering and struggling, his jaws gaping. A rainbow—fourteen inches long!

Three times he takes to the air. At the fourth leap, he gives a hard jerk of his head. But the sensitive rod tip absorbs the shock, maintains its inflexible pressure. He dives and swings in a lightning-fast arc toward his hiding place under the boulder. Lifted rod and line keep him out of there; it's a dangerous place, where a leader may be lost by his antics.

One more he lunges. This time he lunges headlong into the pebbly bottom, jams his jaw against a stone. Suddenly he rolls to the surface, turns over. The Green Drake gleams in his upper lip. He's lightly hooked and must be easily handled. He feints, pretends to fall in, then once more lunges down at the pebbles. This time he darts away faster than ever. Because he's hooked, he has knocked the hook out by the effort.

The pupil's voice from the shore: "Why don't you keep a tight line on him?" Now it's the pupil's turn. The May pop over the water, blown by the wind. She selects another well-tied fly. She lays out a neat cast, a split rock under the far bank. The black-bellied trout is working there. The pupil makes him careless. Once she lunges over right on the surface. He strikes like a "native," a real brook trout. A prize indeed.

The fly alights just to one side of him, almost exact shot. But a splashing disturbs the fly. It drags lifelessly. The pupil retrieves, dries off the fly with a few false casts—and then she makes a error. Eager to get a straighter shot at the big fish, she wades too close to the shore. There she breaks a most important rule of fly fishing: she glances behind to see if there's a shadow on her back-cast. Her line rolls and catches in a branch. The fly hangs in the leaves, the leader is entangled.

By the time the fly is free and the

leader straightened out, the hatch is ended. The wind changes, blows the Green Drakes back into the forest. Moreover, something has frightened the trout, put them down. They have stopped feeding. Or maybe they are feeding deep. This is the time to try another trick, another type of fly.

That first fly is known as a Deceiver. That is, it imitates the natural insect closely enough to make a trout think it's a real one. He'll take it if there are flies like those on the water or if he expects something of the sort. But most of the time there's no hatch going on. That's when the fly fisherman makes his new play and takes advantage of another characteristic of the trout: the ready, ferocious anger that is just as strong in him as his hunger. He likes his comfort there below the ledge and doesn't care to be disturbed. Young trout and minnows keep away from his bailiwick. He'll get mad, too, if any strange thing floats over his private water. Once there was a trout in this pool who hated matches. Every time one came by he struck at it. It wasn't long before he struck at one that had a hook in it. These are the circumstances when the Attractor fly comes into play. Unlike the Deceiver, it's not an imitation of any known insect. It's just a pair of exciting wings, set on a gleaming body.

Best and most popular of all the Attractors is a beautiful dry fly with a beautiful name: Fan-Wing Royal Coachman. It has two large white wings, a smart dash of red in its body, and a long, dark tail. To some people its origin and name are deep mysteries. But a good fly fisherman can explain anything. So here goes:

Once upon a time a king of England, who was just as clever with a fly rod as he was with his scepter, drove out to a famous chalk stream with a party of friends. His Majesty went to work on a great trout that was feeding freely on some natural fly, but nothing in the royal fly box could entice the fish into acceptable action. The king tried six or seven patterns to no avail. Wearied by the trout's inconsiderate behavior, the king waded back to his coach to refresh himself with a glass of wine. He wasn't surprised to find the royal coachman tying a fly. The coachman was an excellent fly tier. But the king was astonished to see the fly as it lay in the coachman's hand. It had two large white wings, a dash of royal red in its body, and a long tail.

Fisherman's Tall Tale

"Steven, my man," cried the king, "what have you there? By huckle, I've never seen the like!"

"Your Majesty," replied the coachman, "I don't know what I have here. I just made it up out of my mind."

"Faith!" cried the king, "I'll try it, Steven. If it kills, you're immortal."

His Majesty thereupon waded back into the stream, laid out the new-fangled fly. On the first cast, the trout smashed at it. His Majesty sank the iron in, and, presumably, the coachman became immortal.

There you have it. The story is a deliberate lie, but, like all fishermen's lies, it's a very nice one.

And Steven is immortal. The Fan-Wing Royal Coachman takes more trout, especially in the twilight, than most other flies, and it's the most exciting to fish with because it's so easy to see.

The Fan-Wing is laid out about a foot below the spot where the big fellow is

**POWERED
TO PAY OFF**

● The True Temper Toledo—Rod of Champions—is powered to pay off when a record smasher grabs the lure and starts for parts unknown. It is forged from a single piece of finest rapier steel, clock spring tempered and ground to the taper (patented) that gives perfect action.

True Temper Rods are unmatched—in supple, unconquerable strength—in stamina to halt the punishing power plunge of monster musky, pike, and bass—in speed of action which foils all efforts to shake the hook.

True Temper Power Pays Off—with prize winning fish.

Results 1941 Field & Stream Fishing Contest

More than half of all prize winning bass, muskellunge, great northern pike, and walleyed pike caught on rods of known make in this national contest were taken on TRUE TEMPER—the Rod of Champions.

The True Temper Toledo—solid forged steel tip, and the True Temper Professional—with tubular tip formed from a seamless tube of super alloy steel and tapered by our famous Step Down Process—are unequalled in perfection of finish. Guides are Trutempaloy—next in hardness to the diamond, itself. The True Temper Offset Speedlock Handle never lets the reel come loose in battle. Your sporting goods dealer will gladly supply you.

Make your fishing trips in 1942 pay prize winner dividends. Use True Temper—the Rod of Champions. Produced only by the Makers of True Temper Products, Cleveland, Ohio — Address Sporting Goods Division, Dept. K, Geneva, Ohio.

TESTED AND PROVED
LURES AND ACCESSORIES

feeding. A breeze catches its big wings,
makes it dance. But it dances in vain.
He's not mad yet. Quickly it's retrieved,
laid out again, this time five or six
feet above him and a little to the right.
A turn of the current bears it right over
his yard. Suddenly he jerks around,
shows his shining back. You can al-
most hear him growling: "What the
devil is that?"

In the next instant he attacks. He
bears down on it in a smashing drive.
There's no need of giving him the butt.
He has hooked himself hard and fast.
Out he comes, turns over, splashes back.
He starts a fast run upstream. He's
hooked so deeply that it's safe to give
him the works and in seven or eight
minutes he's ready for the net. He
spends his last fury against the mesh
and then takes his last dive—right into
the creel.

The question now is: What are the
others feeding on down there?

Her best guess: nymphs.

Try Eight Times

The quickest and best way to prove
it is to clean the last trout, take a peek
at what's in his tummy. Sure enough,
there's a nymph, one called the Caddis
Creeper. But the trout feed hungrily
on the Caddis itself—and here in the
box is an artificial nymph that ought
to do the job. It's fished downstream
on a strong wet-fly leader that sinks
quickly and will hold the big fellow that
it ought to get. Some Catskill anglers
simply cast it out into the riffles and let
it float down, like a nymph cast loose
from an overturned stone. Others prefer
to give the nymph a slight jerky action
as it rolls under the water.

The lady chooses the second method.
She casts over the rock, lets the nymph
go down, then tightens the line, and
gives her rod tip a slight action. The
nymph passes over the place where a
good-sized trout has been feeding. The
big fellow ignores it, probably because
there are plenty more right near him.

"Try again. Try eight times." That's
the rule.

For the third, fourth and fifth time
the nymph soars out, comes easily
down by the rock, vanishes in the water
and goes washing down. The trout is
suspicious. That's clear. He knows too
much. He lies out of sight. But some-
times the wariest trout can be fooled if
enough casts are made.

At the seventh cast, he so decides.
Out he comes, just as the yellowish
nymph goes down. It's a hard hit and
he's probably hooked himself deep.

But: "Hit him! Give him the iron!"
The line is tight. His strike has made

it tighter, has straightened the line.
Smartly she thrusts the butt down
a long stride backward. The rod
does its work. In goes the fata-
l At once he lashes fifty feet down
pool. He seeks deeper water, where
he can show his bag of tricks.

"Rod tip up!"

The whole rod bends into a beautiful
curve. Its pressure turns him in
toward the shore. He fights it, then
cepts the lead. There's a ledge here
and fifteen feet of water under it.
The rod holds him back. He bends and
bends in the sunny air, jerks his
head savagely when he bangs back
the water. His spots of golden red
into a swath of gold. He's a "native"
right and a wise one, hard to hand.

He has plenty of strength.
broad back and thick belly. He
one more long dash into deep
tugs at the line to get free for
into the rocks below.

"Bring him out of that!"

Slowly, firmly she increases the
sure and he obeys. Inch by inch, then
and yanking before yielding, he
bornly swims into shallower water.
Then, with a wide, halted run to
the bank, he shoots into a safe
just where a side-stream flows into
pool. She retrieves line constantly,
her rod higher and higher. At last
snatches her net off its clasp and
ready for the last act in the drama.

This is the kill. And it's the most
cate, most dangerous part of the
For that fat fish still has one last
lunge left in him. They always

She thrusts the net gently for-
wards to sink it below the water.
At the same time, she thrusts her rod
until her rod arm is fully extended.
This brings the trout nearer to the
net. But not near enough. He backs
again, throws his bulk against her
arm and gains a yard. She thrusts
him neatly and repeats the thrust
ward of the rod, the deep thrust
of the net.

Her nearness drives him to the
terrible burst. He thrashes, heaves
self upward and then falls back.
He falls over the rim of the net.
She sweeps the net up to the surface.
He's in. He gives one last blow
the mesh and nobly subsides.

Now she thrusts a thumb into
to make sure that he doesn't make
break for freedom. And the last
to take the nymph out of his

abruptly. His thick hands were trembling and he thrust them into the breast of his apron.

"Not safe for me here with Father Valerian and you?"

"You must go," he said. "I cannot tell you why. But there are very important things about to happen—let us say only that."

She stared at his flushing face, at his small blue eyes evading hers. "Now you are treating me like a child, Rudolf, and I am not a child. I will not go away so easily. This is where I am happy. I have never been so happy before in my life. I will not go away just because you say I must unless you tell me why."

Rudolf struggled with himself. "You see, I know who you are," he said curtly. "I know you are a very—you are the richest woman in the world, aren't you? So I am told by Father Valerian. Therefore you are worth more than your weight in gold. So many things might happen to you. It is conceivable that the Japanese, if they knew who you were, might—why do I say the Japanese? There are also Chinese bandits to whom your ransom would be a temptation."

"Father Valerian—" she began but Rudolf cut her off:

"Father Valerian is a saint and he knows nothing. What are men to him? He stays here and he cares for anyone who needs care, and that is his life. You must believe me when I tell you that in a few days your life may be in danger."

"And you will give me no more reason than that?"

"I can give you no more," he said. He had himself controlled now. He could look at her sitting there in the strong northern Chinese sunlight, her hair blazing with it, and her flesh transparent in it, and bear the beating of his heart because he knew she was not for him. "I will say only that there are things stirring beneath the scene you see from that window."

"Ta-ming looks very quiet," she said gazing down upon it.

"So also does ■ volcano until it bursts," Rudolf replied.

SHE could not but be impressed by the seriousness of his voice and his look, and she rose. "When do you think I should go—if I go?"

"At once," he said.

"Tomorrow?"

"Today."

She shook her head. "You know it is not possible."

"It may be possible," he insisted. "Fräulein, I have heard that the American has come here again from Shanghai—he and another American. How do I know? Well, I have my ways of knowing what happens. It is true they are here. They landed only a little while ago in a plane from Hong Kong. They have told the pilot to be ready to return at any moment. Now they will be coming for you—yes, I am sure it is why that man returns, that he may take you away from here. Tell me, do you—" he broke off, biting his sand-colored mustache.

"I will not go away with him," she said.

"He is in love with you," Rudolf said harshly. "If it is at all possible—it may be well for you to go with him."

"Be quiet," she told him shortly. "You are too silly." She came near to him. "You behave very strangely, I think," she said clearly. "Anyone would imagine you were plotting something and that you wanted me out of the way."

"Imagine what you like," he said in

a low voice, "but this is my advice—whether you love him or not, go away with the American. Get out of China!"

She flung up her head. "It will take more than your advice—or your command." She marched out of the room and closed the door behind her.

Nevertheless when she was alone in the corridor her pride disappeared and she was only conscious of Elton Field, at that very moment perhaps coming toward the mission. She stood in the middle of the corridor, fingering her red underlip, oblivious to the Chinese who passed and stared at her. Elton Field would go first to the Japanese as he had done before. That meant that he would be approaching the mission from the northern street. Then she must walk in the opposite direction—the direction of the airfield, it was true, but still it would scarcely be likely that he would come direct. She was suddenly determined to be out of the house when Elton came, and she flew out of the hospital toward the chapel, where at this hour Father Valerian would be saying a noonday Mass.

SHE went into the chapel breathlessly. Only a few people were there because it was an hour when the Chinese liked best to be out in the sun. It was a grief to Father Valerian that they would not come to pray except at hours when it was not pleasant to be doing something else. A few devout old people stood before him and crossed themselves at his bidding. She waited while he pronounced his blessing and then he saw her.

Father Valerian came down the aisle toward her, his robes flying back from his long legs.

"Father, I want you to come out of the compound with me—now," she said quickly.

"Now, my child, it is time for luncheon and then afterward I must—"

"Please, Father!" She dropped her voice, though the listening old men and women could not have understood. "Elton Field is here again—I don't want to see him."

"Who told you?" His voice was stern. "Rudolf says so—Rudolf wants me to go away with him—"

"Rudolf wants you—" Father Valerian was plainly bewildered.

"Rudolf says it is not safe for me in Ta-ming—"

Father Valerian looked as angry as he could. "It may not be safe for you here, doubtless it is not safe, but I think it is safer than for you to go away with that man. I will go and see Rudolf."

"No, Father, please—don't take the time now—he may be here at any moment. Please, Father, just walk out of the gate with me for a little while."

"As we are, child?"

"Just as we are!"

Her voice was so pleading, her eyes so urgent, that he was disturbed and wondered if there were something she had not told him. He said uncertainly. "There can be no harm, if you wish, in walking a little while—but—"

"Then come, Father!"

She wanted to pull him by the hand, but she did not, knowing that he could bear no human touch upon him. She flew ahead of him therefore, and he was compelled by her swiftness to follow.

The hard winter sunshine was pouring down so brightly that it seemed almost warm, but the day was not warm. A piercing wind came down from the northwest and bit into the flesh.

"You have nothing on your head," Father Valerian said. He did not re-

Whether you're an occasional, or marathon fisherman, you'll enjoy poring over our free "Tackle Guide" Book. Sprightly Split Bamboo and Steel rods, handsome reels, sleek lines and luring lures will greet you there. Prices so modest you'll wonder why you put off owning all you need of it. H-I Tackle is the largest line in America—all at modest cost. See your dealer for your free copy.

alize that he was following her lead toward the south. There was almost no one on this southern street. High walls of houses were on either side.

"It doesn't matter—I'm used to being bareheaded," she said but she was breathless.

They walked on, and he wondered at her necessity for speed. He glanced at her profile, rosy with the wind.

"My child—" he began.

But at that moment a certain beggar who had been cowering in the crevice between two walls saw Father Valerian and came to him with a loud cry, and Father Valerian turned his head to the cry.

"Do you remember me, Foreign Priest?" the beggar asked. "See, look at my face and tell me if you know me!"

The man turned a hideously scarred face toward him. He was nearly blind for even his eyelids were scarred, but out of the pinholes left for his sight, his eyes blazed.

"I do not know you," Father Valerian said. "But I can see you have suffered very severely."

"Do you remember a little shop at the corner of the Street of Three Virgins? You used to buy bean curd there, sometimes, when I had it fresh."

Father Valerian stared at him, forgetting all else. "I do remember you," he said. "You had a round, cheerful face. Why, you were only a young man!"

The man began to sob. It was horrible to see the tears try to squeeze themselves out of those pinholes. "The devils—" he sobbed. "They soaked me in foreign gasoline—and set me on fire. Yes, I was truly burned to death. This is not I—a piece of bone and flesh!"

Father Valerian's beard jerked. He could not answer. How many times he had seen this and yet his throat swelled and his eyes smarted always the same.

"Our Father in heaven, how long!" he murmured. He put his hand into his robes and took out all the money he had in his pocket and poured it into the beggar's stiff, seared hand.

THEN he turned to Elaine. But she was not there. He looked and she was not near him. She was nowhere—he could not see her.

"Elaine!" he cried. "Elaine—Elaine!" It was the first time he had ever uttered her name, and he did not know now that he cried it.

"Where is she?" he asked the beggar. "Did you not see her go?"

"I saw no one but you," the beggar said. "I looked up and saw you going by."

"But there was a young woman with me—a young woman with yellow hair. She was ahead of me, but not very far—I mean, only a few feet!"

"I did not see her," the beggar said, "but then I cannot see much at a time. What I really saw was your shoes. You have bigger feet than anybody in Ta-ming and I looked across the street from where I lay and saw your big shoes and your black robes above them. So I cried out."

Father Valerian did not wait to hear more. They were at a cross street and he ran up and down the streets and shouted her name again and again. But there was no answer. The few people looked at him, and when he asked them if they had seen a young woman with fair hair, they shook their heads, smiling. They all knew who he was, and they were not astonished. No one could be astonished at foreigners who were always strange in their behavior.

He stopped running at last and stopped calling. On either side of the streets for half a mile the high walls and closed doors went on. He was now so terrified that he knew he must go back and get help. He must waste no

more time looking for her like this. They must organize a real search.

"Oh, Mary," he panted under his breath as he strode back through the dust. "How could this have happened to our child?"

IN THE square mission house Larch and Elton Field waited, the box of anesthetics between them. They had been met at the door by an old manservant who would not let them in until he had called the German. This German Larch had liked at once, partly because Elton Field had told him he did not like Rudolf Helgel.

"There is something queer about that German fellow," he had told Larch as they rode muleback from the airfield. "The Japanese captain told me they couldn't make out why he stayed on in Ta-ming. He used to be a military adviser in Tientsin but he didn't go back with the others when they were all ordered home. Well, why didn't he? And why is he living with that fanatic old priest? You will see why Miss Brian ought not to stay there. That German—he certainly is not there for any simple reason like the priest."

But Larch had liked at once the straight look out of Rudolf's small bright blue eyes. When he had opened the door he had bowed and clicked his heels.

"Please come in," he had said formally.

So they had come in and sat down on as uncomfortable benches as could be made, and Larch had stared about the room. Was this where Elaine lived? He could not have believed it and then he saw a blue scarf thrown across the one chair in the room with a back. It was so obviously a woman's scarf that he knew it was hers.

"Miss Elaine Brian, please," Elton Field said very coldly.

Rudolf Helgel bowed. "If you please," he said as coldly. "I will see if she is here."

He went away, and the old manservant came and stood motionless by the door while he was gone. Elton Field sneered. "I don't know what they think we can steal here," he said.

Larch laughed. "Maybe—Elaine," he said cheerfully. But Elton did not laugh. He did not like to hear that name coming so gaily from this young man's lips.

In a moment the German came back. "I regret," he said clearly. "She is not here. I cannot find her."

"Do you mean—not in Ta-ming?" Elton Field asked.

The German laughed. "But certainly she is here in Ta-ming. I mean, she has gone out, she is somewhere I cannot find out, perhaps Father Valerian will know when he comes in. He also is out at this moment. The gateman says he thinks they went together. Perhaps there was a call to a house. Sometimes he takes her with him when it is a woman."

"Then we will wait," Larch said. "I'll just sit here if you don't mind."

"Not at all," the German said. He looked from one to the other of these two men. "Perhaps you are cold," he said. "I will send for some charcoal."

"It is cold in here," Elton Field said. It was at this moment that the door of the room burst open and Father Valerian stood wildly before them. His beard was blown and his skull cap was gone, and the white hair on his head was awry. He saw no one but the German.

"Rudolf!" he shouted. "She is lost!"

ELAINE closed the great gate silently and stood leaning against it. Before her was a brick screen, the wall that guarded the gate, and beyond it the court of a strange Chinese house. No one was

sight and she had a moment in which think. How had Larch come to Ta-ming? If she had not seen him so early she must have believed her own eyes mistaken. She had been thinking about Larch so much in the past weeks that her eyes might have lied to her. But she had not been thinking about him at the moment she saw him. She had been thinking only of how to escape Elton Field.

When Father Valerian stopped to speak to a beggar, at that instant there had ridden across the street two white men on mules. One was Elton Field and the other was Larch—there was no mistaking the tall easily upright young man. His hat was off, as it always was, and she had seen his head clear and dark against the bright blue morning sky. He had been shouting something to Elton, who rode behind him and so Elton had not looked toward her, and she, the instant she had seen his face, had slipped into this gate that stood ajar.

"Larch!" she whispered. She stood there—yes, it was he—but how had he come here? She thought, "I ran away from Larch and not from Elton Field." She did not want to see Larch. If she saw him she would love him and all the old misery of her mother's life would be repeated in her life. She thought, "Father Valerian will be frightened when he can't find me, but he will understand when I tell him why I hide myself."

She tiptoed behind the spirit wall and looked about her. The court was a large one with a small formal garden in the middle, a pool and a few fantastic water-shaped rocks in monoliths among the trees. She had seen no houses like this in Ta-ming. But then Father Valerian's life was among the poor. The wall of this house along the street had revealed nothing but a gray blankness. Was no one here? There was only silence. She knew that most of the few wealthy people of Ta-ming had fled before the Japanese came in.

But even as she stood thinking and wondering which she ought to do, an old lady came out of the main house which faced the court. She was very old, small and thin as a child, but she was bent, and she walked with energy, though her feet were bound into tiny shoes not three inches long. Instead of a cane she used a long bamboo pole that had a silver bowl and mouthpiece. Her eyes as she looked at Elaine

were small and exceedingly sharp in their blackness and she cried out in a clear youthful voice:

"Little Peach, here is a white foreign devil!"

At the sound of her voice the maid-servant came running out of a side court, as ugly a woman as could be found anywhere. She had had in childhood some disease which had scarred her face not in pits but in heavy welts, and had blinded one eye. But it had mercifully left her mouth untouched, so that now it was sweet and smiling in the ravage of her face. She laughed when she saw Elaine, and swore by her mother in her surprise. "My mother!" she cried. "This is the very first white woman I have ever seen, old mistress, and all that we have heard is true! Her hair is yellow and her eyes are glass!"

"So they are," the old lady said amiably. She stood leaning on her pipe and looking at Elaine with an interest that was almost affectionate.

"Do you not wonder how I came here?" Elaine asked and could not forbear smiling a little at the naïve pleasure of the two women. She could speak Chinese now well enough to understand what these two had said and to answer them.

THE old lady looked frightened. She turned to her bondmaid. "How is it that I can understand a white woman when I have never learned even to read and write my own language?"

"It must be foreign magic," the bondmaid replied. She stepped forward and lightly held the embroidered sleeve of the old lady's coat.

"It is not magic," Elaine said. "I have been studying to learn your language, and if you can understand me, I thank you."

The two still stared at her and so she felt she must say more: "I am very rude to come into your gate but I did it to escape—someone."

"A man?" the old lady asked with sudden perception.

"Yes," Elaine replied in a low voice.

The old lady nodded her little head. "You should not be out on the streets. It is true there is not so much danger for a young woman like you—are you young with that light hair? Here our hair grows light only when we are old. But your face looks very young."

"I am young," Elaine said, "and it is true I should not have been out on the

street. May I shelter myself in your house for a little while?"

The old lady looked at her bondmaid. Plainly the two were doubtful. "We are alone except for one manservant," the old lady said. "My sons and their wives and children and all the young bondmaids went away before the enemy came. I am too old. When they wanted me to go, I said I would not go. So I pay the enemy something—you understand, every month. I pay them rent for my own house, the devils, and they leave me in peace. I myself bargained with that son of a turtle who is their captain. As for Little Peach, even the devils' stomachs turn when they look at her, and so we are safe enough. But what will they say if they find you here? It is not in my bargain with them. I told them we are only an old woman, a bondmaid with a scarred face, and an old gateman."

"Let me hide here for a little while," Elaine begged. "I will send a letter to the foreign priest and he will tell me what to do."

She saw doubt and curiosity struggle on the lively old face before her and curiosity won. "Let the devils be deceived," the old lady said. "This is not the day for them to come and collect the money. Come in and hide in my first daughter-in-law's room. And you must tell me all about yourself and your people." She came forward and seized Elaine's hand. "How white your hand is! Little Peach, look at her hand! It is not small but how white! Is it fragrant?"

She put Elaine's hand to her nose and smelled it and made a grimace. "Ha, it does not smell sweet! It smells of something I do not know. Little Peach, smell!"

The bondmaid smelled Elaine's hand. "It does not smell sweet," she agreed.

"Medicine-water," Elaine said. "I have been caring for the sick."

"You?" the old lady cried.

"Yes, I help the foreign priest," Elaine said. She could scarcely keep from laughter, these two were so naive, so eager in their interest, so unconscious, seemingly, of their plight in this enemy-ridden city.

The old lady did not let go her hand. "I like you," she said as though she were a queen speaking to a pretty beggar girl. "Yes, you cannot help your glass eyes, and your skin is very beautiful. Tell me, what do you put on your skin to make it white?"

"Nothing," Elaine said. She was following the gentle pull of the little claw of an old hand that led her into the house. "I was born white."

"Was your mother the same before you?" the old lady asked.

"The same," Elaine said.

THEY were now in a room off the main hall. It opened into a small court of its own. Under the surface peace of this strange moment she was thinking in her daze: "Of course I cannot simply stay here. I must indeed decide what I ought to do." She could not sidestep life and slip into a gate ajar and escape it. Or perhaps she could? Would it be possible to send word to Father Valerian and tell him where she was and beg him, command him, to let her stay here and say nothing of where she was until they had given up the search for her? But she could not think clearly. She was living in a fantasy.

The little old lady pushed her into a carved chair upholstered in scarlet wool. "Sit down! You are hungry and thirsty. Little Peach, go and fetch her food. Now, white one, tell me everything. Do the people in your country eat the same food we do? Perhaps they eat some other food to make them such a color? And your hair—let me feel it!" She felt the texture of Elaine's wind-tossed

hair. "It is softer than our hair but why does it curl? You must have eaten something when you were a child to make it curl."

"No, I was only born so," Elaine said again.

The old woman laughed. "Tell me, are children born in your country as they are here? Do men beget and women conceive?"

Elaine nodded, suddenly shy, and the old lady laughed again, a ripple of curiously young laughter. "Ah, you are shy, just like our girls! Are you married?"

"No," Elaine said. "I shall never marry."

"Never marry!" the old lady exclaimed in horror. "But all women must marry! Whoever heard of a woman who did not marry? How then will you have children?"

"I shall not have children," Elaine said and thought what folly it was to speak out her heart to this old one who could have no understanding of a life different from her own.

"You are a nun," the old lady said. "Perhaps I am," Elaine agreed. It was as easy an escape as any other.

THE old lady leaned over and tapped her knee with a finger as slender as a delicate child's. The nail on it was an inch long. "It is very well to be a nun when you grow old," she said, "but it is a great pity when you are young." She nodded, smiled, and coughed behind her hand. Then she looked grave, put on a grand manner and called out, "Little Peach!"

"Here!" Little Peach shouted. In a few more minutes she came in with a tray of steamed meat dumplings and a pot of hot tea.

"Eat," the old lady commanded Elaine. "Eat and drink!"

She put the dumplings into a bowl for Elaine, and Little Peach poured tea. It was miraculously quiet behind the wall; the court was pretty, even yet. The sun shone down warm into it, and shrubs of heavenly bamboo stood dark green and scarlet with berries. It was impossible to be afraid. Elaine was suddenly hungry in the momentary security. She ate heartily and pleased the old lady so much by her appetite that when the meal was finished, the little creature leaned over and caressed her cheek with her tiny hand. It smelled of musk.

"I like you," she said sweetly. "I like you very much. You may stay with me. You will be quite safe. Even if the Japanese come they will not want a woman who looks like you. You are as safe as Little Peach with her scarred face."

"If I may stay for a few days," Elaine said, "I will thank you."

"A few days!" the old lady cried. Now that she had made up her mind she liked this foreigner she could not like her enough. "You shall stay with me forever! I will make you my daughter—eh, Little Peach? Shall I make this foreigner my daughter?"

Little Peach considered, staring very hard at Elaine. "But if you make her your daughter you must in duty marry her off, and how can that be done?"

The old lady pouted a moment. Then her face cleared. "I will not make her a full daughter—I will just keep her for a toy, a foster-daughter."

"Ah," Little Peach said, "why not, then, if she amuses you, old one?"

These two, Elaine thought, were there two like them anywhere? Around them the whole world had changed, but behind this gate they did not know it. Yes, she could shelter here for a few days, at least.

"If I amuse you, I am glad," she said, and laughed half sadly as she might have laughed at children who did not know there was a war around them.

Any Week

Continued from page 4

are told too, that to the question: "How did you get into the Army?" numerous soldiers are replying: "Political influence." This is most regrettable, indicating that we have made very little progress in the past quarter century. And in this belief we are supported by a bit of intelligence to the effect that a ceteran Infantry officer overheard warning a group of new recruits not to be carried away by the glamour of mechanized arms. "Look at Germany in Russia," said he. "He has the most mechanized army in the world and where is it getting him?" But he may be one of that old guard saved from total disaster by General Grant in 1863. General Grant was not noted for his humor. Therefore we suspect grim truth in his reply to a suggestion that, for sanitary reasons, officers of the Union Army shave off their beards. "Take it easy," Grant replied. "If we take off our whiskers there might not be anything left."

A REAT many of you—Mrs. Willha Bredenbeck of Toledo, Ohio, for a particularly positive one—think that Mr. Roosevelt should set the nation an example of self-denial by getting along without a few dozen nondefense agencies and bureaus. Mrs. Bredenbeck is not content merely to criticize. "If I can get along without sugar," says she, "the government can get along without the CCC. If I can't have a couple of new tires for my jalopy, Mr. Roosevelt ought to try to get along without his VA. I gave up my aluminum pots and pans and I think it only fair for the

government to close down the Rural Electrification Administration for the duration. Why can't Mr. Roosevelt match us dollar for dollar especially when they are both our dollars?"

BUT now that we're gradually getting used to War Time, we've begun to wonder why the idea isn't being carried on to ultimates. Suddenly an hour was snatched out of our lives while we were deep in defenseless sleep on a remorselessly cold morning. And we find that we didn't miss it. With Mr. Harald T. Bergquist of Portland, Oregon, we don't know why similar Joshua methods might not be applied to whole weeks, months or even years. Why can't we pretend that it is December 6, 1941, all over again and be prepared for the fateful morrow, notifying Admiral Kimmel and General Short to be on their guard? If Congress can say that it is 1926 or some such year for farm prices and if the President can say that it's three o'clock instead of two, what's to prevent the rest of us from letting on that it is next year or any other time less defeated than the moment? We've had quite a lot of correspondence on the subject. For example, why can't we drop a couple of days out of the week, thereby establishing labor's longed-for five-day week? Although that's clearly unscriptural and something we never quite understood anyway. Of course the idea isn't particularly new. A lot of our generals are acting and thinking as if it was still 1917. And for some of our leaders, the clock hasn't budged since the turn of the century. . . . W. D.

"Frankly, I don't think we're getting anywhere"

Our Fighting Men

Continued from page 41

SLOAN FIELD, Texas. Laid out on a flat, barren stretch of what was West Texas ranchland, this installation is slated to become the largest bombardier training school in the world. The site was selected because of the wide open spaces ideal for egg dropping and for climate and atmospheric conditions sized up as the nuts by aviation experts. Five million dollars worth of construction got under way last July 7th, and the first "Hell From Heaven Men" who checked in February 7th are now more than halfway through the 12-week course. Other batches of bombardier cadets will pour in direct from one of the Gulf Coast Air Corps Training Center's two "kindergartens" (Kelly and Ellington).

The field is equipped with the new AT-11's, especially designed for bombardier and gunnery training; with some B-18's; and with the secret bombsights, kept in jail-like vaults that make Alcatraz look like a chicken coop. It boasts the largest ordnance company (the 437th) and the nation's biggest bomb dump, made up of 100-pound practice bombs soon to drop at the rate of about 1,000 a day on near-by ranges. Each AT-11 is rigged to hold ten 100-pound practice bombs, racked five to each side and to be released individually or in salvo from as high as 20,000 and as low as 100 feet over the 80-mile campus of the bombardier college. White circles form daytime targets, crosses of lighted flares are the objectives at night. Hits are checked from spotting towers near each target and with giant aerial cameras carried in the planes.

MATHER FIELD, California. Private phone calls to the boys in camp have been restricted, but a love-inspired gal in Beverly Hills has found a way to beat the ban. After 8 P.M. she calls the field and asks to speak person-to-per-

son to the squadron commander. It's a legitimate request but she's told—as she knew she would be—that the commander has gone home for the evening and will she speak to anybody else? "Well," she says with well-studied hesitancy, "if the commander isn't there I suppose Private So-and-so (her boy friend) COULD take the message for him." She says it works like a charm. Or has up to now anyway.

CAMP CALLAN, California. The stork made a powerdive on this cantonment at Torrey Pines Mesa one quiet Sunday morning and discovered the Army and Navy ready to work hand in hand. Object of his visit was the wife of a pharmacist's mate stationed at the San Diego Naval Hospital. Returning from a visit in Los Angeles, the highly expectant mother was transferred to an ambulance 20 miles north of Camp Callan, and the baby arrived before the vehicle swerved into camp and screeched to a stop at the nearest infirmary. Medical Officer Lt. James R. Matson dashed out. . . . Later, Mamma and her five-pound boy proceeded leisurely to the Family Hospital at the San Diego Naval Air Station—the original destination—where the sailor father waited, oblivious to his debt to the Army; and Camp Callan chalked up another first for any Army replacement center: The birth of a Navy baby on its premises.

CAMP JOSEPH T. ROBINSON, Arkansas. The hutment song is being tapped out by hammers in the hands of carpenters converting this tent camp into frame buildings 16-feet square for officers, who, since last month, are required to live on the post, and for men who are spending eight weeks in the Medical and Branch Immaterial Replacement Train-

"He must have an independent income! I can only get in there once a month on my pay!"

FALSE TEETH

KLUTCH holds them tight. KLUTCH forms a comfort cushion; holds plates so much firmer and snugger that one can eat and talk with greater comfort and security in many cases almost as well as with natural teeth. Klutch lessens the constant fear of a dropping, chafing plate. 25c and 50c at druggists. . . . If your druggist hasn't it, don't waste money on substitutes, but send us 10c and we will mail a generous trial box.

KLUTCH CO., Box 2907-D, ELMIRA, N. Y.

Centers. (Try and find out what Branch Immaterial means. Nearest we could get to an explanation was, it's immaterial what branch of service you get into—you get eight weeks' basic anyhow). If, by the way, you think enlisted men have a monopoly on grouching you should have heard the officers at Robinson when they learned that, instead of breakfast with the little vic in Little Rock, they now have to sleep and eat on the post, paying \$30 a month for grub. This is war.

KISER WILHELM was the given name announced by an Arkansas Negro, born in 1918, who showed up at Robinson for induction. Said his folks at the name in the papers and thought it sounded nice. Later, when neighbors asked, the parents were "too contrary" to change it. . . . Robinson examiners reported the case of the Harvard graduate, who, inadvertently put into the wrong group, went through a test designed for illiterates. He came out looking slightly puzzled. "The questions," said he, "were extraordinarily simple."

FORT LEONARD WOOD, Missouri. This commanding officer wanted to know why he was six hours late returning from leave, so Pvt. John MacDonald told him. "Sir," said he, "I came through 600 miles of blizzard, as follows: In Minneapolis I boarded a transport plane for St. Louis and we were grounded at Des Moines, where I laid out a hundred bucks for a private plane, which managed to fly ten miles before the weather forced her down. Then I walked eight miles and hooked up in a coal truck for forty-six more miles, after which I hired a taxi. The taxi stalled in the drifts. A bus came along and I got to Kirkville just as all bus traffic was stopped. Finally, I got a train for Columbia, another cab to Jefferson City, and a bus brought me to the fort. Sorry I'm late, sir."

MARINE BASE, Quantico, Va. Sixty-two newly commissioned lieutenants have fanned out from this base and are visiting universities and colleges in every state in the country where they are putting on a sales talk for the Marine Corps. Within the next thirty days they hope to have persuaded a sizeable number of college students to take officers' training courses. If the Army doesn't get you, the Marines will.

FORT BRAGG, N. C. For the first time since the Signal Corps lost the aircraft in the early days of the last war, a branch of the Army other than the Air Corps will be equipped with organic aviation. The 1st (Heavy) Field Artillery Brigade is lined up to receive a dozen or more four-engine, two-place "Grasshoppers" (Collier's, Nov. 22d, 1941) which the brigade will use to observe its own long-range fire. Artillery officers will act as mechanics and observers, thus releasing Air Corps pilots for combat duty. Another important advantage is that the artillery will control its own observation, no longer dependent upon infrequent release of Air Corps ships for this duty. The Air Corps likes the idea; so do the brass hats in the light artillery, which will conduct similar tests with 2d division units.

CAMP BLANDING, Fla. Artilleryman Pvt. Sheldon Summers sat in front of his tent, the other day, with a round carton of dog biscuits, one of which he handed to each guy who walked by. "It's on me," announced Pvt. Summers. "My dog has just had four pups."

COMPLETION of eight theaters at Blanding has put the Station Committee in the picture-show business in

a big way. Seven of the theaters seat 1,038 men each; the other, for the small detachment of Negro troops, takes care of 600. First-run movies play to an average of 15,000 customers nightly and there's no more griping about three-mile walks to reach a show; the new theaters are so located that no company street is more than half a mile away from a Hollywood epic.

JACKSONVILLE NAVAL AIR STATION. Four of five cadets, invited to dine with five Jacksonville gals, returned to the station glowering and exhibiting unmistakable signs of a slow burn. Seems the missing cadet had copped the prettiest mouse and scrambled from the party. After a council, one of the quartet phoned the beautiful babe at her home and announced he was the Communications Office. "Will you please," he asked, "give Cadet Blank the following message? 'Twins arrived. Doing nicely. Love. Your wife.'" Presently the outraged victim boiled back into camp. "Even if I were married," he told the quartet after an hour's discussion of the business, "I'd never think of having twins."

GENERAL

"THERE'S a vast army of us," writes an Army wife, "doing our job for defense, not wearing the uniforms of any volunteer corps and unknown to one another, although we have a very common bond. Why isn't there some badge to show the part we are playing, or an insignia to show our position, and our husband's rank, in this fight? It would help us recognize one another and save us many embarrassing incidents." The housing problem, by the way, continues to be pretty bad in spots. At Fort Dix, N. J., for instance, Army wives are permitted to live in the Officers' Mess (Club) for a week only; then they have to move into a \$21-a-week room in some near-by town and share one bathroom with thirty-five other disconsolate Army wives. It's not only expensive but tough on morale.

IF YOU'RE interested in new slang and the derivation of Army terms, get yourself a copy of Army Talk, written by Col. Elbridge Colby and recently published by the University of Princeton Press. It's the answer to a lot of letters received by this department from readers who get yardbirds mixed up with dogfaces, and vice versa.

NOTE to people who write letters to the commanding officer at Camp Boyd, Texas, and especially to the Bureau of Public Relations, Washington, D. C., which has been mailing press releases regularly to this post: All mail addressed to Camp Boyd is automatically forwarded to Fort Bliss. Camp Boyd is a hangover from the previous world war and isn't garrisoned. Hasn't been for 24 years.

ALL available chromium is being used in war industries, with the result that the Army is beginning to order a silver finish for all flatware to be used at mess. Fancy stuff, but another headache for the boys on K.P. duty.

THE supply of nickel is limited, too. According to recent newspaper dispatches, the nation needs a name for the new five-cent piece, which will be made of mixed copper, silver and any other alloy the Director of the Mint decides will do the trick. Some of the suggested names heard around Washington include "sico," "cosi," and the well-known "jit."

Change to Spuds

Enjoy Their Soothing Coolness!

When smoking begins to "tell" on your throat, accept the pleasing relief of mildly mentholated Spud Imperials! They're *specially designed* to protect your throat from the irritation usually caused by cigarettes. Spud Imperials give you:

MILDER MENTHOL—Because *just enough* soothing menthol is distributed evenly throughout the cigarette by an exclusive patented process. *No menthol overdosing!*

GREATER SAFETY—Because the special moisture-retaining agent used in Spuds does not produce the common throat irritant present in the smoke of nearly *all* cigarettes. And, because Spuds are 20% longer, you get a still cooler and better-filtered smoke.

EXTRA QUALITY—Because only finest vintage tobaccos—aged to perfect mellowness—are used in Spud Imperials. No coupons—just fine tobaccos.

Try new improved Spud Imperials for a few days. Or smoke them regularly, as thousands do—purely for pleasure. But by *all means* change to Spuds whenever your throat is irritated.

THE WORLD'S COOLEST CIGARETTE

THIS reporter, for one, has now heard enough jokes and beefs about our British allies to last till next Thanksgiving Day at least.

Whenever we hear another of these japes, the thought goes thundering through the bean that we Americans haven't been so superior to the British in our conduct of the war to date that we can justly snoot them.

The British pulled some awful boners in Malaya and in the short-lived defense of Singapore. But in two and a half years of war, the British have yet to surpass the boner of Pearl Harbor. And according to a broadcast by Martin Agronsky from Australia, a United States fighting ship in one of the early actions off Java found itself trying to struggle along under a Japanese dive-bomber attack with

1930 and 1931 ammunition which had been tested a year before and found to be only 30% effective. The Navy is now investigating this charge.

Britain's famous old-school-tie boys, who cluttered up her government in such profusion until Churchill began weeding them out, and the equally famous Col. Blimps who still clutter up her army to some extent, have no doubt been responsible for a lot of Britain's griefs in this war. There is no objection that we can see to well-aimed gibes at these gentry, in the hope of cutting down their power to gum the British war effort.

But we have a few Col. Blimps of our own, to say nothing of a few Admiral Tubbaguts and a selection of all but incredible stuffed shirts in

high government circles. For all our vaunted flexibility and mental agility, we didn't pig-hole enough of these characters in time to avert the Normandie disaster.

And so it goes. Making allowance for different lengths of time the two nations have been in the war, you can match boner for boner between the United States and Great Britain.

Our two countries are in this war together for better or for worse, and up to the neck. The more energy we refuse to waste in mutual recriminations, the more we'll save to spend on the Axis. Up to now, the Axis has shown itself capable of absorbing all the energy we've been able to send against it. It has also shown to be adept at making military capital of every suspicion of inter-Allied friction.

Au Revoir—But Not Goodby

THE automobile industry has gone in for war work 100%, most likely for the duration. It hasn't been any too much fun to see those photographs or newsreel shots of the last cars rolling off the assembly line. It makes you feel as if a chapter in American history has been finished.

As a matter of fact, it has. The automobile wrote a large part of the history of the last 40 years or so in this country.

Its development from a curio into something that would actually run with fair dependability was a characteristic American achievement, to begin with. We always were a gadgety, mechanical-minded people. The gasoline engine harnessed to a buggy had an irresistible appeal to that trait in us, and the results were colossal.

Thoroughly American, too, was Henry Ford's notion that this rich man's toy could be simplified and improved into a cheap car which millions of people could afford to buy. Ford, along with various other pioneers of the motor industry, made that dream come true.

Among them, they produced another revolution. When they began to tinker, this was a giant, sprawling country, loosely knit by a network of railroads, scarred by unspeakable dirt

and mud roads outside the cities, and therefore quite capable of coming apart under strain. The automobile forced the construction of a nationwide grid of fine roads—the finest highway system in the world. It brought us all closer together, mentally as well as physically; it united the nation as nothing else could have done.

Now that we are at war, the automobile is paying us still another national dividend. These highways can be—are being—used for the swift shuttling of troops and arms from anywhere in the United States to anywhere else in the United States. If we should be forced back to a last-ditch defense of our own country, our highways would constitute a ready-made system of interior lines on which we could put up a dancing-wildcat fight.

What next in the saga of the motorcar? Well, the veteran airplane designers and manufacturers have now teamed up with the automobile people in a number of instances to produce fighter, bomber and trainer planes for this war. The airplane men supply the designs that they have pioneered and improved; the auto men furnish the mass-production methods that they made into one of the great boasts

of American industry. Between them, the groups should be able to turn out enough planes and other machines of war to bat the Axis in time.

Then what?

Well, by that time a lot of the 33,000,000 now in circulation in the United States should be about ready for retirement. We can't believe the country will go forever short of beer. We think that problem will be solved somehow—and that it had better be, unless we want our whole economic system to take a blow.

After the war, there should come a new era of the auto industry, plus a tremendously expanded airplane industry. There are all sorts of dreamy, half-baked plans floating around beating the expected postwar depression. They may be beaten by the hard, cold fact that a lot of Americans will then want a lot of new cars, and that huge facilities for producing cars will exist, plus the fact that numerous home-flying fliers will be determined to keep on flying.

It's just possible that the automobile, by its younger brother, the airplane, will make America over—after the big job now in progress is finished.

Pityrosporum ovale, the strange "bottle bacillus" regarded by many leading authorities as a causative agent of infectious dandruff.

TELL-TALE FLAKES?

ITCHY SCALP?

UGLY SCALES?

LOOK OUT FOR INFECTIOUS DANDRUFF!

Start NOW with LISTERINE!

Take these signs seriously. They may be a warning of the infectious type of dandruff, so common and frequently so stubborn! Don't delay. Neglect may aggravate the condition. And don't rely on one application of some makeshift, "over-night" remedy to treat a stubborn infection.

Medical—Not Magical Treatment

Your common sense tells you that it's wise to treat an infection with an antiseptic which attacks large numbers of the germs accompanying the infection.

So, be wise . . . start right in with Listerine Antiseptic and massage. It's a simple, delightfully easy, *medical* treatment.

Kills "Bottle Bacillus"

Listerine gives hair and scalp an antiseptic bath . . . kills millions of germs associated with infectious dandruff, including *Pityrosporum ovale*, the stubborn "bottle bacillus" which many authorities recognize as a causative agent of infectious dandruff.

Those distressing, loosened dandruff flakes begin to disappear. Itching and inflammation are relieved. Your scalp feels healthier, your hair looks cleaner.

76% Improved in Clinical Tests

We've received countless letters from men and women all over America, praising Listerine to the skies for bringing them relief from dandruff's distressing symptoms!

Not only that . . . there's even greater evidence, from scientific quarters. In a series of severe clinical tests, fully 76% of the dandruff sufferers who used Listerine Antiseptic and massage twice daily showed complete disappearance of or marked improvement in the symptoms within a month!

If you have the slightest sign of infectious dandruff, don't wait . . . get after it *now* with Listerine Antiseptic, the tested treatment. The large economy-size bottle will save you money.

LAMBERT PHARMACAL CO., St. Louis, Mo.

The LISTERINE TREATMENT

MEN: Douse full strength Listerine Antiseptic on the scalp morning and night. **WOMEN:** Part the hair at various places, and apply Listerine Antiseptic right along the part with a medicine dropper, to avoid wetting the hair excessively.

Always follow with vigorous and persistent massage with fingers or a good hairbrush. Continue the treatment so long as dandruff is in evidence. And even though you're free from dandruff, enjoy a Listerine Antiseptic massage once a week to guard against infection. Listerine is the same antiseptic that has been famous for more than 50 years as a mouth wash and gargle.

Collier's

PRICE GOES UP
MAY 9th

Collier's is more determined now than ever before to maintain its high editorial standards. This policy, we are sure, will be endorsed by our readers. In view of higher costs, we are obliged to increase the price to TEN CENTS a copy, effective with the issue of May 9th.

Also on May 9th, subscriptions will be advanced. In the United States and Possessions, Canada, Newfoundland, Labrador and all countries in the Pan-American Union:

Present Price \$2.00 a Year
After May 9th \$3.00 a Year
(Foreign Countries, \$3.50 per year extra)

No subscriptions will be accepted at present price after May 9, 1942.

WRITING this on a South America-bound plane has certain social aspects. We've done this before. In fact this column has been written on planes, battleships, destroyers, trains, motor-cars and various other unconventional places including a fishing expedition during which we were almost fatally seasick. And all this may account for certain efforts which fell somewhat short of brilliance. However, we are doing our best and have ample assistance. Five people—three gentlemen and a lady with an infant in her lap—are intensely interested in what we are doing. Crowded together like this, four of our five closely packed fellow travelers are even more absorbed in your letters. At first they read them along with us rather politely, doing it out of the corners of their eyes, at the same time trying to look unconcerned. But they soon dropped their little pretense and frankly pitched in reading what you've written to this magazine and agreeing with you or disagreeing with considerable vigor. After five or six letters, the baby fell asleep, leaving us to carry on as well as we can.

SO MR. JULIUS B. McWHITT of Louisville, Kentucky, will be glad to know that his letter touched off a discussion which presently spread all the way up and down the aisle. At one point the debate became a trifle bitter and a gentleman named Bintress or some such said that he was going to write to Westbrook Pegler. This lat-

ter, incidentally, is now done by many irate citizens who used to be content to write to their editors or to their congressman. Mr. Bintress made it clear to us that he knew all the better columnists—so well that they all looked to him to supply them with important ideas and devastating facts. We asked him why he had ignored us. We're a little stupid that way. Anyway he took our name and address and promised to put us on his list—on probation anyway.

WHAT started us on Mr. Bintress anyway? Ah, yes. Having retrieved our copy from the lady with the baby we find that it was Mr. McWhitt's letter. Mr. McWhitt writes about pensions, saying in part that if the President, members of Congress and other ladies and gentlemen who work for the government rate government pensions, so does he. "Nobody," says Mr. McWhitt, "can say that I'm not working for the government and if you want any proof look at my income tax. The way I have it figured, I work two days a week for the McWhitts and four for the government." Of course Mr. McWhitt is not alone in this. Lots of us are doing it, including Mr. Bintress, who adds that it's because of the increased income tax that he is compelled, this winter, to limit his Florida vacation to one month. However, he is bearing it with a smile.

WHILE we are looking around for the rest of our mail (OUR mail, my eye!) we may as well tell you that we paused in Savannah, Georgia. The airport was well stocked with Army and Navy bombers, fighters and observation planes. Also it was well patrolled by soldiers whose orders must have been sharply to the point. You could walk from your plane to the airport waiting room and you could walk back. But the moment you did more than that

you had a couple of sentries riding herd on you. Some of the soldiers were white and some Negro—we'd say 50-50. We talked to a sergeant. He carried no arms—not even a pistol or a bayonet. But ten feet away was a very tall, very thin black soldier with everything—pistol, bayonet, Garand rifle and about a ton of ammunition. "All I'm supposed to do," said the

Price, 5 cents a copy in the United States, \$2.00 a year, two years \$3.50, three years \$5.00 in the United States and Possessions, Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Labrador, Mexico, Newfoundland, Nicaragua, Panama, Paraguay, Peru, Spain and Colonies, Uruguay and Venezuela. Price in Canada, 7 cents a copy, \$3.00 a year, two years \$5.00, three years \$7.00. Other foreign subscriptions including postage: \$5.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

*"Boy! Am I glad I put
Silvertowns on this baby!"*

"YOU FELLOWS ought to be glad, too," Tex continued. "It means we won't have to hike home 15 miles from our shift for a year or two anyway."

"Do you figure they'll last for the duration?" Tex asked him.

"Wouldn't be surprised," Tex answered. "Duramin is one thing Silvertowns are famous for!"

"New things are more important to America today than the automobile. Thousands of cars that were used for pleasure driving a few weeks ago are now carrying workers to their jobs today. They're used for defense weapons."

"What does this mean to you? Just this: as the need for tires and rubber grows, it be-

comes more and more necessary that you help America save its rubber. Your tires are part of our country's rubber reserve. If you use them wastefully, you throw away a bit of the rubber our country needs so much.

You know better than anyone else when to use your car, and when not to. You know the simple rules of care that will make your tires last long. Don't be a rubber-waster.

Even Silvertowns won't last forever. It's true that they're made with Duramin, the famous B. F. Goodrich discovery that keeps rubber young. It's true that you can expect extra miles

from Silvertowns. But you'll get *even more* if you drive with reasonable care.

Everyone wants to help America today. Saving rubber is one way. And while you may think your part is small, the total amounts to more than a hundred million tires. Keep 'em rolling!

TIRE INFORMATION HEADQUARTERS

Your B. F. Goodrich Dealer or Silvertown Store is tire information headquarters for your neighborhood. Here you can get the answers to your questions about tires, or the tire situation. Even more important, you can get the advice and help of tire experts on how to get more miles from your tires. Your "B. F. Goodrich man" is also qualified to make expert repairs, if needed.

How to make your tires last longer!

Maintain recommended or rated air pressure at all times. Shift your tires from wheel to wheel every 5000 miles to insure uniform wear on all tires, including spare.

Don't take corners at high speed that wears tires faster than anything else.

Never slam on your brakes—

except to prevent an accident.

5. Have your wheel alignment, front and rear, checked regularly.

6. Don't drive too fast—for high speed heats up tires and hastens deterioration and wear.

7. Start up gently; do not spin your wheels and grind off rubber.

8. Do not bump into curb—no tire will withstand such abuse.

Remember, every ounce of rubber you save helps your country

KEEP UP WITH THE WORLD

By Freling Foster

The Leibovitz sisters of Philadelphia, identical twins and both artists, sometimes produce "joint pictures." Freda, the right-handed twin, paints one side of the canvas while Ida, who is left-handed, does the other side. When the painting is finished, it appears, even to experts, to be the work of a single artist.

A man has been taught to dilate the pupils of his eyes at will. The first step was the association of a decrease in light with the ringing of a bell, followed by the association of the bell with a verbal command of the teacher. Then the subject gave the verbal command to himself, which he was eventually able to replace with a mental command.—By J. F. Hamaker, Jr., Washington, D. C.

In Japan, most religious worship consists only of visiting a temple for a few minutes to say a prayer, either alone or with a small group. When entering their sacred edifices, Shintoists clap their hands and Buddhists ring a bell in order to arouse the enshrined deity and get his attention.—By Peggy Rust, Leesburg, Virginia.

When Elihu Yale gave \$2,500 to the Collegiate School, its name was changed to Yale University and, when John Harvard bequeathed \$3,500 and a small library to Cambridge College, its name was changed to Harvard University. Today gifts to educational institutions often amount to millions of dollars and receive little or no publicity.—By B. C. Cartmell, Houston, Texas.

During a trip between San Francisco and Honolulu in 1928, the 33,000-ton U. S. Airplane Carrier Lexington traveled 768 statute miles in one day, the longest distance ever made by any kind of vessel in twenty-four hours.—By Martin Goldwasser, Woodside, Long Island, New York.

Judith Skinner, a 26-inch midget who died in London in 1763, has a unique maternal record. During the twenty-three years she was married to Robert, her 25-inch husband, this woman, weighing less than thirty pounds, gave birth to fourteen normal-sized, robust children, all of whom grew to adulthood. Furthermore, she is believed to be the only mother in history who survived fourteen Caesarean operations.

The oldest business house in the United States, and one that is still in the hands of the founding family, is the Perot Malting Company of Philadelphia, established in 1682, 255 years ago.—By Michael J. Iton, Homewood, Pennsylvania.

An odd disaster was the explosion of a two-million-gallon tank of molasses in Boston on January 19, 1919. Flying fragments of the tank crushed or damaged several buildings and injured more than sixty persons, while the deluge of thick syrup entrapped and suffocated eleven others before help could reach them.—By Elmer A. May, Swansea, Massachusetts.

The 300,000 people on the island of Malta receive their radio entertainment through a "rediffusion" system. One central radio station tunes in the best European program every hour and transmits it by telephone wire to each receiving station, which rents for \$3.75 a year.

Flashes of lightning from a cloud to the earth have been less than three thousand feet in length, while flashes from one cloud to another have been more than twenty miles in length.—By Ruth Albright, Cleveland, Ohio.

IN ONE WAY ALL THESE AMERICAN WAR PLANES ARE ALIKE

★ All American fighting planes have one important feature in common: their engines are designed for high-octane gasoline. That's the basic reason why they have more power than similar enemy planes. And because they have more power, they will—plane for plane—outfly and outfight our enemies'.

We alone have *all three* things needed to produce high-octane gasoline—and plenty of it: *one*—vast resources of high quality crude oil; *two*—superior re-

fining processes, developed by America's petroleum industry; *three*—adequate production of anti-knock fluid to improve octane ratings of military gasolines.

The makers of Ethyl brand of anti-knock fluid have geared their plants, laboratories and technical staffs to meet the oil industry's war needs. Until victory is won, our Army, Navy and Allies have first call on Ethyl fluid to make fighting fuels for planes, tanks, armored cars and other mechanized equipment.

Champion of pilots' rights is David L. Behncke, former pilot and president of the Air Line Pilots Association since its founding

THE Brotherhood of Locomotive Engineers is an ancient and honorable organization of stern, gray-haired, experienced pilots of the iron horse and known to just about everybody. So it's time to report on its counterpart of the skies, the Air Line Pilots Association (A. F. of L.) which after a very trying decade of organization and development is now firmly established as an integral part of our scheduled air transport system.

Inadequate appreciation, by a brand of management no longer identified with present-day airlines, of the vital role played by the pilot was the basis for the formation of an association or "union" of pilots in 1931. In this little group was David L. Behncke, former Army pilot and then an active scheduled airline captain. He was elected ALPA's first president and has been re-elected for two-year terms ever since.

Dave was contemplating resigning his airline job early in 1934 to devote his entire time to ALPA when a freak accident stepped in and hastened his decision. He was out on his regular run on a winter night when his carburetors iced up and both engines expired. He pancaked the airliner into some trees and brought it safely to rest with tail down and nose high.

Passengers, copilot and hostess left by the regular door, but Dave stepped out through the emergency cockpit exit onto the wing. It was glazed with ice; he slipped and fell to the ground, breaking a leg in three places. Dave was hospitalized and crutch-bound for nearly a year, and in the days of his convalescence he made a dramatic figure hobbling up to testify at Congressional hearings on remedial legislation for airline pilots.

To Dave Behncke, the airline pilot is an ideal. He sees red and utters volumes of bitter words against any and all who don't treat his boys right. Particularly violent does he become at what he calls the "blame-it-on-the-dead-pilot" line of reasoning.

He cites an airline accident last October in which all on board except the pilot were lost. With the help of a brother pilot and a wide-awake and co-operative management, Mr. Behncke

declares, the sole survivor was point to the real cause of the accident. And he adds: "Who is there that it wouldn't have been blamed on the dead pilot?"

In the Association's publication, *Air Line Pilot*, of which he is editor, Dave keeps alive the memory of his boys under a heading "In Memoriam." This list, surrounded by a black border, now numbers 15 members of ALPA killed in flying accidents. In addition, there were 20 who died of natural causes. Twenty-two inactive members were lost in accidents, two were on the waiting list for membership and four were dropped. The list concludes with honorary members, Dr. Ralph H. Gurney, noted authority on aviation medicine, and Will Rogers.

DEEP in the heart of Texas is a factory of North American Aviation which publishes a house organ devoted to the life and times of its thousands of employees. A feature of the publication is a classified ad section entitled "Something? Want a Ride? Sell Something?" Under the latter heading there is a brisk traffic in holsters, rifles and shotguns. They had to be cleared up so we went to the North American Aviation office and did it without hesitation.

"You see," he said, "ninety per cent of our aircraft workers are Texans. You know how they love to shoot. They are doing with defending themselves against invasion. Just a nice little rootin', tootin', shootin' Texans equally good with aircraft rifles."

WHEN the efficiency of every worker of any kind should be running at full throttle, there are a few to be found in every plant who upon the day's work as a pastime, loaf, stall, have fun or just through their jobs with their minds beyond the walls of the plants. It is the consequence who was the first to use the method of ridicule for such line slackers, but the aircraft industry is doing it and with much success.

Four-and-Twenty Cobblers

By Sax Rohmer

ILLUSTRATED BY ELMORE BROWN

Bimbâshi Barûk encounters a mystery, suspects a crime, and discovers the tragic secret of a woman's heart

THOSE mysterious circumstances which attended the death of Major de Maura might never have been explained, nor the true story of why the White Hart on Lychgate Heath became so uncomfortably crowded one night in September never have been told, if two men who had nothing to do with the matter had not chanced to meet there.

On the night in question, a man who wore a rough tweed suit and carried an ash stick, made his way into the bar. He was deeply tanned and his rather sleepy eyes looked almost startlingly blue in their dark setting. Immediately inside the door he paused for a moment surprised by a fog of tobacco smoke and boom of conversation created by an unusual number of customers who crowded the place.

Joe Porter, the landlord, beckoned to him and, "Would you care to step into

the Sergeants' Mess, sir?" he suggested. "It's getting pretty fuggy in the bar."

The Sergeants' Mess was a tiny coffee room in which might be seen a print of "Ye White Harte, Lychgate Heath, 1743." This sanctum gained and two pints being served:

"What has happened?" the customer asked. "Have you got a Lodge of the Ancient Order of Foresters or what?"

"Not at all, sir. It's clean beyond me. That crowd out there are shoemakers." "Shoemakers?"

"Yes. There's over twenty of 'em."

"But why have they all decided to come here tonight?"

JOE PORTER took up a copy of the County Mirror and indicated a paragraph. This was the paragraph:

TO COBBLERS AND WORKING SHOEMAKERS

A cobbling match for the Champion's Cup and a purse of One Hundred Pounds. Entries between 9 and 9:30 P.M. on Thursday, September the eighteenth, at the White Hart, Lychgate Heath.

"That's the explanation," said Joe Porter. "It's filled my house with cob-

blers from miles around. Even old Jerry Stickle is here tonight. Won't go out after dark for nobody as a rule. Not," he added, "as anybody's going to work overtime to persuade him."

"H'm," murmured the visitor. "Queer business. Practical joke?"

"I suppose so. Anyway, nobody's come forward to explain it."

Voices from the bar grew louder at this moment, and Joe Porter raised the hatch so that the man in tweeds, looking through, could both see and hear the disputants.

"What I says is," remarked one who had a voice like a macaw, "and I says it firm, is this: Who done it?"

The speaker was a small, bald man with a choleretic red face. He wore spectacles with uncommonly thick rims, was attired in riding breeches, green stockings, and a rough sort of tunic, while his shoes had been built for alpine occasions. On his back he carried a steel helmet and a gas mask.

"There's twenty-four of us here," he announced, "includin' six from Uphill. I have been a-countin' of 'em."

A heated dispute thereupon arising, Joe Porter excused himself and went to restore order. As he retired by way of one door, a customer entered by the

other. He was a big blond man with that in his bearing which suggested the soldier.

"B.B., by all that's wonderful!" he exclaimed. "I thought you were on Africa's burning shore!"

"So I was ten days ago." B.B. sprang up, a light of welcome in his eyes. "But I have established an unfortunate reputation as a Bow Street runner or something. So, now, I'm back in England. Delighted to see you, Colonel."

Colonel Dawney, commandant of a military hospital in the neighborhood, smiled into the blue eyes of Bimbâshi Barûk. Although still young, Mohammed Ibrahim Brian Barûk of the Camel Corps had—entirely contrary to his wishes—become an almost legendary figure among those who served in Africa.

"You haven't looked me up," said Dawney, as Joe Porter's face appeared behind the hatch. "I sometimes drop in here, because it's the only pub I know where one can get a decent glass of beer."

"Thank you kindly, sir," said Joe. "Two pints?"

"I didn't know you were here," the bimbâshi replied. "I am billeted on some worthy people out Kinton way, where I share a small bedroom with a large bust of W. E. Gladstone which frightens me."

"You look fit," commented the medical officer, running an appraising glance over Barûk's spare, athletic figure.

"Quite recovered from that nasty one you stopped in Libya?"

"Quite. In fact, I think it did me good to let some daylight into my dark interior."

"Well—what about dining with me tomorrow night?"

And so this was arranged, as Joe Porter's parade-ground tones reached them: "Final orders, please!" But when at closing time, four-and-twenty cobblers reluctantly faced the blackness of Lychgate Heath, they did not disperse until Sam Jollet, the constable, had pointed out that they were creating a public disturbance.

FOLLOWING quite a sound dinner, Colonel Dawney and Bimbâshi Barûk were lingering over the excellent port (the colonel was a connoisseur) when an urgent phone message called the colonel away to one of the wards. The bimbâshi emptied his glass (he didn't care for port, even when it was super) and filled his pipe. He was lounging in an armchair island surrounded by a sea of tobacco smoke when Dawney returned.

"Sorry to leave you, B.B. It was that chap I mentioned—Major de Maura. Came in at eight, and now it's"—he glanced at his watch—"nine forty-one."

"Well?"

"Finished. He's gone."

"Sorry. Very sudden surely?"

"Yes." Colonel Dawney helped himself to a stiff brandy and soda: he was clearly upset, because he failed to note that his guest was not drinking. "Heart, I think, at the end. Phew! I'm bothered."

"Let me see, Dawney: This was the man who was working as a linguist for the War Office people on the Hill. Born in the Argentine, you said, and had served in Morocco and elsewhere?"

"That's the fellow. Unique at languages, they say. He was billeted at the house of a Mrs. Saunders near Hayland Common. She called the police when he was seized with this attack. The M.O. on duty diagnosed tetanus, but it was difficult to see how it had occurred. They found a small scar, certainly, on the side of his calf—probably caused by brambles—healed and unlikely to have led to such violent infection. There was also, I should add, a tiny pinprick, quite recent, on his right forefinger. A thorn again might have done it."

"From what little I have learned—believe I told you—I gather that de Maura was by way of being a Don Juan. Normally, I should say he was a good-looker of his type. Lorkin, the medical officer who went to collect him, didn't like his heart. He picked up some story

from Mrs. Saunders about a woman used to visit him secretly. He said that's neither here nor there. It was that a phone message came through him—female voice, foreign accent before they called me."

He drew a slip of paper from his pocket.

"It was taken by the orderly and sent up to the ward. You said the patient's mind was clear, at least although his tongue was paralytic. They decided to read the message to him. Here it is, as the orderly put it down—" and he passed the paper across.

Bimbâshi Barûk read the following words aloud:

"Please tell Major Rafael de Maura that Gabriel Varez is with him in the ward."

"Did he seem to understand?"

THE colonel nodded: it was a sufficient nod.

"He forced himself upright in the ward and he spoke, for the first and last time—"

"What did he say?"

"He said, 'My shoes—'"

"My shoes?"

"Just that. Then came the final seizure—and his heart conked out."

Dawney suddenly observed that Bimbâshi Barûk was not drinking. The bimbâshi came conscience-stricken.

There was an interval of silence. Bimbâshi Barûk watched a daddy long-legs bent upon committing hara-kiri.

The Perils of Judy

By Luther Davis and John Cleveland

Disaster dogged Judith Evelyn persistently. That's the only reason the leading lady of *Angel Street* was surprised when she turned out to be the sensation of a Broadway hit

THIRTY-ONE curtain calls and a theater full of people shouting "Bravo!" "Aren't you thrilled?" someone asked Judith Evelyn, the hit of the evening.

"Surely!" said Judith. "I'll eat!"

Not that eating was a completely new experience for her but it did have certain elements of novelty. It is to be feared that as she bowed to those cheering customers she saw only a long line of sirloin steaks, medium rare.

Until that moment she hadn't dared hope beyond her rehearsal diet of

canned sardines and plenty of good cold water. *Angel Street*, the play of which she was leading lady, had looked like something a great deal less than the four-star all-out hit of the season it became. In fact, only the last-minute madness of one of the actors—who had suddenly and astonishingly come through with the thousand dollars necessary to get the curtain up—had got them an opening night at all.

Wags around Broadway had come to refer to it as *Poverty Row* instead of *Angel Street*. When the critics arrived,

In *Angel Street*, Judith Evelyn's tortured wife of a murderer, she had to drive her mad, and the play got much of its success to

the cast was unhappy to not have had all come alone—weaver seemed to be their very old. If they come all brushed and with their best girls on the you're in. But when they slip and in sackcloth, as on this November 5, 1941, backers known to cry out and stage leave in a body.

It wasn't just an opening. It was her first Broadway role, most her first professional performance on any stage. That would make her nervous enough but she, central character of the play, efforts depended the fates of

Judith had written her motto too bad we're opening on a Friday means we'll only get two nights, Friday and Saturday. No, been a Tuesday, say, they'd have kept it open the rest of the week. Oh, well!"

Throughout the first act the play was strangely, unpleasantly serious. It is a Victorian thriller, one's expected to laugh or cry anything, but an occasional comical have been reassuring. Vincent, Judith's leading man, admitted thought everybody had gone.

They Just Had to Like

Judith's *Angel Street* role required her to concentrate deeply on making to the audience that she is real while leaving room for reason in the minds of the other cast. She played that night with an intensity because she was anxious. She knew the play was good, she knew others in the cast were good, she could honestly tell herself that she put everything into her character, that she was capable of putting it better like it!

When the curtain went down at the first act, the terrible silence of the audience continued and Price called at Judith and said, "Maybe we can act together again sometime."

And then it began—sudden applause. Judith and Price peeked through the peephole in the wings, curious that the mayor must have just arrived, judging by the swelling sound of approval, perhaps Mrs. President. But no, the members of the audience were standing in front of the stage, beating their dear hands together, staring happily at the stage.

They clapped right through the mission and, from then on it was playing to a houseful of shills and friends of the family. During one scene in which Leo G. Carroll, playing a police inspector, shows up forgetting his derby before hiding in another room, there was a shriek from one of the orchestra seats.

"Your hat, you fool! Don't lose that hat!"

That's the happy ending. The next day were what West Fort Street likes to call "terrific." The most terrific part of every notice do with the "striking, brilliant performance of a newcomer named Evelyn." Another reviewer came out with it: "Miss Evelyn is the most wonderful thing—a finished actress who had, before *Angel Street*, earned a total of two hundred and thirty-two dollars from the theater. She's the answer to those young pianists who weep that 'stock' is

we struck into the jungle beyond Gatun Lake that we were out of condition like this we'd have been sore.

"Citizen," said Izzy, comforting us, "you're breathin' like a fighter I had a piece of, a double sundae called Young Rhino. Ask Dan Parker of the Mirror. That soup tureen used to get winded just pullin' on the gloves. We used to have to change his oil between rounds, if he lasted a round. Ask Damon Runyon. Sam Pian discovered him in Chicago—hangin' on a hook in Armour's. Pian shipped him to Jimmy Johnston, the Boy Bandit, and Jimmy give me a piece of him if I would lead him home to my place until we could get him a fight with—"

But by now we'd got our breath, got to our feet and took a look down the jungle trail we had climbed to *el rancho en el cielo*, one of the searchlight and antiaircraft battery aeries of the Panama Coast Artillery Command. Well, we'd asked for it. When they asked us what we wanted to see we said that we wanted to know what the Army was doing to stop the Nazi or the Jap before their planes could smash the Panama Canal, isolate what remained of our Pacific Fleet and otherwise add to the ill fortunes of war.

So we hit the road to the jungle. The Canal Zone is only ten miles wide. Be-

yond that, east or west, you're in the Panamanian jungle. We struck east. Like all strangers in the tropical forest we didn't bother about direction, just followed a guide hoping he knew what he was doing. It was early in the morning and we were licked to begin with because there was the sun rising huge and molten out of the Pacific Ocean. They had warned us not to worry about incidents like that. They had told us that the Pacific Ocean entrance to the canal was twenty-seven miles east of the Atlantic entrance and that no matter what it looked like, the sun still rose in the east. So we put our silly compass back in our pocket and followed our guide. Six months ago this kid, our guide, was an architectural draftsman with a drafting-board chest, paper shoulders, ivy-vine arms and morning-glory hands. Now, stripped to the waist, as brown as a native, he swifts his way through the Central American jungle like a Choco Indian. But we'll come to that in a moment. If you don't think that this war's crazy, come down here to Central America.

We rode the first nine miles on Enoch John Hooper's banana railroad. Hooper, a wholesale brawl of a man, fifty years old, a handsome, powerful guy from Alabama, helped dig the canal. And when the digging was done he wandered

A Panama Coast Artillery crew mans its gun for target practice. Loader is Mickey Harris, former Boston Red Sox pitcher

off into the jungle and built himself a home and began to grow bananas. He has survived the bite of the coral snake and the bushmaster. He has cut his way free of the coils of the boa constrictor. He has been carried out thrice by naked blacks to the hospital to die of malaria. And three times he has walked back to his jungle home to survive the spring of pumas, jaguars and the ocelot. A very tough guy is Enoch John Hooper who says:

"Aaaaaw shoooo, jungle's been ma home fo' thirty year come the rain. Right sociable, too. Now and then some native gits angry at you and takes on you with a machete, but it don't amount to much. Take a machete right back at him if he gits serious."

So nine miles of Enoch John Hooper's nervous-breakdown railroad shuddered us into the heart of the Panama jungle. Maybe there's another railroad like it somewhere else in the world but we haven't seen it. He built it himself with

BROADBILL!

J. Kip Farrington, Jr.

In the corner, Señor Albacora, the pride of Chile, 800 pounds of muscle and meanness. Take him and you join the world's most select sporting group—the rod-and-reel men who have beaten the mighty broadbill

"ALBACORA! ALBACORA!" shouts the Chilean boatman. "Grande albacora!" echoes the helmsman, swinging the boat in the direction of the incoming broadbill swordfish, the ultimate One Prize in the fishing world—the albacora in Chile.

The same sounds doubly sweet to the angler at the cockpit, and instantly he is in a state of activity. Off come his sweaters and outer garments. The bait is pulled out of the icebox. A last-second check is given the rod, reel, line and lure. A half-dozen thoughts flash through his mind. Will the swordfish strike the surface until the boat gets within a bird fly down and attempt to dive on the bait, perhaps scare it away? Is the bait swimming in a circle? A swordfish is the hardest fish to fool. Will he be in a state of activity when he sees it? The boat is now within four hundred feet of the fish and the lookout men on top call to the angler to put the bait over.

The swordfish do not rise to a trolled bait as other big salt-water fish do. It must be sighted on the surface before the angler can go into action. They are bottom feeders and evidently come up to digest their food. That's why they are so seldom interested in the

The helmsman has throttled the engine down, so that the boat is running at the lowest possible speed, at the time the maneuvering to get into the most advantageous position. Everything is quiet. No one speaks except in a very low voice. The sound of the engine is hardly audible. The angler, sitting in his fighting chair, with his harness hooked to the reel, is letting the bait drift out about two hundred and fifty yards.

The fish looks good; he is swimming in a straight line and not circling, a favorable sign. Another minute elapses and the boatman maneuvers his boat so that the bait, a seven-pound oceanic mackerel, is within twenty feet of the fish. Señor Albacora shows no interest in the bait and is not the least bit interested in the boat. He just swims slowly and steadily on the same course. The boat circles, and again the bait is presented to him. Again there is no sign of interest on his part. The boat then makes a wide circle, the angler lets out about fifty feet more of line, allowing the bait to sink even deeper. The boatman puts it within ten feet of the

surely, if the fish does not strike at the bait has been presented to him. If he does, he is not going to strike at it. I have presented a bait as often as

and again the angler has the huge fish—good hard bait that have set the hook and firm—and the battle may last ten hours; the broadbill never gives up

sixteen times to a swordfish without any interest on his part. But just as the angler is about to give up hope, the fish gives his tail a tremendous kick and goes under, leaving on the surface a boiling resembling the explosion of a miniature depth bomb. That kick of his great tail is not always a sign that he's going to hit the bait, but it usually tells the angler that the fish has seen it.

The boat is barely moving as two, three, and then four minutes elapse without a strike. Suddenly the angler, holding the line about three feet out from the reel (which is on a free spool and above his left hand), gets a jolt so hard that his hand is snapped back to the rod before he can let go of the line. Instantly the line begins running off at a fairly fast pace, and the lookout men climb down from the top of the cabin roof as fast as they can, extremely pleased that the albacora has at least hit the bait.

Let Him Have It!

The angler is all attention as about two hundred feet of line run off the reel. He is waiting for the line to stop, which, if everything goes according to Hoyle, usually happens when the fish is swallowing the bait. Seventy-five feet more of line pay out, then it stops. Another two minutes go by, then fifty feet of line simply spurt off the reel. Another pause. Then, as if it had been shot from a gun, the line really begins to leave that reel, faster and faster, with the water flying off it in the angler's face as he intently watches the free-running spool for signs of dangerous backlashes in the making. When about four hundred feet have left the reel, he yells "Avante!" The Chilean at the wheel throws in the clutch (the boat having been stopped when the fish struck), opens the throttle wide. The angler throws on his brake, the line comes up tight, and he begins to strike the fish—once, twice, three times; seven or eight times if he can, and each one of them a good, stiff, hard jolt.

After about five hundred additional feet of line have run off the reel, the Chilean slows up the boat to maneuver it into the most advantageous position and the fight is on. It may last fifteen minutes, or it may last ten hours—no one can ever tell, when he hooks a swordfish.

The method that I have just described of hooking "the greatest gladiator of them all," as the late Zane Grey correctly named Señor Albacora, was developed by W. E. S. Tucker, who pioneered the swordfishing off Tocopilla, Chile. It is here that swordfish run to larger size and are more numerous than in any other place in the world. Mr. Tucker has taken eighteen of them, a record exceeded only by Michael Lerner, who is recognized as the world's leading angler and has a total of twenty-three to his credit. The writer holds the Number Three spot, with eleven.

Only 336 swordfish altogether have been caught on rod and reel in all the

waters of the world (and by less than a hundred fishermen!). All the record-breaking catches were made off the coast of Chile except for one 674-pounder caught off New Zealand and Lerner's 601-pound Atlantic fish. Six of those caught off Chile weighed 800 pounds or better, and one between 700 and 800 pounds. The average is about 585 pounds.

In 1939, when I caught the smallest swordfish ever taken at Tocopilla—a 236-pounder—my Chilean boatmen did not want me to bring it in, as they said it would pull down their average. Tucker holds the world's record with an 860-pounder, followed by my 853-pounder. George Garey, Tucker's associate in Tocopilla, is in third place with an 842-pounder. Tucker and Garey tied for fourth, each with a fish weighing 837 pounds, and Garey has another weighing 800.

This is really Herculean angling, and yet, believe it or not, swordfish have been pooned off Tocopilla by the commercial fishermen there have weighed up to 1,500 pounds! In Chile, these interesting and hard-working men receive about three pesos a kilo for their catch, a far cry from the North Atlantic market swordfishermen, who receive from ten to fifty cents a pound, depending upon the time and the season. But take it from me, no matter what waters he is caught in, Mr. Broadbill is one of the finest eating fish that was ever placed on a table, and he is exceptionally delicious smoked. There is nothing quite like eating smoked swordfish when you are fighting a swordfish! Last year we gave the townspeople of Tocopilla over 6,000 pounds of swordfish which dressed out for the table at more than a ton.

The majority of the baby swordfish caught or seen have been found in the Mediterranean Sea, so it is presumed that they spawn there. Very few males have ever been seen on the North Atlantic coast of the United States, where so much commercial fishing is done, and of those investigated to date off Chile and Peru by the scientists of the Michael Lerner-American Museum of Natural History Expedition to those countries, all of the fish opened have been females.

It took me six years to catch a swordfish, and I know many men who have been more than twice that long without succeeding. A good friend of mine has

Deadliest enemy of the broadbill is the big Mako shark. Big game sport fishermen consider him the only one worth their attention

hooked twenty-two, but has yet to catch one. They have the softest mouths of all the big fish, so it is very easy to pull the hook out of them when they have been hooked in the mouth. Nevertheless, probably 80% of those caught have been so hooked, a fact that is not surprising when you consider how hard they hit the bait with their long sword, causing the hook and leader to fly. Another reason for this is that they roll over and strike from underneath without coming to the surface, as marlin do, when hitting the bait.

If the hook ends up in the sword, the dorsal fin or the pectoral fin, the angler is in for a long, hard fight because the fish then has full control of his great fighting strength and is able to keep his mouth closed. It is like handling a lion on a leash. Hooked in the corner of the jaw, the swordfish is also apt to prove a tough fighter for the angler, since the fish evidently thinks the hook is just some new kind of parasite annoying him and does his level best to shake it off.

The Fish That Fights to the End

If he swallows the bait and is hooked in the stomach or heart it naturally kills him very quickly, or if he is hooked directly in the eye, it paralyzes him even more rapidly. In most cases, however, a swordfish fights until he is almost dead; when finally brought alongside, the flurry that he kicks up will usually be his last. Off Montauk, I once fought one for eight hours and fifty minutes after hooking him in the dorsal fin; I finally boated him at midnight after he had taken us twenty-two miles to sea, always on a southwesterly course. About two hours after the swordfish had been hooked, a shark came swimming slowly along, and Mr. Broadbill chased him around the ocean for about ten minutes. At half past six, after the fish had been hooked for three hours and twenty minutes, we ran into a school of bonitos. The swordfish promptly started to feed

This Easter, soldiers like these at Ft. Tilden, N. Y. (above), will attend services in Army chapels recently completed at military bases throughout the country. Below, one of the 12 standard chapels at Ft. Dix, N. J.

Our Fighting Men

SAN FRANCISCO. Since the War Department officially revealed that American forces in Australia and other parts of the Western Pacific were baring no military secret to suggest that some may have passed through here to get there, the secret, although not generally appreciated, is that the most unpleasant task facing Army officers in all American ports is clamping down on flings by men who have a hunch they'll soon be in places from which some may not return. But understand the farewell-party urge, but the stand, too, that it must be stifled for two reasons: the danger of men contracting diseases the danger they may let slip some information about troop or ship movements—even though their celebrations to absolutely dry and chaperoned social evenings and family dinners.

The keep-your-mouth-shut campaign has made the traveling soldier's seaport visits lonely and a bit gloomy, and hospitable citizens feel alienated by enemy aliens. Those who would like to stop out-of-town soldiers on the street and invite them home for dinner know it can't be done. First, the soldier would be suspicious; secondly, there's nothing to talk about. Everything conversational about a soldier's life, from "Where'd you come from?" to "Well, do you expect to take a crack at the Japs soon?" is out.

For a time after Pearl Harbor, last flingers of a certain type of welcome and conviviality in bars and night clubs where the breezier citizens gave a slap on the back and told the soldier how good they were. That led to loose talk, which was a drastic tightening of discipline. Navy shore parties and M.P.s began rounding up guys who were off too much; police cleared such places of women and girls that all city jails, and some in near-by towns, were jammed. A Naval Intelligence officer in San Francisco bled all San Francisco bartenders one 3 A. M. and told them they'd have to silence service men, as they served them; otherwise they'd find their place bounds and surrounded by guards. The bartender sighed. It was their traditional duty to listen to a customer when he poured out his soul, but they agreed that even that tradition was out for the duration.

The city's lusty voice hasn't been completely stifled. There's considerable activity for those who know their way around. Yet fewer fellows get around. Leaves have been cut to a minimum. Those who get them are hoping the going will be easier when all the Japs and alien Italians and Germans are hoisted out of the big towns where they can have fun if a guy could only have it. Until then, said a friendly San Franciscan to a soldier on Market Street, "you look as sad as the worst Broadway blues song." "What," asked the soldier quickly, "makes you think I'm from back there?"

JAMES B. McCORKLE pantingly reported to the 12th Naval District headquarters the other day. "I've been up in the mountains prospecting for gold all winter," he explained, "and hurried down soon's I hit civilization and heard about the war." The officer handed him a bunch of mail and McCorkle opened an envelope after envelope until he reached one containing \$2,400 in Navy retainer pay checks that had been looking for him since he was discharged to fly home in 1937, after sixteen years of service. He was back in at his former rating: water tender, 1st class.

China Gold

Pearl S. Buck

EDITED BY MARTHA SAWYERS

Story Thus Far:

LIVING the death of her mother—the "cheerful woman in the world"—in New York City, Elaine Brian is lonely and restless. To find peace, she flies to China, telling her father, a self-centered man, of her plans, where she becomes an assistant to a priest—Father Valerian, one of her father's dearest friends—in his work at the mission.

Elton are in love with her: Larch Corbran, whom she had met by chance in New York, and Father Valerian's German-refugee friend, Adolf Helgel. A third man—Elton Field—lives in Shanghai—hopes to marry Elaine for money; he pursues her, follows her, and finally (when Elaine refuses) sends a cable to her father, in New York, informing him that his daughter is in danger and suggests that he force her to come home.

Meanwhile, Field's Eurasian mistress Helen (recently discarded) has left Shanghai, taking a-ming (which is held by the Japanese), and opened a "house of amusement." One of her girls is Mei-su, the sister of a young Chinese guerrilla leader: Captain Siao. Mei-su suspects that her brother—secretly advised by Helgel—is preparing to attack Tang and take it away from the invaders.

Elton now has Helgel in her power. In accordance with her carefully formulated plan, she proceeds to make use of him. . . . The Japanese captain visits Helen's establishment while intoxicated, he raves about the Americans. Finally, he threatens to bomb their ships—in the harbor. He cannot be induced to name the ships.

In New York City, Paul Brian, Elaine's father, receives Elton Field's cablegram. He then, summoning Larch Corbran, he gives him a curious assignment: To go to Shanghai, meet Elton Field, and bring him back to America. . . . Corbran leaves. A short while later, he and Field meet in Ning. There Elaine (trying to avoid him, whom she dislikes) slips into a lovely courtyard, where an old Chinese lady gives her a courteous welcome, and, following a brief conversation, astonishes her by her bondmaid, "Little Peach," who says, "I won't make her a full daughter, but I'll keep her for a toy, a foster-daughter." Elaine can hardly believe her ears. "If I am glad," she says gently; and Elaine half sadly as she might laugh at him who did not know there was a war, a war around them.

X

WHEN the Japanese captain came to the café where he now spent his evenings he was surprised to find not his favorite, Mei-su, but the mistress of the establishment herself waiting to entertain him. He had, it was often said, looked at Helen with some interest, but he was afraid of her. She was handsome and, in a way he could understand, she looked foreign. She was much more beautiful than the Chinese girl, but also she looked more difficult, and he hated these things in a woman. He liked to feel that he was instant to obey his command. He pursed his lips and did not smile. He staggered into the inner room where Mei-hua led him. Helen was waiting. She was heating the pewter cups in hot water when he came in. "Mei-su is ill," she said gently. "But you may not be robbed of your evening's pleasure, I will take her place so long as I am able."

He nodded curtly, and hid his surprise under surliness. Then he unfastened his wide leather belt with its ornate sword and sat down. She poured his first cup of wine. This man, he perceived, was full of some sort of force. She must find out what it was. But she did not speak. She waited quietly to fill his wine cup again. Complete silence he drank down six small bowlfuls. Then he cleared his throat.

"What did the girl fall ill?" he asked. "This morning," Helen replied.

"She sent her sorrowful apologies to you and she hopes she will be well tomorrow."

"Is it a catching disease?" the Japanese asked.

"It is not," Helen replied.

"You Chinese," the Japanese said with contempt on his thick lips, "you are all filthy."

She did not answer this, and he fixed his eyes on her exquisite hands, one hand on the handle of the wine pot, the other holding on the lid.

"The Americans are very clean, are they not?" Helen said after a moment. "At least I have heard they are. I have not been in America."

"The Americans!" the Japanese grunted. He drank down two more cups of the hot wine. A plate of cakes stood

near him and he ate one in a bite. Then he cleared his throat again loudly and spat into a tissue he took from his pocket and threw the tissue across the room into a corner. "The Americans are pigs! They are animals! But I do not worry about them. In a short time there will be no more Americans."

"So?" Helen said carelessly. "Is your wine warm enough?"

The Japanese paid no heed to her question. "We shall bomb the Americans out of the Pacific," he said still in his loud voice. He pulled his short stiff mustache. "It will be easy—a few days."

"So?" Helen said again. "Now would you like a little cold wine?"

"I like any wine," the Japanese retorted. He drank quickly a few cups of the cold wine she brought. "The Ameri-

"What's the matter with him?" Elton Field asked. "He looks as though he'd had a stroke!" "He is only drunk," she said quietly

cans," he said, "they are children. While we have been preparing to demolish them they have been playing with their toys, their ships and their airplanes, so neatly side by side. Yes, they play—over the week ends, you understand, they all play. They make war as the Chinese do—only so far as it is convenient for them and enough only not to interrupt their football games. The Chinese stop a battle when it is mealtime and eat before they go on fighting. But (Continued on page 26)

She dropped it onto the fire. With a quick gesture that hurt my back I jerked it off again just before it caught. "Don't," I said. "We may need it. For the police"

The Story Thus Far:

JERRY BURTON, a young Londoner, is injured plane he is piloting crashes. On his physician's advice goes—with his sister, Joanna—to the provincial town stock. There he rents a house and sets to work to regain his lost strength.

For a time, all is well. Then Burton receives a mysterious letter in which the writer insists that Joanna is his sister! Others (he soon learns) are being similarly deceived through the mails; nevertheless, he and Joanna are determined to investigate. . . . Among those whom the newcomers meet are:

Richard Symmington, a lawyer, and his wife; Owen Griffith, a physician, and his strong, self-reliant sister, Aimée; the Rev. Dane Calthrop—and his severely pious wife, Mrs. Pye, a well-to-do dilettante; Miss Emily Barton, a young woman who owns the house the Burtons occupy; Megan Symmington's stepdaughter (a curious girl who is looked upon with askance by the townspeople); and Elsie Holland, the Symmingtons' good-looking nursery governess. . . .

Knowing Joanna as he does, Burton is not surprised when she informs him that she rather likes Owen Griffith. A lively, modern girl, is never quite happy unless she is in a love affair—usually amounting to nothing. . . .

While alone in her home, Mrs. Symmington kills herself with cyanide. Investigation reveals that, a short time before her death, she had received an anonymous letter—a "pen" missive in which the writer had asserted that one of her sons was not Richard Symmington!

Feeling sure that, with the Symmington household uproar, Megan would be happier in new surroundings, Burton and Joanna invite her to visit them for a few days. Megan (who has always fancied that her parents' presence, are sorry she is not a boy) accepts the invitation with alacrity.

Burton and Aimée have a talk, during which Megan's personality and problems are discussed. Aimée thinks the girl should have a job, do something; she inveighs against the "silly old-fashioned idea that a woman's place is in the home." Listening to her, Burton is astonished to find he had no idea that Aimée Griffith could be so vehement.

III

I MET Symmington in the town later in the afternoon. "Is it quite all right for Megan to stay on for a bit?" I asked. "It's company for Joanna. She's rather lonely sometimes with none of her friends."

"Oh—er—Megan? Oh, yes, very good of you."

I took a dislike to Symmington then which quite overcame. He had so obviously forgiven about Megan. I wouldn't have minded if he had actively disliked the girl—a man may sometimes be jealous of a first husband's child—but he did like her, he just hardly noticed her. He felt for her much as a man who doesn't care much for a dog would feel about a dog in the house. You know when you fall over it and swear at it, and you give it a vague pat sometimes when it presents itself. Symmington's complete indifference to his stepdaughter annoyed me very much.

I said, "What are you planning to do with her?"

"With Megan?" He seemed rather surprised. "Well, she'll go on living at home. I mean, naturally, it is her home."

My grandmother, of whom I had been very fond, used to sing old-fashioned songs to her grandchildren. One of them, I remember, ended thus:

"Oh, maid most dear, I am not here,
I have no place, no part,
No dwelling more, by sea nor shore,
But only in your heart."

I went home humming it.

EMILY BARTON came just after tea had been cleared away. She wanted to talk about the garden.

We talked garden for about half an hour and then we turned back toward the house.

It was then that, lowering her voice, she murmured, "I do hope that that child—that she has been too much upset by all this dreadful business. Her mother's death, you mean?"

"That, of course. But I really meant the unpleasantness behind it."

I was curious. I wanted Miss Barton's reaction.

"What do you think about that? Was it true?"

"Oh, no, no, surely not. I'm quite sure that Symmington never—that he wasn't"—little Emily Barton was pink and confused—"I mean it's a possibility—although, of course, it may have been a mistake."

"A judgment?" I said, staring.

Emily Barton was very pink, very Dresden shepherdesslike.

"I cannot help feeling that all these dreadful things, all the sorrow and pain they have caused have been sent for a purpose."

"They were sent for a purpose, certainly, but grimly."

"No, no, Mr. Burton, you misunderstand me. I'm not talking of the misguided creature who wrote the letter—someone quite abandoned that must be. I mean they have been permitted (Continued on p. 21)

second spoonful of sugar
to nobly pass up today
help shoot a Jap. Sugar-
molasses is the best
of smokeless powder
we need a million sweet
of it in a hurry. That's
reason for saving sugar

Your Sugar Bowl Blows Up

By Frank J. Taylor

IF you've been wondering why,
all our sugar-cane plantations
Hawaii, Puerto Rico, Cuba and the
States, and with our 150,000 sugar-
cane in fourteen states, we Ameri-
cans to go easy on the sugar bowl
well, here's the answer: We're
in a lot of sugar at the Japs and
Japs. Worse luck, the Japs may be
in some of our sugar from the
Japs back at us.

Our 'ootin' sugar goes into the all-
manufacture of smokeless powder
a, appears, is not powder at all
st of black, pasty spaghetti. The
adent to turn guncotton and the
ingredients of this potent explo-
into an easily handled paste is
cohol, and the quickest, cheap-
to get 190-proof ethyl alcohol
ment enormous quantities of
the molasses with special, fast-
yeasts; then distill the residue.
is a clue to why the U. S. De-
Supplies Corporation contracted,
ly after Pearl Harbor, for the en-
Cuban crop of sugar cane, which is
ed from January to May. In-
dehydrating the whole crop into
syrup, the Cuban mills will leave
equivalent of a million tons of sugar
concentrated molasses. This is the
stuff—not the blackstrap residue
refineries that most of us know
sues—and is easily delivered by
to the ethyl alcohol distilleries
in country. Less than three days
it arrives, the molasses can be
alcohol.

Now you may want to know why we
deert some of our superabun-
dant grain to the whisky distilleries
to be made into ethyl alcohol, and
of sugar. There's an answer
at one, too: Ethyl alcohol made
from grain takes longer and costs more;

and the best the whisky distilleries turn
out with their regular equipment is 160-
proof, which isn't good enough.

Of course, the munitions makers
might produce powder without ethyl
alcohol, as do the British, who use an
explosive powder, whereas ours is a
burning powder. Explosive powder is
dangerous to handle and is blamed for
the blowing up of the battle cruiser
Hood when a shell from the Bismarck
scored a direct hit on the powder maga-
zine. That's one risk our men-of-war
don't run as long as we're willing to
forego about one spoonful of sugar out
of six for the manufacture of smokeless
powder.

Even if we didn't shoot a million tons
of sugar, there would still be a shortage.
The Japs in the Philippines have cut
us off from plantations and mills that
normally send us 850,000 tons of raw
cane sugar annually. In Hawaii, which
usually sends us another 900,000 tons of
raw sugar, the plantations and mills
have diverted much labor and equip-
ment to speed up war work and they
will be able to harvest only half a crop
this year. Adding to the predicament,
the beet-sugar men in this country were
held under wraps in 1941 by the quota
system by which the U. S. Department
of Agriculture attempted to prevent a
sugar glut, so that they entered 1942
with a stock pile 500,000 tons below nor-
mal. That was one of those instances
where hindsight is better than foresight.
Altogether, that's "two million eight,"
as the sugar men put it, that we don't
have this year for the sugar bowl, and
for baking, candy-making, chocolate
and soft drinks.

That's the dark side of the cloud.
There's a bright one, too. Fortunately,
the sugar shortage isn't like the rubber

Action at Sea

By Thomas H. Raddall

ILLUSTRATED BY PERCY LEASON

One way to win the battle of the Atlantic. Stranger things have happened, but not very often. Nazi bombers please take note

ORTON PORTINGALE sat in the small and deserted wardroom of His Majesty's Canadian corvette *Windlestraw*. He was drowned in gloom, or rather, he was drowning, and seeing in review the events of his past life. His naval life at any rate. That was not very long.

Two years before, at twenty-eight, he had been sitting for a master's ticket, the goal of his young lifetime in the merchant service, and speculating on the chance of getting a ship of his own before he was old and gray. From that he had walked straight into the war, with an application to Ottawa for naval service, accompanied by his worn and much-thumbed B.O.T. discharge book, letters of recommendation from several owners, his birth certificate, and the crackling new master's ticket.

He was sound in wind and limb, and stood an inch short of six feet, though his big chest and heavy shoulders made

him look shorter than he really was. He had gone to sea after leaving high school, and had come up the hard way, beginning with schooners in the fish-and-lumber trade to Demerara. The combined assets of education and experience had given him a supreme confidence in himself, which went very well with the Portingale nose and jaw. He was quite sure that Ottawa would accept his services promptly—and the prompt acceptance came. Young men with master's tickets and well-filled B.O.T. discharge books are not to be sneezed at when a navy is being built up in a hurry.

There followed an order to report at Halifax for medical and other tests, and the passing of those tests in the busy ant heap of the naval dockyard. Then came the training. He was a Bluenose of the Bluenoses—his father and grandfather had been deep-sea captains before him; and he made no bones about saying, with the instinctive and faintly hostile cockiness of the Bluenose, that he knew a good deal more about the sea than the average brass-bound naval officer; and what he did not know he could pick up quickly. He clung to the first half of this belief, but the rest had suffered a sea change. It began on land, really, in the training school for officers, where the day began with physical jerks on a chilly parade ground at seven in

the morning and ended (theoretically) with telegraphy at six pip emma. This left the evening free for study.

He studied, among other things, the King's Regulations and Admiralty Instructions, and found it a peculiarly absorbing book. From it, and from the talk in the barracks, he learned that the navy, like Gaul, was divided into three parts. First there was the Navy proper, the *ne plus ultra* of the business; then the Reserve, a little lower than the angels; and last, and very low indeed, the Volunteer Reserve—the V.R.'s, the "Wavy navy."

HE WAS inclined to sniff at the superior airs of the Navy; but he took comfort in his prospective commission in the Reserve, which enabled him to look down upon the "wavies."

The prewar occupations of the "wavies" ran the gamut from banker to college student. Portingale was prepared for that. But he had discovered, to his horror, that a good half of them were fresh-water men from the Great Lakes, and worse, from the prairie towns. He had an instinctive distrust of a man who had never seen salt water. And he made no secret of these things.

He remembered the great day when he became Lieutenant Orton MacIan Portingale, R.C.N.R., and the journey to the Saint Lawrence to take over his

first command, the little corvette whose lonely wardroom he now remembered the crowd in the and a charming creature bowed with a champagne bottle horror at the name—*Windlestraw*! Apparently the running out of strictly botanic He soothed his nerves with the that it might have been Violet Pansy.

He remembered his first in of his officers, all but one wavy gold sleeve braid of the teer Reserve. Query...for a gentleman at the Kentucky Derby

US: If your favorite romps home to win the wreath of roses today, we dare say you'll be having a drink.

MAN: Win, place or show—I'm having a Mint Julep!

US: Good. But first we'd like to ask you a question. Have you tasted *today's* Four Roses?

MAN: I've been meaning to, but...

US: Then since Derby Day is such a special day, we wish you'd try a very special Mint Julep... made with today's Four Roses! Because, unless you've tasted today's Four Roses, you can't possibly know what wonderful things have happened to this superlative whiskey! Ah, what bouquet! what surpassing flavor and mellow richness! What matchless amber-gold magnificence!

MAN: Say—I'm glad I ran into you! I suggest that

we meet at the clubhouse bar after this race. And if today's Four Roses lives up to the send-off you've given it, the Juleps are on me!

WOULD YOU LIKE TO START YOUR OWN FOUR ROSES KENTUCKY MINT BED?

Naturally, even so glorious a drink as a Four Roses Mint Julep tastes *more* glorious when it's made with real Kentucky mint.

So we'd like to send you—with our compliments (at the proper time for planting) a sturdy young plant of real Kentucky Bluegrass Spring Mint, with instructions for starting your own "Four Roses" mint bed. Just write before June 15, 1942 to Frankfort Distilleries, Inc., 501 Columbia Bldg., Louisville, Kentucky.

Four Roses is a blend of straight whiskies—90 proof. The straight whiskies in Four Roses are 5 years or more old.

I'VE NEVER TASTED SUCH WHISKEY AS TODAY'S **FOUR ROSES!**

Old Hands at new Jobs

THERE is a new look of grim satisfaction on the faces of many a veteran Buick worker these days.

There is the look of the seasoned infantryman who, having patiently waited while advance forces engaged in all the early skirmishing, at last gets the marching orders that let him move up front.

You didn't have to tell these old Buick hands why the whole Buick factory hadn't been called to action before.

They knew with the practical experience of men who work with their hands that, even if you had the orders, you can't stamp tanks out of automobile sheet metal, or machine rapid-fire cannon with the same tools and methods that make car assembly lines tick.

They knew that new methods had to be established, tried and tested—that new machines and fixtures had to be designed and built—that even such fine skills as their own had to be refreshed, redirected, reapplied.

They knew that normally this would take years—it took more than a year, didn't it, to "make ready" even a new car model?

So they noted with appreciative approval as new plants went up, new techniques were established and new skills developed in a matter of weeks.

They were assured that their chance would come months ago, when fellow workers in the same plants began to take on first one wartime job, then another.

Their chance did come, and they're making the most of it.

The job of change-over is handled, and like recruits called up, these qualified veterans went into action.

Old hands at the fine, on-the-button work of war equipment calls for relish their opportunity that when Uncle Sam needs better war goods, Buick can build them.

So there's new buoyancy in their stride as these craftsmen march to work.

There's grim purpose and intentness as they guide planers and lathes.

For these old hands are all-out on new jobs to win total victory.

war goods
**WHEN BETTER AUTOMOBILES ARE BUILT
 BUICK WILL BUILD THEM**

UNCLE PITCH was worthless as kitchen help but it was better anyhow, Daisy thought, to keep him back with her and out of trouble rather than let him hang around the driveway and the office and the restaurant ushering customers in and out and pretending to shine up their cars when he saw them coming, and hinting for nickels and dimes in a dozen other bothersome ways. Miss Nelly didn't mind it too much but Daisy thought it didn't look decent. Uncle Pitch out begging, as if she didn't keep him in pocket money. Uncle Pitch sorely despised the kitchen but there wasn't much he could do about it; he was downright afraid of his niece.

Daisy was coal black, rising forty, and as hefty and strong as the bull of Bashan. Uncle Pitch often declared with some pride; furthermore, she was the best cook in the world and with a head full of sense for money, and Uncle Pitch couldn't deny that she kept him better than he'd ever kept himself, but none of that knowledge eased his kitchen misery.

"I like company, honey," he complained. "Just gimme a raft of company and I'm content. What do I do back here? High and lonesome by myself, all the blessed day."

"Now bring me them pickles," Daisy said, busy over her great stove.

"And half the night," Uncle Pitch said. "From the crack o' dawn to—pickles?"

Daisy turned on him: "Ain't you fished them pickles outen the barrel and sliced 'em, like I told you?"

"I forgot," Uncle Pitch said, stricken. "I guess I wa'n't paying attention, honey. I'll fetch 'em right now."

"You ain't never paying attention," Daisy said, sweeping ahead of him into the coolroom. "Here it is most dark, and supper time—you stir yourself and sweep out this coolroom; looks like there's been rabbits fed in here with that coleslaw you tried to make. Get, now! And you ask me where is the broom I'll use it on you!"

Uncle Pitch grabbed the broom and limped into the coolroom and scuffed and brushed around half-heartedly.

"And light my stove in there," Daisy called, "and the oven too; I ain't got room here for biscuits."

"Yes, honey," Uncle Pitch said. The coolroom, so called because it was closed off from the kitchen and the heat of the wood range there, was used generally to store supplies delivered through its big double doors that opened on the back drive. But due to the exigencies of space it also contained Daisy's other stove, a range fed on bottled gas, for use in emergencies.

Uncle Pitch opened the double doors and swept the broad stone step outside. Around at the front of the restaurant he could hear the sound of cars, slamming doors, distant voices, and beyond that the intermittent roar of traffic on 31. There were lights in the tourist cabins visible from here, and activity along the driveways, as new customers came in.

MISS NELLY had the best tourist place and highway restaurant in Indiana, and maybe in the whole country, and she did get the business too. Uncle Pitch was proud to be connected with such a successful enterprise. But you take two women like Miss Nelly and Daisy, and they made a combination, that was all. Miss Nelly was young and slight and slim, with dark brown hair and blue eyes deep and innocent like a little child's, and always smiling, but there wasn't anything anyone could put over on Miss Nelly.

Daisy called at him, "Pitch! Did you hear me tell you to light that stove?"

Uncle Pitch moved to obey. He secretly feared lighting the contraption, especially the oven. Immersed in his task, he heard a step outside and swung his white head to peer at the night framed in the double doors.

"Who there?" Uncle Pitch asked.

A voice said, "Evening, tarball," and a little runty figure stepped inside and pulled the double doors shut. The little man wore a new-looking light felt hat and a blue topcoat, and he was a stranger to Uncle Pitch.

"Don't start up a racket," he said. "You understand, don't you?"

"Wh-why certainly, most certainly," Uncle Pitch said. "Yes sah, yes sah, I do."

"That's good. This the kitchen through here? All right, let's go in."

"Yes sah," Uncle Pitch replied nimbly. That little man sounded as if, down underneath the soft way he talked, he was mad, maybe scared mad. Uncle Pitch moved through the coolroom door into the kitchen as quickly as possible.

Daisy encountered the little man, when he entered, with surprise, and said, "Ain't nobody supposed to be in here but the help."

"That's fine," the little man said. He walked quickly the length of the kitchen and glanced through the serving door into the restaurant and came back. He said again, "That's good. I want the place to myself."

Daisy frowned through the cloud of steam from an opened pot. "How is that you say?"

"Daisy," Uncle Pitch said, "don't fuss with the gentleman."

The little man opened the coolroom door again and held it open with his foot while he looked around. "You shines behave, and I won't bother you," he said. "Understand what I mean?"

"Yes sah," Uncle Pitch said.

"That's good." The little man stepped inside the coolroom and partly closed the connecting door. He discovered a small window set in the door, and was pleased. He said, "I can watch you through this door. If somebody comes and asks you, you ain't seen anyone, there ain't anyone here. Understand what I mean?"

"Yes sah," Uncle Pitch said. "Indeed we do. Yes sah."

The little man closed the door and they could see his face through the little window. Daisy moaned, "Oh, Pitch, he got a gun."

"Be quiet, honey, and cook your supper." Uncle Pitch picked up his broom and began to sweep and whistle.

PRESENTLY Miss Nelly came back from the restaurant with Malory. Malory was a cop, and he was Miss Nelly's beau. They asked if there'd been someone running through the back drive, and Uncle Pitch replied that they never saw a soul, cooped up back there in the kitchen. Malory explained that the little man had hit a soldier hitchhiker with his car, back on the edge of town, and he had shot at a traffic cop who had tried to stop him, and that other cops had chased him out this far before shooting out one of the tires on his car. But he had got away again in the dusk and they thought he must be hiding someplace around Miss Nelly's Motel. They didn't know who he was but they thought he might be a bank bandit.

Miss Nelly asked Daisy what was the matter, she was shaking; and Daisy, trying to keep from looking at the coolroom, said she guessed she wasn't feeling very good. Malory went out again to help the other cops search around, with Miss Nelly calling after him to please be careful, and then Miss Nelly went back to the restaurant and Daisy leaned against the stove, holding her heart and breathing with her eyes closed. Uncle Pitch went on sweeping, from time to time glancing at the coolroom door.

When he saw that the little man's face was no longer visible through the small window, he said, "Now, honey, you go fetch Mr. Malory and we'll drag that gentleman out."

Daisy opened her mouth to protest and Uncle Pitch said, "You hurry too, or he'll be daid. When I turned on your gas stove in there it purely slipped my mind for a minute to light it, and he bust in on me before I thought of it again. You tell them police to come in by the outside door too, so they won't blow up your kitchen. Now you trot."

There was no reward attached to the little man, who proved to be a fugitive from an East Chicago holdup murder charge, but Uncle Pitch was satisfied with the new position Miss Nelly gave him, in which he sat all day in a chair by the front drive, wearing red suspenders and a badge, as the motel detective. Daisy declared it was sinful, but Uncle Pitch didn't mind her any more.

Kitchen Police

'Who there?' Uncle Pitch asked. A voice said, "Evening, tarball," and a little figure stepped inside and pulled the doors shut. "Don't start up a racket!"

A SHORT SHORT STORY
COMPLETE ON THIS PAGE

China Gold

Continued from page 19

the Americans only prepare for war according to the hours their labor unions allow work. Four hours—five hours a day, no work on the week end!"

He was laughing horribly, and he was not looking at her. The drug she had put into his wine was taking effect. He struggled against it. He leaped to his feet and with fumbling hands he picked up his belt and tried to fasten it about him.

"Let me help you," Helen said. She rose and took him by the shoulders and pushed him into his seat. He sank helplessly, his eyes wide open and upturned to her. They were completely blank. She stared down into them.

"Tell me," she said, "where will you bomb the Americans?"

He muttered an answer. She could not hear it and she shook him. "Tell me!" she insisted. "Say it again!" But it was too late. He sagged into his chair and his head fell on his bosom.

"I gave him too much," she thought, angry with herself. "How could I have been so stupid? But no, it is because the Japanese are too easily drunk. I ought to have remembered that."

She gazed at him, disgust curling her red lips. For a moment she played with the idea of having Li-hua tie him with ropes. She might give him to the guerrillas. Then she rejected the thought. No, it was too soon—she might have need of the Japanese. She shouted for Li-hua, and when he came in she said: "He is drunk again. Take him and lay him on the bed. When he comes to himself, give him a little hot rice."

"Ha," Li-hua said, in enigmatic assent.

IN THE mission house the three men listened to Father Valerian's gasping explanation. It was no explanation—Elaine had been with him and she was gone! It was Larch who really listened, Larch who was dismayed with all his heart. Rudolf and Elton heard, but they watched Larch each of them bitterly jealous of him.

Larch leaped to his feet. "She can't simply disappear! She's somewhere! She's got to be found!"

"Don't be a fool, Corpran," Elton Field said. "It's no good simply dashing off. Let us think a moment what we ought to do—it will save time in the end."

Father Valerian came out of his confusion for a sudden clear moment. He gazed at Elton Field with his piercing blue eyes. "It would have saved everything had you not come," he said. "She was trying to escape you."

Larch, already at the door, stopped. "Why should she try to escape you?" he demanded.

Elton Field did not answer. The light of anger sprang into his gray eyes. But Father Valerian answered for him.

"This man wishes to marry her," he said, "and she does not wish to do so."

Elton Field jumped out of his chair. "This is an absurd time to speak of such a thing. But since you have spoken—yes, it is true, and if I love this girl and want to marry her, it only gives me the more right at this moment—"

Larch strode across the floor and stared down at him, his fists clenched. "You old goat," he said distinctly. "So this is why you cabled her father!"

"Is there any law against my wishing to marry her?" Elton Field retorted.

Rudolf had not moved or spoken. He stood back against the table, his arms folded, contemplating the two men with a look of sad amusement upon his face.

"Before you two fight over the lady,"

he said with irony, "it is perhaps better that we find her. You, Mr. Field, were about to make a suggestion."

Father Valerian sat down and wiped his face with the skirt of his cassock. He had stepped on the edge of his cassock in his haste and ripped the edge. Now when he saw the rent, he tore the hem off and threw it on the floor. The men watched him, without seeing him.

"I suggest," Elton Field said, his eyes fixed on the rag, "that I go at once to the Japanese headquarters and demand a house-to-house search."

"Good," Rudolf said coolly. "I agree that this would be an efficient thing to do. Gentlemen, suppose we allow Mr. Field to proceed at once to the Japanese captain. He has more influence with the Japanese than we have."

Larch stepped back and in silence

"Come," he said, "we will go from door to door, and find her somewhere, you and I—"

AT THE door of Helen's sitting room Elton Field paused. They had told him at headquarters that the captain was at the new café, and so here he had come. But she? He could not believe what he saw.

"Helen!" he cried. "What are you—"

"I have been here a long time," she said. She did not rise. She was grateful for the moment she had had to compose herself, to prepare for his coming. Li-hua had hurried in. "Your big-man is at the door—he asks for the Japanese."

She had paused for one second's thought.

"Do not show yourself," she said. "He

Behind her Elton Field found a mind a torment of questions. chance that brought her here. For a moment he was her. He glanced at the smooth head bent as she walked. She altogether Chinese, this woman's hair was low on her neck and jade pins were crossed in it. He "I hate these Chinese, the 1 their smooth faces!"

"Here he is," she said, and detained. There on a great bed, covered by a red silk quilt, the Japanese snoring, his mouth wide open slightly open.

"What's the matter with him asked. "He looks as though he stroke!"

"He is only drunk," she said. "This is how he looks every night."

She looked so devilish in her as she stood there that Elton Field seized with horror. She looked caught the horror in his eyes.

"What is the matter with you asked in the same still voice.

"You—" he gasped—"I believe know where she is—I believe wicked deceitfulness—"

"You mean Elaine Brian?"

Her voice was so silvery in its ness that he choked. He leaped and seized her by the shoulder do know!" he shouted.

Then with a movement as smooth as a snake's she put back one hand out of her hair the jade pin, pin she had brought with her before from Fukien, the pin a long slender dagger, made to Fukien woman from the man who hated, the foreigner, the conqueror with a thrust as sure as a snake she thrust it into Elton's right into the soft stuff of his brain b

SHE waited while he staggered saw him fall and struggle a lie still. She stooped and pulled pin and wiped it clean on the under of the red silk quilt that covered Japanese. There was very little the dagger, and the stain it left silk scarcely showed. Then she back the cover and dragged the nese out of bed and let him fall the inert body on the floor. He wake, and she contemplated them for a moment.

"It will do," she thought. "there to care how he died?"

She put the pin back into her went out, closing the door behind. In her sitting room at the end of the corridor Mei-su was still waiting lifted her head in curiosity and ment as Helen came in and Helen swerved the look, her voice as ever.

"A strange thing has happened said. "For some reason the Japanese has killed the American. He left the bed and grappled him and flung backward on the brick floor."

Mei-su cried out: "But will blamed?"

Helen shook her head indifferently. "Who is there to blame us in if a Japanese kills an American."

She clapped her hands for When the old man came in, she "Li-hua, the American is dead Japanese fought him without knowing what he did, and he fell backward broke his head on the bricks. What Japanese comes to himself, tell what he has done."

"She must be found," Rudolf saying to Chen. "I will not all

"This one comes fully equipped"

Elton Field put on his coat and his hat. "Let us meet here at the end of two hours to compare what we find out," Rudolf said, "that is, if we can."

"She'll be found long before then," Elton said brusquely and went out.

Behind him Father Valerian sighed. "Why do I hate that man?" he inquired of Rudolf. Then his eyes fell upon Larch. "Who are you?" he asked. "And why are you here?"

"I am Larch Corpran," Larch said, "and I have come to take Elaine home."

FATHER VALERIAN rose, his eyes fixed on Larch. "How did you know where she was?"

"Her father sent me," Larch said. "And that fellow Field told him where she was. And now, please, let's not waste our precious time!"

"Larch Corpran!" Father Valerian echoed. Surprise passed over his face and was gone in a second. "Why should I be surprised?" he muttered. "Father in heaven, forgive me that I am surprised when having prayed for help, it comes to me!" Resolution and confidence strengthened in his face.

may remember you. Let Mei-su bring him in."

So the girl Mei-su had brought Elton Field in, her eyes round with the strangeness of her mission. What was this man to her beloved mistress? She stood now just behind him.

"Come in," Helen said. She rose with a slow grace and stood while he came in. "Sit down," she said.

"I can't," he replied. "I have come in search of the Japanese captain. They tell me he is here."

"Yes, he is here," she said. "He is always here. But he is very drunk."

Elton stared at her, then around the room. "Is this what you did with my money?"

She nodded. "Business is very good."

"But why Ta-ming?"

She turned her head away. "I wonder why?" she echoed in her soft voice.

He took one step forward then checked himself and shook his head angrily. "I don't care what you do," he said. "Take me to the Japanese!"

She drooped her head. "This way, please." She moved with her incomparable silent grace toward an inner door.

"Oh, how I love to get up this morning!"

attack to take place until she is found!"

Chen smiled ■ still glimmer of a smile. "I can understand why you feel thus," he said, "and yet how can I tell the Hill and Water men that they must not attack the city because a young white girl has disappeared? They will only believe she has been taken by the Japanese."

"At least do not give the signal until the man Elton Field returns," Rudolf urged. "We agreed to return here, all of us, at the end of two hours."

"Since the Hill and Water men tell their time by the sun an hour or two will not matter to them," Chen agreed. Some peculiar wisdom in his smooth and handsome face caught Rudolf's eye. "You know where she is!" he cried.

Chen smiled. "I do not know, but I have heard," he said. "That is, the old manservant who belongs to the house of the Pao family told his best friend who is ■ gate keeper at the camp of the enemy, who as you know is a spy of our side, and he told me."

"Then why—" Rudolf began, outraged.

CHEN interrupted him: "Why did I not tell you before? In the first place the thing only happened today. In the second place, had she wanted it known where she was she could easily have walked out of the gate as she walked in. I waited to find out the way the wind was blowing before I spoke."

"But you have known for half an hour that we are distracted because she was lost!" Rudolf cried. He put on his Chinese fur-lined cap as he spoke and his fur-lined soldier's coat.

"Since I knew she was safe—" Chen murmured.

But again Rudolf would not allow him to finish: "Take me to the house, Chen, and hold back the signal for attack until I have her safe in the mission."

The Chinese shrugged, threw out his hands, smiled good-humoredly and led the way without a word until they were in the street. Then he laughed.

"We had better keep it secret from those Hill and Water men that a woman has delayed the attack," he said. "They would be very angry if they knew."

"I do not care if they are angry," Rudolf retorted. He was now so anxious about Elaine that he could not believe her unharmed. When Larch and Elton Field and Father Valerian had left the house together, he had remained behind. He had already determined to talk with Chen before going out to find Elaine, knowing how usually the Chinese priest knew what no one else knew. All over the city spies faithfully brought him news, sometimes useful, sometimes of no worth. He had therefore gone straight to the hospital and found him, his cotton cassock tucked up under his white apron.

The apron he had taken off, and now his black robes, which somehow always looked more new than Father Valerian's, flew back in the dry wind as he walked.

"Here is the gate," Chen said. It was barred and he beat on it with the flat of his hand. It opened, and an old man looked out. "Let me in," Chen said with authority, "and the password is—" he leaned forward and whispered into the man's ear. Rudolf himself did not know that password.

"Follow me," Chen said, and Rudolf followed him through the beautiful formal courts. The old man trotted ahead of them and cried out as he went. A scar-faced bondmaid answered and ran more quickly ahead of him. Then in a moment they were at the main hall. The latticed door swung open and they went in. The great room was empty except for the bondmaid who had reached there before them.

"Tell your foreign guest that man whom she knows is here she need not be afraid," Chen said. "Hao," the bondmaid said away.

In the great room they waited ■ moment more, and then an drew back, and Elaine stood the looked so well, so pretty, even mischievous, that Rudolf smile with a sad sense of loss.

"You know you have distracted all?" he asked.

A childish look of defiance came her face. "I had to escape," she said.

She felt a touch on her shoulder the little old lady came through behind her. She was very elegant plum-colored robe of brocade with wide old-fashioned embroidered sleeves. She pointed her long finger at Rudolf.

"Is this the man you ran away from she inquired of Elaine.

"No, not this one," Elaine smiling with sudden brightness at Rudolf's eyes.

"How many men have you?" Rudolf retorted. She sat down with amiable curiosity at Rudolf the bondmaid filled her pipe.

But Elaine did not answer the lady. She was looking at Rudolf was gazing at her with strange in "Ah," he said quietly, "my intuition right. I wondered why I had a young man. Do you really escape him?"

"Yes," she said. "Help me, I don't tell where I am!"

Rudolf pulled at his mustache have chosen the worst possible to begin your complications. I understand them. But you ask hide you now when—" he glanced at the old lady, who sat at them tranquilly majestic as a queen in her carved chair. "I understand any English?"

"Not a word," Elaine replied.

"Then—I must tell you—at the moment the guerrillas are waiting to attack the city. They are waiting signal—from me, in fact. But I refused to give it until you were here. If the city were full of fighting men could I have found you? But what shall I do with you, dear and troublesome child?"

Her head drooped under the tenderness of his voice. "I am way," she murmured. "Perhaps true I ought to go home." She was full at the thought, not for any he knew but for the mission house. Father Valerian. "I don't want she murmured, and tears filled her eyes. "I was never happy until I came I was never of use before. If Valerian does not need me the body needs me."

HE LONGED to cry out, "I know—how desperately!" But he speak. What safety had he to young and beautiful girl however he loved her? In the world that lie ahead of tomorrow, he did not know whether there would be a him. If Germany and Japan triumph he would be called a traitor. lost, he would still be a German. was nothing for him but silent loneliness.

She lifted her head. "Does Valerian want me to go?"

"I do not know," he said. "I have heard him speak of it."

Stubbornness straightened her mouth. "Then I will wait until me to go. Oh, Rudolf, help me to

"Where in this city can I hide? The words came thickly from her have no home, no refuge of my belong in the middle of the battle committed to war—"

His mind was searching the city

CHEVROLET MOTOR DIVISION, General Motors Corporation, DETROIT, MICHIGAN

DIGGER CHIEF

By H. J. Timperley

One thing the Japs wanted at Singapore was Australia's Cocky Bennett, the man who battled them all the way down the Malayan Peninsula. They didn't get him. He's back on his home grounds, ready and eager to carry the fight to the Japs

BRITISH COMBINE

Tough, able Major General Henry Gordon Bennett is Australia's "man who saw it coming" and prepared to do something about it

STALIA need have no fear of the Japanese if it takes advantage of Malaya's lessons. If Australia fails to learn from this experience, there can be no answer but defeat. In our one idea must be to attack, attack. We must not sit and stay on the defensive. The general from general to private had a fighting spirit and that must be maintained. The man who proclaims this is a redoubtable accountant, a businessman who is only when there's a war on, who will play a vital part in aiding General Douglas MacArthur's defense of Australia. "Who" lists him as Major General Henry Gordon Bennett, C.B., D.S.O., V.D. He was com-

mander of the 18,000 members of the A.I.F. in Malaya, and he escaped from Singapore after the surrender. His report conveyed to the Australian War Cabinet was followed by directives to army schools and training centers insisting on new lines of defensive tactics.

"In Malaya, I learned that it is hopeless to underestimate the Japanese," said Gordon Bennett. "It was the universal fault of the British that we underestimated the power and capacity of the Japanese. Our general experience was that the Japanese soldier is inferior to the Australian soldier. I endorse this wholeheartedly. When they clashed with the Australians, we won."

"The Japanese will strike at our air-dromes and use them for jumping-off places for further advances. We must

hit them before they land and while they land. We must attack continuously. We must have aggressive inspiration at the top and brilliant junior leadership. These are the only answers to the tactics the Japanese use.

"Australian troops in Malaya succeeded in every clash with the Japanese by throwing overboard the 1918 textbook methods. They gave no thought to traditional training methods or antique battle technique, and solved each problem as it arose. From the start, the A.I.F. realized that the only way to stop the Japs was to take the offensive, particularly with the bayonet. The Allies must learn that it is by continuous offensive action only that the Japs will be beaten. I found that the Japs are well organized and trained, and that they are always on the offensive.

"It was the simplicity of the Japanese methods that enabled them to succeed. They won battles by maneuvering. There was no need for them to make frontal attacks. They could infiltrate and attack from the rear and snap our vulnerable communications. There was only one real frontal attack, and that

was on the island of Singapore, and they succeeded because of their air support. The Japs weren't loaded down with equipment. Their main weapons were tommy-guns, machine guns, and mortars, and their main means of transport was the simple and efficient bicycle."

The man who said the foregoing is fondly known to his men as "Cocky." It is a term that implies the fighting spirit of a russet-feathered gamecock, something that Bennett has a lot of. Brass hats of larger tonnage have never had terrors for this spunky Australian. He has just gone ahead and blown them out of the water. A brush with authority occurred just before his appointment to the Malayan command. For some years Bennett had brooded over the shape of things to come, and early in 1939 this civilian, then president of the Chamber of Manufacturers of New South Wales and merely an officer in the reserve, wrote a series of trenchant articles for the Sydney Morning Herald in which he said just what he thought of the Australian General Staff.

The theme of the articles was familiar enough. Bennett said things that critics

of the British Army and of the United States Army have said many times, chiefly that the democratic armies were preparing for the last war instead of the next. Bennett charged that the Australian General Staff was antiquated, and that if they had got beyond the tactical conceptions of Waterloo—which he doubted—they were thinking too much in terms of Spion Kop and Amiens and too little about the dust-up he knew to be just around the corner.

Bennett had a close friend in Major General Henry Wynter, a brilliant staff officer who had worked out probably the first general theory of the defense of Australia by Australian forces acting alone. This, too, was heresy to Wynter's imperial-minded colleagues. To them the assumption (now apparently a fact) that Australia might have to defend herself without large British assistance was a crime of unforgivable proportions. At all events, Wynter was deprived of his job as commandant of the staff school in Sydney and posted to a district command in Queensland.

The technical charge against Wynter was that he had once expressed his views to a nonmilitary audience. A similar complaint was made by the brass hats against Cocky Bennett because of his Sydney Morning Herald articles, and he resigned his command in the Australian military reserve. All of which would be so much ancient history if it did not offer a deadly Australian parallel to what happened in the democratic armies up to the beginning of the present war and for too long afterward, and if it did not throw light on just what sort of soldier Bennett is.

Down at the Imperial Service Club in one of Sydney's lanelike, 150-year-old streets, where the younger reserve officers do their serious drinking, Cocky Bennett became something of a hero. He stayed friends, too, with Major General Iven Mackay, then headmaster of a swank preparatory school in exclusive Rose Bay, who was recently recalled, after brilliant work in North Africa, to take charge of Australia's home defenses.

Cocky feels that this is a young man's war. Just before he left for Malaya he had dinner at the University Club in Sydney with a manufacturer who was running a small but essential industry but who wanted to get into the army. "Don't be a damn' fool," Cocky told him bluntly. "I wouldn't have a subaltern over twenty-three. He's got to be able to go for days and nights without sleep and still do a job better than any man under him. You're too old (the reserve officer was thirty-six). Forget it!"

The Major Proves a Point

"Today," Bennett says, "a man commanding a section has to know as much as a battalion officer did in 1918. In battle the section must be able to operate without further orders. Maybe it will be cut off from its own lines but fire power has increased so much that it is still a fighting unit. The man running it must know what it's all about. In 1918 there was perhaps one battalion concentrated on a half-mile front. Now the front might be ten miles. Each single unit in that ten miles must know just what to do. The sergeants are the lads. They've got to be good."

This dinner-table conversation was a preview of just what happened when the Japs first hit the Australians, and advanced Australian units had to cut their way back to the main lines. They fought squad by squad. They had no orders; only guns. The idea that you can give men a cut-and-dried set of orders in modern battle conditions is, as Bennett says, "bloody crazy."

Cocky Bennett, apostle of the young man's war, is fifty-five. He swore before

he left for Malaya that he would massage with him to keep him from rubbing his muscles with eucalyptus. Ironically, also, the first job he had in this war was to organize a corps.

When the Returned Soldiers Australian counterpart of the A. I. O. F. M. Legion, decided that the time had come to form an ex-servicemen's defense corps, the military authorities scoffed at the idea of an "old brigade." Then Bennett stepped in, knocking the corps into first-class shape, successfully demanding its incorporation as an integral part of the Australian military force. The result of his foresight, 50,000 trained veterans are able to hold the line in New South Wales alone while the rest of Australia girds herself to meet the Japanese.

The Man for the Job

After this, Bennett's stock rose rapidly in the public estimation when it was decided to send a man to help in the defense of Malaya given the command. His qualifications for this key position were threefold: He had had the right fighting experience in the last war, was able to think in terms of needs rather than textbook doctrine, and, most important of all, everything that the Australians say when he talks about "guts."

There can be no shadow of doubt that the battling bookkeeper has run his veins as well as red his head. During the first World War he was cited for gallantry eight times. As a youthful major at Gallipoli he stood a desperate stand on shell-torn Ridges. Shot in wrist and shoulder, standing up to direct the fire of his company against the Turks, Bennett was taken to a hospital ship but came back to his unit to carry on the next day. His younger brother, of twenty, was killed in the same engagement.

At twenty-six, Bennett founded a colonel and when he was appointed to command the battle-scarred Australian Brigade in France he was twenty-nine, the youngest general in the entire Australian army while serving with the 3d Division. A company signaller that I first met in 1917, he says, "I was a signaller don't hobnob much with the generals, as a rule—they take them a bit too far forward—but it seemed that Cocky was snoopin' around and he poked his head into our dugout more than once."

Because I was an expert signaller I was promoted to the job of communications assistant to the battalion adjutant in that capacity I saw many of the operation orders. As I recall they were just the kind of thing you would expect to get from a man accustomed in civilian life to figures. They were clear, precise, they wasted no words. We were exactly what we had to do with beating around the bush, and remember that Bennett never gave any lead as to what we were to do, failed to reach our objective, if that entered into his calculations.

It's a far cry from the mud of Flanders to the faded splendor of the Raffles Hotel in Singapore, but where, last September on my way from a summer dodging the Chungking, I caught my next glimpse of Cocky. It didn't seem to me intervening twenty-three years had made a lot of difference. The bright red thatch had thinned to a fiery halo, and the close-clip sideburns were flecked with gray, but still alert and spry. At fifty

World War when various Australian units, his own included, were placed under English command. The "diggers" made no secret of their dislike of this arrangement and fought twice as well when eventually they were regrouped as an all-Australian army corps under Sir John Monash. Bennett knew what he wanted and the brass hats didn't stop him from getting it.

Nobody who understands the psychology of the Australian "digger" will doubt that every man-jack of them lived up to Bennett's pledge that he'd do his best. The Australian tends to become impatient with the "spit and polish" regulations so dear to the heart of the English brass hat, but in action he is second to none in rigid observance of essential battle discipline. The secret of the Australian army's fame lies in the ability of the commander to rely upon the determination of each man to carry out his part.

Long before the end of the Gallipoli campaign which gave them their baptism of fire in the last World War, the Australians had dispelled the notion that they would prove inefficient from lack of discipline. Although they had not yet acquired the astonishing technique which made them invincible as shock troops in 1918, they had revealed themselves as magnificent, resourceful fighters. This new force raised suddenly from a people totally unaccustomed to restraint was tested under the most exacting conditions of warfare and against literally overwhelming odds and was not found wanting in any single particular that matters when the guns begin to shoot.

What was the motive force which sustained these men as, at the Gallipoli landing and later in Palestine, in France and in Flanders, they fought on and on when there seemed no prospect of victory? The answer has been eloquently recorded by the official historian of Australia's part in the first World War.

"To be the sort of man," he wrote, "who would give way when his mates were trusting to his firmness; to be the sort of man who would fail when the line, the whole force, and the Allied cause required his endurance; to have made it necessary for another unit to do his own unit's work; to live the rest of his life haunted by the knowledge that he had set his hand to a soldier's task and had lacked the grit to see it through—that was the prospect which these men could not face. Life was very dear, but life was not worth living unless they could be true to their idea of Australian manhood. Standing upon that alone, when help failed and hope faded, when the end loomed clear in front of them, when the whole world seemed to crumble and the heavens to fall in, they faced its ruin undismayed."

Mobilgas

SOCONY-VACUUM

**Your Friendly
Mobilgas Dealers**

GIVE YOUR CAR A "FRESH STA

CAR LAST LONGER"

10,000 Mobilgas dealers — from coast-to-coast — are ready to serve you. You'll find them eager to give your car vital services that will add precious extra mileage. Drive in and enjoy the Friendly Service that helps make your car LAST LONGER!

FREE AIR? SURE — YOUR TIRES CHECKED EVERY WEEK!"

inflated tires wear at a slower rate. Underinflated tires wear on the shoulders (5 lbs. pressure can increase wear 25%). You need gasoline in once a week check your tires. Inflation can cut tire wear 25%.

5. "LET US LUBRICATE YOUR CAR EVERY 1,000 MILES!"

• Careful chassis lubrication does more than any other service to prolong the life of your car. It pays to have an expert who knows the requirements of your car do this job. Our famous Mobil-lubrication Chart shows every part of your car that needs protection!

7. "WE'LL KEEP HER SHINING — WAXED EVERY 3 MONTHS!"

• The finish on modern automobile bodies lasts many years, if properly treated. This is an all-too frequently disregarded step in making cars last.

Make up your mind not only to keep your car running—but also to have a car you'll be proud to drive. Bring it to us for washing when it needs it—for waxing four times a year! Make your car's looks last, too!

"LET US SWITCH YOUR TIRES EACH 5,000 MILES!"

Right rear tire, for example, wears as fast as the left front. Switching makes the set wear evenly. Proper wheel alignment and so cause rapid wear. Check these, and inspect for road cuts and bruises.

THE FIGURES SHOW TIRE WEAR—

YOUR BATTERY NEEDS OUR CHECK-UP EVERY 2 WEEKS!"

• Let us see that the battery is filled to a safe level. It's also important to make sure connections are tight... that a faulty generator is not over-draining battery... and, most important, that battery is kept charged to full capacity. Proper maintenance can lengthen battery life greatly!

LET US CHANGE YOUR OIL EVERY 1,000 MILES!"

Good motor oil... reputation behind don't wait for a gritty, filled, diluted. Regular change long engine life. We'll put our Mobiloil—your favorite motor oil—how is good!

6. "LET US FLUSH YOUR COOLING SYSTEM TWICE A YEAR!"

• Accumulated dirt and scale in the radiator prevent heat from being carried away from red-hot valves and combustion chambers. A clean cooling system helps you get long, thrifty mileage. Let us clean it and condition the water to prevent rust.

10. "WE'LL CLEAN YOUR AIR FILTER — CHECK OIL FILTER!"

• A dirty air filter wastes gasoline...permits grit to enter your engine. Check every 2,000 miles. A dirty, clogged oil filter is worse than none. It's a source of grit and grime...promotes engine wear. Change it every 8,000 miles.

OIL IS AMMUNITION
USE IT WISELY!

Continued from page 13

sky, its heat blown out of the world by the wind which went crying on into space.

"You'll board at Mrs. Rand's hotel in Ingrid," he said. "Wasn't anything out on the flats four months ago. Then Teddy Roosevelt opened the reservation to homesteadin' and five hundred people filled it in a week. Big argument on the school. Some wanted it, some didn't."

"How could anybody not want a school?"

"This country," he said, "requires a strong back and a weak mind. Not that I'm prejudiced. Never had schoolin' myself, but maybe it is necessary. World's changin'."

"Do you have a homestead?"

He shook his head. "Man like me wouldn't like a hundred and sixty acres after chasin' cows all his life. I'll be movin' on one day, away from the bob-wire. Fences and houses close together ain't natural." He dragged the team to a stop, shouting "Who-aa!" He tucked the loose blanket more securely around her and sent the horses on again with a yip and a yell. In the forward distance dots of dust showed in the haze and at the end of an hour they began to pass wagons full-loaded with household goods and families.

"THE weak ones give up," pointed out Charley Graves. "They came for somethin' free, figurin' to get rich. But it is a year until crop time and winter's comin' and there's considerable work and starvin' to go through. People wantin' things free never have the sand to stick. These kind have been leavin' for a month. What's left now are the tough—good tough and bad tough."

A great woolly grayness raced across the sky as soon as sunset came and the rustle and roar of the wind was all about them. They began to run by wagons loaded with wood, these moving toward the blur of a settlement in the distance. Three hours exactly after leaving Virgil the buckboard came into Ingrid, which was half a dozen houses on the prairie, and wheeled before Mrs. Rand's hotel. Mrs. Rand, young and soft-faced and pretty, stood at the door. "I'm glad you're here," she told Judith. "It is always a tiresome ride. Charley, take the trunk to the corner room upstairs."

Judith entered a living room warmed by a huge central stove. Mrs. Rand lighted an extra lamp, and Charley Graves, having carried the trunk upstairs, came down and paused by the stove. Judith noticed that he was ordinarily a shy man but when he smiled, as he did now, the devil flickered in his eyes. "Feel the house shake? That's the way it is out here—bend or break." He went out of the house.

Mrs. Rand showed Judith to her room and departed. Wind jolted the house like a giant hand and this motion added its uneasiness to the ride on the buckboard and gave Judith a moment's seasick feeling. She freshened up and she stood still in the room, tired and now depressed by the rawness about her. "I'll never keep clean," she thought, and went down to supper.

Afterward some of the settlement people came in to meet her. The elderly Adam Brewerton and his wife appeared, with their daughter Letty, who was a fair, serene girl of Judith's own age. Charley Graves came by and stopped, warming his back at the stove. The Swensons, both beyond sixty, dropped in. The plump and jolly young girl who had waited on table was Ingrid Berg, for whom the settlement was named;

and a big and very capable man latered and was introduced to her Kertcher. They were all friendly and they all had the air of agreeable and this lasted until on man came to the hotel—thin and what dry of face and with a diable pair of eyes. He was, Mrs. said in her soft voice, Clyde Jacks.

Clyde Jacks gave Judith a civil stare and made it plain how he on the school. "I was—and am—such fool waste of money." As he remained in the room the definitely less friendliness; these people clearly disliked him and he it and showed his bristles, and then parted.

Judith was very tired and prepared her excuses and returned room. She wrapped herself in found her writing materials and a chair before the bureau to compose a letter:

"Dear Harry: I have arrived at the first night. I had thought West as being mountainous but nothing here but distance stretched as flat as the floor of Charpentier as far as you can see. The wind is ing and the hotel shakes. I think the dust most of all. There isn't here to remind me of the neat houses and the green lanes of S

She wished to add that she him, that she was afraid and the presence was her greatest desire they were really not yet engaged so she ended it by writing, "Faithfully, Judith," sealed the note into an envelope and addressed the envelope to Harrison Gurdon, Salem, Massachusetts. This was her first year of living and perhaps it had been for her to wish to adventure so far home. It had seemed an old thought at the time; something far voyaging of her earlier sea-ancestors sailing around the world. Now she was afraid.

SWENSON and his wife moved toward through the rough wind. Swenson steadied his wife with his gentleman's voice: "Lean against me. Turn your face from the wind and my arm."

"Winter's coming," she said have eleven dollars. It will be a year before we can see a garden be hard, Nils."

"Very hard," he said. "If I'm younger man—"

"You should not speak of the shanty. Their shanty lay a half mile down road on one of the flat's best quarters. Swenson led his wife and moved around to light a lamp would be easier in my mind," "if there was wood. But at four the cord—"

The shanty was two rooms and thrown together of raw pine and sealed with roofing paper. Swenson had made neatness of with curtains at the windows calendar picture here and there kitchen was a big wood stove, and a couple of chairs built by Swenson and a huge cupboard with shelves and drawers and dishes. There was no fire in the stove.

They were an aging, gentle pair had joined the land rush in the finding a last home, and had been in drawing a good quarter section. Swenson was older than he looked and there was a fear in his eyes he held from his wife; and Mrs.

"You're broke," pointed out Jacks,
"and you will lose it."

Swenson murmured, "That is prob-
ably right," and fell silent. His wife had
moved into the other room, out of sight.
Swenson sighed and dipped his head
and had his thoughts, and knew that
every word spoken by Jacks was wholly
true; it had been a problem in his mind
since the beginning. Suddenly he hated
Jacks, but he thought of his wife and
he came to his hard conclusion. "I will
accept the bargain," he said.

Jacks gave Swenson a sharp, sly look.
"None of this is on paper. You could
do me, but I take you for a man of
your word, or I wouldn't be botherin'.
Say nothin about it to people." He went
out into the brawling night.

Nils Swenson stood in the cold small
room, knowing the last and greatest of
many defeats; and he wanted the sup-
port and the nearness of his wife but
he would not go to her, thinking she
would be feeling worse than he felt.
Then he heard her voice behind him as
she came out of the little bedroom, lov-
ing as it had always been: "It is nothing,
Nils. We are together. That is enough."

JUDITH dreaded failure. Now, look-
ing out upon the sixteen youngsters
seated in the dull light of late afternoon,
she knew she was failing. The long rough
wind, ceaselessly blowing since her ar-
rival ten days before, shook the flimsy
schoolhouse, and the sound of it made
the youngsters nervous; they turned
in their seats and scraped their feet
along the floor and whispered and would
not keep their attention on lessons. Tara
was at the moment reading aloud from
the fifth-grade book, her voice indis-
tinct. The end of the hardest day so far
was at hand and the cordwood piled
around the schoolhouse half covered
the windows, so that the light, never
very good, was now almost gray. Kurt
Dyckman made a fugitive motion with
his hand half under the desk and the
restless youngsters began to titter.

"Kurt," Judith said, "straighten on
your seat and be still."

That boy, she realized at last, was the
cause of her trouble. He was not a boy
at all, but an eighteen-year-old giant
as large as two ordinary men, with a
dim, sly mind which would never grow
big enough to grasp seventh-grade work.
The school could do nothing for him
and he did not belong in it; he was a
mountainous shape above the other lit-

the figures of her class and his furtive rebellion ran among them and ruined all her efforts at discipline.

She said, "That will be all, Tara." She sat at the desk before them, slim and straight, her gray eyes very serious, her small shoulders squared. The children were on the edge of their seats, ready to bolt at her word of dismissal. Kurt Dyckman stretched both legs into the aisle, knowing she disliked this. Each day his impudence increased. She said, "School is out. Kurt, I wish to see you."

The youngsters made a scurrying storm down the aisles; they went crying and shouting into the wind. Kurt Dyckman lifted his huge bulk and walked deliberately away. Judith Murray waited until he had reached the door before speaking again. "Kurt," she said, "just a moment."

He went through the doorway and turned and sent back his dull grin. Judith Murray stiffly checked her anger and rose and crossed the room, going into the yard to face him.

"Kurt," she said, "I know it is difficult for you to be among children. After all, you're a man. I need a man to help me with some of the chores. I'd like to count on you."

He listened to her with his head lowered. He was slow-minded, and therefore suspicious. He laboriously turned the proposition over in his mind and looked up with his unpleasant grin. "I got chores enough at home." He came half a step nearer, made bold from knowing she could not control him. "You're a mighty pretty woman," he murmured, and walked away from her. Some of the youngsters had stayed in the background. Now they ran on, knowing she had failed to control Kurt. It had not helped discipline at all.

She was angered enough to cry and she thought, "That meanness should be beaten out of him." She put the thought away as unworthy—and lifted her head to see Charley Graves sitting on his horse twenty yards off. She wheeled into the schoolhouse, hating to have him witness her distress.

WHEN she at last closed the school door behind her Charley Graves was still waiting, smoking a cigarette, one leg tossed across the saddle horn. The wind whipped color into his face and he wore no coat and time seemed to mean nothing to him. He dismounted and fell into step beside her, leading his horse down the rutty road toward Ingrid.

"Why," she asked, "did they pile the wood against the windows?"

"Come a good windstorm, it sort of anchors the shebang. That shack ain't stout."

"It is a cheap, flimsy thing."

"Folks," he said in his easy way, "don't have much to work with out here. Not much money and not much time from their own chores."

She was rebuked and knew it, but she kept still, involved in her own troubles as she marched along the up-and-down ruts of the road with the wind beating at her face.

"Everything all right?" he asked. "Havin' any trouble at school?"

"No," she said. "Charley, when will this wind stop?"

"Maybe in an hour. Maybe not for a month." He cast his quick, direct glance at her. She felt its bite, its force. Then he looked away, idly saying: "You got to learn to bend with it, or you'll bust. Kind of hard on educated folks."

"The way you speak," she said, "it sounds as though an education is a handicap."

"The way I figure, education ought to make a person see more and feel more. That's all to the good, except that if you're strong on feelin', you're goin' to be more miserable in bad times. It ain't

the dumb folks that go crazy w wind blows. It's the ones that much."

She felt a small glow of surprise had little learning of the kind she and yet now and then his observation dug deep. Harry Gurdon, so sometimes so prematurely wearing his culture, could not have said ter. She felt slightly disloyal finding the comparison, and then troubles returned and she grappled them as far as the small shanty Swensons. Clyde Jacks was at ment unloading wood beside the bending and lifting with a kind chanical regularity. Mrs. Swenson at the door, beckoning.

Judith noticed the narrow way Graves looked upon Clyde Jacks said, "The Swensons seem long drop in for a moment." She wanted to thank him for walking with her but she was embarrassed and quite abruptly from him. Mrs. Swenson waited for her at the doorway old woman's vague and beaming "Coffee is ready for you," said Swenson. "It is cold today."

CHARLEY GRAVES rode toward the schoolhouse. He shredded out his cigarette at once and wind lifted loose earth from the lands and darkened the air. He thought, "There goes the soil, hell-bent for There never had been any excuse language for the plowing under beautiful grass; and still he had reservations lately. Maybe it would do to judge too soon. People farm somewhere. Past the school he saw youngsters dotting the horizon, homeward bound; and Kurt Dyckman's big-lumped shadow on the road. He narrowed on Kurt and rode up to him.

"Wait a minute," he said, and down. The giant boy's face looked him and showed insolence; a full head taller than Charley natural bully. Charley considered with a grave thought, and got There wasn't any use of explaining thing; only way to break a battle was to beat him humble. He was ing some chances, considering plain animal strength.

He went at Kurt the same chopped trees, one lick at a time beat him on the soft flesh under jaw, he dug at Kurt's flanks. The ambling down the road as they and once Kurt got in a wild swerved Charley clear to his boots ley ducked his head, and took a on his knuckles with a full flush on Kurt's chin. Kurt went to his

Like all animals, he was all when something stronger came there wasn't any pride to maintain fight after he was hurt. He looked at Charley and shook his head. were bleeding and he put a bandage on them and saw the blood, and a throb of fear glittered in his eyes. "Cut it out."

Charley Graves swung up to his dle. The kid was a mountain of a bully turned into a yellow puppy ley said, "Your education's all don't ever go near that school slanted his hat over his forehead loped away.

JUDITH drank Mrs. Swenson's Scandinavian coffee brew a considerably improved, and she observed how little the Swenson There were these two rooms, set with building paper, and a shed behind. The shed had a floor and dow and tar-papered walls.

"It's nice," she said, "that you your wood."

Mrs. Swenson was a guileless and her smile simply faded and

her eyes pointed to the door. "Yes," said, without heart, "that's nice." "Where's Mr. Swenson?" "I pin Mr. Carney build a barn." Swenson shook her head. "Even a dollar a day he is too old for. Maybe he's on top of the roof and it blows him off. If it wasn't for food he wouldn't feel so small." Swenson drew up the edges of her dress to her face and began to cry. Not a sound; the tears rolled along her cheeks, flushed, girl-like face, into her apron, and presently she ceased to cry. "You know what is?" she asked and then, needing to tell this to someone, she related the whole story of the homestead and the good and Clyde Jacks to Judith. She must say nothing. Swenson promised when he promises a thing he'll do it.

"The government doesn't permit residents like that," said Judith, "the promise needn't be kept. He's in the advantage of you."

"For people cannot choose." Judith said, "Right is right," and looked at the bare walls and the neatness of Mrs. Swenson's kitchen cupboard. She moved to the end of the porch and looked into the shed. "You can talk to Jacks. Make him see that's fair."

"You are still a girl. Things in this world are not all straight."

Judith said, "Thank you for the coffee," and left the cabin, marching across the long Swenson quarter section toward the buildings a mile distant. She clapped her hand and dust rolled like a cloud around her. She bowed her head, thinking of the Swensons and knowing it was the first time their desperate poverty. When she thought, "Perhaps other people are equally poor," and was paid at the quick suspicion that her fifty dollars a month caused her a ready privation.

She topped at the Brewertons' for her second letter from Harry Gurdon and went to the hotel. She read the letter in the room, its serious lines, its little

sallies of humor and she saw Harry as he wrote it, a tall man, leisurely and whimsical, with a character that produced actions always right and never unexpected. He was a comfortable man. She saw him; yet as she brought his face before her mind's eye there was a vagueness that was strange, as though distance dimmed what he was.

She had her dinner and returned to the room and began her letter to Harry. She sat long still, thinking of her own troubles at school, feeling the cold dread of failure; and the problem of the Swensons never was out of her mind. Presently she sighed and went to bed, the letter unfinished. There had to be some way of waking Kurt Dyckman's good instincts. That was the purpose of education.

WHEN she faced the class next morning and saw he was missing she felt an enormous relief, and immediately afterward was reproached by her conscience. He did not appear after lunch hour and this day was her best day until, when school was out, young Reeves Powder brought the news:

"Kurt ain't comin' back any more. Charley Graves beat the tar outa him last night and told him to stay away."

She was glad it was gray enough in the room to conceal her blush. All the youngsters rushed at the doorway, leaving her to struggle with the information. She was relieved to know Kurt was gone; but this relief shocked her conscience and she grew slowly angry and the anger remained as she marched against the endless wind. Charley had done something for her which she should have done herself. Moreover, everybody would know at once about it and speculate on her attitude toward Charley Graves. She was in a grim frame of mind when she turned in at the Swenson house. Mrs. Swenson had the coffee already poured.

"I must move from the hotel to a place nearer to school," said Judith. "Your house is the closest. If you will put a bed in the shed it will make a very satisfactory room. Twenty dollars a

Field-fresh, whole kernels... serves four.

FANS...BE BRIGHT, TOO!

"Fans expect a star to have exquisitely bright teeth always. And we've found we can" ... says lovely Paulette Goddard. Many of Hollywood's most famous smiles are brighter, are whiter because of Calox Tooth Powder.

Two Ways to WHITENESS

**YOUR DENTIST FOLLOWS BOTH!
SO CAN YOU - WITH CALOX**

Notice your dentist's technique when he gives you a dental cleaning. First, he thoroughly cleans your teeth. Then, and only then, does he polish them.

In your home care why be satisfied with less than cleaning and polishing BOTH, when you can get Calox?

Calox gives you not one or two, but five special ingredients for cleaning and brightening. With every stroke of the brush, Calox helps detach food particles,

removes deposits, cleans off surface stains. Your mouth is stimulated, refreshed. And with every stroke Calox polishes, too, making your teeth shine with their own clear, white, natural lustre.

In Hollywood, where a smile may mean a fortune, many a star trusts to Calox-care. Your smile may be even brighter than you know. Try Calox and see. McKesson & Robbins, Inc., Bridgeport, Connecticut. "Quality since 1833."

month is what I would be charged elsewhere. Is that all right?"

"Daughter," said Mrs. Swenson, "it will be cold."

"We have wood, haven't we? And perhaps later we can get a little stove." She saw that Mrs. Swenson was about to cry and so hurried on with her brisk tone. "You will have rent money enough to pay Clyde Jacks for the wood. You must go to him and ask him to release you from your promise. Do it tonight if you possibly can. I'll see about the bed today and perhaps I can move over tomorrow." She carried the talk rapidly to the end and left the house at once and moved across the quarter section toward Ingrid. When she reached the road near the settlement she saw Charley Graves riding forward. She stopped in the dust, waiting for him. When he rode up and prepared to dismount she pitched into him:

"You stay right there. I'm angry with you. I'm ashamed of you. What gave you the notion to interfere in my affairs? Everybody will laugh at me for needing a man to straighten out my troubles. What made you think it would be any good to knock Kurt down and scare him away from school? That's just force. It doesn't settle a thing. Do you know what I'm going to do? I'm going to tell him to come back to school. I've got to find a better answer than yours. Education isn't violence."

He looked down at her, not smiling but close to a smile; and the admiration in his eyes further irritated her. He said: "The lad's a dumb brute and the only kind of education he savvies is a punch in the beak. I reckon I was a pretty good teacher." He rolled in the saddle, perfectly self-contained. "You can invite him back but if he comes I'll whale him again, which he knows. So he won't come back."

"Charley Graves, you stay out of my business! There's too much violence out here. You have taught him something wrong."

"I taught him that bein' balky will bring him a beautiful punch in the nose. That's education in any language."

"Fighting," she said, "settles nothing at all."

"Maybe not," he said, "but it sure does a lot of mind-changin'."

She went by him with her outrage. "How can you reason with a man like that?" she asked herself. She stepped into Solomon's store and priced a bed and a mattress and bedding and made arrangements to have it taken to the Swensons the following day. In her room she seated herself at the bureau before the unfinished letter to Harry Gurdon, but could write nothing. He was far away, and vague, and her problems here were too real to bring the memory of him before her. She sat quite still and felt the shock of knowing he was not uppermost in her mind; and at last went down to supper.

SHE hated to tell Mrs. Rand of her decision to move but Mrs. Rand, the most understanding woman, seemed pleased. "The Swensons," she said, "need that help badly, and this is the nicest possible way. You are kind to think of it. I will lend you sheets and pillow slips."

There was a deep feeling of neighborly obligation among them, the close tie of people all in a common lot, and that came upon Judith with its goodness. Later, when the usual group dropped in, Mrs. Rand spoke of the move, and Judith felt the approval of their eyes. She had done something which placed her within the group; it was the first time she had sensed this. Charley Graves stood with his back to the stove, his head bent over the manufacture of a cigarette; he lighted it and his glance struck over the edge of his

cupped hands, grave and serious. Tom Kertcher came in, looking "Swensons just walked into Jacks' place. Now I wonder."

Judith remembered a question had in her mind and now a "What is a quarter section worth it has been patented?"

"Depends," said Kertcher, "is. Anything within two-three here is worth five thousand dollars anybody's money."

Charley Graves casually mentioned "Any particular claim in mind,"

She shook her head, but all the while she was watching her and she knew why she had asked. The sharp and wise in many things that came from books the knowledge of people and the common troubles of people—the small and always pressing iteming. She thought of the Swensons worry came upon her and she over the room and went out into the windy darkness. She stood there a little while she saw the Swensons leave Clyde Jacks' house and toward, very slowly. When they the hotel they paused and Mrs. son said: "It was a nice thing but Clyde said it was a promise we gave our word and he will not back to us, we will keep it."

SHE watched them go on, moving slowly into the steady wind; and she was again, and this outrage made mind for her. She walked straight the road, past the store and Bre place, toward Clyde Jacks' wind and she walked with the inflated sense of justice of all her ancestors within her, and she was the vigor of her hatred. People thought, shouldn't let themselves freely; but she still felt all the knocked on Clyde Jacks' door with knuckles.

When he opened the door—slack man who seldom both shave—she walked into the room, and waited for him to turn. It was a queer room, more like a shed than anything else, full of gunnysacks and bits of wire and empty bottles and pieces of glass. A stove stood at one end, there was a table made out of boxes and a bed in the corner with quilts on it. Then she was at Clyde Jacks' narrow, scarce stare.

"If you want anything of me, 'you ain't goin' to get it. Even wants somethin'. Just because thrifty and work hard is no sign to share with them that ain't good enough to keep from starvin'."

"The Swensons can pay for wood. That should be enough for them."

"They would of starved or they stayed. If they left they'd be the place. I made a fair deal a peck 'em to keep it."

"They can pay you now."

"They couldn't when we did deal is a deal."

"You can't keep a bargain against the law."

He gave her a narrower stare. "You got enough to do without ferin'? Half the folks out here as soon as they get deeds."

"But they can't make agree to sell before they own," she pointed.

He shrugged his shoulders. "To the same thing."

"No, it doesn't. If I told the face you'd have trouble."

"You got nothin' to prove it." Then he grinned when he saw her. "The Swensons ain't the talk after they promise somethin'."

This grew worse and worse. A sharp man, trading on other

jumped away from her.
Graves and Tom Kertcher were
away.

He said in a changed voice, "This
anything I started."
He stared at Jacks in a way
her afraid. They were solid,
but now they were dangerous;
wasn't any mercy in them at all.
He said, "Well, Charley, you want
it, or you want me to?"
He looked to the far end of the
room and stood sallow and sullen,
said. She put a hand up to her
hair and was calm. Now she
thought this would be. "The wood is
like a cord," she said. "Ten
hundred dollars. They will pay you
a month."

"Right," Jacks agreed quickly.
"Right," Charley Graves had
crossed the room at him. Judith
put her hand and stopped Charley.
He said, "that ends the Swen-
son's case to you?"
"Right," said Jacks and kept his
eye on Charley Graves.

"You hear that, Charley?"
He held the Swensons to any
se. She was still a little afraid
of safety. These two big men
were definite in what they
thought; he caught Charley's arm and
led him around, feeling his unwill-
ingness, and drew him toward the door.
He said, "I brought it on—I had to hit
him reasonable." She took
Kertcher's arm also and got both
out the door. As a matter of
fact, she reached back and shut the
door. Jacks, seized the arms of the men
and led them toward the hotel.
He didn't say a word all the way to
the hotel. She stopped here, and Tom
started to turn in. He looked
suddenly smiling. "Kind of a
certain here, Charley," he mur-
mured, and went on into the hotel.

"Charley," she said, "I know what
you're thinking. But this was much dif-
ferent."

"Ahuh," said Charley Graves. He was
a very deliberate man and he took his
own time to build and light a cigarette.
The matchlight flickered in his eyes and
went out; then he said, coolly, tantaliz-
ingly, "Still, it was violence in my book.
Mighty shocking. Can't imagine the ex-
ample you're settin' young children."

She had nothing to say. She watched
the glow of the cigarette make its shine
on his long, dark cheeks. He pondered
the situation deeply and she waited, not
knowing why she should. Wind ripped
across the flats, bringing its dust and its
curt chill; she swung a little, coming into
the shelter of his tall body.

"You know," he said, "if I was a
farmin' man, I wouldn't homestead on
this side of the river."

"Wouldn't you, Charley?"

"I'd go across the river and lease a
chunk of that good land from the In-
dians. Foolish of me to think of such
a thing, though."

"Is it?" she said. "Good night, Char-
ley."

SHE went inside and straight up the
stairs to her room. She lighted the
lamp and stood still. She saw herself in
the mirror, her shaken hair and the
smudge of dust on her face, and she was
rather proud of what had happened. Was
sin always this pleasant? She sighed and
sat down to the unfinished letter, still
conscious of the beat of the wind; but
it didn't trouble her at all. It had be-
come a familiar sound and she got to
thinking of herself as one of the group—
one of the slow and steady people mak-
ing their fight against the new land. She
took up her pen, well knowing she could
say nothing of these events to Harry.
What then was there left to say to
him?

She thought of it a long while, wrote
a few sentences and prepared to add her
usual "Faithfully, Judith." But before
she did she brought the image of Harry
Gurdon forward and looked at his face
a long while, and saw it slip backward
into the mists. She realized then it
would never again come forward clearly
to her; and she knew also that some-
time during the day Salem had ceased
to be her home. How strange this was.
She signed her letter simply, "Judith
Murray," and turned it over on the bu-
reau and rose to leave the room. She
heard the group talking below her and
she wanted to join that warm and com-
fortable circle. She hoped Charley was
there.

"He's got a great little sense of humor, all right"

WILLIAM STEIG

MAINTENANCE

means Longer Life!

FOR YEARS the story of Macmillan RING-FREE Motor Oil has been
a story of reducing friction and wear in engines, keeping them cleansed
of carbon and saving fuel. It's the same story today.

Yes, it's the same story, even though prolonging the life of your car is
more important than merely reducing the cost
of operation.

For the same improved lubrication that has
been keeping motorists ahead of the formation
of carbon, giving them more miles to the gallon
of gas, quicker acceleration and fewer repairs
and replacements—that same improved lubrica-
tion will now make present cars last longer.

Take carbon-removal, for instance. RING-
FREE is refined by an exclusive patented
process which retains a vital characteristic of the original crude oil, enabling
RING-FREE to dissolve the binder which holds carbon to the metal parts
of your engine. You keep ahead of the formation of
carbon because RING-FREE cleanses your engine
and floats off these particles of carbon as it lubri-
cates.

Or take RING-FREE's savings in fuel. In 1094
certified road tests in many makes of cars in widely-
separated parts of the country, it was found that
savings in the consumption of gas up to 10 per cent were not uncommon.

Or take starting wear. RING-FREE's cling and film strength, its penetration
through closely-fitting parts, offers unusual protection
even to vertical metal parts. That means less friction to
moving parts after an engine has been standing idle.

Whether RING-FREE is used in an automobile or
truck, a tractor or a bus or a stationary engine, the ex-
clusive properties developed by its
patented refining process mean
long life.

You have probably been intending to ask your inde-
pendent filling station or garage proprietor about
RING-FREE. You know that he
is an expert, free to recommend
anything that he knows is best
for your car. Don't delay asking him his opinion. Now
that the life of your car is so vital to you, let him tell
you from his own experience how it will prolong the life
of your car.

merry mornings to you!

Crisp

Copyright 1942 by Kellogg Company

Refreshing as an April shower!

Crunchy Rice Krispies strike a crisp, new note for springtime breakfasts!

These golden bubbles of nourishing rice "put the bee" on cranky appetites. They're lovely to look at—nestling in cool cream, decked with spicy fruit. Delightful to hear! Rice Krispies proclaim their lasting crispness with a light-hearted snap! crackle! pop! Heavenly to taste! That palate-tickling Kellogg flavor is definitely habit-forming.

All thanks to Kellogg's exclusive recipe, to oven-popping and gentle toasting. They make unique Kellogg's Rice Krispies the No. 1 rice cereal in America.

"Rice Krispies" is a trade mark (Reg. U. S. Pat. Off.) of Kellogg Co. for its oven-popped rice.

If it's a **Kellogg's** Cereal it's the finest of its kind!

Any Week

Continued from page 4

sergeant, "is to tell people politely that they can't walk around the airfield. If they don't pay any attention and go trespassing on forbidden ground, I merely refer Private Jason there to them. Private Jason is no military genius but he's got just enough sense to admire to shoot the hell out of anybody who insists."

BUT we're completely at the mercy of the lady with the baby. She seems to have most of our mail and the baby, now awake, has the rest. We've just snatched a letter from the baby. His name is Tinsley. It's not much of a letter but we can't be choosy under the circumstances. It's from Mr. L. R. Simons, Extension Director of The New York State Colleges of Agriculture and Home Economics. It reads: "Dear Sir: The simplest way to avoid chick losses for the first four weeks is to buy them with a guarantee that they will live and grow for the first month." We have read Mr. Simons' letter several times and are unable to find a flaw in it. And if we ever get time enough to go fooling around buying chicks we will follow his advice.

BUT we shall have to stop because we are unable to find the rest of our mail. The baby has four or five letters but he bawls horribly if we try to take them away. And his mother doesn't seem able to do any more than we about it. Anyway, she is a little sore at us—the magazine is included. She has just read Grattan O'Leary's article—No Bases In Eire—wherein Mr. O'Leary makes it completely clear that Mr. Eamon De Valera is not anti-British, not anti-American and not pro-Nazi. The article upsets the lady's opinion that Mr. De Valera is pro-Nazi and she's like us in not wanting people to tamper with her prejudices.

WE HAVE another letter here from a Finnish gentleman in South America. Says he: "I am one of your readers, been more than ten year depending on what kind of exchange facilities I happen to have or where I happen to be. For year 1941 I understod, that I will stay here anyway two years, so I got fixset up

for two year all Magazines an papers for me, also I give to m year of Collier's as Xmas gift. T the boy asks me if I can orde American Magazines, Collier's i to him. I told him that is allrig son has no Dollars in U. S.). send order to New York for som zines, also an order to my Bank bo for \$15.00 in U. S. Curr bee sent to above mentioned f found out that my dollars, ever in U. S. A. were or are frozen (I w in Finland). I been keeping money in U. S. A. figuring that thing stands after that Hitlers r over, the Uncle Sam is the one t if he fals, well I do not think anything after that. I mentio home country, Finland, once m told me a storry saying that it h so cold in Finland that the fr stove froze, also recently, I h radio news from New York that sia it is temperature or as he mercury is hitting 50 below zer wondering what kind of mercu talking about, knowing that the I seen, freezes on 39.5 centigr there must be lot of ways to get anyhow here in Colombia it i warm and Got the informati those \$15.00 are bound for New I still have some hope."

YOU are hereby implored to tient. We do the imploring at hand, the suggestion coming to Mr. Morgan Jamies of Was D. C. As we get it, the United always has indulged in a se belly-flops and pratfalls at the of war, regaining her equilib due time and proceeding there kick out the teeth of the enemy sorship," says Mr. Jamies, "will as at present until the public g and mad. Already admirals a erals are being canceled in f sailors and soldiers of higher e content."

y repeated the wording of the let-

You didn't keep the letter, Mr. Bur-
ton?"

"I'm sorry. I didn't. You see, I
thought it was just an isolated instance

of spite against newcomers to the place."

The superintendent inclined his head
comprehendingly.

"A pity," he said briefly.

"However," I said, "my sister got one
yesterday. I just stopped her putting

it in the fire."

"Thank you, Mr. Burton, that was
thoughtful of you."

I went across to my desk and un-
locked the drawer in which I had put it.

It was not, I thought, very suitable for
Partridge's eyes. I gave it to Nash.

He read it through. Then he looked
up and asked, "Is this the same in ap-

pearance as the last one?"

"I think so—as far as I can remem-
ber."

Nash nodded and put it in his pocket.
Then he said:

"I wonder, Mr. Burton, if you would
mind coming down to the station with

me? We could have a conference there
and it would save a good deal of time

and overlapping."

"Certainly," I said. "You would like
me to come now?"

"If you don't mind."

There was a police car at the door.
We drove down in it.

AT THE police station I found Sym-
mington and Griffith were already

there. I was introduced to a tall, lan-
tern-jawed man in plain clothes, Inspec-

tor Graves.

"Inspector Graves," explained Nash.
"has come down from London to help

us. He's an expert on anonymous let-
ter cases."

Inspector Graves, however, showed a
kind of melancholy enthusiasm.

"They're all the same, these cases,"
he said in a deep lugubrious voice like

a depressed bloodhound. "You'd be
surprised. The wording of the letters

and the things they say."

"We had a case just on two years
ago," said Nash. "Inspector Graves

helped us then."

Some of the letters, I saw, were spread
out on the table in front of Graves. He

had evidently been examining them.

"Difficulty is," said Nash, "to get hold
of the letters. Either people put them

in the fire, or they won't admit to hav-
ing received anything of the kind. Stu-

pid, you see, and afraid of being mixed
up with the police. They're a backward

lot here."

"Still we've got a fair amount to get
on with," said Graves. Nash took the

letter I had given him from his pocket
and tossed it over to Graves.

The latter glanced through it, laid it
with the others and observed approvingly.

"Very nice—very nice indeed."

It was not the way I should have
chosen to describe the epistle in ques-

tion, but experts, I suppose, have their
own point of view. I was glad that that

screed of vituperative and obscene
abuse gave somebody pleasure.

"We've got enough, I think, to go on
with," said Inspector Graves. "and I'll

ask all you gentlemen, if you should
get any more, to bring them along at

once. Also, if you hear of someone else
getting one—you, in particular, Doctor,

It costs us more to make
OLD TAYLOR
but we mean to keep it
worthy of this signature

THE man who first made Old Taylor
fought to have bottled in bond standards
written into federal law.

And no other kind of whiskey
has ever been made in
the Old Taylor distillery.

It produces a costlier whiskey.
But we believe it is worth
it. And millions of
men who know
fine bourbon
heartily agree.

Within the ivy-covered
walls of this distillery
no whiskey other than
Old Taylor has ever
been made.

argus ann arbor michigan

barmaid at the Three Crowns, the one received by Mrs. Symmington, this one now to Miss Burton—oh, yes, and one to the bank manager."

Symmington asked, "Have you come to any definite opinion as to the writer?"

Graves cleared his throat and delivered a small lecture:

"There are certain similarities shared by all these letters. I shall enumerate them, gentlemen, in case they suggest anything to your minds. The text of the letters is composed of words made up from individual letters cut out of a printed book. It's an old book, printed, I should say, about the year 1830. This has obviously been done to avoid the risk of recognition through handwriting which is, as most people know nowadays, a fairly easy matter... the so-called disguising of a hand not amounting to much when faced with expert tests. There are no fingerprints on the letters and envelopes of a distinctive character. That is to say, they have been handled by the postal authorities, the recipient, and there are other stray fingerprints, but no set common to all, showing therefore that the person who put them together was careful to wear gloves.

"The envelopes are typewritten by a Windsor 7 machine, well worn, with the 'm' and the 't' out of alignment. Most of them have been posted locally, or put in the box of a house by hand. It is therefore evident that they are of local provenance. They were written by a woman, and in my opinion a woman of middle age or over, and probably, though not certainly, unmarried."

We maintained a respectful silence for a minute or two. Then I said, "The typewriter's your best bet, isn't it? Can't you tell something definite from the—er—the touch, don't you call it?"

Graves nodded. "Yes, that can be done—but these envelopes have all been typed by someone using one finger."

"Someone, then, unused to the typewriter?"

"No, I wouldn't say that. Someone, perhaps, who can type but doesn't want us to know the fact."

"Whoever writes these things has been very cunning," I said slowly.

"She is, sir, she is," said Graves. "Up to every trick of the trade."

"I shouldn't have thought one of these bucolic women down here would have had the brains," I said.

Graves coughed. "I haven't made myself plain, I'm afraid. Those letters were written by an educated woman."

"What, by a lady?"

The word slipped out involuntarily. I hadn't used the term "lady" for years. But now it came automatically to my lips, re-echoed from days long ago, and my grandmother's faint, unconsciously arrogant voice saying, "Of course, she isn't a lady, dear."

Nash understood at once. The word lady still meant something to him.

"Not necessarily a lady," he said. "But certainly not a village woman. They're mostly pretty illiterate down here, can't spell, and certainly can't express themselves with fluency."

I WAS silent, for I had had a shock. The community was so small. Unconsciously I had visualized the writer of the letters as Mrs. Cleat or her like, some spiteful, cunning half-wit.

Symmington put my thoughts into words. He said sharply, "But that narrows it down to about half a dozen to a dozen people in the whole place! I can't believe it."

Then, with a slight effort, and looking straight in front of him as though the mere sound of his own words was distasteful, he said:

"You have heard what I stated at the inquest. In case you may have thought that that statement was actuated by a

desire to protect my wife's memory, I should like to repeat now that I am firmly convinced that the subject matter of the letter my wife received was absolutely false. I know it was false. My wife was a very sensitive woman, and—er—well, you might call it *prudish* in some respects. Such a letter would have been a great shock to her, and she was in poor health."

Graves responded instantly:

"That's quite likely to be right, sir. None of these letters show any signs of intimate knowledge. They're just blind accusations. There's been no attempt to blackmail. And there doesn't seem to be any religious bias—such as we sometimes get. It's just sex and spite! And that's going to give us quite a good pointer toward the writer."

SYMMINGTON got up. Dry and unemotional as the man was, his lips were trembling.

"I hope you find the devil who writes these soon. She murdered my wife as surely as if she'd put a knife into her." He paused. "How does she feel now, I wonder?"

He went out, leaving that question unanswered.

"How does she feel, Griffith?" I asked. It seemed to me the answer was in his province.

"God knows. Remorseful, perhaps. On the other hand, it may be that she's enjoying her power. Mrs. Symmington's death may have fed her mania."

"I hope not," I said, with a slight shiver. "Because if so, she'll—"

I hesitated and Nash finished the sentence for me:

"She'll try it again? That, Mr. Burton, would be the best thing that could happen, for us. The pitcher goes to the well once too often, remember."

I shook my head with a shudder. I asked if they needed me any longer, I wanted to get out into the air. The atmosphere seemed tinged with evil.

"There's nothing more, Mr. Burton," said Nash. "Only keep your eyes open, and do as much propaganda as you can—that is to say, urge on everyone that they've got to report any letter they receive."

I nodded.

"I should think everyone in the place has had one of the foul things by now," I said.

"I wonder," said Graves. He put his sad head a little on one side and asked, "You don't know, definitely, of anyone who hasn't had a letter?"

"What an extraordinary question! The population at large isn't likely to take me into their confidence."

"No, no, Mr. Burton, I didn't mean that. I just wondered if you knew of any one person who quite definitely, to your certain knowledge, has not received an anonymous letter."

"Well, as a matter of fact," I hesitated, "I do, in a way."

And I repeated my conversation with Emily Barton and what she had said.

Graves received the information with a wooden face and said, "Well, that may come in useful. I'll note it down."

I went out into the afternoon sunshine with Owen Griffith. Once in the street, I swore aloud.

"What kind of place is this for a man to come to to lie in the sun and heal his wounds? It's full of festering poison, this place, and it looks as peaceful and as innocent as the Garden of Eden."

"Even there," said Owen dryly, "there was one serpent."

"Look here, Griffith, do they know anything? Have they got any idea?"

"I don't know. They've got a wonderful technique, the police. They're seemingly so frank, and they tell you nothing."

"Yes. Nash is a nice fellow."

"And a very capable one."

"If anyone's batty in this place ought to know it," I said accusingly.

Griffith shook his head. He discouraged. But he looked mo that—he looked worried. I won he had an inkling of some kind.

We had been walking along the Street. I stopped at the door house agents.

"I believe my second installment is due—in advance. I've got mind to pay it and clear out with right away. Forfeit the rest of the money."

"Don't go," said Owen.

"Why not?"

He didn't answer. He said slowly a minute or two, "After all—say you're right. Lymstock isn't just now. It might—it might have—or your sister."

"Nothing harms Joanna," "She's tough. I'm the weak! Somehow this business makes me

"It makes me sick," said Owen. I pushed the door of the house place half open.

"But I shan't go," I said. "Curiosity is stronger than pusilla I want to know the solution."

I went in.

A woman who was typing got came toward me. She had frizz and simpered, but I found her intelligent than the spectacled you had previously held sway in the office.

A MINUTE or two later something familiar about her penetrated to my consciousness. It was Miss Symmington's lady clerk. I commented on the fact.

"You used to be with Galbraith and Symmington, weren't you?" I said.

"Yes. Yes, indeed. But I thought it was better to leave. This is quite post, though not quite so well paid there are things that are more valuable than money, don't you think so?" "Undoubtedly," I said.

"Those awful letters," breathed Ginch in a sibilant whisper. "A dreadful one. About me and Mr. Symmington—oh, terrible it was, say most awful things! I knew my duty I took it to the police, though of it wasn't exactly pleasant for me."

"No, no, most unpleasant."

"But they thanked me and said done quite right. But I felt that that, if people were talking—admittedly they must have been, or did the writer get the idea from I must avoid even the appearance of evil, though there has never been anything at all wrong between me and Symmington."

I felt rather embarrassed.

"No, no, of course not."

"But people have such evil eyes, alas, such evil minds!" Nervously trying to avoid it, I met her eye, and I made unpleasant discovery.

Miss Ginch was thoroughly embarrassed.

Already once today I had come someone who reacted pleasure anonymous letters. Inspector enthusiasm was professional. Ginch's enjoyment I found mere gestic and disgusting.

An idea flashed across my mind.

Had Miss Ginch written these herself?

WHEN I got home I found Mr. Calthrop sitting talking to me. She looked, I thought, gray and

"This has been a terrible shock Mr. Burton," she said. "Poor thing."

"Yes," I said. "It's awful to

one being driven to the stage of her own life."

"You mean Mrs. Symmington?"

"No, you don't."

Mrs. Dane Calthrop shook her head. "Of course one is sorry for her, but it has been bound to happen any way, wouldn't it?"

"Would it?" said Joanna dryly.

Mrs. Dane Calthrop turned to her. "I think so, dear. If suicide is a way of escape from trouble then it isn't very much matter what the cause is. Whenever some very unpleasant shock had to be faced, she'd done the same thing. What it all comes down to is that she was a kind of woman. Not that one could have guessed it. She always seemed to me a selfish rather stupid woman, with a good firm hold on life. She was kind to panic, you would think by now I'm beginning to realize how little I know about anyone."

"I'm still curious as to whom you mean when you said 'Poor thing.'"

"I don't know."

"The woman who wrote the letters, of course."

"I don't think," I said dryly, "I shall have sympathy on her."

Mrs. Dane Calthrop leaned forward. "I laid a hand on my knee."

"I don't see how you can't use your imagination. Think how miserably, violently unhappy anyone is who has to sit down and write these things. How lonely, how cut off from the world, how kind. Poisoned through and through, with a dark stream of poison at its outlet in this way. That's why I feel so self-reproachful. Someday this town has been racked with terrible unhappiness, and I've had my share of it. I should have had. You can't interfere with actions—I never do. But that black inward unhappiness—septic arm physically, all black and rotten. If you could cut it and let it run out, it would flow away harmlessly. Yes, poor soul, poor soul."

"I shot up to go."

"I do not feel like agreeing with her. I have no sympathy for our anonymous letter-writer whatsoever. But I did ask nicely:

"Have you any idea at all, Mrs. Calthrop, who this woman is?"

She turned her fine perplexed eyes on me. "Well, I can guess," she said. "But then I might be wrong, mightn't I?"

She went swiftly out through the door, popping her head back to ask: "Do tell me, why have you never married, Mr. Burton?"

In anyone else it would have been impertinence, but with Mrs. Dane Calthrop you felt that the idea had suddenly come into her head and she had really wanted to know.

"Shall we say," I said, rallying, "that I have never met the right woman?"

"We can say so," said Mrs. Dane Calthrop, "but it wouldn't be a very good answer, because so many men have obviously married the wrong woman."

This time she really departed. Joanna said, "You know, I really do think she's mad. But I like her. The people in the village here are afraid of her."

"So am I, a little."

"Because you never know what's coming next?"

"Yes. And there's a careless brilliance about her guesses."

Joanna said slowly, "Do you really think whoever wrote these letters is very unhappy?"

"I don't know what the darned hag is thinking or feeling! And I don't care. It's her victims I'm sorry for."

IT SEEMS odd to me now that in our speculations about Poison Pen's frame of mind, we missed the most obvious one. Griffith had pictured her as possibly exultant. I had envisaged her as remorseful—appalled by the result of her handiwork. Mrs. Dane Calthrop had seen her as suffering.

Yet the obvious, the inevitable reaction we did not consider—or perhaps I should say, I did not consider. That reaction was Fear.

For with the death of Mrs. Symmington, the letters had passed out of one category into another. I don't know what the legal position was—Symmington knew, I suppose, but it was clear that with a death resulting, the position of

the writer of the letters was much more serious. There could now be no question of passing it off as a joke if the identity of the writer was discovered. The police were active, a Scotland Yard expert was called in. It was vital now for the anonymous author to remain anonymous.

And granted that Fear was the principal reaction, other things followed. Those possibilities also I was blind to. Yet surely they should have been obvious.

JOANNA and I came down rather late to breakfast the next morning. That is to say, late by the standards of Lymstock. It was nine-thirty, an hour at which, in London, Joanna was just unclosing an eyelid, and mine would probably be still tight shut.

However when Partridge had said, "Breakfast at half past eight, or nine o'clock?" neither Joanna nor I had had the nerve to suggest a later hour.

To my annoyance, Aimée Griffith was standing on the doorstep talking to Megan.

She gave tongue with her usual heartiness at the sight of us:

"Hullo, there, slackers! I've been up for hours."

That, of course, was her own business. A doctor, no doubt, has to have early breakfast, and a dutiful sister is there to pour out his tea or coffee. But it is no excuse for coming and butting in on one's more somnolent neighbors. Nine-thirty is not the time for a morning call.

Megan slipped back into the house and into the dining room, where I gathered she had been interrupted in her breakfast.

"I said I wouldn't come in," said Aimée Griffith—though why it is more of a merit to force people to come and speak to you on the doorstep, than to talk to them inside the house I do not know. "Just wanted to ask Miss Burton if she'd any vegetables to spare for our Red Cross stall on the main road. If so, I'd get Owen to call for them in the car."

"You're out and about very early," I said.

"The early bird catches the worm," said Aimée. "You have a better chance of finding people in this time of day. I'm off to Mr. Pye's next. Got to go over to Brenton this afternoon. Guides."

"Your energy makes me quite tired," I said, and at that moment the telephone rang and I retired to the back of the hall to answer it, leaving Joanna murmuring rather doubtfully something about rhubarb and French beans and exposing her ignorance of the vegetable garden.

"Yes?" I said into the telephone mouthpiece.

A CONFUSED noise of deep breathing came from the other end of the wire and a doubtful female voice said, "Oh!"

"Yes?" I said again encouragingly. "Oh," said the voice again, and then it inquired adenoidally, "Is that—what I mean—is that Little Furze?"

"This is Little Furze."

"Oh!" This clearly a stock beginning to every sentence. The voice inquired cautiously: "Could I speak to Miss Partridge just a minute?"

"Certainly," I said. "Who shall I say?"

"Oh. Tell her it's Agnes, would you? Agnes Waddle."

"Agnes Waddle?"

"That's right."

Resisting the temptation to say "Donald Duck to you," I put down the telephone receiver and called up the stairs to where I could hear the sound of Partridge's activities overhead.

"Partridge! Partridge!"

Partridge appeared at the head of the stairs, a long mop in one hand, and a

look of "What is it now?" clearly discernible behind her invariably respectful manner.

"Yes, sir?"

"Agnes Waddle wants to speak to you on the telephone."

"I beg your pardon, sir?"

I raised my voice: "Agnes Waddle."

I have spelled the name as it presented itself to my mind. But I will now spell it as it was actually written:

"Agnes Woddell—whatever can she want now?"

Very much put out of countenance Partridge relinquished her mop and rustled down the stairs, her print dress crackling with agitation.

I beat an unobtrusive retreat into the dining room where Megan was wolfing down kidneys and bacon. Megan, unlike Aimée Griffith, was displaying no "glorious morning face." In fact she replied very gruffly to my morning salutations and continued to eat in silence.

I opened the morning paper and a minute or two later Joanna entered looking somewhat shattered.

"Whew!" she said. "I'm so tired. And I think I've exposed my utter ignorance of what grows when. Aren't there runner beans this time of year?"

"August," said Megan.

"Well, one has them any time in London," said Joanna defensively.

"Tins, sweet fool," I said. "And cold storage on ships from the far-flung limits of Empire."

"Like ivory, apes and peacocks?" asked Joanna.

"Exactly."

"I'd rather have peacocks," said Joanna thoughtfully.

"I'd like a monkey of my own as a pet," said Megan.

Meditatively peeling an orange, Joanna said:

"I wonder what it would feel like to be Aimée Griffith, all bursting with health and vigor and enjoyment of life. Do you think she's ever tired, or depressed, or—or wistful?"

I SAID I was quite certain Aimée Griffith was never wistful, and followed Megan out of the open French window onto the veranda.

Standing there, filling my pipe, I heard Partridge enter the dining room from the hall and heard her voice say grimly, "Can I speak to you a minute, Miss?"

"Dear me," I thought. "I hope Partridge isn't going to give notice. Emily Barton would be very annoyed with us if so."

Partridge went on:

"I must apologize, Miss, for being rung up on the telephone. That is to say, the young person who did so should have known better. I have never been in the habit of using the telephone or of permitting my friends to ring me up on it, and I'm very sorry indeed that it should have occurred, and the master taking the call and everything."

"Why, that's quite all right, Partridge," said Joanna soothingly, "why shouldn't your friends use the phone if they want to speak to you?"

Partridge's face, I could feel, though I could not see it, was more dour than ever as she replied coldly:

"It is not the kind of thing that has ever been done in this house. Miss Emily would never permit it. As I say, I am sorry it occurred, but Agnes Woddell, the girl who did it, was upset and she's young too, and doesn't know what's fitting in a gentleman's house."

"That's one for you, Joanna," I thought gleefully.

"This Agnes who rung me up, Miss," went on Partridge, "she used to be in service here under me. Sixteen she was, then, and come straight from the orphanage. And you see, not having a home, or a mother or any relations to

advise her, she's been in the habit of coming to me. I can tell her what's what, you see."

"Yes?" said Joanna and waited. Clearly there was more to follow.

"So I am taking the liberty of asking you, Miss, if you would allow Agnes to come here to tea this afternoon in the kitchen. It's her day out, you see, and she's got something on her mind she wants to consult me about. I wouldn't dream of suggesting such a thing in the usual way."

Joanna said bewildered, "But why shouldn't you have anyone to tea with you?"

Partridge drew herself up at this, so Joanna said afterward, and really looked most formidable, as she replied:

"It has never been the custom of this house, Miss. Old Mrs. Barton never allowed visitors in the kitchen, excepting as it should be our own day out, in which case we were allowed to entertain friends here instead of going out, but otherwise, on ordinary days, no. And Miss Emily keeps to the old ways."

Joanna is very nice to servants and most of them like her but she has never cut any ice with Partridge.

"It's no good, my girl," I said when Partridge had gone and Joanna had joined me outside. "Your sympathy and leniency are not appreciated. The good old overbearing ways for Partridge and things done the way they should be done in a gentleman's house."

"I never heard of such tyranny as not allowing them to have their friends to see them," said Joanna. "It's all very well, Jerry, but they can't like being treated like black slaves."

"Evidently they do," I said. "At least the Partridges of this world do."

"I can't imagine why she doesn't like me. Most people do."

"She probably despises you as an inadequate housekeeper. You never draw your hand across a shelf and examine it for traces of dust. You don't look under the mats. You don't ask what happened to the remains of the chocolate soufflé, and you never order a nice bread pudding."

"Ugh!" said Joanna.

She went on sadly: "I'm a failure all around today. Despised by our Aimée

for ignorance of the vegetable kingdom. Snubbed by Partridge for being a man being. I shall now go out garden and eat worms."

"Megan's there already," I said.

For Megan had wandered away minutes previously and was now ing aimlessly in the middle of of lawn looking not unlike a me bird waiting for nourishment.

She came back however too and said abruptly, "I say, I'm home today."

"What?" I was dismayed.

She went on, flushing, but with nervous determination:

"It's been awfully good of you ing me and I expect I've been a nuisance, but I have enjoyed fully, only now I must go back, after all, well, it's my home a can't stay away forever, so I'll go this morning."

BOTH Joanna and I tried to m change her mind, but she was adamant, and finally Joanna got car and Megan went upstairs ar down a few minutes later with longings packed up again.

The only person pleased see be Partridge, who had almost on her grim face. She had nev Megan much.

I was standing in the middle lawn when Joanna returned.

She asked me if I thought I sundial.

"Why?"

"Standing there like a garde ment. Only one couldn't put the motto of only marking the hours. You looked like thunde

"I'm out of humor. First Aim fith—and then Megan beetling thought of taking her for a wal Legge Tor."

"With a collar and lead, I su said Joanna.

"What?"

Joanna repeated loudly and as she moved off around the c the house to the kitchen garden

"I said 'With a collar and suppose?' Master's lost his dog what's the matter with you!"

(To be continued next wee

"My wife's bills! No more dresses, no more hats—just uniforms, uniforms, uniforms!"

GREGORY D.

'RIGHT OF WAY FOR THE U.S.A.'

ONCE SAM gets the green light on the railroads today. We're sure you'd want it that way—for America has a war to fight all over the world, and a lot to produce and deliver in overwhelming numbers of the things fighting men need. *These are the first among the million tons of freight handled every mile on the rails every minute.*

Railroads are united in working with each other — with industry and farmers — and the government — to keep America's

great war program rolling.

Whether the job calls for passenger equipment or freight—whether it's one of moving troops by the hundreds of thousands, moving raw materials or finished fighting machines—every railroad man knows that the first rule today is, "Right of Way for the U. S. A."

ASSOCIATION OF
AMERICAN RAILROADS

WASHINGTON, D. C.

WARNER RADIATOR CLEANER

Clean out your radiator as soon as the anti-freeze comes out

After winter driving beware of barriers of oil-muck, rust and scale in the tiny water passages. Clogged radiators cause overheating and serious motor damage may result. As soon as you drain your anti-freeze, clean out your radiator with Warner Radiator Cleaner... it's a THOROUGH cleaner and ABSOLUTELY SAFE for all cooling system metals.

Then as an added protection for your motor during hot summer driving, stop rust and corrosion in your radiator and cooling system with Warner Cooling System Protector.

Today you **MUST** repair and take care of your car. Keep your cooling system clean and protected for better performance and longer life.

If your radiator becomes "leaky," repair it with economical Warner Liquid Solder. It repairs leaks quickly... safely... **permanently**—in the radiator, or even in a cracked motor block.

Keep your cooling system in condition. Go twice a year to your favorite service station, accessory store or garage for Warner "prescribed" Service.

WARNER-PATTERSON COMPANY
919 So. Michigan Ave., Chicago, Ill.

ball, stone or stick hurled by a soldier pal. Fact is, Rags didn't seem to get the drift entirely until, during grenade practice, he raced out and came trotting back with a mouthful of very bad news. The unit scattered and prayed and their prayers were answered. Nothing happened to the grenade in the pooch's puss. "However, men," continued the instructor, who still hadn't uncrossed his fingers, "the fact that one grenade turns out to be a dud is no excuse for taking the slightest chances with them."

CAMP SAN LUIS OBISPO, Calif. A recent War Department release began: "The Secretary of War announces the formation of the 1st Filipino Infantry Battalion, with station at Camp San Luis Obispo. This new unit is formed in recognition of the intense loyalty and patriotism of those Filipinos now residing in the United States..."

Officers at headquarters watched teletypes and the mail for official orders. Three weeks later they still awaited further word. Meantime, Filipinos from all over California phoned, wrote and wired for information. Sport coupés loaded with from two to eight nattily dressed Filipinos rolled into camp. QMC supply sergeants took one look at the diminutive occupants and began scratching special requisitions for size 3½ shoes and pint-size uniforms. "We want to fight with General MacArthur," the volunteers announced. Officers like the eager glint in the California Filipinos' eyes, and the feverishly grim manner in which they train. Once red tape is unwound and the 1st Filipino Battalion really gets going, this camp will have the fastest featherweight outfit in the Army. "We'll call it the Runt Battalion," said a cook. "Maybe you will," retorted a corporal. "Just once."

LUKE FIELD, Arizona. Speaking of little guys, they're training Chinese aviation cadets at this West Coast Training Center school, and the boys are making quite a record for themselves in anticipation of getting wings and returning to their native land for a chance at the Axis. A Hollywood newsreel gang trekked over to get some shots of the Chinese in training, and had worked out a sequence showing the men getting last-minute dope from an instructor, turning and trotting to their ships, kicking the motors over and taxiing off. It would have made an interesting shot, but as the camera whirled and the Chinese turned to go to their planes, the lens got nothing but a bunch of bobbing bed pillows strapped to the posteriors of the tiny Orientals. Director of Flight Training Lt. Charlie Lancaster explained: "Some of those boys are so short we had to ask the Quartermaster department for pillows so they could reach the pedals."

RANDOLPH FIELD, Texas. You might as well get acquainted with Cadet U. S. Bond, whose picture is plugging the sale of War Stamps and Bonds. His full name is Urban Selar Bond but his patriotic initials were lost in the shuffle in home-town Wentworth, S. D. (pop. 300), where he went by his middle name and answered to Zeke at high school. Joining the National Guard in 1936, his name went down in the roster as Urban S. Bond, but the initials still didn't mean anything to anybody until Bond, after serving through the Louisiana maneuvers last summer, chucked his sergeant's stripes in favor of a cadet's uniform. A public relations photographer at Randolph finally no-

Collier's for April 11, 1942 Our Fighting Men

Continued from page 18

Don't be startled by the black border. At Army posts in many sections of the country, cards similar to this one from Randolph Field, Texas, are handed by noncoms to enlisted men who come to them with complaints

ticed the name U. S. Bond at the bottom of a small identification picture and wrote a story about it. The Treasury Department read the story. This brings you up to date on Cadet Bond, who is maturing rapidly.

ARLINGTON CANTONMENT, Va. They've opened a new school here for training both officers and men in M.P. Service, and from it will come the personnel for nearly 100 new battalions of military cops. The newly completed manual for the eight-to-ten-weeks course hasn't been made public, but it would seem that the new M.P. has to undergo all the training an infantryman does, with a little more thrown in. Besides learning all about field and battle tactics and the handling of all types of weapons your M.P. has to know traffic control; guarding, escorting and questioning of prisoners and enemy aliens; must have knowledge of criminal investigation and military intelligence work; and must be able to plan and carry out protection of vital defense plants against sabotage. Moreover, he has to learn to handle the civilian populace with tact and success in the event of riots, strikes, fires, floods and other clambakes.

It's a big job, because you can't push civilians around the way you can an enemy. Civilian bloodshed at the hands of soldiers is about the worst thing that could happen to an M.P.

As fast as the officers and men are trained they'll become the nuclei for new battalions. Just to make sure everything's running all right, two officers from existing outfits go along, one acting as executive officer, the other as adjutant. After three or four months with the new organization they give up their places to new officers and move on to the next embryo outfit.

Keep your eyes peeled for the gents with the white trimmings on their uniforms; and when they tell you to do something, do it.

GENERAL

ACTUAL warfare doesn't dim the Army's sense of humor. From an unidentified source comes A Glossary of Staff Phraseology which deserves more than passing notice. There's a good deal of it, but these excerpts will give you an idea:

"With reference to—" (whether it has or not, this letter must begin somehow). "Submitted for information" (this means nothing to me but it may to you). "I approach the subject with an open mind" (completely ignorant of the whole subject). "Under consideration" (papers temporarily mislaid). "Under active consideration" (propose institut-

ing a search for the file). "Have remarks?" (can you give me what this is all about?). "Snider" (able to take only an hour half for lunch). "This will be mind" (no further action will be taken until you remind me). "You member" (you have forgotten to do you ever knew). "In due (never). "All orders issued predecessor are to remain in haven't read them yet, but shall first opportunity of altering the you know" (as you didn't know

NOW that Saturday is no half holiday at military posts the graph on week-end shows a decided decline, with correspondingly brisker business at changes, service clubs, movies camp shows. Ever since the tacked on a Sunday, Uncle Sam no chances. It's a six-day week sharp lookout on the seventh.

WITH no extra dough for either.

COLLIER'S SHUT-MOUTH POSTER AWARDS

WE INVITE the officers and the Army, Navy, Marine Corps and Coast Guard to design and submit competition posters which humorously symbolize the in of spiking rumors. This week's cover is the type of idea which considered. One hundred dollars to be paid for each poster, not five, adjudged suitable for reproduction in this department.

Here are the contest rules, originally announced in Collier's of 21st:

1. The Shut-Mouth Poster Contest now open to officers and enlisted active service in the Army, Navy, Marine Corps and Coast Guard.
2. Posters may be drawn in medium on any kind of drawing paper must be neither more than 18 inches nor less than 8" by 10" in overall dimensions. Unfinished or "rough" sketches be considered. All entries must be submitted in complete, finished form in black and white or color. The service unit, and address of contestant must be on the back of drawing. Addresses will be confidential and will not be published.
3. \$100 will be paid for each poster, which will become the property of The Crowell Publishing Company.
4. A contestant may submit posters as he wishes, but entries win no awards will not be returned unless the entries are accompanied by setting forth the method of shipment desired, and sufficient postage stamps or money order for the transportation cost.
5. Judgment will be based on originality and effectiveness of idea and on the artistic merit of the drawing. When similar ideas appear in entries, the poster which most approximates Collier's standard will be selected.
6. Entries must be mailed to Poster Contest, Collier's, 1230 Park Avenue, New York, N. Y. be received until 5:00 P. M. on April 11, 1942, when the contest will close. Acknowledgment can be made on request.
7. The Editorial Staff of Collier's will be the judges, and their decisions on matters affecting the contest making of awards will be final.

Panama Jungleers

Continued from page 15

black men to help him lug the ties. There's not a way yard of track in the whole jungle, the tracks having been laid by eye and guess. They say when he came upon a snake, he and it. No such nonsense as a jungle's transit or level influence. Couldn't be bothered, says John who, with his black boys, went through the steaming black-vine and machete as they went. They bridged the jungle streams, them building while the rest found frightening off the all-around snakes below and the beasts

onyes and parrots? Aaaaaaaw! Them apes swung along with him like a tetchd preacher sorta on like folks do at the ball at the same time scarin' back to look yere."

Each John will yank his shirt off his back and show you the deep es of a black panther's claws, from his shoulders to his waist.

Johncheerful that was," sighs John. "Big Colombian boy Mossui carried me out. Carried me out, too. Mighty handsome cat Mossui ruin the hide."

Jungle Philosopher

all the nine miles we crept on John's flatcar (he made that, with his own hands just as he had made with an old Ford motor in some mysterious way to four wheels beneath a plank raft), on nine miles we left the tracks only

the ole dee-lerium tremens sittin' tard," explained Enoch Hooper. "Reckon she's gittin' any like me, her daddy. Used to go to the tracks right often, makin' as many as six, seven miles an hour, load of bananas and maybe some oranges and breadfruit for the hold on, mister."

John threw the engine out of gear and the brakes and yelled "Shir—part Alabama, part Spanish—part Choco—to his water boy, the best liver of boy we've ever seen. The banana special quivered to a halt, first on one rail and then he kept to them, Enoch and the water boy leaped. Enoch had his gun and the boy had the te. There were three shots and they crashed at a low vine trellis. In a flash a six-foot snake fell into the brush. We hadn't seen it.

"Shiraster," said Enoch John, "the engine again. "Mean. Lay a branch on a level with your right smart. But I don't know. I mean many no more. Gittin' tard and the ole banana flier. Sort of down the way these soldiers in here lookin' downright sickly, like a lady, no eyes for the next thing you know these white boys from the city are in the birds is their steady nyotin' big snakes up to camp and tryin' to put dog collars on 'em. By the time they know about the jungle to be skeered it's too late—too late fer the

ut at business of putting a dog on a puma—it didn't work. It had been done if Izzy Gishmick was stricken with a strictly fun idea. A kid drafted nine years out of a movie usher job on the Seet, San Francisco, caught a

panther cub nuzzling at the breast of its deceased mother. He toted it to camp, where, fed on condensed milk and scraps, it presently developed into a junior menace. Rather than throw it back into the jungle, they decided to put a collar on it and chain it up when it became too rough. Several attempts failed and Izzy got his idea—chloroform the creature, collar it and appeal to its pride. After a considerable struggle in which the beast lost some fur and several anti-aircraft artillerymen shed considerable skin, they chloroformed it, collared it and stepped back to see what would happen when it came to. They waited for six hours. The funeral was strictly regulation plus a stretch of Dorothy Lamour music on the harmonica by Private Gishmick who, of the harmonica, said that he had collared that, too—from Larry Adler.

We thought that we were seeing jungle from Enoch John Hooper's flatcar. But it wasn't until we reached the end of the tracks and began to climb up a trail two feet wide that we began to understand what the Darien forest was like, what these kid artillerymen from New York, Boston, Chicago, San Francisco and other American soft spots had licked.

After that nine-mile jolt that Enoch John and his black boys had slashed through, back in the days when Hooper's 5,600 acres grew cargoes of bananas and Hooper was rich, we took to the black trail on foot. We might have made a couple more miles on the flatcar but, suddenly coming out of a begloomed tunnel of sweating palm lashed over with a rainproof roof, and made tight by vines that seemed as much alive as the snakes, we slammed into the high dirt embankment of a road that the Army engineers were building through the jungle. It was all news to Enoch John, owner of the railroad. He dismounted, waved a huge hairy hand toward the new road and almost wept.

Mr. John Won't Sue the U. S.

"This is shore a surprise," mourned he. "I kin carry you no further. Last week I could have toted you right down to the mountain but the on-predictable United States Army has throwed up a road right across my tracks buryin' the same from sight. It will cost you ten dollars for as far as you've come, and the couple miles more that the United States Army has conquered wouldn't have cost you nothin' extra. All out fer the end of the jungle as far as Hooper's concerned. Jungle, hell! There ain't nothin' sacred no more."

We began to climb, leaving Enoch John explaining to an engineer colonel that as a freeborn American from the great state of Alabama he had the constitutional right to sue the United States of America. But he won't.

"If my country wants my railroad it kin have it," said Enoch John. "In fact, it don't have to ask fer it. It's got it."

At the end of a sunless tunnel of cuipa, corotu, wild figs, ilang-ilang and camphorwood, thatched and sheathed with palm upon palm, we were halted by the first outpost of the great searchlight battery above. Four kids in fabric helmets, shorts and boots protecting their legs from the crawlers, halted us, examined our passes. They gave us a water canteen and filled it for us from a water vine. With a machete one of them slashed down six feet of a wrist-thick vine that was trying with a minimum of success to strangle a rubber tree. Swiftly he held it vertical and let the purest

Jockey Midway

NO. 2 IN A SERIES OF SYMBOLIC STATUETTES

Close in on Comfort!

It's all right for our Jockey dog to yawn... but, if we caught a single pair of Jockey lowers gapping, we'd sentence it to hard labor for life—as a windshield cloth in a filling station!

There's little chance of that, however, for Jockey is masculinized to fit the male figure everywhere. Cooper's patented

Y-front* construction, found only in buttonless Jockey Underwear, couples a conveniently-angled opening—that positively will not gap—with mild, restful support and complete freedom from bunch, bind and squirm. Jockey is cool, too, and easy to launder. Its knit fabric absorbs and evaporates perspiration, gives your skin a chance to breathe, rinses clean in a jiffy, and needs no ironing. Get a supply of Jockeys now—and see if they don't bring comfort closer to you than it's ever been.

Two-piece... varied leg lengths... contoured shirts to match. Children's sizes down to four years. For widest selection of fabrics, visit "Quality Corner" at your favorite store. And always look for the words "Jockey" and "Coopers" on the label. They're your assurance of satisfaction.

Patented Y-Front Construction. The Source of Support

Jockey Short
Squirm-free comfort for active men.

Jockey Over-Knee
Protects skins against scratchy tweeds.

Jockey Long
Keeps leg muscles fit in cold weather.

water we'd had in the tropics spill into the canteen. Over the shelter he stood guard in was the sign: "Chicago Junior. Telephone 000 Mercy. Hell 000 miles. Gatun three days."

At every turn up the mountain the grade grew steeper. And presently, clutching at roots, clinging to long free-swinging vines, we were dragging up a sixty per cent grade digging our feet into toeholds scooped out by the United States Army's Jungle Mudders—lads who, a few months ago, would have made a major tragedy of climbing to the top floor of a three-story walk-up or hiking two miles to school.

An iguana ran over our hand, giving us his lizardly leer as he sped past, spearing with his come-hither tongue. Someone behind us stepped off the trail, cursed bravely, disappeared into the wall of huge fern and jungle matting. A covey of brilliant birds—parakeets we think—gave him hell for being so clumsy. The mountaintop was just above us; that's all we cared about. Something that had been waiting for weeks to get itself a large hunk of amateur war correspondent had entered one of the several large rents in what was left of our shirt. Later Private Gishmick, looking over the missing section of our belly, said that it must have been a prizefighter's manager.

"They always take the soft part, citizen," said Private Gishmick.

They Did the Impossible

Anyway, we made it, as we've already intimated. And before the swift tropical night fell, with no twilight to soften the blow, we beheld the sobering sight of the evening jungle and the work of that most adaptable and resourceful of all God's creatures—the American boy. In crates, in boxes, on limbers, on their backs, these kids newly come from the streets of the city and the corners of small towns, from the cool of the level pasture and the ice of the north, had lugged their huge searchlights to sweep the skies above two oceans for many miles. They had had no mechanical devices to help them, no slings, no pulleys, no cranes, just rope and brawn and the will. Pack mules helped halfway up the mountains and then lay down, rolled over and would have slid back to the bottom with their cargoes if these lads from the pavements hadn't blocked them, lashed them fast to vines and trees.

From the end of the valley trail, for five miles up the matted mountain and finally up the last murderous stretch of the red stone cliff, these American jungleers had dragged antiaircraft guns, huge searchlights that weigh thousands of pounds, the lumber with which they've built their own quarters. No wonder the howler monkeys howled at them. As far as we could learn not even the black bushboys had got that far up, nor the Cunas nor the Chocos. We didn't have to take the word of Colonel Reamer Argo for that, nor of Captain Lee Davis. They had followed us up, observing our struggles with considerable interest, being jungleers themselves in the Panama Coast Artillery. And maybe it was just a coincidence but just behind us as we got what we'd asked for, came a chaplain and a doctor. It helped to hear them grunt and groan. The chaplain was First Lieutenant Dennis Coleman from the Dunwoodie Seminary near Yonkers, New York. We're sorry but the doctor's name—a captain—must have been lost in that bunch of notes we left in that jungle mud bath on our way back to Panama City. That's the only dive we took but it was a honey. The chaplain and the doctor also assured us that these American soldiers were the first to scale that Darien mountain cliff. Maybe nobody had to

"Listen, mister," he replied almost enthusiastically. "This is the first time in my life I've ever known what privacy is."

"I need the Army to get a little privacy? Must have been slightly hectic here."

"I say. I joined the Army because it kept me. Didn't want to. But I've been thinking of writing to the sergeant or somebody, thanking them. I got at this jungle job when it came along. Listen: both my parents were in vaudeville. I was born in a dressing room. I slept with my head on a trunk. I was a night owl before I was five years old—trouping with my father and my old man. When the boys killed vaudeville, it was the end of amusement parks, burlesque, like that. The older I got, the more I hated it. But so what? Show business, kid. No good at it myself; but I guess so. So I'm working in an agency where the draft got me. Now I'm here in the anti-aircraft, sitting on top of the world looking at the jungle. I can be here all night and not say anything to anybody, and nobody says anything to me. Something I've wanted for years. I haven't talked this much to anybody for six months. Up here, the jungle gets into you. Nobody talks at night. Down there—home—small and crowded and noisy, all night. Up here, it's too big for me. It smells quiet. You can think what you want to. Private!"

"Think about what?"

"I think it's swell," he grinned.

And then he left us. We sat there and we too began to think. We thought a lot of foolish things. We thought how nice and tonic it would be to have a lot of those war-contract commission merchants, priority whiners and dirty politicians up in Washington and a few huge nights on a Panama Coast Artillery mountaintop. We thought about pensions for congressmen and laughed. We thought of a few army-howlers (taxes and debt and the war) back in the States and thought they could be with us. We thought, "Here's a swell spot for a fire-eater, Mr. President." We thought, "Here's unity, truth and vigilance up here, Mr. Willkie. Come on up, Mr. Willkie." We thought, "It's all clear and defendable here above the jungle, above Knox and Mr. Stimson. You can learn about devotion, learn from the kids how to fight without hate. Come on up! We'll carry you if you want." We thought, "Come up to this place in the skies, Archie MacLeish and Leon Henderson, Tom Connally and Jim Fish, John L. Lewis and Bill Clegg. You can make it, General Marshall and Admiral Stark. Do you want to breathe the rank, sharp reek of the jungle a few days. Listen! These kids don't have to be exhorted to fight, make sacrifices..."

We have gone on like that if the only voice of the officer at the radio

hadn't snapped us out of it. Planes were coming. Our own planes? He didn't ask. He didn't ask anything, just repeated what the central yonder on that other mountaintop was saying. Right. Yessir. Right. Yessir. And as he talked, the searchlights and the guns were trained on that square in the dark heavens that in a minute or two would be the frame of the oncoming planes.

This is the way it would come—the long-expected attack on the Canal. Okay, we were ready. Men move in the darkness, swift, sure, to posts. There's a brief whir of wheels, a soft sliding of metal, a quiet, almost murmured command.

In the clear indigo above us, the jungle moon softening it with thin cold light, we saw the planes—six of them. The guns picked them up. A button could be pressed, and the planes would be blinded in the terrible light of the most powerful glares the Army has ever owned. All we were waiting for was the word from below, and these mountaintops would burst into fire—a more murderous fire than ever rose from that now dead volcano yonder.

But the word came that they were Navy planes, on their course, all accounted for. They roared over, their melodious baritone song magnified in this ocean of silence. But that's the way it will come—when it comes.

If this wasn't war we'd tell you how many American Jungleers there are on these mountains. If we could we'd tell you just where we are tonight. Anyway, we wish you were here. You'd stop grousing about sugar, tires, girdles, silk stockings. You'd stop hoarding. You'd pay your taxes and be glad. This place gets you!

But we can tell you that never before in your country's history has anything like this come to American troops. We're here in the Darien jungle for the duration. We're happy, we're healthy, we want a fight. That's what these kids are telling us to write.

They get three days off a month. They can slide down the mountain, hit the jungle trail for civilization. Call it that, for the want of a more accurate word. Some of them do that, maybe catching Enoch John Hooper's epileptic rattler and maybe not. But many times they don't leave the jungle or the mountains but carve new machete trails to neighboring mountains to see what gives with the guys across the valley.

Their hero is General Douglas MacArthur, to whom they send word that never gets to him: "Wish we were with you, Pal."

Their peeve is the Jap to whom they extend the invitation: "Come up and see me sometime, li'l boy!"

Their motto, the new war cry of the Panama jungle, is carved high upon the blue-black mountains:

WHATEVER THE TASK.

Hell! Something's just bitten our belly again!

Pour it with Pride...

that there's no longer any way for an
actor to get experience. "It's a vicious
circle, my dear!"For those who can take it—for those
willing to chance the terrible perils of
Pauline for a crack at the lived-happily-
ever-after part—here's how it's done:
First, book passage on the Athenia, or
a reasonable facsimile thereof—which
is to say, a boat aimed at a torpedo.Judith did precisely that. An Ameri-
can woman alone in London just before
the war, she could hardly prove that
her work on the radio was essential to
the national interest. Therefore, she
packed the wardrobe she had finally got
together after a year and a half of hard
work; packed it tenderly because the
lack of proper costume had more than
once defeated her professionally.

How to Learn About Life

The ship was overcrowded with refu-
gees—mainly female and infant—and
on the night war was declared Judith
went down to dinner beset by the feeling
that she was playing in a rather seedy
revival of Outward Bound.Nothing seemed very real to her as
she sat between her fiancé and his fa-
ther. Then there was a crash, the smell
of cordite, and all the lights went out.
"This is it!" she remembers remarking,
and there was stumbling and carefully-
not-pushing and a great deal of trying
not to get panicky.Eighty people in a lifeboat built for
a maximum sixty—Andrew, her fiancé,
the only able-bodied man aboard. Fi-
nally, high seas got them; the boat cap-
sized.Of the eighty, nine dragged them-
selves onto the overturned craft, clung
grimly to it and shivered. An old man
slipped off into the darkness, and An-
drew dived after him. A few minutes
later Andrew was back—without his
father.They say an actress has to know life,
and they usually spell it Life. Nobody's
ever been quite sure whether this means
she should live immorally, fully, or just
frequently. If it's the last two, Judith
agrees. At one point in Angel Street
she has the stage to herself and is re-
quired to imitate a woman blowing her
top. Of her performance in this scene, a
critic wrote: "If she'd played it any bet-
ter, the audience would have screamed
aloud—in fact, some did."Judith thinks that maybe her por-
trayal of hysteria is helped by some of
the things she saw on that ship; certain
vivid memories of gaping, terrified faces.
In particular there are the eyes of a
woman who—just as the half-dead eight
on that capsized lifeboat were being
pulled aboard a destroyer—released her
tired hold on her baby and watched it
drop into the sea.The fact that she was on the Athenia
has been noted in many newspaper in-
terviews which quote Judith as saying
that those experiences helped develop
her acting technique."Now you have to have been on the
Athenia to get a part!" was the reaction
of one of the young actors of the vicious-
circle turn of mind.This isn't so, Judith thinks. It's al-
most as helpful to have been a child
prodigy. She, for instance, graduated
from the University of Manitoba, Win-
nipeg, Canada, at the advanced age
of seventeen. She was valedictorian
of her class and, equally important,
had the opportunity of playing most
of the leads in the dramatic club's pro-
ductions.

It all gave her a kind of head start so

that now, at twenty-nine, she
back on what seems to her a
and active life. "I'd feel like

an here for several months and
ud, read, with mingled I-told-

you-so and why-couldn't-it-have-been-
I reactions. of Shepard Traube's plans
to present the play in New York featur-
ing Vincent Price and Price's wife, Edith
Barrett.

But Miss Barrett fell ill just as re-
hearsals were scheduled to begin in New
York. Producer Traube found himself
with a double calamity—first, he was
leading-lady-less, and second, he was
haunted by Vincent Price and Leo Car-
roll. This pair followed him all over
Manhattan and never stopped dinning
into his ears their praises of Judith Eve-
lyn's Coast performance, which they'd
seen and he hadn't.

"I tell you," said Price, "she's so good
it gives me gooseflesh."

Finally Traube gave in and suspi-
ciously wired Judith's agent: "Want
Judith Evelyn hundred dollars week
plus transportation New York to play
Mrs. Manningham, also general under-
study."

That "also general understudy" line
had Judith chewing a lot of fingernail
during the train ride east. The role of
Mrs. Manningham is what the trade
calls an "actor killer." Arduous in the
extreme, it permits the actress to be
offstage a total of seven minutes an
evening.

What Mr. Traube meant, of course,
was that he still didn't have much con-
fidence in this female Lochinvar from
the West. If she was as bad as he
thought she'd be, he'd make her earn
her share of the budget by understudy-
ing. Otherwise—well, he'd see.

He saw all right. Judith marched
onto the bare rehearsal stage and played
to an audience consisting of Traube
and about half the play's fifteen or
twenty backers. She went right through
the first act and then turned on her heel
and walked off to her dressing room—
where she found Traube's lawyer await-
ing her. "Sign here," he said.

That contract has been the subject of
heated argument up and down Broad-
way, in drugstores, bars and agents'
offices. It provides Judith with a salary
of one hundred dollars a week—a sum
roughly equivalent to that earned by the
ticket sellers in the box office. In a hit
of Angel Street's dimensions—low run-
ning costs, high profits—it is customary
for the producing corporation to tear up
old contracts, drawn with an eye on fail-
ure, and replace them with something
more luxurious—tailored to fit.

Almost alone among those who dis-
cuss that contract, Judith is unperturbed. In the first place, she frequently
receives a bonus along with her weekly
pay check and doesn't much care
whether it's backed by a written guar-
antee or not. Then, too, radio-script
shows and guest spots swell her income
at least a hundred per cent.

Meanwhile, Hollywood winks and
leers and beckons to her. She gets bona-
fide movie offers by the gross in her
daily mail, but for the present she's
quite content in a part for which she did
everything but steal.

Plans for the future? "Oh, I don't
make any plans. That was knocked out
of me a long time ago. Not, you under-
stand, that I don't think I've been very,
very lucky."

Just for satisfaction

Blackie: "I'll never be satisfied until I

upon them and kept right at it until he had all the supper he wanted.

Swordfish really get tough after dark, and this fellow was no exception. Just at dusk I managed to lift the steel leader out of the water; but the fish got right in our wake and started to chase the boat, which was running as fast as she would go with the throttles wide open. The fish was about ten feet behind the stern and about three feet under water. Around half past eleven, he began to circle and at twelve o'clock came up, stone dead.

Why these fish put up a tougher fight after dark, I cannot explain, but Zane Grey fought one off Catalina, California, in 1924, that began to feed on flying fish more than eleven hours after it had been hooked. Once, at nine o'clock at night, I made Mrs. Farrington quit on one when she injured her back after having fought the fish eight hours and fifteen minutes. I took him on for over two hours more and was unable to move him fifty feet. The rod finally broke.

Mrs. Michael Lerner, who shares with Mrs. Farrington the honor of being the only women to have caught swordfish in both the Atlantic and the Pacific oceans, fought one for over seven hours off Tocopilla, Chile, which was estimated to weigh over a thousand pounds. The fish was lost after the guide took the leader, so they had a good look at him.

The Big One That Got Away

Mrs. Farrington also had the same experience with a fish estimated to be two feet longer than my 853-pounder. Hers broke loose from the guide after he had hold of the leader, which the fish cut with his sword. This is a common occurrence, even though the steel cable leader tests 500 pounds. Only seven women have ever caught swordfish on rod and reel. The first rod-and-reel-caught swordfish, by the way, was taken in 1913 by the late W. C. Boschen, who injured himself very badly in fighting the fish.

But don't get the idea that they are all tough. Mrs. Farrington took a 396-pounder in four minutes, hooked in the eye, and he came to the boat like a baby. In six days' fishing last year off Chile, I lost five in succession, some of which had been on the hook for as long as two hours. Then I caught a 390-pounder in six minutes!

Hooking and boating a swordfish is satisfaction enough for one day. But to catch two swordfish on the same day is the greatest prize and greatest thrill any angler can ever have happen to him. It's a trick that can only be compared to a pitcher hurling a no-hit baseball game, a golfer making a hole in one, or a hockey player scoring three goals in one game. Eight men and one woman are the only persons so far able to pull this trick in all the years of broadbill swordfish angling. Only one of these has done it more than once, Michael Lerner having actually accomplished the feat four times.

I had to fight my "second-in-one-day" for six hours and twenty minutes off Tocopilla, and you can take it from me, I wanted that fish more than any I have ever hooked. The tension and nerve strain I was under during those six hours in a rough sea (which of course makes the fight much more difficult) were unquestionably the toughest I have ever endured.

In 1940, Lerner pulled that trick of two-in-one-day on every one of the major species of big game fish. On five different days, he boated two black mar-

lin, two blue marlin, two striped marlin, two mako sharks, and a pair of broadbill. He has caught hundreds of fish, large and small, throughout the world, and has shot big game from Africa, Asia, and Indo-China to Alaska and the Canadian Rockies, but he always says that the one fish he wants to catch again and the one that gives him his greatest thrill of all sports is the broadbill swordfish.

The four species of marlin are magnificent fish; so, of course, are the giant tuna. Members of the marlin family jump repeatedly. I have seen the Chilean striped marlin jump clean out of water fifty-two times by actual count. This, of course, tires them out. I believe the swordfish is actually too smart to jump. The striped marlin, as he is found off Chile, is, I believe, the most beautiful fish in the world. The color of his stripes and body are lovely to behold, and believe me, he knows all the tricks of his trade. He can jump, greyhound, tail-walk, somersault, and charge on and over the surface of the water like no other fish I have ever seen. I took the 9-thread world's record striped marlin (a 425-pounder) off Chile last May. In fact, it was the largest fish of any species ever taken on 9-thread (which tests 27 pounds when wet). We used 600 yards of line, but of course nowhere near that amount ever leaves the reel. The rod weighed six ounces. The former record was 351 pounds.

That same morning I caught another that weighed 322 pounds, and lost a third after a two-hour fight. The record on 6-thread is 209 pounds, so I then attempted to catch one on that size line with a four-ounce rod tip. As there are not many striped marlin off Chile that weigh less than 300 pounds, I didn't feel I would have much chance. I hooked eight of them for periods ranging from ten minutes to an hour and a half, but on six different occasions the marlin's mate or companion swam up and cut the line. It was a spectacular sight to see them do it. I would stand on top of the cabin roof with the rod over my head, with the line out of water, and the other fish would leap clean out and cut the flimsy line with his bill. We would throw bottles at him, but it was of no

avail. The striped marlin usually swim in pairs, and even we were a mile away from hooked my fish, within an friend would follow him and appearance. With 24- or 39- they are unable to cut it easily.

This is absolutely stunt fish definitely do not advise it. parable to trying to shoot a g or an elephant with a sling s

The broadbill swordfish have only one marine enemy-shark. Of all the sharks that is the finest, fastest and only to catch. Sometimes he is a tack the swordfish from the he is on the surface and cut thus rendering him completely less. Actual battles have been between these two gladiators and several swordfish have been dead floating on the surface, tails.

Sportsman's Paradise

In 1939, off Bimini, Lerner 720-pound mako shark while side him, practically intact, a broadbill swordfish with his attached. The mako shark had edest set of teeth of anything the oceans.

Chile is without a doubt a sporting country in the world. In opinion, her fresh-water fish shooting, duck shooting, and shooting for golden plover species, have absolutely no equal also has as fine skiing to offer found anywhere in the world. the man who likes the small of salt-water fish, there are these too. The lovely dolphin and most beautiful of the small found off her coast in great numbers hard-fighting yellow-fin tun up to 100 pounds disport there by the thousands; the albacora is always plentiful. marlin are more numerous here than in any other place world. Mike Lerner counted them tailing in a single day's Tocopilla.

You can have them all—and My hat is off to the albacora!

"It's Smedley's idea. Afterward we eat it"

Your Sugar Bowl Blows Up

Pillipine sources and the de-
for hooting sugar. Although al-
ve plant that grows manages
er some carbon dioxide from the
ne and mix it with hydrogen and
a frin the soil to form $C_{12}H_{22}O_{11}$,
uga cane and sugar beets store
ff such form that the men can
t it easily and in great quantities.
I. S. Department of Agriculture
its ive tested sugar refined from
m, alms, bamboo, maples, wa-
ons and scores of other plants, as
s ce and beets, and concluded
by a chemical test can the pure

crystallized sugar from these different
sources be distinguished."

The quickest way to get more sugar
is to plant more of the long, wedge-
shaped beets that thrive on the Pacific
Coast and in the Rocky Mountain,
prairie and Great Lakes states. In Cali-
fornia, the leading producer of beets,
seed planted in midwinter can be beets
ready for harvesting in July; eighteen
hours after the beets flow into the sugar
mill they can be sacks of pure sugar
ready for delivery. In Colorado, next
largest sugar-beet state, beets planted
in the spring will be sugar by October.

This country's 150,000 beet growers—
who are unique among farmers in that
they invariably sell their crops before
they plant them, growing strictly on
contract for refineries—have been r'ar-
ing to plant more beets for years. Un-
der the Jones-Costigan sugar-quota law,
the Department of Agriculture held
them down to 916,000 acres last year.
Farmers like to rotate their beets with
other crops, the idea being that the sugar
beets' long roots reach down to aerate
and improve the soil for other harvests
to follow. Last year's twelve-million-
ton crop yielded not only every fifth bag
of sugar that we'll have this year, but
the sugar-beet tops fed tens of thou-
sands of farm animals, and the beet
chips, mixed with molasses and dried in
the sugar mills until they resembled
breakfast food, fattened additional
thousands of steers for market.

This year the sugar-beet growers
want to step up their plantings to the
point where the beet refineries can pro-
vide us with every third bag of sugar.
The quota is off, but another limitation
confronts them—labor. The Army, the
Navy and the defense plants have
pulled thousands of workers off the
farms, and the wages of those that re-
main have jumped twenty-five per cent.
Labor is the big item of expense in beet
farming because it takes a squad of
seventy men per thousand acres for
thinning, and forty for harvesting.

A Cinch for the Inventors

Fortunately, the Sugar Beet Institute
in 1938 sent a committee to see Pro-
fessor H. B. Walker, head of the engi-
neering staff of the University of
California agricultural school at Davis.
Professor Walker had gathered together
a group of gadget inventors to solve the
problems of farmers, and the beet men
hoped that these Edisons might evolve
a machine to thin and harvest beets.

Well, said the professor, maybe it
could be done if he and his colleagues
had a little money to build some ex-
perimental machines. They'd just fin-
ished an invention for the walnut
growers, a machine to hull walnuts.
Would the committee like to see it
work? The professor fed some walnuts
into a near-by machine, which neatly
drilled a tiny hole in each nut as it
passed by, and shot some gas into it, ex-
ploding the shell and leaving the meats
bare.

"Well, I'll be!" exclaimed one of the
committee. "Anybody who could in-
vent that exploder can figure out a ma-
chine to blow beets out of the ground."

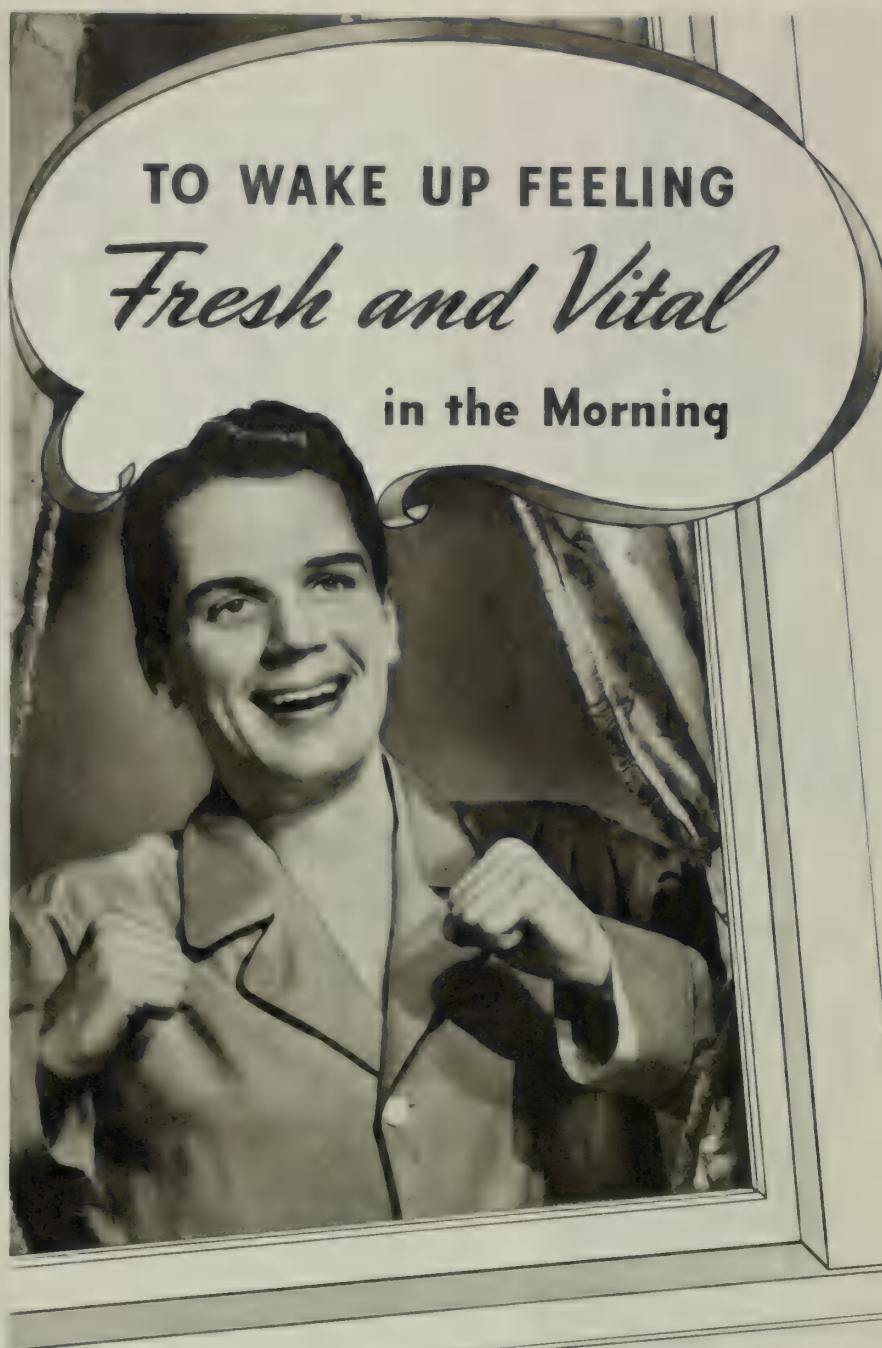

The Institute promptly raised some
money, and Professor Walker and his
staff began inventing. Last year, after
discarding a lot of contraptions that
didn't work, they had proven up three
ingenious machines the beet men think
will cut their labor requirements and
costs to one third.

The first is a beet-seed "segmenter."
A sugar-beet seed is a curious corky

TO WAKE UP FEELING

Fresh and Vital

in the Morning

Try This At Bedtime Tonight

IF YOU awaken nerve-jangled or tired in
the morning—are "used-up" long be-
fore night—you should know this. To-
day, science reports that millions who
feel this way can wake up *fresh and buoy-
ant*, with lasting vitality to carry them
through the day!

For science has discovered certain al-
most-magic food elements—with power
to *revitalize* millions of the tired, nervous
or under par, and build them up for clear-
eyed morning freshness and vigorous,
energetic days.

As you may have read in recent maga-
zines, these new-found elements are so
important that governments throughout
the world are changing national diets to
include *more* of them. Warring nations
feed them to their armies, to build up
physical stamina and sound nerves. Deny
them to captive peoples, to sap resist-
ance and undermine morale.

Already our own government is seek-
ing ways to supply more of these ele-
ments. For government studies show
that 2 out of every 3 Americans aren't
sure of getting enough of these rarer food-
factors to be at their best.

What To Do

In light of these discoveries, thousands
are taking a cup of *new, improved* Oval-
tine night and morning. For Ovaltine is
a scientific food-concentrate designed to
do two important things.

First: Taken warm at bedtime, Oval-
tine fosters sound sleep—without drugs.

Second: To build vitality while you
sleep, Ovaltine supplies a wider variety
and wealth of valuable food elements
than any single natural food. *More* than
merely a "vitamin carrier," it provides
not just two—four—or six—but *eleven*
important food elements, including vita-
mins and minerals often deficient in
ordinary foods. It provides signifi-
cant amounts of Vitamins A, B₁, D
and G, protecting minerals, complete
proteins.

So why not see what these new discov-
eries about food may mean to you? Turn
to *new, improved* Ovaltine—starting to-
night, for more vigorous, buoyant living.
See if you don't begin to feel far fresher
mornings—with abundant vitality to face
these strenuous days.

Skepticism INVITED!

Refuse, if you wish, to believe that Widmer's Wines and Vermouths can possibly be as good as their reputation. But try them. Your skepticism will vanish. For Widmer's represent a perfect alliance between human skill and those rare conditions of soil and climate which accentuate the most allusive characteristics of fine wine grapes.

Regardless of your selection... Sweet Wines, Dry Wines, Sparkling Wines, Vermouths... you'll find Widmer's quality uniformly high.

proposition, about the size of the eraser on your pencil. In it nestle from two to five seed germs. Each germ makes a plant, and when all the plants are allowed to grow, they crowd together in long, skinny roots with little room for sugar storage. The tedious job in beet growing is to remove carefully all but one of these plants after they have sprouted. Thinning usually gives the remaining plant a setback in growth.

The "segmenter" devised by Roy Bainer, one of Professor Walker's men, consists of a hopper beneath which is a coarse emery wheel and a tiny shear bar. As the corky seeds feed out of the hopper, the whirling wheel clips them against the shear bar. When the pieces drop into the sack below, each has just one seed germ in it. The speedy, inexpensive gadget eliminates the job of thinning hills with multiple plants.

Meantime, the professor's gang perfected a single seed planter, which spaces the individual seeds an inch to two inches apart (depending on how the grower wants them), and two other gadgets for mechanically thinning the plants, after they are up and established. The ideal space was to have a beet every ten inches in the row because the professor had a still more ingenious machine up his sleeve, a beet harvester which does everything but think.

Last year, two of these machines were tested in commercial fields of California and Colorado. As the harvester, attached to a tractor, moved down the row, discs cleared away the dead leaves and loose soil, a finder found the beet crowns (some of them level with the ground, some a foot above it), indicated their level to a self-adjusting topper with a series of revolving knives.

Next, a series of V-shaped revolving rollers jiggled the wedgelike beets loose from their roots, making them setups for a battery of tapered rubber rollers that tossed them against a screen. After sifting out the loose earth, this screen deflected the beet to a conveyor which fed it into a bin.

The whole device weighs only a thousand pounds, costs only \$800 to build. With one operator, it harvests sixty tons of beets a day, does the work of twenty hand-toppers. The only hitch in turning the machines out in quantity is priorities on metal.

From Beets to Bowl

The process of turning the beets into sugar in the country's 101 beet-sugar refineries scattered from Michigan to California is a simple one. After their hot-water reception bath, the beets are sliced by revolving knives into strips resembling shoestring potatoes. The beets are not crushed, as sugar cane is, because the sugar is leached out in hot water. The resulting diffusion juice is concentrated by heat, then treated in lime-water vats to precipitate the non-sugar elements. Next it is routed through a series of filters for purification, concentrated again, whirled at high speed to toss off the moisture, finally shot through long revolving hot drums from which it tumbles in a snowy cascade, 99.9 pure crystal sucrose.

Refilling our sugar stock pile by the cane process, upon which the country must rely for two thirds of its next year's supply, is slower business. The fastest growing cane—which reaches its maximum sugar content when the cane stalks are one year old—is that of Cuba, Puerto Rico, Florida and Louisiana. In Hawaii, where the growers have developed a special disease- and insect-resistant cane, H-109, after thousands of hybridizing experiments, sugar cane is an eighteen-month crop. Where the West Indies growers harvest from January to May, the Hawaiians cut and

crush their staggered crops of cane all year around. That is one of the difficulties in harvesting the Hawaii supply. The mills, which have hitherto run day and night, can't do that now because all Hawaii is blacked out nightly.

To get the sugar-bearing sap, the plantation mills feed the cane through three sets of rollers under tremendous pressure. From the third set, the bagasse, or cane fiber, emerges almost as dry as wood, to be used as fuel or processed into wallboard. The sap, caught in great pans, is pumped into heated vats, where lime settles the impurities, after which the molasses (except that earmarked for ethyl alcohol) is dehydrated into brown raw sugar, sacked and loaded onto sugar boats bound for American refineries.

Purity is What Counts

The world's largest sugar refinery, at Crockett on San Francisco Bay, is owned by a co-operative of thirty-six Hawaiian plantations. Here, as in the other plants, the raw sugar goes through an astonishing series of chemical transformations: It is melted into "sweet water," subjected to a new lime treatment, concentrated into a thick, oozy brown fluid called "magma," treated to a whirling shower bath which turns it into brown sugar molasses, and liquefied again into "liquor." It is then fed through diatomaceous earth, the diatoms being microscopic sea animals that flourished and died in such numbers a million years back, that their porous skeletons form a mountain near Lompoc, California.

Finally, the amber-colored liquor flows through three-story tanks filled with charred bones of carefully selected beef shanks (there is \$600,000 worth of bone char in the Crockett refinery alone), and emerges from this Stygian mass—believe it or not—crystal clear, and 99.9 pure. At this point, the chemists call it a day and shoot the stuff through vacuum tanks and hot revolving drums into which you can peek through a little round window and watch the snowstorm of sugar whirling off to the storage bins.

The sugar makers of both the cane and the beet camps take unholy pride in their products. Each refinery's chemists make about 800 tests in the course of each day's batch of sweets, and either group would eat a Jap raw for a practical way of increasing the 99.9 purity to, say, 99.99—practically perfect. "We'll get it some day," they insist.

In the meantime, the sugar makers are right tickled with what the nutrition experts have been finding out about sugar as a food. When you invest in a pound of sugar, you buy 1,860 calories. A pound of beefsteak, costing much more, yields 1,130 calories of energy. A pound of eggs gives you 700 calories; a pound of whole milk about 300. So there you are. Of course, the steak, the eggs and the milk have other values which sugar, being a pure carbohydrate, lacks. But if you're going to play the old calorie game, you've got to play it with sugar. The sugar people figure that the twelve billion pounds of sugar they will produce this year will generate about one fourth of the energy requirements of the nation; which is pretty good for one food.

In this country, nutrition experts have been more interested in how quickly sugar is converted into energy. In tests, they have detected sugar's stimulation in the heart, the brain and the muscles in less than a minute after patients ate it. This lightning action is explained by the fact that sugar, being completely combustible in the human organism, makes no work for the stomach, the liver or the blood stream before it is assimilated. Downright quick energy, we call it.

nt, ame in his place. And one
y a month back, somewhere in
ves with a dirty cross sea
ingo roll the funnel out of her,
tter wind from Iceland shrieking
the corvette's stays and aerials,
ld (ibroath had appeared on
ressd in his best shoregoing
d crying a packed valise, an-
g dietly that he was going
or aet, and would they kindly
ie gogway and call a taxi.

Some of the young seamen had
grinned, and Portingale had rebuked
them savagely. He remembered how
they had struggled to get Gilbroath be-
low, and left him weeping with the sick-
berth attendant sitting on his chest; and
how he, Portingale, had paced the little
bridge that night, whistling for action,
superstitiously, as his father would
have whistled for wind.

And the action came, next morning,
under the eyes of a whole convoy. An
asdic contact—a good one, young Reck-
ling swore. Portingale had rung Action
Stations and signaled "Preparing to at-
tack." He remembered the convoy
sheering aside in a hurry to give him
room, and the Senior Escort Officer's
destroyer tearing back to join action,
and the thrill of firing his first depth
charges at a definite foe. The cans had
made a good pattern, a very exact dia-
mond, with a pair—one light and one
heavy—at each corner and a pair in the
middle for luck.

HE REMEMBERED the terrific up-
heaval astern, the towering columns
of water, the lift and jar of Windlestraw's
stern which rattled all their teeth and
broke the sanitary pump, and his sharp
command that spun the corvette on her
heel, running back to plant another lot.
And after that, the silence, the sea
churned to a milk shake by his explo-
sions, and the thin patch of oil that ap-
peared and spread in colors beautiful as
paradise. And particularly he remem-
bered his triumphant signal to the
S.E.O., "Got a Hun!"

He should have known that asdic,
frequently denounced as a lady of un-
certain virtue, could also lie like a gen-
tleman. But Reckling had been sure.
And Portingale had thrust in and
watched the uncanny instrument him-
self. A beautiful contact; he had never
seen a better, not even in the training
course, where everything was cut and
dried. And there was the beauty of his
depth charge patterns, and finally the
oil, plain to be seen.

He remembered the S.E.O.'s silence,
and then Raith's opening mouth and
lean, accusing finger, and the shattered
carcass of a whale slowly breaking sur-
face in that pool of its own blood and
oil.

It might have happened to anyone.
But it had to be him, Portingale the
cocksure, and the convoy howled. He
remembered the quips that passed by
flag and blinker from ship to ship of
the escort. He had quipped back, of
course; it was part of the give and take
of naval humor, where no man asked or
offered mercy.

But now the tale was going the
rounds. In wardrooms all over the North
Atlantic they were spinning the yarn
of Portingale's submarine, and what
the S.E.O. had said about it. They
were telling it over tall drinks in the
hotels of Glasgow and Liverpool and
Derry and other places where men from
the Western Approaches blew them-
selves to dinners after long patrols. It
was the current jest of Halifax. And in
the officers' club at Reykjavik they were
calling him Jonah Portingale, the man
who swallowed the whale.

THROUGH the porthole he could see
the steep rock wall of the fiord. Raith
and Hogarty were up there somewhere,
climbing like goats for exercise. They
had invited him to go along, but he'd
refused, just as he refused to go with
Barnadine and Reckling to dinner
aboard one of the Yank destroyers an-
chored down the fiord. He wanted

HOW TO Conserve ON SPARK PLUGS and Gasoline Cost

What to do—

Have your spark plugs cleaned and adjusted
every 4,000 miles. (Costs only 5c a plug).

Replace all badly worn plugs promptly.

Why—

Dirty or worn spark plugs waste as much gas as
1 gallon in 10. They also cause hard starting
(bad for batteries!) and loss of power.

Where— Go to your neigh-
borhood Registered AC Spark
Plug Cleaning Station. Look for
this Sign.

A SPECIAL PREPARATION FOR SHAVING

FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush
Not Greasy or Sticky

Modern life now demands at least 1 man in 7 shave *every day*. This daily shaving often causes razor scrape—irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to *glide* over your skin, cutting your whiskers close and clean *without scraping or irritating the skin*.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men in responsible positions—doctors, lawyers, businessmen and others who must shave *every day*—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider has been developed by The J. B. Williams Co., who have been making fine shaving preparations for over 100 years.

TRY A TUBE AT OUR EXPENSE

We're so positive that Glider will give you more shaving comfort than anything you've ever used that we'll send you a generous tube **ABSOLUTELY FREE**. Just send your name and address to The J. B. Williams Co., Dept. EG-05, Glastonbury, Conn. On this **FREE** trial test, we rest our case entirely. Don't delay—send in a penny post card today! Offer good in U. S. A. and Canada only.

Proves Wonderful For Itching Skin

To soothe itching, burning skin, apply medicated liquid ZEMO—a Doctor's formula backed by 30 years continuous success! For ringworm symptoms, eczema, athlete's foot or blemishes due to external cause, apply ZEMO freely. Soon the discomfort should disappear. Over 25,000,000 packages sold. One trial convinces. Only 35¢. Also 60¢ and \$1.00.

→**ZEMO**

neither exercise nor cheerful company. Tomorrow the eternal round would start again, Windlestraw to join an east-bound convoy, the Yank and her lean gray sisters heading west. He went to his cabin and threw himself on his berth.

He heard the return of the duty boat, its exhaust echoed thunderously in the enormous silence of the cliffs. Before long Raith and Hogarty were aboard, red-cheeked and weary, swearing they had seen a cow—a cow in Iceland, by gad! And later on he heard a clink of glasses in the wardroom, and young Reckling's voice: "You missed a good dinner, Raith—you and your cliffs. Afterward we had a fine rag in their wardroom—no drinks, of course, their ships are dry, did you know that?—but plenty of tomfoolery to pass the time. A good bunch of fellas."

"Somebody had an accordion and we sang a good deal. They insisted on singing Rule Britannia out of compliment to us, so we came back with Columbia the Gem of the Ocean, not to be outdone. And we ended up with—what d'you think?—sea chanteys. They sing the same ones we do, and pretty much as we do, except for the Drunken Sailor. Y'know how we sing it: *te, te-te-te, te-te-te, tum-ta-te?* Well, they go, *tum, tum-tum-tum, tum-tum-ta, te-ta-tum*—"

Portingale snorted and kicked his door shut. Reckling fancied himself as a singer. Probably he'd told the Yanks they didn't sing it properly. Reckling, the prairie flower—and the Yanks probably blue-water men!

THEY sailed in the morning—not that "morning" meant very much in this latitude where the summer sun sat up most of the night—and Windlestraw took post near the rear of the center line. The Yank destroyers pulled hook a little later and kept station astern for a time before heading west with a flicker of dot-and-dash farewells.

They were down in the wardroom shaking the dice for gins before lunch, with Reckling on the bridge, when the alarm bells rattled with a vicious suddenness. Portingale sprang for the bridge with Raith, Hogarty and Barnadine close on his heels. He could hear the men cheering, as they always did, going to action stations. He had tried to cure them of it, without success.

Topside, the asdic operator was on his stool, intent over the instruments, and Reckling standing beside him crying out, "Contact, sir!"

There was a funny little silence. Then Portingale said meaningfully, "A good one?"

"Perfect, sir. Come and look!"

"I'll take your word for it," Portingale uttered grimly. "But try for a hydrophone contact before we do anything rash."

He stood at the forward bridge screen, running an eye over the sea. It was choppy, with a stiff breeze flirting spray from the crests; hard to spot a periscope quickly in that. Still, a Hun wasn't likely to attack in broad daylight so close to the land. But you never could tell. You couldn't take chances. Better another dead whale, or a school of codfish blown to smithereens, than a freighter torpedoed right under your nose. It was typical of Portingale that he did not think of danger to Windlestraw herself. It wouldn't do to think of that—not with all those fuel tanks and magazines under you.

A quick low voice within, and then Reckling shouting out to him, "Hydrophone contact now, sir. Engines—unmistakable." He added a course. Portingale snapped to the signalman, "Hoist 'Preparing to attack.'"

The flags went up, snapping in the cold wind, and at once the merchant ships began to sheer off on either side.

The corvette followed up Reckling's contact at full speed. Portingale's mind was busy on the dozen-and-one things that confront a commander at such a moment. His own speed and course, the courses and speeds of the agitated merchantmen on either side, and their distances from him and from one another; the whereabouts of the S.E.O. and his destroyer, of the other destroyers and corvettes of the escort, of the Yanks hull-down astern.

He looked to see that the depth-charge crews were at their posts aft, and at the port and starboard projectors, and—more from instinct than anything else—to make sure that the pom-pom crew were standing by, and the machine guns ready at the bridge wings. Hogarty was watching the forward gun crew as a mother watches a child.

Inside, Reckling plied pencil on paper, consulted asdic, consulted the hydrophone operator and called out directions aloud. As high priest of the oracles he practically commanded the ship when a sub had been spotted, and the boy felt his importance. He pressed the signal button which warned the depth-charge crews to stand by, and then the indicator button which told them to set their detonators for such-and-such a depth. His hard young face stared down at asdic, but Portingale was not watching Reckling's face; he was watching the boy's thumb on the Fire button. Thought Portingale, "He's sure of himself, at any rate. It's all right for him, of course. The Old Man's the goat if the thing's a fizzle. Jonah—Jonah Portingale!"

The thumb moved slightly, and at once the after crew let go two cans, a heavy and a light. Windlestraw swept on. Calculating nicely—because the corvette's speed would throw the side cans ahead a bit—Reckling signaled Fire to the port and starboard projector crews. The firing charges barked in the little mortars, and out flew the deadly cans on either side. Now another pair over the stern, and after an exact interval a final pair to make the diamond complete.

All eyes were astern, where suddenly the sea spewed up five giant columns of water and smote Windlestraw's body and bones with mighty hammer blows.

A nice pattern. Now for an Vaguely, beyond the collar columns, Portingale observed and a bang from the steamer board. He knew what it was. of rocketing a fighter plane in from a freighter's deck had setting at first, because the and the simultaneous appearance low-flying plane made you think attack by Hun aircraft. But used to it. He could see a plane's wing disappearing in smoke. Windlestraw was on course now, and Reckling clicked Fire button ready for another. Ahead, the convoy was beautiful. Nothing like the a depth charge to get 'em into

AS RECKLING poised his the button for another bat there was a startled yell at sound of the airplane was sudden was terrific, was filling the water Portingale looked aft and at shape swooping around his practically eye level.

"S'truth! It's a Focke-Wulf out!"—that was his thought, was no time to say anything. aircraft gun broke into a star pom-pom; but you couldn't pom-pom—or anything else—moving as fast as that. No warning, you couldn't. The come out of the sun, and for a second cast its immense shadow Windlestraw like the shadow itself.

In that split second Portingale aware of a number of things how fast your mind could time like this. In the first knew that Jerry was staging plane-and-sub attack in broad right under the noses of 'dromes. The big Focke-Wulf out of the sun and planted an on the freighter to starboard had dipped low and banked, to hell of antiaircraft fire that to come up at him. And now a devil was skimming around Windlestraw's stern, knowing corvette couldn't do any damage on the level—not with ships to starboard. The roar of its motors

"One by one they started helping us, and the next thing we knew we were back here!"

ened them all as it came along Windlestraw's starboard side, steeply banked, one wing tip almost touching water and the other high and black against the sky like the steeple of a church.

Everybody had forgotten the submarine—Portingale, and Number One, and Hogarty, the pom-pom crew, the four-inch crew, the machine gunners firing wildly from the bridge wings. Everybody but the men in the wheelhouse and the asdic room. There the helmsman was still at his post although, hearing the roar of the diving plane, he might have dived into the little steel kennel behind the wheel, put there to shelter him in such moments. Barnadine was still bending grimly over his chart. Reckling's gaze was still upon asdic, and his potent thumb had already dropped two cans over the stern. It was a study in discipline, and afterward Portingale was fond of painting that picture of them.

NOW—just as all hell seemed to be falling somewhere aft—Reckling pressed his button for the port and starboard projectors. And the faithful men at the projectors jerked their lanyards, and the heavy cans flew out.

The man at the port projectors saw his cans make their usual arc into the sea. But the starboard view was blocked by the hurtling apparition of the Focke-Wulf, and a terrific flash and explosion knocked the men at the starboard projectors flat and breathless. It did the same for the men at the after depth-charge ramps. It knocked the crew of the pom-pom off their feet and stirred them all up together in their armored cup like so many beans in a pot. It smashed the starboard boat in its davits. It blew two ventilators out of their stays and overboard. It stripped the sand-padded screens from the starboard wing of the bridge. It broke all the wheelhouse windows, and a flying sliver of glass cut the helmsman's bearded cheek to the bone.

The seamen at the starboard machine gun had ducked instinctively into the handy cruciform shelter, and were miraculously unharmed. But Portingale, Raith and Hogarty were flung into a heap and stunned.

Portingale dragged himself to his feet by clawing at the rags of the bridge screens. His head sang like a factory whistle and he was aware of blood running down his face and dripping from his beard. He wiped it out of his eyes. A signalman ran up to him crying something, with a hand on his arm. He shook the hand off angrily. He didn't want help—not he, not Orton Portingale!

He stumbled over to the side, to see if the old girl was still under way. She was—at full speed, too, by the look of it. He was turning away when he saw, just astern and to starboard, the tail of an aircraft—a big tail—sticking out of the sea and going slowly down. It went under as he stood there, gasping and fascinated, steadying himself with a hand on the rigid plates of the cruciform shelter. Instinctively he looked ahead, and saw the Yank destroyers coming up fast toward him. They had turned back at the sound of his depth charges.

Again the signalman's voice, cracked and urgent: "Message from the S.E.O., sir." Portingale stared down at the scrawl confusedly. He could taste blood in his mouth, and somebody was standing behind him, winding a bandage around his head.

"S.E.O. to Windlestraw. Abandon sub attack. Cover me while I put fire party aboard bombed ship."

He looked astern and to port, and saw an ominous column of smoke rising from the smitten freighter, and, up-sun a bit, the S.E.O.'s destroyer standing by. Carefully, with the jerky movements of a tin toy, he walked to the shattered

wheelhouse windows and gaver to change course.

Reckling's voice came out: "But the submarine, sir—w begun—" "Orders," said F. He jerked a thumb over his shoulder. "The Yanks'll of your bloomin' submari grinned as he said it, and cracked the dried blood on Reckling, like all asdic enthusiasts considered the ships of other nations deaf and senseless.

His mind was clearing far Windlestraw rushed to get up the destroyer. Evidently the expected further air attack. "Ca he muttered to Raith.

"Seven busted ribs among pom crew. Some of the dep men badly bruised and shaken ward gunner with a bloody there's yourself, sir: nasty sea that."

"Look here," blurted F. "What d'you make of all this?"

"Hanged if I know, sir," blew up, I guess. All by its.

"The pom-pom was firing."

"Yes, sir, they chucked u dozen rounds—all wild. The close enough—and big enough came without warning, like a l shades—faster than the pom-p could move. Same story with chine gunners. Yes, that's happened faster than a man co—or think."

Windlestraw drew up-sun destroyer, and the S.E.O. sto smartly lowered a boat. They it pull over to the steamer, w still smoking blackly, though seemed to be confined to the hold. Her crew had made no lower their boats. They were fire. Good lads, thought P. Things like that made you pr your origin in the merchant There was no monopoly on g man's war.

The convoy had pushed on, rest of the escort, leaving the and the destroyer and Wind settle their own affair. Porting wryly. You couldn't help fee lonely when you dropped bel a lame duck. But now a sudden woomp-woomp of depth ch westward told him there was

HE TURNED and saw the destroyers racing back and fo ping cans with a savage scie seized his admiration, not unm regret. Then it was a sub, and had been right. The Yanks drop cans just on somebody e so. They'd picked up the sub own asdics—or whatever it used—and were raising their ticular hell.

He looked at the freighter a smoke was diminishing fast, a blinker flickered busily on the

"S.E.O. to Windlestraw. F convoy. Ship's engines intact under control. Make full rep later regarding aircraft shot c

Portingale rang full ahead His head was aching. He thod denly of the forgotten lunch-gins. He made his voice very of-fact: "Let's go down to think we could all do with a d one watch go too, Number One no sign of other aircraft. A lo I guess."

He laughed thinly at his c In the wardroom young burst out urgently, "The Yanks our sub—well, good luck to what a pity for you, sir. I me man deserves a mention, you all these hard months."

"Ah!" said Portingale. "The tell you, I can get a mention i

v. The S.E.O. thinks we shot it Focke-Wulf—and a Focke-ry good business."

reigns shot up comically, and hghed.

ke of it is," added Portingale. "—we did! That plane ran to the cans from the starboard—in mid-air—and detonated perhaps both of 'em. I saw one w, before I was knocked gal-ey. Something to tell your grand-er. But I'm not telling the S.E.O. S.O.'s a nice old boy, he stood gner in Reykjavik; but apart th he's a stiff old dug-out, R.N. her him now, givin' me a lecture p charges and the reasons why to ator set for fifty fathoms 'possibly explode in mid-air. I e the letter he'd write recom-ny relief, and an examination ve specialist, and six months' in quiet area—Canada, maybe. oy it's too preposterous." s preposterous damn' war," ob-ith warmly.

s. Any other man could tell al and get away with it. But not no Jonah Portingale. Can't you ehat they'd be sayin' in every oc from here to Halifax? That Pcingale—Jonah Portingale, the w swallowed the whale—has if ou please, knocked down a w a depth charge! Nothing do-

me, sir," Hogarty said—but innr. tiale grinned back. He was ab-ppy. The preposterous blast ined the Focke-Wulf had in am breath blown all the dead the past months from his des. His head still sang from the b the strain was utterly gone. as marvelous. Actually he felt a in—not thirty, he would never e again—but five-and-thirty, e went on coolly, "Too bad we ve the sub. A D.S.O.'s a nice t swank ashore. I might have oter half stripe, even. But, be- it not, I don't care a hoot. I can a hoot about the plane, either. ke Vulf's too big a feather for a y te. My head's not so swelled e to be. No, I'm sorry for Reck-

ling, that's all. He took that damn' whale to heart, y'know—worse than I did. He wanted so badly to vindicate himself, and there was his chance, and we had to drop it."

"Fortune of war," murmured Number One. He added, "What are you going to say about the plane, sir? You'll have to say something. You'll have to explain why half the Hun's instrument board is now stuck in a great hole in Windy's funnel, and twelve feet of his wing wrapped round the pom-pom platform. And the thing that conked you was the beggar's radio set. An inch lower and—"

"I'm the only man aboard who saw what happened," said Portingale calmly. "I've told you—but that's a matter between us, now and forever. I'll report to the S.E.O. the only truth you can swear to—that the Hun was on us before the pom-pom could get going, and that he blew up from a cause unknown while shavin' our starboard side. That's good enough. I tell you I'm thoroughly happy about the whole thing. It's the luck—don't you see? The luck's turned. Things are comin' Windy's way at last—and I wouldn't swap her for anything, not even a destroyer. I'll tell you something else. I wouldn't swap my crew of wavers for any men on earth. By gad, I'm proud to live in the same ship with 'em. But we're forgettin' the drinks. Pick up your glasses and drink a toast with me—to the Royal Canadian Naval Volunteer Reserve—the Wavy navy—and long may they wave!"

THE glasses clinked and a moment later Portingale's tiger, coming along with a tray, was astonished to hear his officer in song with the others. Portingale was not a singing man. But it was the song that really startled the tiger. It was a jingle that had come out of one of the corvettes on the Iceland patrol. It went to the tune of a Western ditty that had to do with covered wagons—not ships—but it had caught on like a prairie fire:

"Roll along, Wavy Navy, roll along,
Roll along, Wavy Navy, roll along;
If they ask you who you are,
You're the R.C.N.V.R.—
Roll along, Wavy Navy, roll along!"

not reassuring to learn that we e me than 100,000 civilians in this y who can fly. Three years ago we 1,000. But to avoid a false impres- hat any time these 100,000 can to heavy and medium bombers or

swift single-seater fighters and go forth to war with a minimum of military and naval indoctrination, we'll take a closer look at the roster.

Of the grand total, about 1,600 are multimotored airline pilots, who are sorely needed where they are. A little more than 15,000 are commercial pilots whose experience extends from 200 hours to many thousands. The largest pilot group in the 100,000 total is represented by the private pilots, who number 84,000. Most of these are graduates of the Civilian Pilot Training Program and they won their tickets by flying 35 to 50 hours solo.

But in this large group of private pilots there are many experienced sportsman pilots who prefer the private classification to avoid the obligations of renewal and physicals imposed on commercial airmen, because they fly only for pleasure. Then there are 3,200 women pilots, of which 184 are commercial and the remainder private.

From the foregoing, neither you, nor I nor the Axis can figure out to the exact head just how many seasoned, experienced airmen and women we do have on civil status suitable for combat work or behind-the-lines flying duty. F. R. N.

a port glass. He possessed a sort of extra sense which, but only at odd times, enabled him to read from a man's eyes what that man was thinking. Such a message had just reached him from Dawney; it was this: "I believe Major de Maura was murdered."

"I take it"—the bimbâshi seemed to be thinking aloud—"that the message, and its strange effect, gave you the idea that there had been foul play?"

COLONEL DAWNEY stared and said: "I don't know how you knew, but you're right. It startled the poor devil like an electric shock, with the queer result I have mentioned. I assume his reaction to have been one of urgency; a sudden, uncontrollable desire to get away—presumably from Gabriel Varez: hence his words, 'My shoes.'"

"Was he undressed?"

"Yes; they found him in bed. But my idea wasn't based on the message entirely. Charlton—he's one of the M.O.'s here—came on duty soon after de Maura died. It was he who phoned me just now. Charlton spent some years in South America; and although I'm inclined to think that the patient's nationality and the mysterious message inspired his theory, Charlton insists that de Maura didn't die of tetanus at all—"

"What's that?" Bimbâshi Barûk's sleepy blue eyes woke up. "Then of what did he die?"

"According to Charlton, of *curare* poisoning."

"Curare poisoning?"

"I have never come across a case myself, but I understand that the symptoms are similar, except that the onset is sudden and the end more swift. A mere touch, of course, is sufficient to do the trick with *curare*—and there was that tiny pinprick on his finger. Point is, B.B., that if it was, as Charlton believes, *curare*, the case goes very deep indeed."

"What is *curare*? Is it something one can buy at a druggist's?"

Colonel Dawney laughed. "Don't be a fool. It's an alkaloid found in the extract of some South American tree and principally used as an arrow poison. Next to unobtainable."

"That fact rather narrows down the inquiry, don't you think? If you really think that there's anything underlying this business, I should be glad—if it would relieve your mind, I mean—to look into it."

Colonel Dawney smiled his gratitude. "Thanks, B.B. I should naturally have hesitated to suggest such a thing; but—I'll have Mrs. Saunders called up..."

MAJOR DE MAURA had apartments forming a suite, accessible from a side entrance. The sitting room offered no useful evidence. Mrs. Saunders, a hushed little woman who looked fragile, the bimbâshi had dismissed from the inquiry, although, if one were to accept as authentic a spacious and gaily colored photograph of the late Mr. Saunders which hung above a bureau, her survival became a minor mystery. It exhibited a gentleman who wore a well-nourished but angry mustache and a Masonic apron, a gentleman whose hypnotic glare would have frightened anyone to death, the bimbâshi thought, with the possible exception of W. E. Gladstone.

A row of textbooks in English, French, German and Spanish lay on the bureau. The bimbâshi glanced at them and went into the bedroom. This he found in wild disorder.

There were few tasks he had more than that of taking stock of man's private possessions, in a sense sacred, by of death. It approached the cency. But he went on with it. He found himself considering a parade of shoes, lined up two a cupboard. Clearly Major de Maura had been a shoe fancier: the counted ten pairs. Another pair under a chair beside the bed, and he saw some red Persian slippers.

For a long time Bimbâshi Barûk considered the rows of shoes, wondering what way they differed from shoes. They were unusually soft, but it was not until he took one up and compared it with that he grasped the real difference. The heels were all but an inch too normal. De Maura, a man whose age height, had been anxious about his stature.

Nearly an hour elapsed before Bimbâshi Barûk came downstairs. Mrs. Saunders good night. He had covered nothing of importance. The bimbâshi knew, now, that de Maura had had no visitors that day, but had gone out to meet correspondence shortly after seven, returning before eight; that he was a chronic amorist; that he dyed that he had been involved in intrigue; that he had expended in cigars and a streak of sadistic character; together with one or two other trivial facts.

But as he walked on through the darkness, Bimbâshi Barûk found himself saying aloud, "My shoes." It was in a variety of ways, pronounced two words with subtle intonation that a number of motives had inspired them. But "My shoes" was a morselessly haunted him, until he pulled up, turned, and went to the immediate outcome of his visit to Mrs. Saunders (from which he brought away a pair of shoes which in newspaper) was a phone call from Colonel Dawney...

"Hullo, Colonel. Barûk here. I believe you are right about de Maura. Looks like an amazingly clever fellow. I'm afraid I shall have to look over the body. You seem to have something. Will it be trouble?"

ON THE following morning, Barûk set out on a tour of shops in and around Lychgate. His time was as follows:

"Good morning. My friend Maura left a pair of shoes paired. Are they ready?"

On learning from one that de Maura was not a customer, he turned the name of another. In this he had made six futile calls which body suggested that he might stick. The name sounded familiar, but although Mr. Stick's establishment proved to be not more than three hundred yards from the cottage, he had no small difficulty in finding it.

The cottage, an eighteenth-century survival like the inn, had a roof, diamond-paned window was smothered in sweet brier, and eled richly with scarlet berries. A path, worn in the center so as to seem a shallow ditch, led to porch. Above this porch a sign which stated:

Jeremiah Stickle
Shoemaker

y the door! I wouldn't trust a
m floor to no livin' man, no, nor
can either, nobody livin'—except
llayce."

ay "cept Dr. Allardyce?"

cau. Dr. Allardyce have one."

He laughed as though he had scored
■ point. "Maybe you think Dr. Allar-
dyce stole them shoes? Likely, too, I'd
say!" He chuckled until his spectacles
threatened to fall off.

"But why has Dr. Allardyce ■ key?"

"Cause I never ask for it to be give
up. When I were layin' in me bed here
with me bronchitis last spring, Dr. Al-
lardyce have ■ key made to come in an'
out. Stay best part o' one night along
o' me, too. Aye, there ain't another
doctor in Lychgate would have did it. I
challenge you to find one. That's what
I calls a real doctor. Always droppin'
in for ■ chat, too, friendly like—"

"I see," said the bimbâshi. "Does Dr.
Allardyce live near here?"

"Heath House. That's where Dr. Al-
lardyce live." He took up the notice
"Back in ten minutes," and: "Would
there be any objection to me goin' along
to the White Hart for me pint?" he
inquired.

HEATH HOUSE. tendrils of creeper
—running like veins across its weather-
beaten face, challenged the Heath in
rather forbidding silence. On ■ brass
plate beside the gate appeared:

*Julian Allardyce F.R.C.P. (Edin.)
Dr. M. Allardyce.*

A trim, grim and elderly Scotswoman
opened the door to Bimbâshi Barûk. He
was presently shown upstairs and left
in a well-appointed study, both win-
dows of which commanded extensive
views of Lychgate Heath. He had
waited no more than a minute, when
one of three doors opened, a man who
wore ■ long white coat came in; and the
bimbâshi felt the impact of a powerful
personality.

"Good morning, Major Barûk. I un-
derstand that you wish to see me."

"Dr. Allardyce?"

"Julian Allardyce, at your service."

Julian Allardyce was tall, of a lean
but athletic build of which his visitor
approved; clean-shaven, with abundant
silvering hair brushed back from a fine
brow. His gray eyes were steady in their
regard and he would have been strik-
ingly handsome if the bridge of ■
strong, straight nose had not been
broken at some time.

"My call concerns one of your pa-
tients—"

"I do not practice, sir, although I hold
■ medical degree." He had a light, vi-
brant voice and at times ■ somewhat
arrogant academic manner. "I am em-
ployed in research work." Another of
the three doors opened and a woman
came in. Julian Allardyce extended a
large, capable hand. "This is Dr. Al-
lardyce."

Bimbâshi Barûk turned, and was
about to say something about "your
daughter," but his nimble wit stepped
on his tongue in the nick of time: he
contended himself with a formal bow.

"Major Barûk wishes to see you
about one of your patients, Marian."
Julian Allardyce bowed slightly to the
bimbâshi. "This is my wife. And now,
no doubt you will excuse me, sir, as I
am engaged upon work of some ur-
gency."

He went out.

"Won't you sit down, Major Barûk?"
Mrs. Allardyce spoke in quiet, cultured
and musical tones.

Bimbâshi Barûk took a seat in an
armchair and Mrs. Allardyce on a deep
settee placed between two windows.
The bimbâshi wondered how even Jere-
miah Stickle had contrived to gabble
for several minutes without betraying
the fact that "Dr. Allardyce" was femi-
nine. He noted that she was dressed
now in a smart tweed suit, that she was
slight and shapely and her husband's
junior by many years. Her dark hair,
in which one might detect faint coppery

How to Get Out of a Mental Rut

**LET GOOD AND WORTHWHILE
READING POINT THE WAY TO
YOUR SUCCESS AND HAPPINESS**

WHAT are the real joys of living? Do
you devote yourself to the material
pleasures to the exclusion of the intel-
lectual pleasures? If you do, you miss the
very essence of living—the stimulating, in-
spiring joys of reading. To read, to grow
in mental stature, to walk expectantly with
the great thinkers—these constitute the
real joys of living.

NOT BY BREAD ALONE

Nothing gives to mankind greater satis-
faction than good reading—the reading
that makes a greater measure of a man,
that builds a man educationally to an
equal basis with his business and social
associates. Good reading makes the well-
rounded man and brings to him a realiza-
tion of the finest things in life.

Dr. Charles W. Eliot, famous President of
Harvard University, provided good read-
ing in *The Harvard Classics*, for this
magnificent set brings to you and to me,
the pure gold of the world's writings,
which have stimulated and inspired men of
all times.

FOR ONLY FIFTY CENTS A WEEK

This library, despite its enormous treas-
ures is not expensive. Its price is within
the means of every American who really

desires it. The cost per volume is one-
third that of a book of current fiction. For
as little as \$2.00, you may have the com-
plete beautiful set of fifty volumes shipped
to you with all carrying charges prepaid.

OUR FAMOUS BOOK FREE

The fascinating book, "Fifteen Minutes a
Day," containing eighty pages, furnishes you
complete information about this marvelous
set. It describes Dr. Eliot's own plan of
reading and contains dramatic biographies
of men whose immortal writings appear in
The Harvard Classics. This book is beauti-
fully illustrated and is a gem of literature.
It will be sent you free, postpaid and with-
out obligation. Simply send us your name
and address today on coupon below.

streaks, had a most intriguing wave. She wore spectacles, and, smiling, so as to display small, milky teeth, she removed the spectacles and laid them beside her.

"My professional disguise," she explained. "I have learned that they give patients confidence."

He found himself looking into amber eyes fringed by long, curling lashes, and he knew that Mrs. Allardyce was a remarkably beautiful woman; he knew, too, that she was not English.

"Actually, I am interested in two patients," he replied slowly. "The first is Gabriel Varez."

Mrs. Allardyce watched him steadily; her expression was unfathomable.

"I have no patient of that name."

"Shall I say, then, was Gabriel Varez? The other is Jeremiah Stickle."

"I have certainly attended Stickle, but not lately. Is he ill again?"

"Not at all, nor is he of more than secondary importance. I am chiefly anxious to know why you sent a phone message to Major de Maura on behalf of Gabriel Varez."

"You say that I sent such a message?"

The bimbashi hated his task more and more every minute. His peculiar system of interrogation called for great moral courage in practice; but he had outlined the inquiry to Colonel Dawney in this way:

(1) Definite evidence that *curare* was used. This he believed he had secured. (2) Somebody who had some or who could obtain it. In this household he had found, at least, somebody who could obtain it and also somebody who could have had access to de Maura's shoes while they were in Stickle's workshop.

"My dear Mrs. Allardyce," he said, "it would be nearly impossible to mistake your voice."

"My voice?"

"Your words were, 'Please tell Major Rafael de Maura that Gabriel Varez is with him in spirit.' Your voice is undisguisable."

"But you did not—"

SHE checked herself, dropped protective lashes; but it was too late. At last, that extra sense of the bimbashi's had awakened. The completed sentence reached his brain: it was—"But you did not take the message." He sighed and stood up. He was actually uncomfortable. He stared out of a window, learning that the cottage of Jeremiah Stickle was visible from that point. Then, he turned.

"Let me make my position clear." His voice was gentle, almost apologetic: "I hold a sort of warrant, authorizing all officers commanding, chief constables and others, to afford me every facility. In point of fact, my present visit is not an official one." Mrs. Allardyce rose from the settee and confronted him. "Would you care to give me particulars and leave the result to my conscience, or do you prefer that I pass the inquiry over to the police, with such evidence as I have?"

Her hands had been clenched, but she relaxed them. "What evidence have you?" she asked coldly.

He took out a small leather box, velvet-lined: it had formerly held pearl studs. It now contained an odd-looking object which he handled gingerly.

"This thorn—a brier thorn, I think—neatly attached to a wooden peg. It was inserted in a hole bored between the sole and the upper leather of de Maura's right shoe, so that his toe would come in contact with the point. In fact, this occurred according to plan, and he removed the shoes to learn the cause of the trouble. His finger also was pricked by the thorn. Now, the case rests like this:

"There is a black substance on the thorn; and I suggest that no one in this

neighborhood—except your husband and yourself—knows, or knew (a) Gabriel Varez; (b) Major de Maura; and (c) where to obtain this substance—which is *curare*. Furthermore, no one else, other than Stickle, has a key to Stickle's cottage. No, Mrs. Allardyce, I did not receive your telephone message, but I believe that it was you who sent it, and I suggest that it was someone in this house who lured Stickle out on Thursday night. I have only one question to ask: Why was it done?"

THERE was an interval during which amber eyes searched his own, an interval which the bimbashi knew must decide the swing of the pendulum. Then, Mrs. Allardyce pointed to the armchair and returned to her place on the settee. "You are a clever man, Major Barûk," she said, speaking with perfect composure. "I salute you. Since you have found the shoe it would be useless on my part to refuse your offer. Scotland Yard would meet with no difficulty in tracing my former relations with Rafael de Maura and the identity of Gabriel

both studying medicine. I learned then that what I had mistaken for love was no more than an outburst of adolescent passion. Gabriel taught me this."

Her eyes glowed as if a somber fire burned in the brain behind them; and the bimbashi wondered by means of what arts the dour Scottish scientist had won the affection of this beautiful, turbulent woman.

"To come to the point of my story: Rafael found Gabriel and myself together. There was an unpleasant scene. Later, there was worse, when I told him quite plainly that Gabriel knew everything about us and that Gabriel and I were to be married. Now, you must understand that Rafael's ardor had by no means cooled. He was not yet tired of me; nor would his vanity permit him to believe that I was tired of him. He made threats which would have shown me—supposing I had not known it already—that I had been infatuated by as callous a ruffian as ever breathed. . . . All the same, the next two months were among the happiest of my life. Then came the end. If you will excuse me

and put to bed. I was terrific symptoms were those of paral-

"I sent for the nearest doctor—ther—and almost lost my reason because he was so long in coming. He arrived, it was already too late: briel's mind was clear, but he had the power of speech—"

Her composure, which had the bimbashi's respectful attention threatened to break down, but quered this weakness and went

"Late that night, Hannibal came a message from Rafael de Maura. It was this, which you have seen, the room before I had read it, I replaced it in the box. 'Now, I understand that I belong to a blooded race—I was Mariana. I swore a most solemn—as I later—a most dreadful oath, before briel's bed, that I would repay.'"

She shrugged her shoulders, lighted a second cigarette from the first. "The de Maura, with misfortune. Indeed, we Rafael fled to Spain so soon after briel's death that I had no time to go to Buenos Aires and lose my degree there. It was during that year that I met my husband. I was as a visiting lecturer from the School of Tropical Medicine."

"Ah, Major Barûk, England knows her greatest men. Beginning with an almost religious respect for the intellect, my affection for Gabriel grew into a love that nothing could ever change—perhaps nothing could ever change. If Gabriel had lived, I not have been possible, but, dead, I found in Julian all that I lost—indeed, more. He does not work for profit, nor to aid destructive works for human good. He has been wealthy, titled, if he wishes, does not so wish—nor do I."

SHE paused, and the bimbashi found that her eyes glowed in a new way. He found occasion to reproach her for his bad habit of jumping to conclusions. This was not the story as reconstructed it.

"We returned to England, and I set up in practice. I was fairly successful. Then, one day—nearly two months later—I saw Rafael de Maura, and I remembered my"—she hesitated—"solemn obligation; but I made up my mind to tell Julian, as I knew how it would hurt him. I saw Rafael going to the shop of an old patient, Jeremiah Stickle, and I could not refuse to believe that he had been chosen as an instrument of justice."

"My husband is working on a treatment for tetanus: it is briel's *curare*. And I remembered the key of Stickle's door! All that I was to get ready and to await visit of Rafael to the shoemaker's. I pared a brier thorn, coating it with *curare* from Julian's laboratory, then fixing a bead of gum on the end (as had been done in Gabriel's shoe) so that the scratch would not take until the heat of the foot dissolved the gum. This, a bradawl, and a glue, were all that was necessary."

"I made it my business to come on Stickle when passing—for I have known Rafael's shoes at because of their small size and heels. My opportunity came at last—"

"A month ago?"

"Yes, my first opportunity. I had heard that a pair of Rafael de Maura's shoes would be finished on a Wednesday evening—and I gave a seat for the local cinema. He refused to go. I am afraid I g-

BUTCH

By Larry Reynolds

Varez. So I will tell you the story, and you may do as you please. Shall we smoke?"

She offered a cigarette from a box beside her and took one herself. Bimbashi Barûk took one also and lighted both. He sat down again.

"Am I to suppose from your words, Major Barûk, that you believe my husband to be concerned?"

"Not necessarily. I await your story with an open mind. You spoke of your former relations with Rafael de Maura. Suppose we begin there?"

Mrs. Allardyce nodded quietly; her expression grew introspective. . . .

"Rafael de Maura was a member of a well-known family which owned large estates in South America. They adjoined our own. Rafael was handsome, fascinating, and an experienced woman-hunter, although I did not know it at the time: I was nineteen. But deceived by all sorts of solemn promises, or perhaps because I was blindly infatuated, I consented to his proposals—only to discover that he had a devoted wife living in Buenos Aires. Even this might have failed to cure me completely, if I had not met Gabriel Varez. Gabriel was the son of a neighboring doctor and we were

for a moment, I will show you in what form it came."

Mrs. Allardyce stood up and went out.

When she returned and resumed her place on the settee, she handed the bimbashi a faded note. He glanced at it and shook his head: it was in Spanish.

"I will translate for you, Major. It says, 'Please tell Gabriel Varez that I am with him in spirit. Rafael.' Gabriel was dying when it came—I nursed him throughout. And this was the cause of his death."

FROM a wooden box she took a thorn fixed to a round wooden plug and held it up for the bimbashi's inspection.

"An *Opuntia* thorn—prickly pear—coated with *curare*. The de Maura employed an old colored servant, Hannibal, who was widely credited with being an Obeah man—and such people understand the use of secret poisons. He was utterly devoted to Rafael. I knew from experience that Hannibal could smuggle messages with incredible cunning; he seemed almost to be able to make himself invisible. Gabriel one evening walked over to see me, and had scarcely set his foot on the veranda when he collapsed. I had him undressed

But the attempt had to be given. I declared that nothing would induce me to leave the house at night. I pondered the problem for a week or more before a possible solution came. Stickle's professional vanity and lack of money.

In the meantime I found out all I could about Rafael de Maura. He saw me, but owing to my 'disguise,' I could not, failed to recognize me. I discovered the name of the poor little soul who was risking her happiness to amuse me beyond saying that she is the wife of a young officer commanding a submarine in the Mediterranean. I must be careful. Many women would condemn me, but few who had had the misfortune to be hunted by Rafael de

—her brilliant eyes challenged the bimbashi's— "I know you thought some time that I was his secret visitor. My second opportunity came. I saw that absurd advertisement in the County Mirror. I typed it on a sheet of paper and enclosed a ten-shilling note. It succeeded. While Stickle was on Thursday night, I opened the door and made a fairly neat job of what had come to do."

"The telephone message?" the bimbashi asked.

"It was purely by accident that I met you on Friday night how well I had heard. I was called out to a case in the same street and was told about a disturbance calling at Mrs. Saunderson. This tempted me to send the message from a public call-box—spoken in really bad English—which, I supposed, completed the case against me. Now, you know how Rafael de Maura reacted, and why."

"On the contrary, Marian," came a pleasant voice, "you have grossly deceived me!"

"Bimbashi Barûk sprang up and fell all in one movement. Julian Barûk stood in a doorway directly behind him. His expression was puzzled. He was looking at his wife, and she was something like a smile about her lips and in his steadfast eyes.

"Julian!" she whispered—and that was all.

"Fair Barûk, I fear I have been deceiving you. I beg your pardon. I did not, not by design, to see my wife from her bureau certain—relics. But it is to be my duty to do what I can. The story which you have heard, the death of Gabriel Varez, is in every particular. I have, my dear, examined the substance on the table which killed him. It is *curare*. It lies upon the brier which you have

"Julian!"—his wife's voice was husky. "What are you saying?"

"I am endeavoring to correct any misunderstanding under which Major Barûk is laboring. Allow me to make my point clear, Major. When Rafael de Maura first appeared in this district, some months ago, I chanced to hear of his arrival. I may say that I had not met him, but I knew the whole story. I knew, also, that one of Marian's light well hold views regarding the propriety of an oath made to a dying man, which others would look upon more seriously. I feared the outcome of a

"I crossed to his wife, with that light step which characterized his movements, and stood beside her, one hand resting on her shoulder.

"Nevertheless, Marian, I knew from your behavior that you had seen him—your fears of mine were shown to be unfounded. Your earliest experiments with barbed wire and small spigots of wire did not escape my attention." He fixed his analytical gaze upon the bimbashi. "You may possibly inquire,

sir, why I hesitated to put an end to these preparations for murder. I will answer you in this way: By the common laws of men, de Maura's life was forfeit; by the private laws of the Borregos—of whom my wife is one—it was forfeit to her. But I hoped and believed that if the attempt should be made, and fail, she would consider her duty—for as a sacred duty she regarded it—to be done. I knew, also, that de Maura was soon to be posted elsewhere."

Julian Allardyce sat down beside his wife.

"Forgive my discourtesy, Major. Please be seated. I cannot know if Marian has told you—I overheard only part of your conversation—but I am engaged upon experiments with a new antidote for tetanus, a condition which accounts for so many casualties in war. I am employing, not without success, one based upon *curarine*. It follows that I have a stock of *curare* in my laboratory. It is somewhat difficult to come by in England, and I keep what I have in a special container. However, detecting my wife's purpose, I transferred it to another and placed a harmless preparation of similar appearance in the original flask—"

"But, Julian"—Marian Allardyce's voice remained husky—"how could it have been harmless, when—"

"When de Maura died?" He patted her shoulder. "You planned your murder perfectly. Do not reproach yourself." Unmistakably, now, Julian Allardyce was smiling. "You see, de Maura did not die of *curare* poisoning; he died of *tetanus*."

"If I may interrupt for a moment," said the bimbashi diffidently, "I have seen the scratch on his foot as well as that on his finger."

"No doubt, sir. I have conceded the point that this attempt was well planned. But there are laws higher than those of Spanish retributive justice. De Maura some days before had sustained a cut on his left calf from partly buried barbed wire. No doubt you have seen this scar also?"

The bimbashi inclined his head.

"He called upon a local practitioner, who noted unsatisfactory conditions and who also chanced to be acquainted with me and my special studies. Dr. Weldon and his patient came to consult me a few days ago—"

"YOU mean"—Mrs. Allardyce spoke in a low tone—"that Rafael de Maura came here?"

"Certainly. I made the appointment for a time when I knew you would be away from home, and de Maura had no reason to suspect the identity of my wife. Perhaps I need not stress the point, Major Barûk, but prognosis in such cases is extremely difficult. Tetanus sometimes supervenes as late as ten days after infection. Even I am not infallible. Indeed, I am weakly human. I will not deny that the temptation to thrash de Maura to within an inch of his life was strong upon me. He would have defended himself, for cowardice was not among his vices; but man for man I stood in a different class, and I conquered the impulse.

"I examined the wound and gave the best advice in my power. Finally, I should be glad if you would arrange to have the substance upon the thorn examined by a competent person, other than myself. I naturally regret this exposure of intimate domestic matters, but I have complete confidence in your discretion. I do not pretend to apologize for my wife." He put his arm about her shoulders. "Circumstances and the heritage of Borrego blood explain her slightly irregular behavior. If I can assist you in any other way, at any time, pray call upon me, Major Barûk. I shall be at your service."

"Friends!

Romans!

Comptometer operators!"

• "Lend me your eyes!

• "I come to praise this man, not to bury him! And I don't mean Caesar—I mean the guy who invented the Keystroke-Censor on Comptometer adding-calculating machines: the device that makes it practically impossible for us Comptometer operators to make an operating error! The exclusive Comptometer feature that protects us from the Boss' wrath, and gives us confidence to turn out figure work at top speed (and that's some speed, on a Comptometer!) without having to worry about fumbled or incomplete key strokes.

• "While I'm at it, permit me to orchid-ize the bird who figured out how to eliminate answer-dial zeros on the Model M Comptometer—unless they occur in the actual answer, of course! I'll personally contribute to a monument for him!

• "Fellow-Comptometer operators, I don't expect to be operating a Comptometer all my life! But even if I get to be a big shot with two secretaries and ten buzzers, I'll never forget that not only does the Comptometer handle more figure work in less time at lower cost—it's also the machine that makes this a better world for adding-calculating machine operators!

• "I thank you!"

(ASIDE TO THE FRONT OFFICE: For information on high-speed Comptometer machines and money-saving Comptometer methods, telephone your local Comptometer Co. representative . . . or write to Felt & Tarrant Mfg. Co., 1714 N. Paulina St., Chicago, Ill.)

Aggressive, But Not Crazy

PUBLICATION of Lt. Col. W. F. Kernan's book, "Defense Will Not Win the War" (Little, Brown & Co., Boston, 1942, 193 pp., \$1.50), touched off a conflagration of demands for an American offensive, somewhere, this spring.

It's a fine book. We admire especially its pugnacious tone, and Col. Kernan's insistence that we must become offensive-minded and actually mount an offensive sometime if we hope to win the war.

However, we want to point out a few things which Col. Kernan does NOT advocate in this book. It is as important, we think, for all of us to know what he doesn't advocate as to know what he does.

The distinguished field-artillery officer and military scholar does not urge a blind, ill-planned, sketchily implemented offensive at some point or points chosen more or less at random, just for the sake of being able to say, "We're on the offensive, boys, gr-r-r!"

Col. Kernan does not suggest that we dissipate our armed strength by scattering it in a dozen places around the map, thus setting up fragments of it like so many ninepins for the enemy to knock over.

He does not advise that we strip this country so bare of defenses and fight-

ing men that we shall invite invasion.

He does not urge any leeching away of defensive strength from such key points as Hawaii, the Aleutians, the Canal, the West Indies bases, Newfoundland, Greenland, Iceland, Dutch Guiana.

Some of our more excitable civilian strategists and tacticians are urging some or all of those near-suicidal steps.

Kernan, a hardheaded, realistic military man, thinks he sees a chance for us to hit at Italy, the Axis' Achilles heel, this spring or summer, provided Russia keeps Hitler sufficiently busy on the Eastern Front. Kernan proposes that we jam an initial A.E.F. of 200,000 men into Italy, and follow this with waves of 200,000 men a month till victory. Thus, he believes, a second front can be set up, and the Allies enabled to rip the Axis up the back and rally the Greeks, Yugoslavs and French to their aid.

But, to repeat, Kernan does NOT advocate throwing this multiple fist into Italy without careful planning and thorough bracing of the fist with brass knuckles before the punching begins.

We hope that if our war chiefs go in for Kernan's plan they will follow it, by and large, instead of some would-be improvement dreamed up by amateurs.

Boom Year for Babies

IT TURNS out that 1941 was a big year for babies in the United States—2,500,000 close on the heels of the 1921 record of 2,600,000, showing hoisted our birth rate for 1941 to 18.8 near Germany's 1940 high of 20. Incidental marriages in 1941 hit an all-time high of 1,560.

All of which furnishes a peg on which to hang remarks which we think should be made.

You hear more than a few people nowadays deriding out loud why anybody should "risk" a baby in times like these. Bring a poor little into the world without its consent, to grow up in panics, revolutions, possible famines? It is felt by alleged thinkers to be some kind of crime.

Very superficial thinking, if you ask us. There never has been a time in the world's history, in any country, when a case couldn't be made out in any way against having a baby. This always was a certain world, in which you can't predict today what is going to happen tomorrow, let alone 10 or 20 years hence. That was as true in the quiet depths of the Victorian era, along about 1885, as it is in the present day.

Our notion is go ahead and have one or two babies, provided only that you want them and have a fair prospect of bringing them up in healthy surroundings. We hope 1942, the United States' first year in World War II if it lasts that long, will see a birth rate in 1941 and 1921 birth records knocked staggering by several hundred thousand.

Some Sugar and Some Saps

THE country is settling with many a grunt into the sugar-rationing nuisance, while it anticipates rationing of other commodities.

We can blame some of these squeezes on our enemies—rubber, of course, and oil if the submarine war in the Atlantic and West Indies nail enough tanker ships. But oil rationing in some sections of the country is much of sugar constriction was brought on by our own other than a bunch of saps on our own home.

A comparatively few people got jittery about sugar after Pearl Harbor because of rumors of heavy cuts in sugar imports. Undoubtedly there will be less sugar from Hawaii this year, and some of the Cuban sugar will go into smokeless powder. But sugar, unlike many other commodities we can do something about. We can grow a great deal more beet sugar in the United States. One thing, as Mr. Frank Taylor explains in his article on sugar in this issue of Collier's. These considerations should not stop people from grabbing up sugar and hoarding it away, thus precipitating an apparent shortage. There was any such thing and before we could do anything about alleviating the one in prospect, the government had to step in to protect the rest of us.

Wartime hoarders almost always outsmart themselves in their efforts to outguess war developments and cheat expected shortages. They usually buy up what presently become overplentiful, and then when things that all of a sudden become scarce, they pose themselves to public hatred and ridicule and sometimes to legal penalties.

We believe that if you just take this war in your stride—don't let it scare you down, and especially don't try to wring advantages over your fellow citizens out of it—stand a better chance than the hoarders and the wise guys of going through it smoothly and without incident from it a bigger, broader-shouldered person than when it began.

More care in avoiding accidents means more production here . . .

and more of every-thing needed here.

Carelessness and Victory don't mix!

Safe (?) at home

One of all fatal accidents—and no how many less serious injuries at home! Eliminate every possible danger. Especially careful in blackouts.

Join the Crusade against Carelessness! There's no age limit. You and you and YOU can help stop the accidents that are delaying production—that are destroying lives and property. You and you and YOU can help stop our \$322,000,000 annual fire loss.

To win this war, every one of us must fight as never before against tragic and needless waste of time, manpower, machines and materials.

A Hartford Agent or your insurance broker can obtain valuable advice for you on how to prevent accidents and fires. He can also build a sound program of insurance to protect you or your business against serious financial loss.

Be patriotic—drive carefully!

Civilian carelessness mustn't delay convoys. Drive at moderate speed—obey all traffic rules. And remember: an accident on the road today may mean *no car* for you for the duration!

← America's worst enemy

Fire attacks somewhere every two minutes—always without warning. A Hartford Agent can furnish you with expert advice on fire prevention. Follow this advice—help stop needless loss!

To reach a Hartford Agent

Call Western Union (or Canadian National Telegraphs) and ask for the name and address of the nearest Hartford representative. Let him study your insurance needs in the light of today's conditions. Or talk to your insurance broker.

HARTFORD, CONNECTICUT

Picture OF THE MONTH

JEANETTE MacDONALD • NELSON EDDY

"I MARRIED AN ANGEL"

A Metro-Goldwyn-Mayer Picture

DIRECTED BY: Major W. S. Van Dyke II

SCREENPLAY BY:.....Anita Loos

PRODUCED BY:.....Hunt Stromberg

SORT OF FOREWORD: We confess that we had quite a problem about selecting the Picture of This Month. Having passed up more serious fare we narrowed the choice down to two: "Rio Rita", starring Abbott and Costello; and "I Married An Angel", starring MacDonald and Eddy. Even now we're not certain about our choice, so please don't sulk, Mr. Abbott, and please don't brood, Mr. Costello. "Rio Rita" is good, too.

CAPSULE REVIEW: Nelson Eddy has his trouble with women. They can be extremely trying what with jealousies and extravagances. In despair he prays for some angel to marry. Heaven opens and Jeanette MacDonald, beautiful winged creature, drops onto earth. Very good, Eddy. Develop the complications and they add up to charm, merriment and wisdom. All in all, one of the dreamiest screen concoctions in these many moons. It is the perfect sort of escapist entertainment. Not too wise for the world but still not crass with harsh realities which we must face with a will in flesh and blood and not merely in shadow form. The film is thoroughly recommended from the standpoint of action, direction and script. It is a cameraman's field day and the M-G-M exceptionally proficient staff have missed no bets. By all means see "I Married An Angel".

TITLE NOTE: All Characters, says the foreword, are fictitious. We suppose this includes the Angel. Angels don't sue.

FORMER INCARNATION: Based upon the Broadway Stage Success. Produced by Dwight Deere Wiman. A musical adaptation by Rodgers and Hart (Lorenz not Moss, *New Yorker* please note) from the play by Vaszary Janos.

CAST EMBELLISHMENT: In addition to the stars, Jeanette and Nelson, one sees the stars Edward Everett Horton, Binnie Barnes, Reginald Owen, Douglas Dumbrille, Mona Maris, Janis Carter and Inez Cooper.

HUMMING WORD: All of us may join in the chorus:

"Have you heard I married an angel?
To Heaven she's carried this
Fellow with a kiss".

REGRET: Dear Abbott and Costello: If we had two columns we'd write about "Rio Rita". Yours.

ANY WEEK

WE HAVE caught no more than a fleeting glimpse of Señor Domingo Turner but we are glad that our acquaintance with him is no more remote. In the politics of the Republic of Panama, Señor Turner is what the late Senator Boies Penrose of Pennsylvania used to call a Pearly Revolving Door. In brief, Señor Turner is a political dissenter, a reformer, an individualist whose support of a candidate or office winner is violent until his man by word or deed departs a millimeter from the Turner convictions. In Panama Señor Turner is regarded as a radical but we'd scarcely call him that. He merely has standards, one of which is that the underprivileged should get a break. Anyway, whenever a revolution brews, at the first thin rumor of political upheaval, the government loses no time in arresting Señor Domingo Turner. He is always first in the roundup of those suspected of wishing ill upon the current administration. It is not necessary that Señor Turner should utter a word for or against either faction; the police fare forth at once and arrest him. He always goes to jail cheerfully and is always lodged in the same cell until the rebellion is frustrated or the government falls. Señor Turner has become a philosopher about all this. One day a Yankee visitor in Panama asked him why he was always the first to be arrested. Señor Turner spread his hands and sighed: "It is customary—es costumbre."

WE'VE had an enlightening talk with a gentleman from Costa Rica. He said that we might not have heard of him—Patricio Ryan y Masacolle—but most surely must know of his brothers, Feliz and Antonio. We didn't commit ourselves, asking Patricio to proceed with his tale. So we learned that Feliz and Antonio were bandits who had, according to the newspapers, been executed no fewer than seven times during the past twelve years. Patricio explained that, according to the newspaper reports, they had been shot, hanged, poisoned, knifed, garroted and clubbed—always fatally and always together. "But these reports are not true," explained Patricio. "My brothers are in excellent health and spirits. They are eager to become soldiers against the tyrant Hitler. Would you care to pay a modest sum to interview them and

perhaps have the privilege of sending them to the United States to fight for your country? It is impossible to destroy my brothers."

BUT we declined the honor and wandered over to a large, pleasant beer garden. It was almost deserted, a few languid waiters huddling in the shade of a red awning, apathetic in the tropical heat. But suddenly customers began to arrive in what the military calls force. In no time every table was filled. The waiters came to life. Beer began to flow in quantity. The world's loudest juke box, aided by a loudspeaker turned all the way on, began to fill the heavens with dance music. We made inquiries. "Church services are over," explained our waiter. "From their devotions have come all good Christians to dance and be happy. Thus they show the good God that they are grateful to Him for hearing their prayers and permitting them to see yet another beautiful day of rest. Ah, no, the American beer is not arrived upon the ship that was not permitted to arrive because of the war. And yet—"

SO WE had a sandwich and went to a baseball game (still alert, of course, against the ever-expected enemy). We're glad we went. It was like seeing the Phillies playing the Phillies. They did everything unusual short of running the bases on their hands. In the grandstand the betting was ferocious, the bets being laid as each man went to the plate. If he didn't hit, the losers became frantic, often requiring the services of the police. For his own safety it is better that a man get a few hits, however feeble. Frequently a hitless day means a police escort for the luckless swinger. Or if the odds are against his hitting and he crosses them up by smacking the ball out of the park, he may require protection. "One comes to have a pleasant time," explained Señor Hannigan, a spare umpire who sat with us. "Every player you have seen today has been wounded at least once."

AS WE bide our time here in Central America awaiting an assault or two by enemies who may long to damage that beautiful and important piece of engineering known as the Panama

ady to go anywhere
...QUICKLY

It's reassuring these days to see those sturdy Bell System trucks along the highway.

They are mechanized motor units. Each has a highly skilled crew; each has its own tools, power and materials. They are ready and efficient and can be mobilized anywhere, any time. And there are more than 27,000 of them.

This is just one way the Bell System is prepared to keep lines open and ready for war-time service — no matter when or where the test may come.

BELL TELEPHONE SYSTEM *Service to the Nation in Peace and War*

"I'M PLAYING SECOND FIDDLE NOW"

Du Pont chemists have outdone the hog—there is no better bristle than Pro-phy-lac-tic's synthetic "PROLON"

No matter what you pay, you cannot buy a tooth brush that has any better bristle than "Prolon".

Because "Prolon" is Pro-phy-lac-tic's name for the most costly grade of du Pont synthetic bristle. And du Pont's is the finest on the market.

When you hear competitive tooth brush claims, ask yourself this: *how can the same du Pont bristle, in another brush under another name, last longer than under the name "Prolon" in a Bonded Pro-phy-lac-tic Tooth Brush?* You know the answer—it can't!

"Prolon", on the other hand, has a mighty important *plus* over any other synthetic bristle sold under any other name... only "Prolon" is rounded at the

ends! See for yourself, in the photomicrographs, the difference between the rounded bristle-ends of "Prolon" and the harsh, jagged points of ordinary bristle. *Think of the difference on your gums!*

The only Tooth Brush in the World with...

2...SIX MONTHS MONEY-BACK GUARANTEE

Every Bonded Pro-phy-lac-tic Brush carries a money-back 6-months guarantee—a clear-cut guarantee of complete satisfaction for, at the very least, 6 full months of use! That's how sure we are of its dependability... and durability!

Hair Brushes in Gleaming, Gem-like Plastic!

Another Pro-phy-lac-tic triumph! Dresser and toilet brushes in clear plastic... in a choice of four gleaming, jewel colors. Transparent Jewelite backs. Moisture-resistant bristles of du Pont Prolon. \$1.50 to \$10.00 at most brush-goods counters. Illustrated: Roll-Wave, a unique "curved-to-the-head" brush... with comb, \$4.50

It's a secret!

6NX

A STARTLING NEW DISCOVERY!!!

MAKES YOUR DOUBLE EDGE RAZOR PERFORM MIRACLES!

Everywhere men are discussing 6NX! 6NX—the new secret process which is amazing thousands upon thousands of shavers!

X is a symbol representing a certain combination of special steel, tempering, lacquering, honing and stropping. This X process produces a safety razor blade astonishing in its keenness and long that it will change your whole concept of blade shaving!

X is your secret, closely-guarded formula

applied to the new Star Double Edge Blade. It's the result of hundreds of scientific experiments! It's an achievement which has produced the most remarkable double edge blade ever manufactured!

Not just another good blade. Don't think that for a moment. THE 6NX PROCESS STAR DOUBLE EDGE BLADE takes edges steel has never taken before—truly amazing in their keenness and uniformity . . . On sale at retailers everywhere! Star Division, American Safety Razor Corporation, Brooklyn, New York.

INTRODUCTORY OFFER!

1 TEST BLADE FREE

TOTAL 5 FOR 10¢

Money back if free test blade doesn't give you the best shaves you've ever had in your life!

ALSO 15 FOR 25¢

INCLUDING 3 TEST BLADES FREE

STAR DOUBLE EDGE BLADES
MADE BY THE MAKERS OF STAR SINGLE EDGE BLADES

DON'T LET INHALING WORRY YOU—

ALL SMOKERS SOMETIMES INHALE—BUT YOUR THROAT NEEDN'T EVEN KNOW IT!

There's a cigarette that not only tastes better—but is proved better for you . . . even when you do inhale!

A vital difference has been found by eminent doctors who compared the leading popular brands. They report that:

SMOKE OF THE FOUR OTHER LEADING POPULAR BRANDS AVERAGED MORE THAN THREE TIMES AS IRRITATING—AND THEIR IRRITATION LASTED MORE THAN FIVE TIMES AS LONG—AS THE STRIKINGLY CONTRASTED PHILIP MORRIS!

Real protection—added to your enjoyment of PHILIP MORRIS' finer-quality tobaccos. No worry about throat irritation even when you inhale!

AMERICA'S *Finest* CIGARETTE

WING TALK

Many industries may build planes in wartime, but from the drafting rooms of the basic air industry come all the advances in design.

THIS is to clarify a little matter that makes our aircraft manufacturers unhappy whenever they get time to think about it, though they'll never come out and make an issue of it. The reason is that they, just as much as our High Command, want airplanes built faster and faster and they don't care who does it—they're that loaded up with government orders themselves. So there's no dog in the manger here.

When it became apparent that the present and potential capacity of the American aircraft industry would be insufficient to meet the war needs of the United Nations in the short time allotted, the government turned to other industries and told them to make parts, subassemblies and even the complete airplane. It did this for tanks, arms and other instruments of war. These heretofore nonaeronautical industries were asked to make planes and engines that have been developed and proved by aircraft designers and builders who have specialized in this work continuously for the last thirty years.

Therefore the other groups that are changing over to make aircraft are reproducing the government-accepted types, not newer types of their own creation. The aircraft industry has loaned its engineers and technicians to the new groups to teach them how airplanes shall be built, and all the while the basic aircraft industry has gone ahead with its own expansion and in the past twelve months has established a record for combat-plane production that is phenomenal. But even that is not enough for this modern air war.

The government depends entirely on the aircraft people to lead the way in the air armament of the nation and this is supported by the orders for new experimental types, of which each military aircraft firm has at least one. These pioneers in combat-airplane design, development, testing and production are the only people to whom the government can look for constant improvement in speed, range, fire power and load capacity. The Army and Navy do not design aircraft; they tell the aircraft industry what they want in performance, and the industry creates the plane.

The airplane builders, for the sake of safety, performance, and speed in delivery, hope that inexperienced people in the other industries now building aeronautical equipment will not monkey too much with the proved designs.

LAST August we reported the government was going to do something to protect airplane windshields against

collisions with reckless-flying dead chickens. A lot has been done since, in a program of hurling dead chickens at terrific force at the equivalent plane cockpits. All this work on the ground, because it takes too much time to go flying around looking for them. So the C.A.A., the Bureau of Standards, the Mellon Institute of Industrial Research, the Pittsburgh Plate Glass Company, the Libbey-Owens-Ford Glass Company, and the Wild Life Division of the Department of the Interior all have put their heads together and are tackling this problem. How important it is.

Many good ideas have been advanced but had to be ruled out because shield insurance against lightning and ice formations could not be secured in favor of protection against a bird. However, recent developments in transparent glass-plastic combinations have resulted in windshield plexiglass of reasonable thickness that has stubbornly resisted impacts.

In case you're concerned about dead chickens were thrown at windshield setup, it's done with a pressed-air gun of 3½-inch diameter. Freshly killed chickens are fired at the rate of 200 feet a second. Now the government and industry experts are arranging for the Veterans' house people of Pittsburgh to build an air gun capable of firing a killed 20-pound swan (minus its wings which brings the weight down to 15 pounds) at a velocity of 270 miles an hour against a variety of transparent materials suitable for windshield of this size and weight is as the maximum to protect against something bigger and heavier along. High-speed movies will be taken and strain gauges and accelerometer pickups will be established at points of the test apparatus, to the bottom of just how much our feathered friends can create out of our birds of metal and glass.

EVEN though the airlines hourly are increasing in value in war effort, have been given preference rating for parts and to keep their ships in tiptop shape operators are not sitting back for the necessary equipment to be delivered as promised. The larger firms in particular, who have elaborate maintenance bases, are equipped with machine, sheet metal and drifter facilities. So they are making that have been delayed or are to get.

This can be told

★

Today, wise military censorship keeps news of most current American inventions behind a cloak of secrecy.

This must be so.

Every true American wants it so.

But this absence of news must not let us forget that American pioneering is one of the great powers that built this nation. And don't let anyone tell you that we have run out of inventions.

Actually, the ability that invented the sewing-machine and the airplane, the telephone and the caterpillar tractor, the elevator and the revolver, the flying boat and the leak-proof gasoline tank—is at its peak right now.

To add to your confidence, and strengthen our faith in American inventiveness (if it needs strengthening), we tell you at this time the story of a dramatic tire development that has taken place in this country.

It is a straw in the wind—and it is a story that can be told now.

The seemingly impossible hurdle that tire designers have faced for years is this: the most effective non-skid tire was the old

Pennsylvania Vacuum Cup—but it was noisy. . . . The quietest tire is a bald tire—but it is frightfully dangerous. So, to cater to the public's desire for safety, and for silence, tire treads have had to be a compromise. The more cuts and grooves added for safety, the greater the possibility of noise.

But American inventors continued to brush aside the word "impossible" in their desire to harness these two opposites and give both advantages in a single tire.

In 1941, the invention that cut this Gordian Knot took place at the Pennsylvania Rubber Company—the home of the original Vacuum Cup Tire.

The new Vacuum Cup Tire accomplished the feat by upsetting the entire current principle of non-skid design. Instead of depending upon noisy ridges (only at their best in one direction), the new vacuum cup gets its amazing results by the silent indented cup which is equally effective in all directions. This resistance to skid at all 360 degrees of the circle introduced a wholly unexpected, and vitally important factor: *it eliminates much of the friction-producing side-to-side weaving and*

thereby extends materially the mileage from every pound of rubber. And it does the job silently. It may prove the salvation in the use of synthetic rubber for tires.

(Left) The new Pennsylvania Silent Vacuum Cup Tire
(Right) The original Pennsylvania Vacuum Cup Tire

★ ★ ★

Of course, we cannot make deliveries until Victory permits, BUT when you wonder what is going on behind the scenes in the American inventors' war effort, think of this vacuum cup tire development, and multiply it hundreds of times. . . . Pennsylvania Rubber Company, Jeannette, Pennsylvania.

VACUUM CUP TIRE

Concerning these animals drawn by a ten-year-old girl

THESE pictures were drawn by a yellow-haired, pretty little girl who lives in Bronxville, New York.

She is ten years old and her first name is Jane.

At present, Jane is absolutely certain she's going to be an artist when she grows up.

Not only is she determined she's going to be an artist, but it's all set in Jane's mind that she's going to be a certain kind of artist. She's going to draw and paint animal pictures, and nothing else.

Already her father has to bribe her to draw a human being.

If you'll think back to those days when you were a child, we think you'll recollect that you also had very definite plans as to what you were going to do when you grew up. And most likely what you're doing today isn't remotely connected

with what you expected to be doing when you were a kid.

Some of the men who planned, as children, to be doctors, engineers, lawyers, or who wanted to be firemen or policemen are today Travelers insurance agents.

They will tell you that they're not only content, but very, very happy that they are insurance men. The reason is quite simple: a Travelers agent gets a lot of satisfaction out of his job.

You'd see why if you were with him when he goes to a hospital and hands over a check that makes a worried face light up, a check that means this man has no more worry about where he will find the money to pay the doctor, the rent, the food bill, and the myriad other bills of his family while he's laid up.

You'd see why if you could follow him into the

home of a man who has injured so badly in an automobile smash-up, and who might be paying for damages running into thousands except for the insurance policy this agent has.

You'd see why if you walked by a family that thanks to a life insurance policy this agent has is able to live decently and comfortably.

Yes, it's a good job, an interesting job.

And when a Travelers agent or insurance agent next calls on you, these are good reasons to be a member as he walks in the door.

MORAL: Insure in The Travelers. Travelers insurance and fidelity and surety Travelers Insurance Company, The Travelers Indemnity Company, The Travelers Fire Insurance Company, Hartford, Connecticut.

The Day of Great Fear

By Stuart Cloete

ILLUSTRATED BY HARRY MORSE MEYERS

The American was as brave as any boy in China. Toa-Tuen knew this, and she was proud to wear his clothing

SINGLOO looked at Cheng's face. Cheng had just asked for volunteers . . . young boys.

"Only boys will do," he said.

There were great objections to being a leader among the boys. They thought a lot of Singloo because he was an American citizen and could speak English and read it. He thought with longing of his father's laundry in Bourbon Street, New Orleans . . . of the beautiful smell of washing and the hot scorched smell of his father's iron as it slid over shirts and slips on the big table by the window. He thought of the parcels of finished laundry all done up in brown paper and each parcel marked with a Chinese letter.

He stepped forward. "I will go," he said.

He had no idea where he was going. He had never had less desire to go anywhere. All he wanted was to stay safely with others . . . the men and boys of Cheng's guerrilla band.

And here he was standing like a fool by himself in front of them all.

There was nothing to indicate pleasure on Cheng's face but Singloo knew he was pleased. That what he had done had been expected of him. That by so doing, though he felt a fool, he had brought honor to his dead ancestors. But all the same it was not pleasant. On the contrary it was not only that he felt ridiculous, he also felt conspicuous and it made him look as if he held himself superior to the others. More brave than they. This was of course absurd. The only reason he had volunteered first was because he was so frightened. To

be frightened made him angry. He would teach himself not to be afraid. By adding danger to fear, fear could be conquered.

"Six," Cheng said. "There is only one."

Ten boys joined him. He felt better. Now he was one of a group, no longer alone on the black earth in front of the band holding a rifle with a fixed bayonet that was taller than himself. Cheng came up to them.

"You can go, and you, and you." He sent five back. Out of the corner of his eye Singloo looked at the rejected boys. On what principle was Cheng choosing them? Why had Fanyan been sent back? He was nearly as big as a man, strong and known to be a brave fighter. Perhaps the bravest of us all, he thought. He looked at those who were left. They, including himself, were the smallest, the youngest, the slightest of the band.

Ah, he thought. We are going to be sacrificed. Like a wise leader Cheng is choosing those who can most easily be spared. His knees knocked together. It is for China, he thought. My ancestors must not be disgraced. And if a boy was killed without having children no blame could be laid upon him . . . this was obvious since he was still too young to have them. At least not too young, but too young to make it practical.

"Now go to the girls," Cheng said. "They are ready."

The girls . . . what was this? A strange

idea entered his head. Perhaps they would leave sons after all; perhaps . . . but that was an absurd thought . . . or was it a hope?

"Go, I say," Cheng said. "They are at the temple. And you, Singloo, since you stepped forward first, are the leader. Do you agree that he should lead you?" he asked the others.

"We agree," they said.

THIS was a terrible thing. He was going to have to lead. It only showed where a combination of fear and vanity could lead you. What was it Confucius said about fear? He could not remember.

"The temple," Cheng said again.

Singloo moved slowly toward it. The others followed him. Whether he wanted it or not he was the leader. They were following him. It was most embarrassing. It made him very conspicuous.

The girls were giggling, laughing. They sat on a low wall like brave little black-haired birds on a perch, chirping like crickets in a cage. Birds, he thought again, as pretty as birds . . . as bright. And what had they in their hands? Clothes. They all had clothes in their hands—red, blue, green, yellow, embroidered silks and cottons.

"Here," one of them cried running up to him. "You are about my size."

What had size to do with it? He was suddenly very frightened. What would she do to him? He wished he were older, more experienced. He wished he were

FROM CHUNGKING

American-born Chinese sampan man outwits the Japanese in disguise in this inside story

IDE in the hot Hong Kong summer the shop fronts remained silently boarded. No trams were running. A few pedestrians hurried by in an effort to get out of the dark. The Peak railway was operating. A few Sikh policemen lined up a line of people in front of a shop.

Machine gun shells warbled overhead and against the hill a short distance. From Wanchai rifle and machine gun fire sounded like a battle of snipers in action. At five o'clock the firing ceased. An hour or so later a servant reported to my friend, a Canadian, that a twelve-hour truce had been arranged.

At dawn some panicky soldiers discarded a tin hat and tossed it into the next compound. A servant, seeing complications from the lack of military equipment, returned the helmet—which promptly fell to him. Our nerves were on edge every two minutes by the clatter of a battered tin headpiece landing on the concrete.

At dawn came the central district

was piled high with war material—parts of uniforms, helmets, gas masks, cartridge belts and holsters—but significantly there were no pistols or rifles. A truck whizzed to a stop and discharged a lone Japanese soldier, who took up a position on a corner with his bayoneted rifle resting in the crook of his arm.

On the opposite corner stood a bewildered and bearded Sikh policeman, armed only with a futile short baton. Small crowds gathered and gaped from a distance. A newsboy did a brisk business selling papers with headlines announcing the cessation of hostilities.

Three Japanese soldiers came by, escorting 105 Canadian prisoners—I counted them, twice. The Canadians were in a cheerful mood—more cheerful than you would have expected from just-captured soldiers. One carried a guitar and another hugged ten precious cans of Capstan cigarettes. They were all young and looked inexperienced.

In the darkness that night I heard cries for help from a Chinese maid in the servants' quarters; then the sound of running footsteps and screams. Never in my life have I felt so helpless; there was nothing I could do.

My mind went back to my experience on the ill-fated U. S. S. Panay on the Yangtze River four Decembers before. At that time also we were helpless before the Japs, with no place to which to run—but it was better then, because I had my camera and was able to strike back later with my pictures.

In the first few days after the conquest and occupation I got a pretty good idea of what happens when the Japanese march into a captured city. And there was no end to the number of my friends in Hong Kong who eyewitnessed the orgy of rape, particularly in the Happy Valley race course section, a residential area for upper middle-class Chinese. The few foreign women in the colony generally escaped this fate, except in a few individual cases.

First to Be Organized

Conduct of the victory-related Japanese soldiers improved somewhat after their military police began functioning and brothels were established. These institutions were the first to be organized after the setting up of army headquarters.

In the process of exploring their new conquest the Japanese discovered warehouses full of liquor, tobacco and assorted merchandise, to which they helped themselves generously before giving their local gangster allies the signal for a general looting.

Private residences were looted in a more gentle but no less effective manner. Japanese officers installed themselves in the better homes, evicted occupants and then later removed pianos, electric refrigerators, radios and furniture. The conquerors appeared particularly fond of hard, uncomfortable Chinese blackwood furniture, judging by the truck-

loads of it hauled to the water front.

Meanwhile, all Hong Kong worried about food. Ostrichlike, most people had not prepared for war by storing food and the others had consumed their reserves during difficult weeks of siege when it was impossible to buy food unless one was willing to stand in line for hours through shelling and bombing to get a loaf of bread.

Not that there was an insufficiency of food. The Japanese army had gone into business, shipping from Hong Kong large stores of rice to Shanghai for sale, and shopkeepers weren't interested in exchanging their food for currency backed by a nonexistent Hong Kong government.

Money also was a big problem. The majority continued the usual habit of signing chits for food and drink throughout the siege with the result that the sudden surrender caught them practically penniless.

Hong Kong's population was hungry for news about progress of the war elsewhere in the southwestern Pacific. The only news available came in a puppetized press which everybody read but nobody believed. Despite their recent

At dawn of the tenth day I talked a sampan man into making the run across to Kowloon. Never did the mile of water seem so wide

The Sounds of Geese

By Vereen Bell

ILLUSTRATED BY JOHN PIKE

With the Lord's help Joe Bullock bares the villainy of Crabtree Myers, meting out punishment therefore

THE wild geese flew over high, the November sun momentarily glinting on the white of their chins and tails. Joe Bullock looked up from his painting and watched them briefly. "Them's late gitting here," he thought. Three skiffs passed the Pelican II, the gill nets piled on their stern decks. Without breaking the steady rhythm of their rowing, the men nodded as they moved by, partly to Joe, but mostly to Nellie Barnaby.

The fishermen turned in at Jules Bar-

naby's fish-house dock with their catch, and Joe said, "Nellie, I been thinking."

Nellie Barnaby sat on the rail of her father's party-fishing cruiser boat and watched a niggergoose feeding under an overhang of bay brush.

"Nellie," Joe said, "ain't no sense in you marrying me."

"Ain't it?" she said. "How come?"

"You don't want to marry no old hard-luck somebody like me."

"Thought you said you wasn't hard luck no more, after gitting me promised to you," Nellie said. "You ain't backing out, are you, Joe?"

"No. Ain't nothing like that. It just looks like everybody's making money but me. Party fishing's plumb done, you might say, until spring er so."

"You could go gill netting."

"Ain't got no gill net."

"Pa'd let you have the loan of one."

Joe leaned to tie his boot, saw the broken mast. He stared at i

Joe shook his head. "Ain't fishing with no borrowed net. Hard luck the way I am, a shark'd git in it, er a sawfish, and then I wouldn't just only be broke, I'd be into debt. Then I couldn't never build you no little bumbalow."

"The way the fish are running now," Nellie insisted, "you could pay for a net in one night."

"I'm scared if I went gill netting, it'd put a stop to the whole dadgone run, and then wouldn't nobody catch no fish. Be dog, if that ain't the truth. I ain't got the heart to mess up everybody's moneymaking."

"Ah, foot, Joe," Nellie said in disappointment.

JOE'S brush smoothly spread the paint over the scars the Pelican II had received in the September storm, when the water had been knee-deep in Crab-flake Myers' store. Joe didn't look up, avoiding the hurt in Nellie's dark eyes, until Walt Minton called him. Walt Minton was the preacher and the best red fisherman in town. He stood below them on the pier, with his little outboard resting on a croker-sack pad on his shoulder.

"Let me have a skiff, Joe," he said.

"Them reds is going to be hor the mouth of the river. I aim a few." Noticing the downca of them, he said, "What ail Ain't had no disagreement, I

OUR FIGHTING MEN

General Douglas MacArthur charge in Australia things began to hum—as they did in the Philippines, where natives used to tell soldiers how thankful they were that MacArthur was there. “They thought the world of him,” states Pvt. Carpenter of Melrose, Mass., who joined the Army two years ago to get some ground floor and was transferred to the Philippines after ten years for reasons of health. Soldiers were fairly soft before MacArthur came along. They were good soldiers, but they refused to drill hard in the morning to keep in shape, but because it was so hot they were off duty from 1 P. M. to 4 P. M., except on days when they had drill duties. MacArthur got them to get up in the mornings, sent them on marches in the cool of the evening, and constituted a “parachute guard” stationed on the roofs of hotels and other buildings. A lot of cushy customs were out the window. No longer on tap for Filipino boys to make bunks, shine shoes, do laundry and take over K.P. for \$1.50 a month; and tailor uniforms at three dollars became a thing of the past. No wonder, Pvt. Carpenter says, that the American soldiers on Bataan are the happy ones such as going-over.

Long before the war, the Filipino Scouts who fought with MacArthur have been calling United States soldiers Joe or Joe American. The nickname is now beginning to stick, and the soldiers of this country who call each other Joe are really paying tribute to the brave little Scouts of Bataan.

WEST DEFENSE SECTOR. The army's bookkeeping system is that the boys sitting out in the hills are on hilltops manning search-

lights, anti-aircraft guns and barrage balloons have to account for every shot fired. Expended, the quartermasters call it. So far, none of the reports from this sector list any ammunition expended on Japs, but the guys at lonely defense posts can't be blamed for taking advantage of the hunting opportunities. Their so-called covering up on the ammunition-fired reports, though, isn't fooling anybody. Standing gag at Anti-aircraft Defense headquarters concerns the flock of pheasants that “attacked our installation” and were knocked for a loop with three shells. Another report told of killing a deer which—yes, that's right—was attacking an installation: but, for some reason probably not flattering to the prowess of the Army, the report concluded with the cryptic note that “some Marines got the deer.” A bear was killed because it was using, as a claw-sharpening instrument, a post on which a searchlight cable was strung, and the claws were lacerating the wire—it says here. However, since cats aren't good eating, officers are more inclined to believe the report of an engagement with a cat on a barrage balloon wire which had to be shot down because the boys couldn't coax it down. It might have clawed the balloon, they said.

Actually, animals frequently sabotage the Army, and it's not always so funny. The anti-aircrafters have hundreds of miles of wire laid along the ground in the Pacific Northwest, and besides being bothered by people who “find” the wire and use it for clotheslines or to tie up rosebushes, soldiers find that cows sometimes chew up the wires along with the adjacent grass. Porcupines seem genuinely fond of the wire insulation.

Air officers are elated by the friendly spirit prevailing between near-by resi-

dents and the soldiers on gun, searchlight and balloon emplacements in their back- and barnyards. The lads “on location” have virtually been adopted by their neighbors, but some field groups are stationed in odd places. One balloon outfit, commanded by an old-line cavalry officer, is quartered in a Girl Scout headquarters; and the C.O. has been riding horses long enough to get “government spread,” with the result that he finds it a little tough trying to fit himself into Girl Scout desk chairs. One searchlight crew is in a Grange hall, and every other Saturday night the boys from Brooklyn and Washington, D. C., move their cots out and spend an evening dancing the polka with the Swedish gals in the neighborhood. Prize for ingenuity goes to a crew stationed by an airplane factory. The commanding officer, a former engineer with draftsmanship experience, spotted and appropriated some of the giant wooden boxes in which plane engines arrived, laid out a floor plan and set the boys to work building packing-box barracks. A fellow down the street contributed some window frames, and a woman neighbor tossed in eight window curtains.

FORT GREELY, Kodiak, Alaska.

Since last December 15th the boys at this outpost have been issuing an eight-column newspaper which puts to shame some of the mimeographed jobs run by outfits in more comfortable surroundings in the States. A complete file of the Kodiak Bear has just reached our desk, together with a letter from Corp. Gene Newhall, the editor. “There's quite a story,” writes he, “in the mechanics of publishing a printed paper at all on this bear-infested island (two of the world's largest extant carnivorous animals have been shot within sight of

BACTERIA BURNER. Newest method of purifying water for Army use is provided by a mobile machine called Sterozone by its designer, Calif.-Tech. Engineer Donald K. Allison (shown on truck above). Water passed through a filter, then treated with ozone generated by a high-frequency electric discharge, is delivered at the rate of 9,000 gallons an hour, free of all bacteria, taste and odor. Thirty units have been ordered by the government. In the field, one machine will furnish sufficient water for a division

camp). Our first two printed issues were hand set and rammed through a gummy little press in the ancient Russian-settled town of Kodiak. Two soldier-printers worked 26 hours at a stretch to get the thing in type, and two Aleut printer's devils did the press work. A linotype machine had been ordered, but the war left it sitting on the dock at Seattle.

“Public Relations Officer Lt. Roy D. Craft, San Francisco Examiner man who put out the Fort Ord (Calif.) Panorama before coming up here, finally worked out a scheme for printing by remote control. We prepare and dummy all copy here, mail it to Anchorage on the mainland where it's printed and loaded aboard the first available transportation back to Kodiak. Naturally there are hitches in such a system, and we don't hit the street with the speed of a metropolitan extra, but we haven't (Continued on page 60)

HI, HAZEL!

By Luther Davis
and John Cleveland

Everyone she knows is on "Hi, Hazel!" terms with the Scott girl. Even old Franz Liszt would be if he were around to hear what she does to the music he wrote

ONE of New York's top music critics whispered to another of New York's top music critics: "Wait until you hear this! Liszt would die laughing in his grave!"

They were in New York's musical Mecca, Carnegie Hall, and the next item on the program had been announced as "Miss Hazel Scott playing Franz Liszt's Second Hungarian Rhapsody."

On the stage appeared a lovely col-

ored girl of an even twenty years, a dusky beauty with large flirtatious eyes, a pouting mouth, a quietly confident grin. She wore a strapless evening gown, and it was a dressmaker's dream; her mere appearance won applause. She bowed, went to the concert grand, took her seat deliberately, and immediately gave forth the introductory chords.

The composition was familiar to that well-manicured audience of musical intellectuals, and the house was quiet as Hazel played. She played well, with the forthrightness of an accomplished classical musician.

Then, subtly, something strange began to happen. Delicately the tempo changed and there was a stir in the auditorium. Someone in one of the center boxes laughed nervously, another person giggled, and then the entire aggre-

gation was snickering happily. For Hazel Scott was swinging it.

Her left hand continued to beat out the careful, measured bass notes which the composer had written, but from her right hand came something syncopated and jazzy; something neither Hungarian nor Harlem, but pure Hazel Scott.

"It was the most impudent musical criticism since George Bernard Shaw stopped writing on the subject," according to one reporter of the event. "It was witty, daring, modern, but never irreverent. I think Liszt would have been delighted." Certainly the Carnegie Hall audience didn't mind. They applauded her as they applauded none of the other distinguished artists who appeared on the all-Negro bill that night. They kept her on-stage for many encores and made her swing such sacred

composers as Bach, Chopin and Liszt. Only one musical die-hard refused to like it and was seen to run out of the hall with his hand over his face, presumably overcome by his emotion.

"Me," said Hazel when she heard that precipitous exit, "I'm not going to agree with him. I know lots of people have good reasons why it's not worth swinging the classics, but—well, I wouldn't do it." Then she dropped her eyes demurely. "I'll try to help it."

It's just as well that she does, for it's a little knack with this very talented young woman that twenty thousand dollars a year comprises the main attraction of New York's most successful clubs and is stock in trade for a phonograph-record company. Hazel is very happy about it.

It allows Hazel to live precisely the kind of life she wants. Through the night at the night club Carnegie Uptown at which she is the featured princess; a few hours of conversation with the customers, chiefly representatives of the city's great, the Social Register's city and Dun & Bradstreet's money tycoons. Then she leaves through ranks of stay-up-late seekers, steps into her cosy sine, snuggles comfortably into cushions, and remarks to her colored chauffeur, "Home, honey."

Home is a brand-new studio in New York's swank Westchester County, where Hazel habitually spends her daylight hours listening to recordings of swing artists or recording classical experts.

"I like them separate," she says. "My stuff is hybrid. I'm not good enough for the classics. As for the well, I'm not sufficiently a

Twelve-Year-Old Wonder

Hazel had been in Carnegie Hall before that triumphal concert in December, 1940. When she was a music teacher Paul Wagner entered in a children's competition before the concert Professor Wagner made a unique request of the judges: like Hazel Scott to play a piece of her own choosing," he said.

The judges expressed the opinion that the required Beethoven Minuet was a charming selection, within the capabilities of a talented child.

"Yes," Wagner said excitedly. "Just it. Hazel is a genius! I mean nothing harder would be easier for her."

The hard things were always for Hazel. Aged three, she started her neighbors by reading intelligent accounts of a murder trial in the papers. Aged three and a half, she discovered to have perfect pitch, used by her family as a convenient substitute for a tuning fork. Hit a note and she'd chirp "Wwong!" E and she'd cry, "Bwavo!"

The bravos for Hazel started before her birth. Her parents, the lights of the citizens of Trinidad, West Indies, made a perfect match. Hazel's father, R. Thomas Scott, a well-known colored scholar, a pool, England, and had come to teach English at St. Mary's. Hardly was he settled in town when he met Alma Long Worrell, daughter of a ranking debutante in local society. If their only child had been a genius, if she had been, say, a highly gifted or greatly talented whole town would have been mourning.

Mr. Scott taught at St. Mary's for four years, and then the entire town (Continued on page 5)

Thus Far:

injured when a plane he is piloting, Jerry Burton, a young Londoner with his lively, fun-loving sister, the small town of Lymstock, goes to recover his lost strength. He settled (in "Little Furze," a story by Miss Emily Barton, an old friend of the author's) receives an insulting anonymous letter.

disturbed for a time, he soon learns that he is being attacked in a similar manner which, the question is: "Who is the letter?" And two of the most intelligent Nash and Inspector to work to answer it. . . . All of a sudden, appears, are composed of printed matter on paper and addressed with a typewriter—one of which, old chard Symmington, a prominent had given to the Woman's Exchange happens to be easy of access to

the Burtons meet are: Symmington's wife; Owen Griffith, a whom Joanna is presently "in" his strong, self-reliant sister, vicar—the Rev. Dane Calthrop, a very pious wife; Mr. Pye, a well-known; Megan Hunter, Symmington's daughter (whom everyone pities, she does not "do something"); and, of course, the Symmingtons' beautiful house. None of these persons appear to be the sort of person who might "open" letters. . . .

in her home, Mrs. Symmington, who had received a nasty letter. . . .

At his new home, Burton hears his telephone ring. He answers it. A female voice says, "Oh!" Then—"Could I speak to Miss Partridge, just a moment?" ("Miss Partridge" is the maid.) "Certainly," Burton says. "Who shall I say?" There is a silence. "Oh," the voice says at last, "tell her it's Agnes, would you?" Agnes Waddle.

A few minutes later, Megan Hunter—who has become the Burtons' guest after the death of her mother—insists that she must go home. Joanna argues with her, tries to make her stay; but the girl is adamant—she has decided that home is the place for her. And go home she does.

IV

I WAS annoyed, I must confess, at the abrupt way in which Megan had left us. Perhaps she had suddenly got bored with us.

After all, it wasn't a very amusing life for a girl. At home she had the kids and Elsie Holland.

I heard Joanna returning and hastily moved in case she should make more rude remarks about sundials.

Owen Griffith called in his car just before lunch time, and the gardener was waiting for him with the necessary garden produce.

While Old Adams was stowing it in the car I brought Owen indoors for a drink. He wouldn't stay to lunch.

When I came in with the sherry I

found Joanna had begun doing her stuff.

No signs of animosity now. She was curled up in the corner of the sofa and was positively purring, asking Owen questions about his work, if he liked being a G. P., if he wouldn't rather have specialized. She thought doctoring was one of the most fascinating things in the world.

Say what you will of her, Joanna is a lovely, a heaven-born listener. And after listening to so many would-be geniuses telling her how they had been unappreciated, listening to Owen Griffith was easy indeed. By the time we had got to the third glass of sherry, Griffith was telling her about some obscure reaction or lesion in such scientific terms that nobody could have understood a word of it except a fellow medico.

Joanna was looking intelligent and deeply interested.

I felt a moment's qualm. It was really too bad of Joanna. Griffith was too good a chap to be played fast and loose with. Women really were devils.

Then I caught a sideways view of Griffith, his long, purposeful chin and the grim set of his lips, and I was not so sure that Joanna was going to have it her own way after all. And anyway

a man has no business to let himself be made a fool of by a woman. It's his own lookout if he does.

Then Joanna said:

"Do change your mind and stay to lunch with us, Dr. Griffith," and Griffith flushed a little and said he would, only his sister would be expecting him back—

"We'll ring her up and explain," said Joanna quickly and went out into the hall and did so.

I thought Griffith looked a little uneasy, and it crossed my mind that he was probably a little afraid of his sister.

Joanna came back smiling and said that that was all right.

And Owen Griffith stayed to lunch and seemed to enjoy himself. We talked about books and plays and world politics, and about music and painting and modern architecture.

WE DIDN'T talk about Lymstock at all, or about anonymous letters, or Mrs. Symmington's suicide.

We got right away from everything, and I think Owen Griffith was happy. His dark sad face lighted up, and he revealed an interesting mind.

"I started looking around, and I stepped into the storeroom under the stairs and—and—she was there . . ."

Internationally Known

By Donald Hough
ILLUSTRATED BY ROBERT O. REID

The funny character in the singular trousers is about to become both the happiest and the luckiest character in Hollywood—thanks to his pal Joe

I AM out of work and my heart is in my shoes and my shoes are wet; I am standing in the rain. Thinking. This is Hollywood, I am thinking, and I am an actor. I am an actor from Broadway, and I am not the best actor in the history of the theater, but neither does Hollywood make the best plays in the history of the world. It looked like a natural, from a long distance. Such a long, long distance.

I thought they'd at least give me a screen test.

No screen test.

I have tried every studio, and no

screen test. Too busy. I am not too busy; they are too busy. I have worked hard in the theater; I have studied and I have tried. And I know I'm set for the movies if I can get a fair test.

I am standing in the rain and in my pocket are two dimes. This is not the most fashionable part of Hollywood. I cannot look across the street at the home of a movie star, but I can look across the street at a lunch room, where hamburgers are for sale. And I cannot make up my mind whether to spend both dimes right now, or save one for tomorrow. One of the dimes is a comparatively new 1937, the other a nicely preserved 1892. One hamburger for a dime, two for twenty cents. Two right now or one now and one tomorrow?

I am not counting the fifty-cent piece in my watch pocket. That is for the last. The very, absolute last. It is not time yet. Not quite. Almost, but not quite.

I go across the street and into the lunch room and hang up my raincoat. I forgot to say I have a raincoat. It leaks where it folds. I hang this up and sit on a stool and put the 1937 on the counter.

I guide Caroline around the floor, and the boys are kneeling on getting pictures of u

The Mystery of the Missed Third Strike

By Mickey Owen as told to Charles Dexter

The play that cost the Dodgers the fourth Series game: Henrich, having swung at and missed the third strike that should have ended the game, goes to first as the ball gets away from Catcher Mickey Owen

Embarrassed hero of the most talked-of play in recent baseball history, Mickey Owen spends his winters as usual at his farm home near Brookline, Missouri. Even Mickey's neighbors forgave him

A Pair of Gloves

A SHORT SHORT STORY COMPLETE ON THIS PAGE

By William Cole

ILLUSTRATED BY WARREN BAUMGARTNER

HIS name was Nikholai. Nikholai Gregorievich . . . his last name has slipped my mind. There was nothing unusual about him. Nothing to distinguish him from ten million other Red soldiers. Nothing, unless . . . well, unless you'd want to count those gloves.

I didn't see him come up to my table. I was listening to the evening Tass bulletin coming over the radio in the back of the restaurant. When the news was over, I saw him standing there, looking down at me. "Zdravstvuy, tovarich," he said.

"Zdravstvuy," I said. "How goes it with you, comrade?"

"Fine." He grinned broadly, the grin splitting his square, rugged face. "It goes very well." He pulled off his military cap, and his thick, closely cropped hair stood up on end. "Do you mind if I sit here?" He waved the cap, indicating that the other tables were all full.

"Certainly not. Please do."

He put the pair of gloves he was carrying down on the wooden table. His cap and his greatcoat he hung next to my things on a peg on the wall. Then, with an audible sigh of satisfaction, he sat down.

"Ah," he said. "This is good."

His big hands went out to the gloves. He drew them over to him and smoothed them flat. There was something special about those gloves, I could see. They weren't military gloves; they were knitted, and very well knitted, too, of heavy brown wool.

I would have given a lot for a pair of gloves like that. I would have given a great deal.

We introduced ourselves. When he heard my name was Jones, his eyes glowed and his grip almost crushed my hand. "An American!" he exclaimed. "Good! Good! That would make you either a correspondent, a diplomat or a very great engineer."

I smiled. "Why 'very great'?"

"All American engineers are great,"

he said. "What machines you people turn out! What perfection in every detail! I saw your tanks at Kalinin. They were marvelous!"

The waitress brought his order—*golubtzi* and a glass of *kvass*. Nikholai was in high spirits, the natural reaction from having been released from the stifling discipline of the front. He grinned insolently at a group of girls seated at a table across the room and saluted with his hand. The girls smiled back.

"INTERESTING," Nikholai said. "The long, narrow one with the full mouth looks most interesting. If I did not have to catch a bus in an hour, I would investigate that."

He'd had just this one day in Moscow; one day's leave in five months of continuous battle. In one hour, he was going back. Going back to stand there and fight against an overwhelming superiority of tanks and planes, to fight with his rifle, with his bare hands if necessary, but to stand in his place as long as he was still alive; not to yield an inch.

These were the orders. Stalin had given them.

I asked him, as I had asked others, if he thought the Germans would take Moscow. His answer was the same as all the rest. "No," he said simply. "No, they will not."

We sat silently a moment, listening to the gypsy string orchestra coming faintly over the radio. I offered Nikholai a cigarette. He accepted it with delight. I took a cigarette myself, noting that there were now only eight left in the pack. I wondered what I would do when these eight were gone; they were the last that I had.

"That's a fine pair of gloves you have there," I told Nikholai, as I held out the match. "Could you tell me where you bought them?"

"Bought them?" He squinted at me through the smoke.

I explained that I had lost the only pair I had brought to Moscow; I had tried several shops but, like the vodka and cigarettes, there didn't seem to be a single warm pair to be had.

"Yes," he said. "Clothing is scarce." He looked at the gloves. "These," he said, "these I didn't buy. My . . . my mother knitted them for me. She did not . . . does not," he quickly corrected, "see very well. But the day before I left home, she knitted them. All day and night she worked to finish them on time. 'Matushka,' I said to her, 'Matushka, they will give me gloves. Please . . . you will ruin your eyes.' I could do nothing with her. All day and night she sat there, the needles flying, right up against her face."

He was silent again and I said what I dreaded to say but what I had to say. "Your mother," I said, "where is she? Where is your home?"

"Nogradilov," he said. The name meant nothing to me. It meant nothing until he told me it was a small village in the western Ukraine.

The rest of his story poured out quickly.

How many times had I heard that same story! . . . The village, when the Russians had fallen back, had been destroyed. Methodically, completely—everything that could not be taken out had been burned—every foot of ground scorched. But, because of the lack of trucks and wagons, the civilians had been forced to remain behind.

"My mother," Nikholai kept repeating, "she does not see well. She is not very strong. What will she eat? Whom will she turn to? How will she get along?"

I looked down at the table. At his big, calloused hands smoothing out the gloves. For a long while, it seemed, he smoothed them. Then, in a quick movement, he shoved them across to me and withdrew his hands.

"Take them," he said. "Take them

and not a word. I don't n

Hoping to avoid Field, she to Chinese home, where a charming ly bites her to stay—permanently! ed bher disappearance, Field searches Leening that a Japanese officer whom he help him—and that the officer is n King's house—he goes to the "house

of amusement." There Helen (who, adoring him once, now hates him) kills him.

A short time later, Rudolf Helgel finds Elaine. Realizing that the city will soon be attacked by Siao's guerrilla band, and that Elaine will be in peril, he takes her to Helen's establishment. Then—following a talk with Helen and Mei-su—he turns to Elaine. "Go with the young girl," he says. "Do not be afraid. I will come for you myself when I can. But keep yourself hidden."

Elaine, knowing that Mei-su will escort her to her home village, does not answer. She rises and follows the young girl away.

Conclusion

IN THE village of the Siao, Elaine was alone. She had followed the young Chinese girl out of the city and along the country road. At the city gate they had been stopped by surly Japanese guards, but Mei-su with a scanty half dozen words had taken out a paper with Japanese writing upon it, and the guards had fallen silent and let them pass.

"What is it that has so much magic?" Elaine had asked.

"I do not know," the girl had replied with indifference. "It is something my mistress gave me. She is very clever."

"Is she kind to you?" Elaine asked. She was amazed at the warmth that flushed the girl's face. "She is always kind to me," Mei-su answered.

But after Mei-su had spoken, her face closed. She had followed her mistress into that room when she went to take the paper from the Japanese and she had seen the white man dead. By accident she had followed, as she so

often followed her mistress and when Helen heard her footsteps she had turned with a leap of fright.

"Oh, it is only you, child," she had said. But her face was white.

Mei-su had stared down at the two men. "Is the white man dead?" she had whispered.

"He is dead," Helen had replied. "I am waiting for the Japanese to wake and see what he has done. Tell no one what you have seen, child."

In silence now therefore she led the way along the country road to her village. Tell no one, her mistress had said and yet, Mei-su thought, "I ought to tell my brother. He must know everything."

She walked along two yards ahead of Elaine, her frowning young face bent toward the dusty road. These two loyalties were her religion—her love of the strange beautiful woman to whom she now seemed to belong, and her own brother who was of her family and blood. She strode along with the free step of the girl whose feet had never been bound.

"I wish I knew how to be friends with her," Elaine thought, watching that tireless stride and the dark bent head.

But the girl was as impersonal as the landscape to which she belonged. It was a beautiful landscape, wide as a desert, brown under the blue sky by day and dark by night, human with clusters of small villages under clumps of trees. But it was a landscape strange to Elaine

in its age and in the simplicity of its quality. Who could be native to it if he had not been born here?

For some reason which she could not understand she felt more and more alien as she went. Earth was under her feet, sky over her head, the houses of people were near, a woman walked with her, and yet for the first time she had a surge of homesickness for her own country and her own people—not for her father, not even for Larch, but for men and women who spoke her tongue, and the familiar faces of people whose names she did not know, but who were her own people. She remembered Father Valerian. But now even he seemed alien. He seemed to belong here.

"He has forgotten everything," she thought, "perhaps—even Mother."

And thus they had come to the Siao village and she stood at the door of a small earthen farmhouse while Mei-su explained to an old man and woman why she had brought a foreign woman here. Elaine watched the brown old faces, wrinkled with dust and wind and age, and could not tell whether she was welcome or not. She could only obey when Mei-su beckoned to her to come in.

"My father says you had better stay inside," she said. "He says there are many men about today."

Mei-su led the way into a small room with a little glassless window that opened upon a fragment of a back yard and a pigpen. A chair, a table, a bed

Front Line in the Kitchen

By Ruth Carson

Uncle Sam is taking a personal interest in what you're eating nowadays, because winning a war takes strength and energy. Here's how to help him, and yourself.

TODAY you're being deluged with diet charts and vitamin counts and health advice. And maybe you think: "But this doesn't mean me. I'm healthy and I feel pretty good and I eat plenty."

But it isn't as simple as that. You can eat a lot and still be undernourished. You can look pretty healthy and still be accumulating a lot of little lacks that don't total up to strong resistance, under the stresses of today. And even the diet doubters would like to have what it takes. So Collier's had you investigated.

We turned you over—by proxy, to be sure—to a staff of technicians at the Ellen H. Richards Institute of the Pennsylvania State College, headed by Dr. Pauline Beery Mack, a jolly, brown-haired woman who can—and does—relish two desserts the same as you, but who counts her vitamins, too.

These are no armchair advisers. For the past seven years, with the co-operation of Pennsylvania's Department of Health, they have been studying farmers, city workers, miners, office workers, school children—country and town, all ages and all incomes. Now, under the wing of the Philadelphia Child Health

Society, they are testing some of their families. They test, prescribe diet, and prove results. And they find that most of us, left to our own devices, don't get as much out of our food dollars as we should.

After a few thousand tests, it's possible to generalize, since we live in patterns. Take, for example, children and country children.

"Many city children are undernourished and fed baby food too long," says Dr. Mack. "Their bones are weak because they get no cod liver oil as a daily ritual. But get other needed foods. Farm children sit up at the family table at a younger age, eat most everything the rest of us do. Their hemoglobin, the matter of blood, which carries oxygen through our bodies, is better as a result. They shouldn't sell so much of their milk. Farm children too often lack enough of these foods, and show the lack of them."

Now to generalize about the records of people who are

(Continued on page 7)

FLETCHER GRABILL, veteran T. W. A. "pilot, and operations officer for T. W. A.'s Squadron in Kansas City, talks of the future of aviation, who has flown over 30,000 miles.

"Son, I've Seen the Blueprints of a *Brighter World* ahead for You"

"I saw them building army planes for Uncle Sam when I was in Wichita. And the way they're turning them out over there makes you feel mighty good. Our aircraft builders are certainly doing their full share to help America win this war. And they'll be doing just as good a job to help make America a better place to live in when the war is over. For instance, the Cessna Aircraft Company have plans for a Family Car of the Air that's as simple and safe to fly as driving an automobile.

"They won't start building this new Cessna Family Car of the Air until this war's over. But when they do, it's going to open up a whole new world of opportunity for your generation. Until they showed me those Cessna blueprints, I hadn't believed much of this talk about people flying their own planes. But I'm certainly convinced now that you'll be travelling all over America in your own Cessna Family Car of the Air as soon as this war is over. And so will everyone else."

All Out for Victory Now!

That's our big job today—our only job. And we're not letting anything interfere with our 24-hour effort to keep twin-engined Cessnas flying regularly to the U.S. Army Air Corps and the Royal Canadian Air Force. In the past 12 months Cessna Bobcats and Cranes have flown over 50 million miles in bomber training service. That's equal to over 200 trips to the moon. Deliveries are well ahead of schedule. And they're going to stay ahead. That's our only job until this war is won. Then, and only then, can we take time out to build your Cessna Family Car of the Air.

**Wear Your Wings!
Keep 'Em Flying!**

Yes, wear these wings-with-a-reason! They'll be a handsome, permanent reminder that you're helping to "Keep 'Em Flying." Send 10c (coin or stamps) to

Cessna Aircraft Company, Wichita, Kansas. We'll send you a 10c Defense Stamp in return... and enclose your wings free, postage paid.

Call It Your Family Car of the Air... because you'll learn to fly it as easy as you'd learn to drive a car. It will be just as easy and as safe, only you'll be covering three times the distance, cruising comfortably and naturally along the skyways instead of the highways. And all those skyways will be planned and regulated for air traffic as carefully as they are controlled for the airlines now.

It's only natural that Cessna with its 31 year background in aviation should have developed the airplane that everyone can buy and fly. It was an aviation problem that could be answered only by men who have spent their lives developing such aircraft as the Airmaster, three times judged the World's Most Efficient Airplane. And that answer is in the future Cessna, ready to be produced for you as soon as this war is over.

most of us—people who eat what they want, who feel pretty good, who have enough money to pay for the food they need (if only they knew what it was) and who have jobs with demands on them that are typical of most of ours. They are:

Miss Sybil Conant, secretary, stand-in for millions of desk-job women. Sybil is young, pretty, graduate of The Pennsylvania State College, where she majored in psychology. She is secretary to Dr. James J. Waygood, neuropsychiatrist in Germantown, Pennsylvania.

Mr. Norman Brightcliffe, answering "Present" for men with hard office jobs. He is an assistant supervisor at an important plant manufacturing precision devices used in making parts that go into planes, ships and tanks. He must be at his best all day in this defense plant.

Mr. Brady Floyd, mechanic, his young wife and their three children—Shirley who is six, Burton just turned five, and Baby Patricia, eighteen months. Mr. Floyd is in the maintenance crew of a company where the largest castings in the world are made—locomotives, gun mountings, tank chassis—the heavy machinery of war. "We keep 'em rolling," he says. He sometimes works two shifts straight, does every kind of repair work except electrical, earns a good wage.

Mrs. Floyd has a full-time job as housekeeper and mother. The Floyds live in a trailer. It's in a big trailer camp near the plant.

A Real Going-Over

Dr. Mack and her crew of helpers set to work on your representatives. Maybe you don't know what diet testing has developed into.

You have your body measured thirty-six different ways, to find out whether you have been growing on schedule since birth.

You have your bones X-rayed for skeletal development in children and degree of mineral content in everybody. Don't think that once you are an adult your bones can't change. Their degree of mineralization may change within a few weeks on an inadequate diet. Bones have to be fed the same as the rest of you. Milk, cheese, eggs and many kinds of vegetables and fruits will do the job.

You go into a dark room and peer into a machine called a photometer, with an eyepiece somewhat like that of your favorite stereoscope. Only instead of pictures there are lights of varying intensities which you either can or cannot see, depending on your degree of darkness-adaptation—meaning your ability to see in different degrees of semidarkness. The better you can see, the better your storage of vitamin A, and the manufacture of this vitamin into visual purple, the light-sensitive substance in the retina of your eye. Better stop cutting down on butter and take more milk and green and yellow vegetables, and an occasional slice of liver, if you're given to stumbling in darkish places.

You rest your chin on another instrument called a slit lamp, and a high-powered microscope trained on your eyeball enables an expert to determine whether you have been getting enough of certain vitamins—principally riboflavin, or B₂, one of the important B vitamins, in which most Americans are too short. Riboflavin is found in whole-grain cereals, liver, milk, some leafy green vegetables, and in many lean meats. Lack of adequate riboflavin causes a lot of disasters, including blind-

ness in extreme cases. From such severe deficiency, but we show some deficiency because the foods we eat. We need more of the food this valuable B₂ vitamin whole-grained cereals.

You have your blood tested, by colorimeter, by laboratory full of electrical equipment—to determine its bin value and red-cell content of other minerals and

You are examined by a physician who judges your nutrition being on the basis of his past experience with hundreds like you. You are examined of dental surgery who X-rays and by a chemist and a mac who test your saliva.

Breakfast is a M. A.

Here are the high points of your as chalked up by your physician.

Sybil Conant passed a good to medium threshold means that she is doing all could do better—the case us. Sybil's major eating breakfast. A cup of coffee little fruit juice, a replica of other breakfasts gobbled by commuters.

"I wouldn't waste a breakfast," says Dr. Mack. needs three good meals a never be able to catch up in two. Breakfast should be a of the day's food. That workers, too. You've had fast overnight, and any ahead of you these days. pared."

For Sybil's breakfast dander:

Half a pint of orange juice drugstore glass holds only a

As a reminder that liver source of riboflavin, as other nutrients, Dr. Mack his model lunch, along with and escarole (both sources A, of which he can use much

constantly with his eyes), whole bread (B vitamins and several s), and butter (more vitamin A), and apple (small but important es of many minerals and vita- whole wheat cookie, and milk, his bones a snack of mineral. ly he wouldn't eat this same very day, even if it were on the hich it isn't. But he should get ce a week for lunch or dinner, the milk and whole wheat bread, y his vegetables to suit his ap- Meat once a day, or twice on ew days of a week, is enough workers.

Floyds have dinner about three afternoon, because Mr. Floyd n at the plant at 4:30 for the t shift. The Floyds like a meat to dinner, including baked po- hich they eat skin and all, and thing, too. They try different es for the children, and various es. But not enough of them, g to their diet records and tests. Mr. Floyd what he needs for his xacting work, and to increase rals and vitamins in the diet of le family, Dr. Mack recom- this for a typical dinner:

roast (B vitamins, proteins— for tissue building, and iron). potato (Some vitamins, and —especially just under the ed carrots (Vitamin A, con- the steaming). greens (Vitamin A. Helps Mr. see well in the factory, in spite re of blast furnaces. And any- izes turnip greens. Good and). ed canned tomatoes (Vitamin will flit out of the pan under cooking. So serve them cold. te even better). wheat bread (Minerals and B) and butter (Vitamin A). spread. dried fruit, stewed (Minerals e vitamins). for Mr. Floyd, to give him a the way to work.

Milk, the good old bone builder, for everyone else.

Those turnip greens, to repeat. We don't pay enough attention to variety in greens, and we don't eat enough of them. Too many of us call greens spinach, and maybe we don't like it. And so we miss a lot of fine messes of beet greens, kale, chard, turnip tops, dandelion greens, and escarole, that are just as full of vitamins and plenty cheap. We should get out of our rut, and grow some beets and turnips in our winter window box, and all year if we haven't a garden. We don't need to wait for the roots to mature, to eat the leaves. And the fresher we eat them the better they taste.

Baby Patricia wasn't invited to tackle all this dinner, although the way she stood up at the table and spooned into things she indicated she was ready and willing. In addition to her milk, she had soup from the meat stock, juice from the tomatoes, and cooked whole wheat cereal with milk. She tasted some of the family dinner, and soon will be eating almost everything in small portions. Shirley and Burton ate some of every- thing, with portions graded down to size.

We have hit, of course, only the high points. But they are the points we could mind the most. We vary in individual ways, but our proxies, picked because they are representative of thousands of us in our jobs, have proved to be representative in their tests and eating habits too, says Dr. Mack. They fit the patterns defined by close to four thousand other subjects and what goes for them can go a long way for us, too. If you want to go even further, and get down to more details, we can direct you to them.

Two more questions we asked Dr. Mack: Sugar rationing? She says it will do us no harm. Maybe good. Most of us eat too much sugar. We can get along with a great deal less than usual if all other aspects of the diet are taken care of.

Vitamins in capsules? Okay, as a safety margin. But mind your diet first. There are still too many unknown elements in food for food not to come first. THE END

O. SOGLOW

When he had gone I said to Joanna. "That fellow's too good for your tricks." "That's what you say!" Joanna said. "You men all stick together!" "Why are you out after his hide, Joanna? Wounded vanity?" "Perhaps," said my sister.

THAT afternoon we were to go to tea with Miss Emily Barton at her rooms in the village.

We strolled down there on foot, for I felt strong enough now to manage the hill back again.

We must have got there early, for the door was opened to us by a tall, raw-boned, fierce-looking woman who told us that Miss Barton wasn't in yet.

"But she's expecting you, I know, so if you'll come up and wait, please."

This was evidently faithful Florence.

We followed her up the stairs and she threw open a door and showed us into what was quite a comfortable sitting room, though perhaps a little over-furnished. Some of the things, I suspected, had come from Little Furze.

The woman was clearly proud of her room.

"It's nice, isn't it?" she demanded.

"Very nice," said Joanna warmly.

"I make her as comfortable as I can. Not that I can do for her as I'd like to and in the way she ought to have. She ought to be in her own house, properly, not turned out into rooms."

Florence, who was clearly a dragon, looked from one to the other of us reproachfully. It was not, I felt, our lucky day. Joanna had been ticked off by Aimée Griffith and Partridge and now we were both being ticked off by the dragon Florence.

"Parlormaid I was for nine years there," she added.

Joanna, goaded by injustice, said, "Well, Miss Barton wanted to let the house. She put it down at the house agents'."

"Forced to it," said Florence. "And she living so frugal and careful. But even then, the government can't leave her alone! Has to have its pound of flesh just the same."

I shook my head sadly.

"Plenty of money there was in the old lady's time," said Florence. "And then they all died off one after another, poor dears. Miss Emily nursing them one after the other. Wore herself out she did, and always so patient and uncomplaining. But it told on her, and then to have worry about money on top of it all! Shares not bringing in what they used to, so she says, and why not, I should like to know? They ought to be ashamed of themselves. Doing down a lady like her who's got no head for figures and can't be up to their tricks."

"Practically everyone has been hit that way," I said, but Florence remained unsoftened.

"It's all right for some as can look after themselves, but not for her. She needs looking after, she does, and as long as she's with me I'm going to see no one imposes on her or upsets her in any way. I'd do anything for Miss Emily."

AND glaring at us for some moments in order to drive that point thoroughly home, the indomitable Florence left the room, carefully shutting the door behind her.

"Do you feel like a bloodsucker, Jerry?" inquired Joanna. "Because I do. What's the matter with us?"

"We don't seem to be going down very well," I said. "Megan gets tired of us, Partridge disapproves of you, faith-

ful Florence disapproves of both of us."

Joanna murmured, "I wonder why Megan did leave?"

"She got bored."

"I don't think she did at all. I wonder—do you think, Jerry, it could have been something that Aimée Griffith said?"

"You mean this morning, when they were talking on the doorstep?"

"Yes. There wasn't much time, of course, but—"

I finished the sentence: "But that woman's got the tread of a cow elephant! She might have—"

The door opened and Miss Emily came in. She was pink and a little out of breath and seemed excited. Her eyes were very blue and shining.

She chirruped at us in quite a distracted manner:

"Oh dear, I'm so sorry I'm late. Just doing a little shopping in the town, and the cakes at the Blue Rose didn't seem to me quite fresh, so I went on to Mrs. Lygon's. I always like to get my cakes the last thing, then one gets the newest batch just out of the oven, and one isn't put off with the day before's. But I am so distressed to have kept you waiting—really unpardonable—"

Joanna cut in:

"It's our fault, Miss Barton. We're early. We walked down and Jerry strides along so fast now that we arrive everywhere too soon."

"Never too soon, dear. Don't say that. One cannot have too much of a good thing, you know."

And the old lady patted Joanna affectionately on the shoulder.

Joanna brightened up. At last, so it seemed, she was being a success. Emily Barton extended her smile to include me, but with a slight timidity in it, rather as one might approach a man-eating tiger guaranteed for the moment harmless.

"It's very good of you to come to such a feminine meal as tea, Mr. Burton."

Emily Barton, I think, has a picture of men as interminably summing whisky-and-sodas and cigars, and in the intervals dropping to do a few seductions of villagers, or to conduct a liaison with a ried woman.

When I said this to Joanna I replied that it was probably thinking, that Emily Barton have liked to come across such but alas, had never done so.

In the meantime Miss Emily fussing around the room, arranging and myself with little table carefully providing ashtrays, minute later the door opened and came in bearing a tray of some fine Crown Derby cups which I gathered Miss Emily brought with her from Little Furze tea was China and delicious as were plates of sandwiches a bread and butter, and a quantity cakes.

Florence was beaming no looked at Miss Emily with a maternal pleasure, as at a favor enjoying a doll's tea party.

JOANNA and I ate far more I wanted to, our hostess pressed earnestly. The little lady was enjoying her tea party and I put that to Emily Barton, Joanna were a big adventure, two people the mysterious world of London sophistication.

Naturally, our talk soon dropped local channels. Miss Barton warmly of Dr. Griffith, his kind his cleverness as a doctor. Mr. Symington, too, was a very clever and had helped Miss Barton to money back from the income tax she would never have known about was so nice to his children, too, to them and to his wife—she herself up. "Poor Mrs. Symington it's so dreadfully sad, with the children left motherless. New

A while back, Davy
Joined the Navy.
And whenever he had leave
He'd visit, if he could, his old
girl, Genevieve.
But by and by her home which
receptions had been warm at
Lost the welcome from its doormat.

At last, or so Dave reckoned,
The fiddle he would play would *not*
be second.
But when her man is way out yonder
A gal of other guys grows fonder;
And all the men that Genevieve
knew
Wore, like Davy, Arrows, too.
And so when Davy called
Genevieve hemmed and hawed and
stalled.
But it was fated:
They dated.

ARROW SHIRTS

See: HITT • HULL • GORDON

A new shirt free if one shrinks out of fit!

Well, Davy got to be a C.P.O.
(Chief Petty Officer, just in case
you didn't know).
These higher-ups among the sailors
Look as if they'd been turned out by
swanky custom tailors.
The shirts they wear are crisp and
white;
Might they be Arrows? Yes, they
might.

Davy found that Arrow Collars
Are nearly as smart as Defense
Bond dollars.
And whether you're small or big your
Arrow "Mitoga" fits your figure.

Back to his ship don't think we're
sending
Dave without a happy ending.
For his term at sea
Had made him handsome as can be.
And in his Arrow Shirts, was Gen
Hard for him to win again?

Of her eye he re-became the apple
And pronto they were married in
their favorite chapel.
Now Davy's ego is so expanded
That he'll tell you it won't be
planes, or ships, or cannon that
will win the war, but that he'll
win it single-handed.

haps, a very strong woman—and her
health had been bad of late.

"A brain storm, that is what it must
have been. I read about such a thing in
the paper. People really do not know
what they are doing under those cir-
cumstances. And she can't have known
what she was doing or else she would
have remembered Mr. Symmington
and the children."

"That anonymous letter must have
shaken her up very badly," said Joanna.
Miss Barton flushed. She said, with
a tinge of reproof in her voice:

"Not a very nice thing to discuss, do
you think, dear? I know there have
been—er—letters, but we won't talk
about them. Nasty things. I think they
are better just ignored."

Well, Miss Barton might be able to
ignore them, but for some people it
wasn't so easy. However, I obediently
changed the subject and we discussed
Aimée Griffith.

"Wonderful, quite wonderful," said
Emily Barton. "Her energy and her or-
ganizing powers are really splendid.
She's so good with girls too. And she's
so practical and up to date in every
way. She really runs this place. And
absolutely devoted to her brother. It's
very nice to see such devotion between
brother and sister."

"Doesn't he ever find her a little over-
whelming?" asked Joanna.

Emily Barton stared at her in a
startled fashion.

"She has sacrificed a great deal for
his sake," she said with a touch of re-
proachful dignity.

I saw a touch of Oh, Yeah? in Jo-
anna's eye and hastened to divert the
conversation to Mr. Pye.

Emily Barton was a little dubious
about Mr. Pye.

All she could say was, repeated rather
doubtfully, that he was very kind—yes,
very kind. Very well off, too, and most
generous. He had very strange visitors
sometimes, but then, of course, he had
traveled a lot.

We agreed that travel not only broad-
ened the mind, but occasionally resulted
in the forming of strange acquaintances.

"I have often wished, myself, to go on
a cruise," said Emily Barton wistfully.
"One reads about them in the papers
and they sound so attractive."

"Why don't you go?" asked Joanna.

THIS turning of a dream into a reality
seemed to alarm Miss Emily.

"Oh, no, no, that would be quite im-
possible."

"But why? They're fairly cheap."

"Oh, it's not only the expense. But I
shouldn't like to go alone. Traveling
alone would look very peculiar, don't
you think?"

"No," said Joanna.

Miss Emily looked at her doubtfully.

"And I don't know how I would man-
age about my luggage—and going ashore
at foreign ports—and all the different
currencies—"

Innumerable pitfalls seemed to rise
up before the little lady's affrighted
gaze, and Joanna hastened to calm her
by a question about an approaching
garden fete and sale of work. This led
us quite naturally to Mrs. Dane Cal-
throp.

A faint spasm showed for a minute on
Miss Barton's face. "You know, dear,"
she said, "she is really a very odd
woman. The things she says some-
times."

I asked what things.

"Oh, I don't know. Such very unex-
pected things. And the way she looks
at you, as though you weren't there but
somebody else was—I'm expressing it
badly but it is so hard to convey the
impression I mean. And then she won't
—well, interfere at all. There are so
many cases where a vicar's wife could
advise and—perhaps admonish. Pull

people up, you know, and
mend their ways. Because

id sniffed. Just sniffed, noth-
e. But I did not care twopence
Partridge's sniffs.

Holland answered the tele-
phone the other end.
y ring you up," I said. "This
y Burton speaking. Is—has—
aid Agnes come in?"

sn until after I had said it that
myself felt a bit of a fool. For if
he come in and it was all right,
each was I going to explain my
up and asking. It would have
tte if I had let Joanna ask the
n, though even that would need
f explaining. I foresaw a new
gossip started in Lymstock, with
the unknown Agnes Woddell
ent.

Elsie Holland sounded, not unnatu-
rally, very much surprised: "Agnes? Oh,
she's sure to be in by now."

I felt a fool, but I went on with it:
"Do you mind just seeing if she has
come in, Miss Holland?"

There is one thing to be said for a
nursery governess; she is used to doing
things when told. Hers not to reason
why! Elsie Holland put down the re-
ceiver and went off obediently.

Two minutes later I heard her voice:
"Are you there, Mr. Burton?"

"Yes."

"Agnes isn't in yet, as a matter of
fact."

I knew then that my hunch had been
right.

I heard a noise of voices vaguely
from the other end, then Symmington
himself spoke:

"Hullo, Burton, what's the matter?"

"Your maid Agnes isn't back yet," I
said.

"No. Miss Holland has just been to
see. What's the matter? There's not
been an accident, has there?"

"Not an accident," I said.

"Do you mean you have reason to be-
lieve something has happened to the
girl?"

I said grimly, "I shouldn't be sur-
prised."

I SLEPT badly that night. I think
that, even then, there were pieces
of the puzzle floating about in my mind.
I believe that if I had given my mind
to it, I could have solved the whole
thing then and there. Otherwise why
did those fragments tag along so per-
sistently?

How much do we know at any time?
Much more, or so I believe, than we
know we know! But we cannot break
through to that subterranean knowledge.
It is there, but we cannot reach it.

I lay on my bed, tossing uneasily, and
only vague bits of the puzzle came to
torture me.

There was a pattern, if only I could
get hold of it. I ought to know who
wrote those cursed letters. There was
a trail somewhere if only I could fol-
low it. . . .

As I dropped off to sleep, words
danced irritatingly through my drowsy
mind:
"No smoke without fire. No fire
without smoke. Smoke. . . . Smoke?
Smoke screen. . . . No, that was the war
—a war phrase. War. Scrap of paper.
Only a scrap of paper. Belgium—
Germany. . . ."

I fell asleep. I dreamed that I was
taking Mrs. Dane Calthrop, who had
turned into a greyhound, for a walk with
a collar and lead.

IT WAS the ringing of the telephone
that roused me. A persistent ringing.
I sat up in bed, glanced at my watch.
It was half past seven. I had not yet
been called. The telephone was ring-
ing in the hall downstairs.

I jumped out of bed, pulled on a
dressing gown, and raced down. I beat
Partridge coming through the back
door from the kitchen by a short head.
I picked up the receiver.

"Hullo?"

"Oh—" It was a sob of relief. "It's
you!" Megan's voice. Megan's voice
indiscribably forlorn and frightened.
"Oh, please do come—do come. Oh,
please do! Will you?"

"I'm coming at once," I said. "Do you
hear? At once."

I took the stairs two at a time and
burst in on Joanna.

"Look here, Jo, I'm going off to the
Symmingtons'."

Joanna lifted a curly blond head
from the pillow and rubbed her eyes
like a small child.

"Why—what's happened?"

"I don't know. It was the child—Me-

"NOW what have I done?"

Nothing! That's just it!

You come home too tired even to
talk and bury yourself behind the
paper. Why act so old so soon?
You can make evenings the Best
Part of the Day if you just do this
before dinner . . .

gan—who called. She sounded all in."

"What do you think it is?"

"The girl Agnes, unless I'm very much mistaken."

As I went out of the door, Joanna called after me, "Wait. I'll get up and drive you down."

"No need. I'll drive myself."

"You can't drive the car."

"Yes, I can."

I did, too. It hurt, but not too much. I'd washed, shaved, dressed, got the car out and driven over to the Symmington house in half an hour. Not bad going.

Megan must have been watching for me. She came out of the house at a run and clutched me. Her poor little face was white and twitching.

"Oh, you've come—you've come!" she cried.

"Hold up, funnyface," I said. "Yes, I've come. Now what is it?"

She began to shake. I put my arm around her.

"I—I found her."

"You found Agnes? Where?"

The trembling grew.

"Under the stairs. There's a small storeroom there. It has fishing rods and golf clubs and things. You know."

I nodded. It was the usual storeroom.

Megan went on:

"She was there—all huddled up—and—cold—horribly cold. She was—she was dead, you know!"

I asked curiously, "What made you look there?"

"I—I don't know. You telephoned last night. And we all began wondering where Agnes was. We waited up some time, but she didn't come in, and at last we went to bed. I didn't sleep very well and I got up early. There was only Rose—the cook, you know—about. She was very cross about Agnes not having come back. She said she'd been before somewhere when a girl did a flit like that. I had some milk and bread and butter in the kitchen—and then suddenly Rose came in looking queer and she said that Agnes' outdoor things were still in her room. Her best ones that she goes out in. And I began to wonder if—she'd ever left the house, and I started looking around, and I stepped into the storeroom under the stairs and—and she was there . . ."

"Somebody's rung up the police, I suppose?"

"Yes, they're here now. My stepfather rang them up straightaway. And then I—I felt I couldn't bear it, and I rang you up. You don't mind?"

"No," I said. "I don't mind."

I looked at her curiously.

"Did anybody give you some brandy, or some coffee, or some tea after—after you found her?"

Megan shook her head.

I cursed the whole Symmington ménage. That stuffed shirt, Symmington, thought of nothing but the police. Neither Elsie Holland nor the cook seemed to have thought of the effect on the sensitive child who had made that gruesome discovery.

"Come on, slabface," I said. "We'll go to the kitchen."

WE WENT around the house to the back door and into the kitchen. Rose, a plump, pudding-faced woman of forty, was drinking strong tea by the kitchen fire. She greeted us with a flow of talk and her hand to her heart.

She'd come all over queer, she told me, awful the palpitations were! Just think of it, it might have been her, it might have been any of them, murdered in their beds they might have been.

"Dish out a good strong cup of that tea for Miss Megan," I said. "She's had a shock, you know. Remember it was she who found the body."

The mere mention of a body nearly sent Rose off again, but I quelled her

with a stern eye and she poured out a cup of inky fluid.

"There you are, young woman," I said to Megan. "You drink that down. You haven't got any brandy, I suppose, Rose?"

Rose said rather doubtfully that there was a drop of cooking brandy left over from the Christmas puddings.

"That'll do," I said, and put a dollop of it into Megan's cup. I saw by Rose's eye that she thought it a good idea.

I told Megan to stay with Rose.

"I can trust you to look after Miss Megan?" I said, and Rose replied in a gratified way, "Oh, yes, sir."

I went through into the house. If I knew Rose and her kind, she would soon find it necessary to keep her strength up with a little food, and that would be good for Megan too. Confound these people, why couldn't they look after the child?

Fuming inwardly I ran into Elsie Holland in the hall. She didn't seem surprised to see me. I suppose that the gruesome excitement of the discovery made one oblivious of who was coming and going. The constable, Bert Rundle, was by the front door.

Elsie Holland gasped out, "Oh, Mr. Burton, isn't it awful? Whoever can have done such a dreadful thing?"

"It was murder, then?"

"Oh, yes. She was struck on the back of the head. It's all blood and hair—oh! it's awful—and bundled into that cupboard. Who can have done such a wicked thing? And why? Poor Agnes, I'm sure she never did anyone any harm."

"No," I said. "Somebody saw to that pretty promptly."

She stared at me. Not, I thought, a quick-witted girl. But she had good nerves. Her color was as usual, slightly heightened by excitement, and I even fancied that in a macabre kind of way, and in spite of a naturally kind heart, she was enjoying the drama.

She said apologetically, "I must go up to the boys. Mr. Symmington is so

anxious that they shouldn't

He wants me to keep them

"Megan found the body said. "I hope somebody is l her."

I will say for Elsie Holle looked conscience-stricken.

"Oh, dear," she said. "about her. I do hope she's been so rushed, you know, lice and everything—but it of me. Poor girl, she must bad. I'll go and look for h I relented.

"She's all right," I said looking after her. You get kids."

She thanked me with a fl tombstone teeth and hurri After all, the boys were her Megan—Megan was nobod sie was paid to look after Sy blinking brats. One could h her for attending to it.

As she flashed around th the stairs, I caught my bre minute I caught a glimpse o Victory, deathless and incre tiful, instead of a conscien ery governess.

THEN a door opened ar tentent Nash stepped o hall with Symmington behin

"Oh, Mr. Burton," he se just going to telephone you you are here."

He didn't ask me—then here.

He turned his head as Symmington, "I'll use this may."

It was a small morning r window on the front of the "Certainly, certainly."

Symmington's poise was j but he looked desperately ti intendent Nash said gently:

"I should have some br were you, Mr. Symmington Miss Holland and Miss Meg much better after coffee ar

PISTON RINGS

THE PERFECT CIRCLE COMPANIES • HAGERSTOWN, INDIANA, U.S.A. AND TORONTO, ONTARIO, CANADA

bacon. Murder is a nasty business on an empty stomach."

He spoke in a comfortable family-doctor kind of way.

Symmington gave a faint attempt at a smile and said, "Thank you, Superintendent. I'll take your advice."

I followed Nash into the little morning room and he shut the door.

He said then, "You've got here very quickly? How did you hear?"

I told him that Megan had rung me up. I felt well-disposed toward Superintendent Nash. He, at any rate, had not forgotten that Megan, too, would be in need of breakfast.

"I hear that you telephoned last night, Mr. Burton, asking about this girl? Why was that?"

I suppose it did seem odd. I told him about Agnes' telephone call to Partridge and her nonappearance. He said, "Yes. I see. . . ."

He said it slowly and reflectively, rubbing his chin.

Then he sighed.

"Well," he said, "It's murder now, right enough. Direct physical action. The question is, what did the girl know? Did she say anything to this Partridge? Anything definite?"

"I don't think so. But you can ask her."

"Yes. I shall come up and see her when I've finished here."

"What happened exactly?" I asked. "Or don't you know yet?"

"Near enough. It was the maids' day out—"

"Both of them?"

"Yes, it seems that there used to be two sisters here who liked to go out together, so Mrs. Symmington arranged it that way. Then when these two came, she kept to the same arrangement. They used to have cold supper laid out in the dining room, and Miss Holland used to get tea."

"I see."

"It's pretty clear up to a point. The cook, Rose, comes from Nether Mickford, and in order to get there on her day out she has to catch the half-past-two bus. So Agnes has to finish clearing up lunch always. Rose used to wash up the supper things in the evenings to even things up."

"That's what happened today. Rose went off to catch the bus at two-twenty-five. Symmington left for his office at twenty-five to three. Elsie Holland and the children went out at a quarter to three. Megan Hunter went out on her bicycle about five minutes later. Agnes would then be alone in the house. As far as I can make out, she normally left the house between three o'clock and half past three."

"The house being then left empty?"

"Oh, they don't worry about that down here. There's not much locking up done in these parts. As I say, at ten minutes to three Agnes was alone in the house. That she never left it is clear, for she was in her cap and apron still when we found her body."

"I SUPPOSE you can tell roughly the time of death?"

"Doctor Griffith won't commit himself. Between two o'clock and four-thirty is his official medical verdict."

"How was she killed?"

"She was first stunned by a blow on the back of the head. Afterward an ordinary kitchen skewer, sharpened to a fine point, was thrust into the base of the skull, causing instantaneous death."

I lit a cigarette. It was not a nice picture.

"Pretty cold-blooded," I said.

"Oh, yes, yes, that was indicated."

I inhaled deeply.

"Who did it?" I said. "And why?"

"I don't suppose," said Nash slowly, "that we shall ever know exactly why. But we can guess."

"She knew something?"

"She knew something."

"She didn't give anyone her name?"

"As far as I can make out, she's been upset, so the cook says, Mrs. Symmington's death, a thing to this Rose, she's been getting more and more worried, and kept didn't know what she ought to do."

He gave a short exasperated sigh.

"It's always the way. They come to us. They've got to get rid of their seated prejudice against being up with the police." If she'd come and told us what was wrong, she'd be alive today."

"Didn't she give the other woman a hint?"

"No, or so Rose says, and I don't believe her. For if she would have blurted it out at a good many fancy embellishments, her own."

"It's maddening," I said. "I know."

"We can still guess, Mr. Burton. We begin with it, it can't be any definite. It's got to be something that you think over, and as it goes over, your uneasiness grows. What I mean?"

"Yes."

"Actually, I think I know what it was."

I LOOKED at him with respect. Good work, Superintendent.

"Well, you see, Mr. Burton, something that you don't. On the afternoon that Mrs. Symmington committed suicide both maids were supposed to be out. It was their day out, but Agnes came back to find the house empty."

"You know that?"

"Yes. Agnes has a boy friend, Rendell from the fish shop. When he is early closing and he comes to meet Agnes and they go for a walk to the pictures if it's wet. That day they had a row practically as they met. Our letter writer was active, suggesting that Agnes should fry, and young Fred Rendell all worked up. They quarreled, and Agnes bolted back to the house. She said she wasn't coming out until he said he was sorry."

"Well?"

"Well, Mr. Burton, the kitchen is at the back of the house but there's a door that looks out where we are looking. There's only one entrance to the house, come through it and either out the front door, or else along the side of the house to the back door."

He paused.

"Now I'll tell you something. A letter that came to Mrs. Symmington that afternoon *didn't* come by post. It had a used stamp affixed to it, postmark faked quite convincingly, so that it would have been delivered by the afternoon letters. But it *had not been through the post*. See what that means?"

"It means," I said slowly, "that the letter was left by hand, pushed through the box some time before the afternoon letters were delivered, so that it was among the other letters."

"Exactly. The afternoon post comes around about a quarter to four. The story is this: The girl was in the kitchen looking through the window—it was by shrubs but you can see through quite well—watching out for the man to turn up and apologize for his behavior."

I said, "And she saw who delivered that note?"

"That's my guess, Mr. Burton. It's wrong, of course."

"I don't think you are. . . . It's plausible and convincing—and it means Agnes knew who the anonymous writer was."

at could be found. Finally,
Gusie offered five hundred dol-

lars for part of her husband's wrecked
boat. This, it turned out, was Crab-
flake Myers' suggestion. Not that the
offer did any good. The fishermen kept
looking, but John's boat wasn't found.

"Don't make no difference," Nellie
said, "if Crabflake's got his mind set on
it, he'll figure some way to git that in-
surance company to pay up."

"Sh-sh," Joe said. "Yon he is, right
now."

They watched Myers striding across
the shell road that led to the Barnaby
office. He was a big, slightly stooped,
slightly bald man. He was good at fig-
ures, especially those preceded by the
dollar symbol. He wasn't well liked, but
nobody wanted to be enemy to someone
who could foreclose on them at will.
"Shucks," Joe once said, "before I'd
have folks scared of me like that, I'd
rather be in bankruptcy."

Myers went into the office of Jules
Barnaby. Presently old Jules stuck his
head out of the door and called Joe.

"Come here."

Joe went into the little kerosene-
warmed office. Nellie went too.

"Is it him you goan send me goose
hunting with?" Crabflake demanded.

"He's the best they is," Jules said.

"I believe I'll take the next-best this
time," Crabflake said angrily, "and git
somebody else."

"That's plumb up to you," Jules said.

Crabflake started toward the door;
then, apparently struck by a new
thought, he turned and said, "I don't
know, Jules. If you say he's a good
goose hunter, I'll tolerate him."

Joe shook his head. "Ain't no use go-
ing goose hunting today."

Nellie nudged him sharply. Jules spat
in the sand box under the desk, and said
nothing.

Crabflake said, "How come it ain't?"

"The wind ain't right. On a quiet sun-
shiny day like this, them geese most
generally just lay offshore, squonking
and feeding. They ain't goan fly, not
none."

"I'll chance it," Crabflake said. "Git
moving."

Joe shook his head. "Ain't a bit of
use."

Nellie's elbow punched him again.
"I'll help you get your things together."

"You going er not?" Crabflake de-
manded. "I'm paying for it, and if I
say go, we go."

"Nope," Joe said. "I wouldn't feel

with ALL the modern features!**

right in my mind about taking no man's money fer guiding on a day like this. Now you take a day when they's a good breeze of southwest wind, we can have some luck."

"Joe," Nellie said incredulously, "you goan refuse to go, bad as we need money?"

"Nellie, I just wouldn't feel right about it."

"Well, for gosh sake!" Crabflake exclaimed angrily. "I guess I can get somebody else to go!"

"I expect you can," Joe answered, "but you ain't goan kill no geese."

Before long, Crabflake was back, his face red with anger, a touch of color even showing through the thin hair on top of his head. "Bullock," he said, "I'm good a-mind to brad your nose! Cain't git nobody in this place to take me goose hunting. They all said that if you said weren't no use going, they didn't care to try it, either. You've messed me up good!" He drew back his fist, cocked and ready.

"Let 'er go," Joe said firmly. "Just pile right on in."

But Crabflake noticed the size of Joe's fist, and he thought better of punishing him. With an angry grunt he turned and slammed out.

Old Jules took his vaporous pipe from his bony jaw, and said, "Joe, you got to learn that the customer is near-bout always right."

"I ain't taking nobody goose hunting on a day like this. I'm hard luck enough when conditions is right. A man would sit a long time on his behind, waiting fer geese to fly today."

"Joe," Nellie said, and he saw that she was crying, "you're just no-'count, that's your trouble. You make out to be hard luck, but you're just purely trifling! I don't want nothing more to do with you, Joe. You hear me?"

Jules said, "You ain't quitting him just because he won't go goose hunting with Crabflake, Nellie, for gosh sakes?"

"No. I've learnt something about him, that's all."

Joe sat down, because he felt sick. Finally he said, "Guess I knowed from the first you wouldn't never come right out and marry me. I couldn't expect no good luck like that to happen to me."

THAT night the wind changed around to the southwest, and blew in a good high tide, and brought flying foggy rain. With daylight, the cabbage-palm fronds rattled and glistened wetly, and the water in the river carried a surface of broken suds; and droves of restless wild fowl moved up and down the coast line.

Joe had stayed awake most of the night, grieving about Nellie, so that when he did drop off he overslept, and daylight was almost there by the time he got dressed. Then he heard somebody calling for him from below, the voice muffled by the blow of the wind. He went down from his room over Jules' boathouse, and found Crabflake Myers waiting for him.

"Now what's wrong with the weather?" Crabflake asked.

"Drizzly."

"I mean for goose hunting."

Joe admitted, "She's a pretty durn' good goose day."

"Well, what's your reason for not going with me today? Got a bad cold or something another, I reckon."

"No, my health's tol'able good. But this goose hunting—it takes a right smart of a man to tough it out, in weather like this."

"I been goose hunting before!" Crabflake said angrily. "You going er no?"

"I'd just as soon," Joe said finally.

They loaded their guns and shells and a few cans of beans into Crabflake's little launch, the Kingfish, and presently shoved off down the chopped water of the river. They had forty miles to go

down the coast, to the vast sea marsh beyond tiny Limestone Island.

Here, on calm days, the Canada geese fed in the s Joe had lain on shore in muck, hidden by needle-cus grass, watching them tentedly about, upending their long necks would re the tender bottom shoots while he waited for their close enough for a shot, he to their satisfied squonks with an occasional full ah-sentinel gander.

But on days like today too high for them to feed o and they had to keep sw stantly to prevent being bl by the wind. So they flew back toward the hammock tiny fresh-water ponds, v possible for a good woods them. Others kept beating and down the coast line, wind, and offering an occ shot.

THEY were flying when Joe boat into Rock Creek. I sadness because of Nellie moved fast, seeing the mag flying in bunches of eight listening to their honks abo Ducks were flying, too, a far offshore a thousand over Limestone Island in cloud. As Joe manuevere fish past the rocks of the c curious about Crabflake, w cabin bunk chewing his ciga so hell-bent to go goose hu strangely unexcited by a c that should stir the blood fowl hunter.

"He sure don't act much hunter," Joe mused. "May till he proves hisself he's prohibition with me."

They anchored the bo island, and Joe went ashore a scrub oak. From this marsh now took on anothe and he could see number creeks, and the round ponc dollars in the sea marsh, a salt flats. None of the pon geese close to the coast. down, and they started island inland.

Slogging across the mars ing gusts of rain at their ba through the thick, stabl Crabflake showed little ent the hunt.

"How come we cain't sit and try for a flight shot?" h finally. "Ain't no use to kill for a few old geese."

"They might fly over you if you're lucky," Joe said. "so I most generally go to n stead of waiting for them me."

"Tomorrow I'm goan sit Crabflake said.

JOE shrugged and kept wa ing through the rank grass John Ulm hadn't gone and drowned. He and John, no like this, would stalk the when night came they'd b geese they could stagger out John had been a fine hunt He hadn't ever wanted to go because his wife, Miss Gu pretty severe letdown after a hunt, or even a poor one. J ally the one who had made to go home. . . .

They reached an island l had named Bell-Cow Island rattlesnake—John called cows—had almost got him day last season. Joe climbe

many times, and from the top of the marsh flattened out beneath Joe's stiffened. On a little out a quarter mile away were Canadian geese, quietly feeding. "Git on your belly like a rat

of the distance they walked in a As they drew closer, Joe moved advance on hands and knees. At hundred yards they slid on lies, Crabflake protesting in anpers that the mucky water was him to the skin. But Joe didn't and crawled on, inching through grass. He listened. Above the wind the grass he heard *pum-pum* se flapped its wings in contentthey were close.

ustly. "If that's your goose out e, ide on out and git him."

ait the guide. You waded out and ny pose."

Yes sir," Joe said, and stepped out th water.

At night Joe lay in his bunk, think- g about Nellie and listening to

fail honking of the geese, like the tin of country dogs in the distance.

He dimly thought he heard Crab- up, then he went back to sleep.

After breakfast they started out again. ead there small flocks of geese

ed back out to sea.

Wenissed our chance yesterday," esai as they came to a small creek.

et maybe we'll git a shot or two be- th all go back outside."

He waded out into the creek, and Crabflake followed. Joe started to step up on the opposite bank when his foot struck something. He thought it a rock, and gave it only a passing benediction; but a glance showed that it was a piece of wood, imbedded in the soft mud of the creek bottom.

"Hey, look," Joe said. He loosened the wood and finally pulled it free, and it was a piece of sailboat rudder, splintered near the upper end where the tiller would have been. Two pieces of brass strapping, discolored with verdigris, bound the flat surface of the rudder.

"That's the rudder of John Ulm's boat!" whispered Crabflake. "I'd know it anywhere. I sold him that brass on there."

"It sure looks like it," Joe said. He washed the mud from the rudder.

"BOY," Crabflake said, "you've sure stepped in luck this time! That's five hundred dollars you stumped your toe on!"

"If this turns out to be John's rudder, and Miss Gussie pays five hundred dollars for it," Joe said, "half the money is sure yours, by rights."

"No, sir," Crabflake said. "You found it, and the money belongs to you. I ain't goan try to horn in on your luck. Let's git on back to the boat and take that rudder home."

"Ain't no powerful hurry. We might git two or three shots. We can deliver the rudder tomorrow."

"Today's better," Crabflake said firmly. "Come on."

Crabflake's impatience was understandable to Joe, because if this was really John Ulm's rudder, Miss Gussie would get the insurance money. But, as they made their way back to the boat, the thing that puzzled Joe was Crabflake's generosity regarding the five-hundred-dollar reward. It just wasn't natural for him to waive his share in a claim like that.

The tide was low and there was no getting out of the Rock Creek for two hours. While they waited, Joe studied the rudder they had found. With his knife, he scraped it to examine the grain of the wood. Finally he said:

"I hate to tell you, Crabflake, but this ain't no rudder offn John's boat."

"How come it ain't? I'd know that rudder anywhere."

"Nope. This un's pine. John's rudder was oak. I helped him plane it smooth. And one time me and him harpooned a shark that turnt and tried to bite the

Always insist on genuine Simoniz and Simoniz Kleener for your car. Sold by auto supply, hardware, drug, and grocery stores, as well as filling stations and garages.

boat. His teeth marks was in John's rudder," Joe said. "Come on, let's go after them geese."

Crabflake walked back and forth nervously. Suddenly he said, with a wise smile, "Won't nobody but me and you know it ain't John's rudder. You can git that money right on. I ain't goan let the cat out the bag."

"I'd feel sort of guilty about pulling a trick like that," Joe said. "We better git started if we want to try the geese."

Crabflake exploded. "I swear, I don't believe you got good sense!"

"Me and you just don't think like each other," Joe said. "You coming or not?"

Crabflake subsided abruptly, and said, "You go on stalking. I'm tired of wallowing in that muck. I'm going out on one them points and set down and wait for a flight."

WHILE Joe hunted that afternoon, he figured the whole thing out. Crabflake had decided to use him as a guide because people knew they weren't friends, and wouldn't suspect the two of them of conspiring together. Probably Crabflake had made the rudder a while back, and exposed it to weather and barnacles. Some of the green touches on the brass looked a bit like green paint. Then last night Crabflake had planted the fake rudder on their trail, so Joe could find it. Yes, Joe thought, he had all the steps of the scheme figured out.

All, he discovered, except the next step. For when he got back with three geese to Rock Creek just before dark, Crabflake Myers and his boat, Kingfish, were gone.

"Hey!" Joe shouted, thinking at first that Crabflake might have simply moved the boat around a bend for some reason. But a half-hour of searching and shouting convinced him that Crabflake had gone and left him.

Joe stood there by Rock Creek with night falling around him, and realized that he was alone on the sea marsh, fifteen or twenty miles from the nearest settlement, with a half-dozen rivers and creeks between. Crabflake had gone home to report finding John Ulm's rudder, and to tell of Joe Bullock's getting lost. Possibly he would get the insurance money for Miss Gussie and then come back to find Joe.

"Or maybe he figures just to let me parish to death out here," Joe figured. The unfairness of it overwhelmed him, and he said angrily, "It shore ain't no way to do a fellow!"

JOE made his way to the nearest island and prepared to spend the night. With dried palm leaves and cedar and pine sticks he built a fire, and while it was catching up he used his pocket knife to cut green cabbage-tree fronds for his bed. He roasted the livers and gizzards of the geese and ate them. Finally he went to sleep, shivering in the cold.

Next morning he set out for the hammock, leaving the dead geese, for they were heavy and he had a lot of rough walking and swimming to do. "He's plumb mistaken if he reckons I'm goan set here and parish to death," Joe told himself.

Now the tide was out and the creeks were low, so that only once or twice did he get wet all over. The sun came out, and the dogflies attacked him in hordes that left blood flecks on his face and hands. He went on, wading and walking and pushing through the grass, thinking, "It ain't no way to do nobody."

He stopped to rest before wading the last creek short of the hammock. A flock of ibis sailed overhead. Joe leaned down to tie his boot and saw the broken mast of a boat. For a second he stared at it, puzzled. Then he started searching.

Before long he found what he was

looking for. He found all that was left of John Ulm. If they had thought about it, they'd have remembered that in the storm the water had covered the marsh.

A heavy sadness weighed upon Joe, here beside the bones of his old friend. He sank to the ground and leaned back against one of the palm trunks and closed his eyes. A gull flew lazily above, looking about inquiringly; from the hammock came the scolding bark of a gray squirrel. A breeze rattled the palm leaves pleasantly.

A new thought gradually came upon Joe's consciousness. This was no place of sadness; this was a place of peace. John Ulm had lived a full life, and now—away from woman's sharp tongue—he rested on his beloved marshland; where the wild fowl flew, and the raccoons hunted, and where, even now, far off, came the honking of wild geese. . . .

Joe fought the hammock that afternoon. Bamboo and prickly ash cut him and tore his clothes, and cypress knees tripped his stumbling feet. Joe thought, "It just ain't no way to do a fellow." But now, if he ever got out, he had Crabflake Myers where he wanted him. For he could easily prove that the rudder was a fake, and then never mention that he had found genuine evidence of John's death. Of course, he'd lose the five hundred dollars Miss Gussie had offered, but he was willing to do that to get even with Crabflake.

Still, it seemed inadequate revenge. What he wanted was something permanent. And next day just as he reached the high palmetto flatwoods beyond the hammock, he knew the terrible thing he could do to Crabflake Myers. . . .

JOE BULLOCK was spreading his gill net—the one he had bought with part of the five hundred dollars—on the grass to dry, and Nellie Barnaby was watching him, and Joe said, heavily: "Nellie, I been aiming to try to tell you: you ought not to marry me."

"Why not, Joe?" she asked. "You've proved you'll work, since you got that net."

"Well, I hate to say it, but some-

thing's been heavy on my co ain't no kind of man for you. I pulled a powerful dirty trick low. Dirtiest I ever heard to said in remorse.

Before she could inquire a Preacher Walt Minton came dock with his outboard motor, fishing. Joe was glad he came now he could confess to his g his preacher at the same time, it done with.

"WHAT'S the trouble with u," Walt asked.

"I pulled a dirty trick on C Joe said. And he told them w done. "At first I wasn't goi about finding John. Then I rer what you said about too mu being like a rattlesnake, and about Miss Gussie, and I kr worst thing could happen to was to have to live with Mi Ulm and all that money the i life. If I'd a-just shot him it a-been so heavy on my mind."

Walt thought a minute, and said, "Joe, it ain't for us to workings of the All-Mighty. N in His book for Crabflake Gussie to be married up, and y git mad and make things come I don't know about that. But I positive that John Ulm a-wanted all that money he ha on that insurance policy to go It was Miss Gussie's money, a flake don't concern us, not non you had the wrong idea, all Miss Gussie was shore due her Walt added. "For all we kno the Lord caused all this to haj so John Ulm's widow could was coming to her."

"You reckon so?" Joe ask fully.

"Like as not," Walt said fi clamped the motor on a skiff. Nellie smiled at Joe.

"I guess it's like the good Bo Joe sighed. "The Lord move cheevous ways."

THE END

"Excuse me, madam, but have you heard the ugly rumor goi around that Seattle's blackout isn't one hundred per cent effective

*New Yorkers unless otherwise stated.

†Died February 15, 1942.

I USED to do most of the talking but now I do most of the listening." So says Alexander M. Sobel (Al Sobel to you), stentorian-voiced tournament director of bridge championships whose 105-pound wife has just landed the Number One place in the ranking of the nation's contract stars for the competitive season of 1941-42. Brilliant, canny, resourceful little blond Helen Martin Sobel and her versatile husband together form the first outstanding married couple of bridge since the days when the Culbertson and Sims families monopolized so many headlines. One difference is that this time the female of the species is the more deadly competitor. In this case, the husband taught tournament bridge to his wife.

This is the second time in history that a woman has ranked first in national championship accomplishments for a season. The other was two years ago, when Mrs. Ralph C. Young, of Philadelphia, gained the top. This season Mrs. Young is in third place, with another Philadelphian, Sidney Silodor, second. These three won two national championship events apiece, out of the eleven contested, and each also had a second place—the two women while playing as partners in the women's title teams-of-four, and Mr. Silodor in the men's pairs.

To settle the relative standings and break what otherwise was a tie among them, it is necessary to consult their performances in nonnational events. These are best appraised through the medium of Master Points, those awards of merit furnished in varying amounts by the bridge players' voluntary national organization, the American Contract Bridge League, to competitions all over country. The number awarded in specific event depends upon the importance of the sanctioned contest, the size of its total entry and the strength of the field, according to a fixed formula. Fractions of Master Points, known as Rating Points, are awarded in all officially sanctioned duplicate tournaments.

Rated this way, Mrs. Sobel outdistanced her competition, as she accumulated a total of 162 for the season, as against 127 for Mr. Silodor and 121 for Mrs. Young. Among the important nonnational victories she gained was the Eastern pairs for the Julian Goldman Trophy, playing with Charles H. Goren of Philadelphia, who led this ranking three years ago and whose pupil, Mrs. Young, was the leader in the following year. Mrs. Sobel is the first woman to

gain the William E. McKelvey trophy awarded for the most Master Points in a season, the runner-up for this being John R. Crawford, Philadelphia, with 145, who finished this ranking. Philadelphia's year in championship play bel was born in Philadelphia, second and third placers both there.

Fourth place goes to Simon Rossant of New York, a newcome national winners, with two victories and sixth are the late "Jimmy" Maier and Howard Schenken of New York, members of the Four Aces team, each with two seconds, whose tie with the former having 117 Master Points and the latter 113. Mr. Maier died of a heart attack on February 15, 1942, at the age of 33, is the first player to have been humously in these rankings were instituted twelve years ago. The fifth place is Lee Hazen, New York, who won the individual championship and also gained place. John R. Crawford, Philadelphia, in eighth place, had one second and that great Sherman Stearns of New York is placed ninth, earned more Master Points than any other. Sherman Stearns of New York, each also with a first and a second, are tied for tenth place.

The new season champion is 3 feet 3 inches tall and weighs 104 to 105 pounds. She was born on May 22, 1910, in the Philadelphia. She completed her education at Temple University and then embarked on a career as a dancer. She was truly adept, and she gained a reputation as Helen Martin Sobel. Her interest turned to bridge in 1932 when she met Al Sobel at the old Contract Bridge Club. Recognizing her aptitude for the game, he induced her to try duplicate. As her partner, she has since that time she ever played, at the Contract Bridge Club in New York. From then on, she played bridge, a more general skill, to rubber bridge.

She's in to Stay,

In 1934 Helen Sobel entered a big tournament and won a mixed four championship. The late Louis H. Watson, Howard Schenken and Helen Bonner, summer of that same year, the first national champion. She entered, the women's tournament at the Walden Hotel, New York, with Mr. Sobel as her partner. After that, she was by the stars as one of the best. In the meantime Al Sobel was becoming more prominent in the world of bridge than in the world of industry. A native New Yorker, born in 1908, a graduate of New York University, he had a degree in industrial engineering, he had the building business. He had trained mathematical talent in scoring and other technical game. His first work at the Walden Hotel was as chief scorer of the Eastern Championships.

In 1935 both he and the woman who was later to become his wife were summoned to Los Angeles by Stoddard, principal bridge player of the Pacific Coast, who was a major in the U. S. Army, to further organization. The duplicate tournaments are now being promoted and conducted by Helen and Al. Helen wrote about the lessons and helped in the clubs. Finally, Ely Culbertson (Continued on page 4)

Top ranking in contract bridge play for the 1941-42 season goes to Helen M. Sobel of New York. With her is her husband, Tournament Director Alexander Sobel

shoot the green to that little job"

... the little coupe, south of the field
... little coupe . . . if you can hear me, wiggle
... But the little coupe can't hear the
... control tower, because it has no receiv-
... so it doesn't wiggle its wings. It just
... and round. Then the dispatcher says,
... green to that little job." And the oper-
... with a light-gun, shoots a green flash
... with pilot's eyes, a green light that means
... it's safe to land."

And that's what the green flash of the Quaker State sign means to motorists, too . . . "Come on in, it's safe to land" . . . It means greater motor safety for little cars as well as big cars . . . for old cars as well as new cars. It means you get the greater protection of Stabilized Quaker State Motor Oil . . . an oil that's engineered to resist oxidation, an oil that's specifically designed to prevent the harmful formation of

sludge, varnish and corrosive acids.

In these days, safety means more to your motor than ever before. So change to Stabilized Quaker State Motor Oil wherever you see the green flash of the Quaker State Service Station sign . . . a safety signal for your motor, no matter where you drive. The Mystery of the Missed Third Strike

Continued from page 19

knew what was coming: "But when you missed that third strike, we could have kicked you in the pants."

"Why don't you do it?" I asked.

He looked at me in amazement. "Do you mean it?"

"Sure do," I said soberly. "It might do me good." Mr. Wise began to laugh and the other men chuckled as I moved into the open space between the rows of hand tools. "Well, sir," he said, "if you think it'll do you any good—" I turned around, standing my ground as he stepped behind me, planting a boot where it hurts the least. And then I laughed with the other fellows, a good, fine, deep laugh which shook off all the regrets, and cleared up forever The Mystery of the Missed Third Strike. I knew then—and I know now—that the name of Mickey Owen will never be inscribed on the list of baseball's goats. I know, too, that the missed third strike, instead of ruining my career, will make me a better catcher not only during this new season of 1942, but also until the day I hang up my mask and glove forever.

I have no excuse for failing to catch that ball. Hugh Casey threw it, and it should have sealed his greatest victory. From the time he retired Joe Gordon on an easy fly with the bases full in the upper half of the fifth inning, he'd been pitching the greatest ball of his life. Higbe, French and Allen had failed. But not Hughie. He had control, speed, change of pace and curves. Yes, sir, curves that broke with a fork like the jagged end of summer lightning. He was taking my signals without question, and delivering the ball on X-marks-the-spot. We had the Yanks hog-tied as the ninth inning began.

Hugh breezed through the first two batters, Johnny Sturm and Red Rolfe. He wasn't afraid even of Henrich, although we knew that Tommy is a clutch hitter. We knew that the pressure was on Tommy. He had to hit the ball for a clean drive, or curtains! So we determined not to give him any piece of the ball, but to put it where he would be compelled to swing, swing and swing.

Casey's great curve made this easy. The ball would come roaring up to the plate and then break away. Henrich was outsmarted on two strikes, but managed to work the count to three and two.

The Play That Made History

And then came the third strike. I signaled for a low, inside curve, figuring that Henrich was so deep in the hole that he would swing at anything. The ball shot toward the plate, then suddenly broke down and away, fooling Henrich, who swung and missed. It certainly fooled me, too. It had the wickedest inshoot I've ever seen. My glove was placed too near my body; that's how the ball got away. It was all my fault. Henrich raced toward first. I dashed madly to retrieve the ball.

Many fans believe that the special police, who thought that the game was over, and who ran out of the field boxes and dugout to protect the players, obstructed my quick throw to catch Henrich. This is not true. Henrich got to the bag too soon for me.

Charles Doyle, of the Pittsburgh Sun-Telegraph, has criticized Manager Durocher for not removing Casey from the box at once. He also believes that the skipper should have held up the game to permit Casey to settle down. But Casey was not flustered. And Leo did hold up the game, by a signal from the bench to me. He decided, and decided correctly, to leave Casey in the game.

Joe DiMaggio was the next to golfed a fast ball into left field. Henrich pulled up at third. The ball was still ours. Two were out. My only job was to dispose of Keefe. He swung for distance, and there it was at bad balls.

Casey fed Keller wide curves, keeping the pace with each pitch he threw. Charlie swung as if his eyes were missing two curves far outside. I signaled for one more out. Casey and I shot the ball exactly where it belonged, far beyond the reach of Keller's bat. He let it go by. Plainly the situation called for a side curve. It came low, where the batsman in a hundred could drop beyond the reach of our outfield. Keller was that batsman. He hit the ball against the right-field fence, scoring the tying and winning run.

How It Feels to Be a Goatsucker

The rest is a blur to me. I was sitting on the stool before my locker, tired to strip off my clothes. Wyatt, Fitz, Medwick, trying to talk to me. "Forget it, Mickey . . . To another day," they were saying. I knew, and I knew that we had been beaten by a great exhibition slugger. They also knew that they had caught the third strike. I think, stood beside me for a moment. "Never mind, Mickey," he said. "I can't keep chain lightning in a room." Mr. MacPhail slipped his arm around my shoulders and said: "Well, they won't, Mickey. And I want to know that I wanted to win that bad as you did. Forget it, will you?" I nodded, and looked up. I knew that the Dodgers' boss had tears in his eyes.

I was still in a daze as I met Casey on the ramp. Police escorted us, and we whizzed through Brooklyn. New York hotel. I could feel the excitement of the city, the few boys as I quit the park were still running. As we drove across the city, Gloria asked me for the first time. I had missed Casey's winning pitch the first time, I told her. She said she couldn't be helped. It might have happened in any game since the season began. Everyone has faith in Mickey."

At that moment I was thinking of the other "goats" in baseball's history. Goat . . . the word smacked between the eyes. I had failed at least of the many things I am supposed to do on a ball field—to catch which would have made millions happy.

Telephones were ringing, the were arriving, the hotel clerk was queering at me, the elevator said, "Good evening, Mr. Owen." We ordered the telephone disconnected and decided to eat a private dinner. During the meal, John McDonough, Dodger road secretary, dropped a quiet guy, and, from force of habit, a thoughtful one. He sat down, and "Just met Larry Goetz in the clubhouse." John looked me straight in the eye and continued: "Larry's been umpiring for years. He says that from where behind the plate this afternoon Casey's curve had the most violent break of any ball he's ever called." I said to John then asked: "Does that make me feel any better, Mickey?" "No," I replied. "It doesn't make me feel any better."

But the applause of the fans

losing game on Monday did feel better. And by the time ed Brookline, the local post-as snowed under by the weight from all parts of the country. my mouth—tight, as we ball-ay—I ripped open the first. What. would the fans say? ld they feel about the missed st te?

ne of the thousands who wrote used me of deliberately fail- ch Casey's curve. On a sheet scratch paper the threat was le. With cowardly caution, the ned no name. He wrote:

h don't you quit when you throw me like today? You ought to ood. You ain't no ballplayer M. You ain't got no guts but ter. I'd like to make you quit

er riters had no other object than me understand that although we eagerly rooting for a Dodger ey did not blame me for our ome offered personal advice. eemed to know that I was suf- a tried to buoy me up with ex- on of their faith in my ability.

h tters made me realize how y fans love baseball, especially w live in small towns, far from ag cities. From the eastern shore ynd, an 82-year-old man wrote: ar young, but not until you are y age will you know that your e your greatest success. For ill now how to conquer yourself e, and to see everything in e perspective. You are a player ar er, and therefore a man of e. Everyone here is pulling for at s home for the aged where I, thi, still live."

m eastern State Penitentiary in ylnia, a convict laboriously ead this message on the narrow, off al writing paper: "You had o the same kind of luck that dvn, kid. Chin up, now. Keep ee on the straight and narrow, no r wat."

ing That Keep a Man Going

ll, is is next season, and to this rier in a jail, and to so many, otors, I owe more than the solu- f T. Mystery of the Missed Third. r now I have friends, friends he—a sweet Catholic nun in y Cy, a police officer in Omaha, ad a great shipping company in ranisco, a small boy in a Georgia t—m going to drop off and see he the Dodgers move north this d a World War veteran who n service station far up in Maine, an soldiers in our Army of to- on st in Newfoundland, one in na Cone, and one from Honolulu, th war struck that December

tel these friends of mine how I appreciate their thoughtfulness engh. Perhaps I ought to ex- hat their good wishes have proved th I have succeeded in one re- I y to work harmoniously with ocker pitchers. I try to make and every other player on our ke me personally. This, I think, e doe. And although few loyal ylnians are acquainted with me e field, I believe that all of them, er they have seen me play or not, stan this simple precept. Per- ecause I was a member of the St. Gas House Gang for a time, a real at a hat, I have the reputation of a scappy, fighting player.

e r pitchers, for example: r. Fisimmons and Davis of our ionship staff seldom shake off gna, because they have con- e in my knowledge of batters.

Wyatt and Higbe are two exceptional pitchers, now at the top of their form. Whit and Kirby both study batters carefully; sometimes Whit shakes me off, as we say when the pitcher disagrees with the catcher's judgment. Kirby likes to pitch his own game. I try to keep them at ease, working with them so that they will feel that their catcher is part of their own pitching skill.

Perhaps these pitchers have never been aware of my help in many other respects, for battery work does not consist merely of throwing and receiving the ball. It's the catcher's job to encourage pitchers when they weaken, to prompt them to watch base runners, to point out to them that some runner is wandering far from the bag and can be picked off with a quick throw. A catcher must sense a play on the bases before it happens; he must tell his pitcher what base to cover on infield grounders, and where to place himself so as to back up a throw from the outfield.

How to Nail 'Em on Third

The catcher holds the ball almost as often as the pitcher. He has much more to do than merely to throw out base stealers. He can pick them off at any base with quick, accurate throws, sometimes shot from a crouching position. Sure, I get a kick out of rifling that throw to second base when some speedy runner, say Linus Frey of the Reds, tries to steal. But my favorite play is the throw to third. Let's suppose that Johnny Hopp of the Cards is on first when Enos Slaughter slams a liner to center. Hopp scurries past second, past third as Petie Reiser grabs the ball and throws to the plate. Hopp sees the throw and turns in his tracks, backing toward third. I must throw the ball straight up the third-base line, always avoiding Hopp, for if the ball hits him, it will roll away and he will score easily. But I must also throw low and to the right of the bag so that my own third baseman can scoop the ball out of the dirt with his glove and tag Hopp out as he belly-whops back to base.

As for the more commonplace work of outguessing the batter, baseball would be a far more interesting game if the fans could read our minds as we plot and plan.

Great hitters (Mel Ott is one) wait for the pitch they like before they will swing. The catcher in such cases works like a master of chess. He must call for pitches which the batter will not expect. He must also be careful to call for pitches which the batter thinks you will not dare throw to him. It's like leading to strength in bridge—and most ball-players are good bridge players, too.

I became a catcher accidentally. Ten years ago I was a shortstop, playing on a St. Louis amateur club. In the middle of the game, our catcher fell ill, and I put on the mask and glove for the first time. Today my head is a card index of the batting styles of all players in the National League, and my body is ripped with spike wounds and bruises. Hard work? Yes. But I'm glad I'm a catcher, even though that error on the missed third strike will stand on my record as long as baseball is the American national game. A catcher's big-league life is long, because, more than any other player on the team, his stock in trade is experience.

I earned my spurs in experience that Sunday afternoon at Ebbets Field. I learned then that although baseball is only a professional sport, it welds together the people of our country in one solid mass of believers in fair play.

I'm a better man because I missed the third strike. Not exactly a hero, but certainly not the villain of Gloria's imaginary mystery tale.

THE END

Are YOU the type who mixes well?

The Face of a Sociable Fellow
... Eyes, pupils shiny—lids etched with lines of merriment. Mouth, large—easily given to laughter. This type who makes friends easily—serves friends "double-rich" Cream of Kentucky, made by the "dean" of Kentucky distillers.

Then meet another "good mixer"

Cream of Kentucky

the "CREAM" of Kentucky's finest Bourbons

If you're the congenial type with a host of friends, you'll be the kind of host who serves Cream of Kentucky and so gives his friends a "double-rich" treat... Remember, the password between "good mixers" is "make mine Cream!"

Kentucky Straight Bourbon Whiskey. 86 proof. Copr. 1942, Schenley Distillers Corp., N.Y.C.

There is a story about a town called Kings Row

All knew it, but none talked about it—except in whispers...

Out of the hushed strangeness of these lives, and out of the shadows that hid their shame, film-dom has fashioned a drama most unusual, most touching and Most Wonderful! Here is screen greatness, truly!

ANN SHERIDAN

the girl from the 'wrong' side of town

ROBERT CUMMINGS

he knew women's minds and hearts—too well

KINGS ROW

NOW READY FOR SHOWING!

WARNER BROS.
NEW SUCCESS WITH

CHARLES COBURN

The Screen Play is by Casey Robinson from the Novel by Henry Bellamann • Music Composed by Erich Wolfgang Korngold

Directed by **SAM WOOD** of 'Mr. Chips' and 'Kitty Foyle' fame

Claude Rains • Judith Anderson • Nancy Coleman

KAAREN VERNE • MARIA OUSPENSKAYA • HARRY DAVENPORT

With blue-gray business suits, white, cream, gray and blue shirts are best. The shirt at left is a close-stripe blue, worn with small blue-and-white all-over-effect tie. The complete harmony between shirt, tie and suit makes for conservative but dressy appearance. Shetland jacket, right, worn on the campus or in the country, looks well with tan and brown shirts. Yellow thread in jacket fabric is repeated in tie with contrasting figures

With natural shades in covert, gabardine and whipcord, everything in the brown-tan family is good in shirts. Green is excellent in neckwear because of the greenish cast in the suits

Wine-and-gray striped shirt at left, worn with gray flannel suit and red tie with black-and-white figures. For contrast with the gabardine suit at the right, choose blue shirt with rust-and-gold striped tie

We'll Match You

erry L. Jackson

Navy have good shirt-tie color combinations: Khaki and black (soon to be khaki and blue and black, white and black. Life you have a wider range of color juggling due to shortages.

Before long white shirts will be up cream color, due to shortage. There'll probably be more colored shirts, but plenty of the old kind. This won't hurt: ties should be lighter than

Three chief suit colors: blue, gray, blue. Mix 'em or you can't go wrong. But a green shirt with a blue suit. You have four collar styles to choose: Medium point, spread, for big-shouldered California long point; the

button down. The California's the most comfortable.

Ties? For town wear, simple designs, subdued colors. For country, bold colors and patterns. Let the basic color in your tie be that of your suit or shirt; then add a contrasting color.

Good combinations: Gray suit, blue shirt, maroon tie; dark blue suit, gray shirt, blue-and-white polka-dot tie; brown suit, tan shirt, green-and-tan tie.

Tip for men whose wives buy their shirts: Get the Little Woman a color chart from an artists' supply store—but do it tactfully, Brother! And when she tells you to unknot your tie at night, instead of just loosening it and slipping it over your head, take her advice. Your ties will last longer and not wrinkle so badly.

Want to know where to get any of the ties or shirts shown here? Just ask us. ★★★

PARTY

Peach Short-Cake with Gingerbread layers. M-m-m! Add water to mix... bake layers... spread with whipped cream and fruit.

LUNCH BOX

Hearty, wholesome dessert for young or old. Use greased muffin pan (or line with paper cups). Extra-delicious with frosting.

AFTER SCHOOL

Mouth-watering gingerbread, and a glass of milk... real nourishment there! Only the choicest ingredients in Dromedary mixes.

HOT GINGERBREAD

LIKE YOU NEVER ATE BEFORE!

Just add water to Dromedary Gingerbread Mix!

FOR TONIGHT'S DESSERT serve a piping hot square of this fragrant, melt-in-your-mouth gingerbread, topped and filled with whipped cream. If your folks don't throw their arms around your neck, they just aren't human!

2-MINUTE RECIPE FOR CHOCOLATE STUDD "GINGIES" with whole pieces of chocolate!

You'll want to send them to boys in the service, children at school—they're so tasty, so easy to make.

Just add 1/3 cup water and a 7 oz. package of semi-sweet chocolate pieces to Dromedary Gingerbread Mix. Bake 10 to 12 minutes in a moderate oven—350°.

BEATS ANY HOME RECIPE... yet costs you less!

• Even the best cooks admit Dromedary gingerbread mix beats their own! And it comes out perfect every time! Yet it actually costs less than mixing at home! Made from the private recipe of George Washington's mother.

were there, nothing else. "This was my room," she said. She looked about it with bitter eyes. "You will be safe here, perhaps," she said, "safer than I was. My mother will bring you food. If you are tired, sleep upon my bed."

"Thank you," Elaine said. "I think it will not be long until my friends come."

She saw Mei-su give her a quick look, but the girl made no other answer. In a moment she was gone and Elaine was alone. The country silence was deep about her. The day had been windless, a rare day, and now the small noises of the country carried clearly to her ear through the open window. A hen cackled, a dog barked. Someone called and two women laughed. Men's voices shouted across a field. But no one came near her.

OUTSIDE the room Mei-su had stood for long minutes, thinking, weighing in her right hand and her left her loyalties. This house in which she was born pressed upon her, though she did not know it. It was made of the earth of the fields which had belonged to the family of Siao for generations. Floods had flattened it, but it had been built again and again through the centuries. Here she had spent her childhood, here her life had been. The weight of the house pressed upon her and after she had stood a little while, she sighed deeply and moved toward an inner room. There, her mother had told her, she would find her brother. She went there and opened the door. He was walking up and down the earthen floor. When she came in he stopped.

"You," he said, "what are you doing here?"

"I was told to bring a white girl here," she said.

"A white girl," he repeated. "Who sent you with her?"

"The German," she said.

"The German," he repeated, as though he did not understand. Then a fury came into his eyes. "That is why the signal has been delayed!" he shouted. "We have been waiting for two hours and more. By this time the city ought to have been taken."

"Wait," she said in a whisper. "Here is something else I cannot understand. I—she—they told me I was not to tell you—not to tell anyone, you understand. But you are my brother. A white man is killed! The Japanese killed him. The Japanese is drunk, you understand—yes, and he is also sleeping. That is—she must have given him a great deal of the drug because he has been asleep now for many hours—ever since last night."

"Where is he?" her brother whispered.

"In her house—I mean, where I belong, you understand. The Japanese is lying across the white man's body."

"Do you know the room?"

"Yes."

"Can you take me to it secretly?"

"Yes."

"Then—at once!"

The brother and sister went out of the house, not by the main door, but by a small gate that gave out of the pigpen.

"What will you do when we get to the Japanese?" she asked—but she already knew the answer. "Come. Quickly!" he said.

Elaine leaning at that moment on the earthen sill of the window, saw them slip through the late afternoon light. They were strangers to her, and yet less strange than all else around her and in this house and when she saw them go she felt her first pang of fear. At that same

moment a clangor rose from the near-by city and spread through the air. She lifted her head and listened. It was the noise of the church bells. Surely it was the bells, but ringing as she had never heard them ring before. They rang and rang, and when at last they stopped she heard the sound of voices, roaring like the waves of the sea, muted by the distance into a deep roar.

She listened and was terrified.

"IT IS not possible to open the door of every house in this city," Father Valerian said at last to Larch. "We have gone into all the doors on the streets that she could have reached in the moment in which I lost her. Let us go back to the mission and hear the others. As for me, if she is not found I shall go into the church and pray while the search goes on."

"There's a very queer feeling in this town," Larch said, staring about him. "Look at the streets—empty!"

"Since the Japanese took the city no one comes out unless he must," Father Valerian replied. He looked old and full of trouble and he was longing to get to prayer and find out what he must do next. Within him his heart was continually crying, "Mary—Mary—Mary—" Was she blaming him somewhere up there in that heaven in which he believed she was waiting for him?

"The people's faces look scared," Larch said, gazing at a man passing by.

"Perhaps they are afraid of you," Father Valerian retorted. "You are very large and foreign-looking. They are not used to white men, except me, and I am not very white after all these years. My color now is about like theirs."

He came out of his daze for a mo-

ment. "Why do you n Elaine marry you?" he the innocence of a saint. lieve you want her mone see you. You are very Paul Brian."

Larch turned crimson u "Did she tell you I wante

Father Valerian tried exactly what Elaine had s words to that effect," he be honest. Larch's crim fury. "She's crazy, then, angry vigor. "I don't wa give me anything. I war what I get. Believe me, w married by now if she'd poor. But since she's ind won't marry her at all."

"Ah," Father Valerian "I must tell her that."

Larch stared at the tall at his side, but the face of as innocent of irony as a needn't tell her anything

But Father Valerian dic He was thinking to his walked back to the missio thing had happened to El pray God to forgive him if one's life for it.

"Here we are," he said gate stood open and he h "Now let us see—God in have found nothing!"

Simple hospitality is back in style again

In times like these, all of us feel increasing need to be together in friendly groups. Courage and stamina are bred in the circle of good companionship. But certainly we are not in the mood for big, lavish parties.

Beer and ale are very naturally the basis of today's simple hospitality. Beer is the very symbol of friendship . . . of rest and peace after work and strain.

It is the beverage of thoughtful and tolerant people who live sanely and wisely. Most important of all, beer is

the beverage of moderation for a self-disciplined people.

Serve refreshing beer or ale to your friends. It has a rich, mellow flavor that comes from skillful brewing of sun-ripened grains and fragrant hops.

It is the natural companion of good food . . . making good-things-to-eat taste their best.

Remember that beer and ale can do much during these strenuous times to bring relaxation and pleasure to your husband, your family, and your circle of friends.

May we send you, free of cost, a booklet describing the important "Clean-Up or Close-Up" program of the brewers of America . . . a program which provides active industry cooperation for the maintenance of wholesome conditions wherever beer is sold. Address: Brewing Industry Foundation, Dept. B 15, 21 East 40th Street, New York, N. Y.

TEN MILES FROM MIAMI IT'S 110° BELOW

YES, 10 miles above Miami, and we mean straight up, it's colder than at the same altitude over the North Pole. It may be 50 degrees colder, and that's no military secret.

This condition and similar ones impose problems on our military aircraft and personnel—and their solution is the immediate concern of AiResearch.

Military operations at plus 30,000 feet are already at hand and flight upward to 50,000 feet is a future certainty. The unique research laboratory at AiResearch, in which

acute conditions of temperature and pressure are simulated, helps give our military airplanes their superiority. We are already busy solving the problems of future stratosphere flight.

The "air-conditioning" of engines and cabins, whether creating a comfort zone for passengers or cramming tons of processed air into power plants, is the responsibility of AiResearch engineers.

TO THE END THAT AMERICAN AIRCRAFT WILL FLY EVER HIGHER, FASTER AND FARTHER

the house. Father Valerian looked at him. "Rudolf—have you—found Elaine?"

In the midst of the noise his voice sounded as weak as a child's.

"Come here with me," Rudolf said pityingly. He drew Father Valerian toward the hospital, forgetting Larch until he saw him following. "Please," he said, "go into the house and wait a little."

"Tell me—just one thing—have you heard anything about her?" Larch demanded.

"Please," Rudolf begged him, "wait."

He hurried Father Valerian into the hospital and took him to the first room and shut the door.

"I know where she is," he said, "and she is safe."

Father Valerian sat down suddenly on a bench and put his hand to his mouth. His lips were trembling, also his knees. He could not speak for a moment. Then he took his hand away, "Where is she?" he gasped.

"I will not tell you unless you promise not to tell that young man," Rudolf said. "It is what she herself made me promise."

"Did Elaine say I wasn't to tell him?" Father Valerian asked.

"She does not want to see him. She wants to be hidden until the two Americans go away again."

"How can she be hidden safely in this?" Father Valerian asked.

SHOUTING voices filled the air. The bells had stopped. Someone was battering at the mission gate. "She is safe," Rudolf insisted. The battering grew louder and voices shouted over the wall: "Priest—foreign priest, open to us! There are wounded men here!"

"Wounded!" Father Valerian exclaimed. He rose involuntarily. His mind so trained to years of service, went back to its unconscious work.

"Yes, you must open the gate," Rudolf said.

"You say she is safe?" he asked Rudolf.

"She is safe in the village of Siao," Rudolf replied.

Father Valerian was rolling up his sleeves. "Is that where she is?" he cried. "Yes, that is good. Let her stay there. She will be safe enough for a while. Where is Chen? I need him to help me."

Rudolf gazed at him. The priest, he thought, is greater, after all, than the man. What strange drug poured into a man's veins when his spirit was given to God? "You agree that we must send her home, Father," he said gently.

"Certainly we must," Father Valerian agreed absently. Now that she was safe he had almost forgotten her. At the gate there were wounded men waiting for him. "Yes, this is no place for a young white woman," he added, "especially Elaine." He looked restlessly toward the door. "Find Chen for me," he commanded, "and I will go and open the gate. They will not understand it that our gate is locked against them when they need to come in. It is never locked. They will think we have changed—or run away."

"We must not let them think that," Rudolf said, half smiling. He stood aside as he spoke and let Father Valerian stride past him, his ragged robe flying back from his long legs.

"How wrong it would be if I let Elaine stay here with him," he thought. "He is already an angel in heaven, and what would he do with her? She is all woman and how lonely she would be!"

It was at this moment that he knew he had all the time been arguing with no one but himself. His heart had been trying to defend its own longing to find it right that she be kept here, in spite of all. Knowing how helpless he was, how none would trust him as a friend,

yet, he had argued with himself ever thought that perhaps it could be happy with Father. Now he saw that she could not slowly toward the mission. Larch waited for him.

"HERE!" Mei-su whispered. The lowing of voices, the non, the bursting of guns ground upon which the cit. A voice could not be heard an ear, and she touched her sleeve as she spoke.

He turned at her touch at the door she opened. He wanted to be where he ought to be, ment, eager to be gone, an signal of the bells had been. If he found the German he him to account. But mean was the enemy who must find. He saw the two men there still, but the Japanese were to wake. The noise had per the dimness of his drug he was muttering and his striking out against imagination.

"We are almost too late that German," he muttered quite!

He drew his pistol as he bent and put it to the temple. Japanese and fired. Mei-su hid her face. He went touched her shoulder.

"You wanted him dead," she lifted her face. "I killed him!"

"And you," her brother are forgiven for everything as he spoke and leaped out of the window and disappeared now that she had disobeyed, went to find her and she had done. She went to Li-hua stood at the door, but to him that she must go in. "She is sleeping," Li-hua willingly.

"This is life and death simply and he let her in.

But Helen was not sleeping. Lying on her back, her hair streaming over her pillow, she looked up with envious eyes as Mei-su came in.

"The Japanese is dead," "It was my fault. I told my brother has killed him."

A MOMENT ago Helen herself she did not care. And yet when these words she leaped out and rushed to the room where dead men lay and Mei-su her. Yes, the Japanese was dead. "Oh, stupid child!" Helen now how will we explain this?"

"We can say they killed Mei-su faltered.

"There is no pistol here," she stared at this elder, bling, her round black eyes tears. Helen flung back sighed. Then she saw the her anger was gone.

"Come," she said, "don't men! Let us escape as fast as we can." "Escape?" "Overland, until we can road, then back to Shanghai." "All of us?" Mei-su asked. "No, you and I," Helen. "Li-hua shall stay here to keep the house open a few take the other girls home."

Mei-su took the edge of the bed in her fingers. "But I am to go with you," "Until you leave me," Helen replied.

as hours later that she remembered what the dead Japanese had told her at somewhere at some harbor, that ships would be bombed by Japanese airplanes. She and Mei-su were in a filthy inn where they had come back. The same paper she had seen from the captain's pocket had their safeguard whenever they stopped. Another day's journey was leading them to a railroad.

It had been easy enough. She had a sense of miraculous freedom, as though she had cut off all her old life and was beginning again, with this child and her, a human being to love and protect her. She was weary of men. She lay on the brick bed, thinking, and thus she remembered that portentous night when the drunken Japanese had spilled from his unheeding lips.

"It does no good to me now to know what you thought. 'Whom can I tell? I have told the German.'"

She was regretful for a while, and then she gave it up with a sigh.

"I cannot go back," she thought, and she was asleep at last.

THE rightful din of the attack had been on while Rudolf was talking to her. It had been a difficult talk. They were wary of each other, and for a little while neither had said anything, each waiting ostensibly for Elton Field to speak.

"You are sure Elaine is safe at that point?" Larch said two or three times.

"Oh completely," Rudolf had replied. "Perhaps, that is all. But I think you should wait for Field, because he will have some help from the Japanese. Why doesn't he come? Well, we must wait. It is not safe to go out."

The fellow who brought us was told to wait," Larch replied. "I suppose he will wait."

He was unusually somber and silent, as though he was thinking of what Father had said. Now to marry Elaine was the last thing he would ever do. He would take her home and put her on her doorstep, tip his hat and go off fighting—and mad as the devil.

Rudolf stood, as he so often stood, leaning against the table, his arms crossed, watching the surly young face of the white man. Could one trust one's beloved

to this young man? Yes, perhaps, there being no other! He sighed and bent his head and at this moment the clanging of the church bells broke out again like madness over the compound. The bell was a gentle thing accustomed to measured pealing for worship, to joy for marriage of Christian Chinese, to slow tolling for the dead. But now someone was jerking the ropes and the bells were frantic.

"What the devil is that racket?"

Rudolf leaped to the window and stared at the low belfry. "I cannot imagine," he said. But he knew. He could see someone there, pulling the ropes with all his strength. It was Chen, his robes flying out as he bent to and fro with the jerk of the ropes.

"It is a signal to the guerrillas, doubtless," Rudolf said hurriedly. "Where can Field be?" he said again most anxiously. "It will not be well for him if the guerrillas find him with the Japanese."

But Larch was already on his feet, cramming his hat into the pocket of his topcoat. "To hell with Field," he said. "If there's to be this sort of thing I've got to get Elaine out right away. It's no show of ours."

"No, of course not," Rudolf said, uncertainly. "Yes, you are right—we must think of her first."

He hurried out of the house after Larch. At the gate an old man stopped him. He felt the man's hand hard upon his arm and he could not shake it off. When he looked, he saw it was the old man he had seen in the half-caste woman's café!

"German," the man said, "I have something to put in your ear."

"Speak out," Rudolf said in Chinese. "This man with me does not understand your language."

BUT Li-hua stood on tiptoe and whispered: "There are two dead men at our house—the Japanese I can care for—I will give him to the Hill and Water men when the city is taken. But the white man—how can I care for him?"

"What white man?" Rudolf demanded.

"Him," Li-hua hesitated. He was loyal to his mistress and not a word would he say that once the dead white man had been her big-man. Then he

ME
WALK?

BETTER LEARN to walk pretty quick, Junior. When the family car gives out, you'll have to start walking, too.

No use crying. It's the war, you know. So give Dad this tip. Tell him that Sinclair Dealers have developed a special Sinclair-ize service that makes cars last longer. Tell Dad that just as American railroads, airlines and the U. S. Army use Sinclair lubricants to save wear on vital transportation equipment, so can Sinclair Dealers use specialized Sinclair lubricants to save wear on your family's car.

Tell Dad to ask his nearby Sinclair Dealer about this service today. He'll find that Sinclair-ize service can save him money and worry, too.

pointed at Larch. "The white man who came with that one."

Elton Field! Rudolf, staring at the brown face with its scanty gray whiskers, all but cried out the name. Then he did not. Elton Field dead?

"How did he die?" he asked the old man.

Li-hua looked to the sky, his eyes full of innocence. Then he looked down at the earth. He knew how the white man had died. He was standing by the door, as he always did, and he had looked through a crack in the rough boards, and he had seen her take the long pin from her hair. Yes, but for such a thing that pin had been made. The white man had treated her very ill, and women had no way to right themselves if they did not use revenge. Never so long as he lived would he let her know that he knew what she had done. When he looked at her he saw always a little lonely half-Chinese child in a white man's house, who came into the kitchen for her only company.

He leaned toward Rudolf. "The Japanese killed him," he said.

"What is the old fellow saying?" Larch asked impatiently.

"Nothing of importance," Rudolf said quietly. "Come, let us go on!"

He paused for one word more to the old man. "When it is very dark tonight," he said, "past midnight, then bring the body here and put it in the church. The foreign priest will see to its burial."

"Ha," Li-hua said, and trotted off into the darkness.

ELAINE was waked from her shallow sleep by the light of a candle upon her face. The old farm mother stood there at her bedside. She had come in once to bring food, but now why did she come? Elaine sprang up and pushed back her hair with both hands.

"What is it?" she asked.

"Two men," the old woman said. "One the German."

"Oh," Elaine cried, "they have come for me, doubtless!" She leaped out of bed and drew on her Chinese cloth shoes. At last they had come—Rudolf and Father Valerian!

She followed the old woman eagerly through another room. Then at the entrance to the third she stopped.

"Oh!" she cried.

It was Larch. Rudolf had brought Larch.

"Elaine," Rudolf said, "you must go away at once—"

"With me," Larch said firmly. "But see here—I don't want you to think it is for—anything except to take you home. Your father sent me to get you and bring you home and it is a job, and that's all. I'll deliver you over to him and say goodbye. You needn't worry about—anything."

She flung up her head. "Rudolf, you promised—"

"Promises are nothing when the world changes around you," Rudolf said steadily. "Elaine, the city is being attacked. How do I know what will become of us?"

"But Father Valerian"—she broke in—"if Father Valerian is in danger—"

"We shall all be in more danger if you are there," Rudolf said ruthlessly. "We are two men. We can take care of ourselves. But not if we must always stop to think of you—to look after you—to protect you in the dangers which are yours. What if the Japanese win? Who can protect any of us then? If you value Father Valerian's life, go away!"

"But you—"

"I will take care of him," he said steadily. "Go home, Elaine, go home!"

She did not answer. But she and Larch stood facing each other across the room, stubborn, proud, young. Rudolf watched them, aware in agony of their youth and beauty.

"You two cowards," he said slowly. "Neither of you dares to marry the other. Each of you is thinking only of himself—of no one else. You, Elaine, you are not truly thinking of Father Valerian, no, but of your own pride. You, Larch, do you think I would let money keep me from marrying her? If she loved me, I wouldn't know her millions existed! I, a German, an enemy to her country! I wouldn't know that anything existed between us, though everything does—if she loved me!"

Larch looked at him, stupefied. "You love her!"

"I love her," Rudolf said gently. Elaine bent her head. "But she does not love me."

NONE of them spoke for a moment. Elaine did not lift her head. The old farm woman stood there holding the candle and wondering at the angry talk of these white people, of which she could not understand one word.

Then in the silence Rudolf began again, still in the cool gentle voice of an elder speaking to two children: "You've put me through a nice hell, you two, for nothing. Neither of you deserves anything if you have not the courage to trust each other."

Still those two did not speak. He turned away in seeming impatience. "Very well, Elaine, if you will not go home, then come back to Father Valerian. But I will be responsible for nothing that happens."

"Wait," Elaine said in a small voice. "Wait, Rudolf!" She lifted her head at last and looked at Larch. All her face was pink in the candlelight. "Can you trust me?" she asked him.

Larch shook his head and looked away from her to the candle. "No, you'll think you won't remember your mother but you will."

"What if she does?" Rudolf cried at him angrily. "Can you not help her to forget?"

"But if I can trust you?" Elaine's pleading voice fell upon the silence again.

"Who can make promises for years ahead?" Larch retorted, and went on looking at the candle.

Rudolf laughed, loud harsh laughter that made the old Chinese woman stare at him and shield the candle with her

hand that she might see clearly. "Come, Elaine," "marry me! After all, I desire more than this fellow does. You Americans are—always about money!"

"We aren't—he isn't—" Elaine out in fury.

"He is!" Rudolf shouted. "We are thinking about yourself."

"She isn't," Larch cried.

But Rudolf pretended no longer. "I give you both up! I take the two of you here. Elaine, for you at the mission for one I get back. Then if you are I will try to save my own life ther Valerian's—if it is not

"No," Elaine said in a snarl, "don't wait!"

Whatever these two men were the old Chinese farm mother the white woman obeyed. Even she did as she was told. The young white man led her away about her—his sister doubtless was so familiar. Then she whole matter, for the German money into her hand, a lot more than she had seen in money was saying something at last could understand.

"Tell your son by whatever comes from him, that even now to proceed according to

"Certainly I will tell him plied fervently. "And I will tell you are a good man."

"For that, thanks," Rudolf followed the other two.

IN THE airplane, soaring over the Chinese landscape which now barely see coming out of the beneath them, Larch spoke Elaine, though his eyes laughed. "Do I understand that you are going to me, madam?"

The wind was roaring past he had to bellow in her ear his warm sweet breath upon and she turned and the wind her hair about her face, and she vigorously. Then she saw all the mounting in those dark eyes her face and she dropped her shoulder, and his arm about her shoulders, and he held her again and again. But again

"Say, Mr. Farnsworth, you left a few personal belongings that we of the Navy won't have use for!"

because . . . IT'S SURE TO RAIN!

midst of his kisses she felt his lips at her ear.

"I accept, formally," he said, "on one condition. If ever you mention the word money to me, for any reason, I shall return you to your father. Understand?"

She nodded again, her lips upon the brown smoothness of his neck. He took her left hand and kissed it. Her rings were hard to his lips, and he pulled them off and dropped them into the pocket of her coat.

"No more rings on this hand except mine," he said.

She did not deny him. Yes, it was better to put her mother's rings away. She and Larch wanted no memories of unhappy love.

Larch gave a sudden leap.

"I forgot!" he shouted. "The anesthetic!"

"What anesthetic?" Elaine shouted back.

"I brought a box of it—a fellow asked me to bring it along and it's there in the mission house. I forgot to tell anybody about it!"

Elaine laughed. "Father Valerian will find it—he'll think God sent it."

The machine gave a great dip, but they did not know it. In a little mirror the Japanese pilot was aghast at what he saw. Then he righted himself sternly. It was no business of his what two foreigners did behind his back. It was his duty only to set them down at the coast in time for the next clipper. The German had so told him and that he was not to wait for the other white man. Well, his duty he would do!

"EIGHT days," Helen Kung said anxiously, counting on her fingers. She was in Shanghai again but it was a strange city. Now it belonged to the Japanese. The proud English had given it up, the Americans had gone away. She was left there, she and Mei-su and Li-hua, waifs upon the wind. But they were still safe in her little apartment and she had most of Elton Field's money left. She would see what to do soon. Li-hua had come back to tell her that Elton's body he had taken by night to the church, after he had taken the girls home. Then at dawn he had come away himself, leaving the dead Japanese as he lay, and the café exactly as it was.

"It was a loss," he said to her regretfully, "the dishes and the furniture. Still, life is best."

"Yes," she agreed. "Life is I do not know why."

The newspaper which Li-hua brought into her room with her tea had horrible headlines: Bombs Pearl Harbor."

"Shall I pour your tea?" Li-hua asked.

"No," she had said, "I'll do it myself."

Pearl Harbor—that was whose name the Japanese tell! Oh, but those two, had caught on one of the islands waii itself?

She read the paper hastily to have told someone, she thought. It was strange that had always repudiated her will can blood, should now, as she that white blood boiling in anger. The treachery of it, the cruelty of it, the evil. If they had been caught, the Japanese, they had won.

"TELL your mistress," the G said to Li-hua, "that the sheltered has gone home—young man who came from to fetch her. Tell her—they were married."

When she heard it her turned over in her breast. Have killed Elton Field? Would come back to her? She had and then she had wiped away. What she had done she had had gone on living. Now her "Eight days." She counted fingers. She took each day or Oh, they were home! They have not caught them! They she thought, they have won! and put down the paper and her bed and walked around her bed robes, her arms hugging.

"Oh," she muttered. "Oh, they've won."

She thought of the dead Japanese a sort of crazy joy. Well, he was dead, anyway—one less and two Americans were safe. Then she stopped and laughing thinking in English," she said "for the first time in my life though I were an American."

She sat down at the table her face for a moment in. Then she lifted her head and herself a bowl of Chinese tea.

THE END

"The lady above me is a water-colorist, but I don't suppose that has anything to do with it"

Argentina—Axis Gateway

Continued from page 11

all relations with the Axis. They have taken their place at the peoples of Mexico and Central America and all the other countries of South America except Chile. They have broken all diplomatic, political and economic relations with the countries. They would have helped the Western Hemisphere against attack and would have prevented the flow of vital information from the fronts of North and South America to the enemy and enemy-dominated areas abroad.

because the common people of Argentina, like common people nearly everywhere, are decent and hard-working and fundamentally believe in the principles that resulted in the Bill of Rights in the United States. But the people are not sovereign in Argentina. Their rights are stolen. Their press is controlled by martial law arbitrarily imposed by Señor Castillo. He decreed martial law when the press demanded that Argentina honor her pledge to condemn attack against an American nation and aggression against all the Americas. That was after Pearl Harbor. As he saw that, as a consequence of an attack, an effort would be made to bring the Big Three of the Pan-American Conference—the United States, Mexico and Argentina—to rally all of the Americas against the Axis. He knew the attempt would be made at the Rio de Janeiro Conference of Foreign Ministers.

As he saw that, the press, which the Argentinos were warmly pro-American and pro-Democratic. They wanted to go to war against the Axis. At the time, they wanted Argentina's Foreign Minister Ruiz Guinazu to vote with the Americas for an immediate total rupture of relations with the Axis countries. Castillo—pious, glacially conservative, essentially pro-Fascist—simply scrapped the thermometer. He scrapped Argentina's Bill of Rights, suppressing free speech and a free press.

It Didn't Matter In 1918

Comically, Argentina's isolationism in the first World War didn't work. The Allies bought her beef, corn, hides, mutton, wool and quantities of tungsten, and carried goods away in their own bottoms. Argentina received in return what matter and manufactured goods she needed and Argentina's 2,000 families prospered. They hope to do so again. Argentina's neutrality in this war has been very much. For this, there are many reasons. One of them is the matter of communications. From Buenos Aires, you can send cables and radios and you can telephone any Axis country controlled capital in the world. There is the fifth column. The Axis agents in Argentina are more numerous, more organized and more influential than in any other Latin-American country. They are ably led and have plenty of money. They constitute an active threat to the security of the Western Hemisphere and to the success of the war effort. And they're immune to arrest or deportation.

At least one other reason is economic: Argentina, as a neutral, is able to sell wheat to starving Spain, for example, but these food supplies seldom go to Spain at all, but to Germany and Italy. On the ships that ply between Buenos Aires and Spanish ports, moreover, travel the reinforcements for the Axis fifth column in Argentina.

Easy communications between Buenos Aires and enemy points, plus the existence of a fifth column so strong that it is tantamount to an Axis invasion of the South American continent, and the commercial pipe lines between Argentina and enemy Europe make that country an Axis base in this hemisphere.

This is why freedom of communications is probably the most important asset of enemy agents in Argentina. A ship sails from, say, Rio de Janeiro. Enemy agents transmit this information to Buenos Aires. That part is easy. There are at least fifteen high-powered clandestine Axis radio stations operating at strategic points on the continent. The German Embassy receives the information and transmits it, in code, to Berlin. There the High Command communicates the message to a raider or a submarine. The ship that sailed from Rio is sunk.

Every scrap of information valuable to the enemy, legitimate news as well as military secrets gathered by Axis spies, can be transmitted to Berlin, Rome and Tokyo in this fashion. Any indiscreet news item appearing in the press anywhere in North and South America can be forwarded through Buenos Aires to where it will do the Allied cause the most harm.

Communications—Made to Order

Enemy agents operating in the Argentine capital don't even have to communicate directly with Berlin. They can wireless, cable or telephone to Madrid or Vichy, from where their dispatches can be readily sent on to Axis capitals. In the other direction, the fifth column in Argentina receives its orders and instructions.

That the Axis fifth columnists have a well-organized communications system on the continent itself is not a myth. The United States government knows of the existence of the clandestine radio stations. Recently, the Nazi Embassy in Buenos Aires was caught sending a new high-powered short-wave transmitting apparatus to Chile. The German diplomatic pouch on the Santiago-bound Pan-American plane looked over-bulky. The bag was legally opened and the transmitter was discovered. But how many radio sets did the German-operated Condor lines carry to scattered points in South America before the lines were grounded?

One of the war's major paradoxes involves the communications systems that enable the Axis and pro-Axis diplomats in Buenos Aires to keep in touch with their bosses in Berlin and Rome and Tokyo, or with Madrid, Vichy, Dakar, Stockholm, Geneva and a score of other points from where messages can be relayed to the Axis high commands. The ownership of most of the cable and wireless companies operating out of Buenos Aires is preponderantly American and British.

The All-America Cables and Radio Company, a subsidiary of International Telephone and Telegraph, is 100 per cent American. It provides cable, wireless and radio-telephone service with all foreign points. As a public utility, it cannot, under Argentine law, refuse to give the German Embassy in Buenos Aires a connection with the Wilhelmstrasse in Berlin.

The Western Telegraph Company is all-British. It provides communications with Europe and the Orient. It's legally on the spot in the same sense as All-America Cables and Radio.

APRIL 'SHOWERS' A-HEAD?

SHOWERS OF TAP-WATER

... may mean "showers" of dandruff—because water washes away natural oils—leaves hair wild, unruly. Use Kreml to keep hair neatly in place, remove dandruff scales, relieve itchy scalp.

SHOWERS OF GOO

... mean "patent-leather" hair—and a greasy, "gigolo" look! Kreml can keep your hair looking soft, lustrous, handsome, well-groomed all day long without being sticky or greasy.

SHOWERS OF FALLING HAIR

Use Kreml and massage to help check excessive falling hair—to help your scalp maintain a proper oil balance.

SHOWERS OF ADORATION

... mean a long reign for King Cupid. Kreml keeps your hair faultlessly groomed, your scalp free from unsightly dandruff scales. Moral: Use Kreml and massage—every day!

Ladies! Kreml keeps coiffures lovely, lustrous... conditions your hair both before and after permanents.

Hair-Care Combination: To complete your hair-care, use Kreml's partner Kreml Shampoo (made from an 80% olive oil base). It cleanses thoroughly, leaves your hair more manageable. Ask your barber for an application. Get BOTH at your drugstore.

DON'T USE WATER USE

KREML

REMOVES DANDRUFF SCALES

of Buenos Aires until Italy entered the war. Then the Italian cable was cut, but Italradio is still working. It carries some Italian and Spanish traffic.

Communications experts admit that it is entirely possible for Nazi-Fascist operatives to make direct contact with submarines or Axis warships from clandestine stations operating on Argentine soil. Two such stations have been located and smashed up, thanks to the Taborda Committee of the Chamber of Deputies. But, radio and telephone men argue, if the Argentinos have been able to locate two stations with their poor finder equipment, there must certainly be others.

Where the Money Comes From

The fifth column itself draws its strength from the foreign born who reside in Argentina. There hasn't been an official census in the country for years, but a survey made on November 6, 1941, gave the nation's population as 13,320,641.

The foreign born, excluding first and second-generation citizens born in Argentina, who are largely anti-Fascist and anti-Franco Italians and Spaniards, included 50,000 Germans, 680,000 Spaniards, 780,000 Italians, and 850,000 "others." There are few Japs in Argentina.

Funds for the activities of the German fifth column, the strongest and best organized, are levied from the thousands of German nationals or descendants of Germans who are in business in the country. An estimate of how well provided with money the Germans are can be obtained from the following data: From 1932 to 1939, or in about seven years, the German Embassy in Buenos Aires spent an average of \$225,000 a year. In the year ending June 30, 1940, however, the German Embassy disbursed \$784,000, and in the year ending June 30, 1941, it paid out \$1,930,000. These figures have been reconstructed by the Taborda Committee from known withdrawals from local banks. Hidden cash outlays made directly to agents, propagandists, saboteurs and associated craftsmen must bring the totals up considerably.

The Wintershilfe, the German Winter Help organization, alone raised enormous quantities of money for fifth column work. The contributions levied upon German descendants and nationals varied from 4% to 32% of the individual's income. Wintershilfe produced \$287,000 in the year 1939-1940 and \$334,000 the following year. These funds were paid into the Nazi Embassy's Chamber of Commerce.

Investigating the accounts of German banks in Buenos Aires, Radical Damonte Taborda found innumerable "bearer checks" issued by the German Embassy. Amounts paid out varied from \$250 to \$5,000. Most of these were outright bribes. A check drawn "to bearer" in Argentina requires no endorsement.

German fifth columnism in Argentina dates from the moment the Nazis came into power in Berlin. There were already thousands of German settlers in the country. When Adolf Hitler took over, the Germans in Argentine business firms, those employed in important chemical firms, in the building trades, the wool industry and the old business, who wouldn't follow the Nazi party line were promptly fired. Almost all of them, however, fell into step with the Brownshirts. Relatives at home were held as hostages in a pattern of things that's now as familiar as that of the panzer blitz.

The National Socialist-Democrat Argentine Party and the Labor Front were duly organized. Both were dissolved on May 15, 1939, following a national scan-

dal over the discovery of plans in Patagonia, but the Taborda Committee a few months ago proved that they were still doing business at the same stands with new names. The Labor Front became the Association of Benevolent and Cultural Societies. The Labor Front became the Federation of German Trades Unions.

In the "Benevolent" association, strong-arm boys are organized into cells, or Stutzpunkte, of 10 men each. Every square mile of Argentina is divided into blocks, district zones, under their respective commanders, Landeskreisleiters and Landpenleiters. The officers for these troops are regular SS and SA men. Until May 15, 1939, they drilled, practicing shooting with rifles and did their exercises in uniforms. Now they shoot and do their exercises in civilian uniforms.

That the German fifth column is more than "cultural" or "benevolent" intentions regarding Argentina, therefore, the Western Hemisphere can be deduced from the fact that Buenos Aires and its environs have been divided into nine zones with a Gruppenleiter over each. At a proper moment, Buenos Aires is taken by the Germans with a few phone calls. Buenos Aires is a man's head on an anemic body, and the head falls, the body topples.

American and British oil companies and other firms have cleaned up in Argentina, Italian, Spanish and Fascist personnel. But the Argentine oil monopoly, the YPF, is controlled by Germans. One German engineer was caught making detailed drawings of a refinery on the Argentine coast, though he held only a minor valve-turner or oiler in one of the plants.

American oil men are confident that Berlin possesses complete blueprints for every oil refinery, storage depot, plant, railroad and key industrial in Argentina. In recent years, German nationals have completely taken over the chemical industries, the trades, engineering, drafting. In the past ten years, there has been a continual flow of German technicians into Argentina. Their supremacy in these fields might have been accidental, but there is a preponderance of evidence that it was planned and political.

The two electric-power plants which furnish Buenos Aires with power are owned by Belgian, Spanish and Swiss capital. One plant is owned by an Italian. In the provinces, the fifth column is almost as strong as in the centers. German "rowing clubs" have taken the headwaters of Argentina's rivers. The Argentine province of Mendoza, bordering on Bolivia and Paraguay, across the frontiers of which a band arms traffic flourishes, is virtually a German colony.

Attachés and More Attachés

Buenos Aires, however, remains the capital of Nazi espionage and sabotage. The Axis agents' German Embassy. This is staffed with a staff of 150 diplomats, consuls, military and naval attachés, and commercial attachés. Despite the fact that German trade in Argentina has been reduced since Berlin's affairs in Buenos Aires are handled by ten men.

The Nazi rendezvous is a comfortable, modern hotel near the German Embassy. That's where Herr Giese, Gestapo big shot, landed when he was tossed out of Venezuela.

Herr Giese's trail was picked up in loyal Venezuelan, Brazilian, Paraguayan, and Uruguayan papers. He made his way to Argentina

he arrived, the American Embassy re-
quested the Argentine government to
arrest and deport him. Nothing was
done. Finally, under much pressure
from Washington, Buenos Aires police
inched up on Herr Giese but he had dis-
appeared.

He was located in a hospital, where he
had been admitted on presentation of a
doctor's certificate to the effect that he
was a very sick man. Had Argentine
police taken the trouble, they would
have noticed that Herr Giese's docu-
ment was signed by a German physician
who was, of all things a *gynecologist*.
Giese entertained in his hospital suite
for about a week, receiving many guests
and giving and taking orders. Then he
disappeared permanently.

Herr Giese is one of at least twenty
Nazi agents operating in Buenos Aires.
Their names and case histories are
known to the American government,
which has communicated its informa-
tion to the Argentine police and the
Foreign Office. But nothing has been
done about these men despite the Pan-
American wartime agreement that the
movements of spies and agents must be
mutually reported and the persons ar-
rested, detained or deported. At least
200 known agents have applied for
visitors' or permanent visas at the Ar-
gentine Foreign Office since the other
Latin-American nations put the squeeze
on enemy agents. They're all filtering
down now into Argentina and Chile, but
mostly into Argentina, where they can
be sure of continued hospitality. It's
possible that Chile will break relations
with the Axis one of these days.

How many enemy agents enter
Argentina by steamer from Europe, or
across Argentina's unguarded frontiers,
isn't known. They come with false pass-
ports and faked documents, and disap-
pear into the interior. Usually they
speak flawless Spanish. They take the
trouble to learn Spanish before coming
to South America.

Berlin-Buenos Aires Pipe Line

One of the chief sources of worry to
American and British military people,
as well as to diplomats, is the steam-
ship line owned by Franco Fascists who
confiscated it from the Republic pre-
Spanish Civil War owners. This line con-
stitutes a direct Axis pipe line between
Berlin and Buenos Aires. From one of
its ships at Trinidad, recently, the Brit-
ish arrested the notorious Leon Hirsch,
agent of Otto Abetz, with six or seven
other agents. Now the Buenos Aires-
to-Spain ships no longer stop at Trini-
dad or any other ports where they might
meet with difficulties. It was on this
line that the German ambassador to
Argentina, Von Therman, recently re-
turned to Germany.

British and American policy toward
Madrid is kid-gloved. Spanish ships on
the high seas are not annoyed. In Wash-
ington, it is still hoped that Fascist Gen-
eral Franco, Premier of Spain, will not
turn his country, army, navy and ships
over to Germany to be used against the
Allies, just as the myth persists that
anything we can do will prevent Vichy's
Marshal Pétain from knuckling to the
Nazis whenever it becomes impossible
for him to do otherwise. That's why
Spanish ships safely sail out of New
York with oil and from Buenos Aires
with food, despite the lack of positive
proof that supplies they carry don't
reach Axis countries. Wheat and meat
can take the same route to Berlin that
Ambassador von Therman took.

An integral part of Axis fifth column-
ism in Argentina is the Nazi-controlled
press. The bellwether of Nazism is El
Pampero, printed in Spanish, edited by
Enrique Osés. This newspaper has a
circulation of from 75,000 to 100,000, or
from one third to one half of the distri-

bution of pro-Democratic La Prensa,
and about equal to that of genuinely
Argentine newspapers such as El
Mundo, Crítica or La Nación.

El Pampero is brilliantly edited, well
written. It persistently plugs the Axis
party line, which is anti-American and
anti-British, of course. It distorts Allied
victories into defeats and extols Axis
losses into major triumphs. Editorially it
preaches anti-Semitism and, when it isn't
Red-baiting, it is screaming "Yanqui
Imperialism" and proclaiming Argen-
tina for the Argentinos. Cash comes
into the coffers of El Pampero to the
tune of 100,000 pesos every month, and
the advertising department of El Pam-
pero derives almost all of its income
from Axis advertisers.

El Pampero Goes to Town

The German Transocean News
Agency, an offshoot of DNB, Italian
Stefani and hopped-up "specials" from
Berlin, Rome, Tokyo and Madrid fill
El Pampero's columns. La Prensa, El
Mundo, Crítica and La Nación were
lukewarm, almost taciturn, when Ruiz
Guiñazú returned from the Rio Con-
ference after having knifed—with the
aid of oily little Juan Bautista Rossetti
—Sumner Welles' program for a unani-
mous outright break between Latin
America and the Axis. But El Pampero
screamed: "Guiñazú Returns Victori-
ous."

Proud and supercilious Argentinos
preened. There was a full-color Argen-
tine flag waving literally and figuratively
on El Pampero's front page, along with
an enormous picture of pince-nezed
Ruiz Guiñazú. The fact that Ruiz
Guiñazú's overloaded French Potez
plane ran out of the runway in Rio and
pancaked into the harbor was played
down. In Rio, Brazilian Foreign Min-
ister Oswaldo Aranha quipped: "It
wasn't the plane that was overloaded—
it was Ruiz Guiñazú's conscience."

For a long time, it was a mystery
where El Pampero got its newsprint.
American economic-warfare sleuths
traced the source—a Canadian firm.
The source has dried up on El Pampero
but the paper will keep going. It has
about one year's supply stored up. It
bought it in dribbles through straw men
in Brazil, Bolivia and Paraguay. The
decent papers in Buenos Aires are run-
ning out of newsprint, but El Pampero
is well fixed with the raw materials of
propaganda.

There are other pro-Axis, Nazi-ma-
nipulated newspapers in Argentina. The
German-language Deutsche La Plata
Zeitung plays the Axis game, but not too
willingly. It's the newspaper of the
old-timers who would be good Argen-
tinos instead of Germans if they had
half the chance. The same is largely
true of Il Mattino d'Italia, whose propa-
gandizing is limited almost exclusively
to unassimilated Italians. For the most
part, the Italians become more creole
than the creoles within six months of
settling down in Argentina. However,
there are plenty of Fascist die-hards
among them, although their loyalties to
the old country have been rudely shaken
by the sorry figure Mussolini has cut in
the war.

The government's pro-Axis policy and
the fifth column combine to make Ar-
gentina a menace. The proportions of
the latter are such that I heard Allied
diplomats and soldiers speak of it with
something of the horror that I heard
wide-awake but helpless men speak of
the situation that existed in Holland,
Belgium, France, Greece and still exists
in Egypt.

But until all relations between Bue-
nos Aires and Axis capitals are severed,
Argentina remains the potential Norway
of the South American continent.

reports of their work and arranged for them to come back East, Helen as manager of Crockford's Club and Al as associate editor of The Bridge World.

But before they left the Coast in 1937 they decided to get married, which they did across the border in Mexico on March 28th of that year. When they got back East both were in bridge to stay. Mrs. Sobel was chosen by Ely Culbertson to join the team of four which he took in 1937 to the international championships in Budapest, Hungary, where she, Charles Vogelhofer and the Culbertsons gained some notable triumphs. Back from there, she has played in an increasing number of events and her reputation has steadily grown, as has Al's.

It is pretty hard to get Mrs. Sobel to talk of her bridge unless you are about to become her partner and want to know what bidding conventions you are going to use. Then you will learn from her that she:

1. Uses no artificial slam conventions unless you insist, since most devotees overdo the use of them.
2. Prefers all bids in their natural meanings, as causing fewer misunderstandings.
3. May violate any convention at any time, for the sake of general results.
4. May bid the same hand ten different ways against different opponents.
5. In choosing an opening bid, likes to select the suit which will best prepare her to handle the worst possible response from her partner.
6. In general, prefers to play "by ear" rather than "by note," fitting her action to the situation which exists at the time rather than following some previously determined rule.

Just such a simple summary of general principles was discussed by her in the few minutes preceding the event which clinched her place as ranking player of the past season. It was the national open team-of-four championship, scored on a board-a-match basis, which was played in the greatest tournament ever held by the league, at Richmond, Virginia.

A Jolt for the Masters

Only a week before the tournament, Simon Rossant had telephoned her in New York that he and Peter Leventritt were going to the tournament and invited her to get a partner to make up the other pair for the team game. She wrote then to Mrs. Wilkinson Wagar in Atlanta, one of the South's greatest players, and Mrs. Wagar accepted. When they won the event, in the closest possible kind of contest, by a fraction of a match point, from the great five-man combination of Waldemar von Zedtwitz, Charles Lochridge, A. Mitchell Barnes, S. Garton Churchill and Lee Hazen, it signaled the first time that a pair made up of two women had been on the victorious combination.

During the season, twenty-seven different players shared in the winning of the eleven national events, and twenty others gained second places. The championship hard-luck record of the year—greatest since Waldemar von Zedtwitz five years ago earned eight second places—was registered by the famous Oswald Jacoby, who finished second, barely out of first place, in four of the most difficult events without gaining a victory. His second places for the year made him the leading Master Point holder of all time, with 1,338, ahead of David Bruce Burnstone's 1,332.

One of the striking achievements of

the season was the winning of the Individual Masters' Championship by Lee Hazen of New York by the largest margin in the history of the event, 27½ Match Points. His score was 638 as against 610½ for B. Jay Becker, who was second. The year before, his second place among the thirty-six selected Masters was with 623 points. This was beaten only by Morrie Elis, who broke the record for the event then with 640. Mr. Hazen's two-year average for the event is far above that of anyone else since it was instituted ten years ago.

Coast-to-Coast Bridge

One of the significant occurrences of bridge during the season was the consolidation of the Pacific Bridge League with the American Contract Bridge League, finally giving the game organization which places all parts of the country on an equal basis. Cementing the amalgamation is the fact that Morgan Howard, a former New Yorker but now a resident of Pasadena, California, has been elected president of the League for 1942. The Pacific Coast was better represented than ever before in the national championships at Richmond, and so, of course, was the South. The East is always well represented in both number and quality of contestants, but the Middle West had its least representative year in both total entries and their achievements.

War conditions have caused calling off of the World Bridge Olympic for 1942—the event in which identical selected hands distributed by mail have been played simultaneously in as many as sixty different nations. Last year it shrank to fifteen nations, and this year has had to be abandoned. Replacing it,

perhaps, may be a match between the United States and Brazil, which has sued a challenge for a tournament.

Organized bridge, as the League and its many members as larger events, has always had a good deal of its efforts directed toward the slogan, "Take a Hand." For many years the main beneficiary was the children suffering from cancer, which was continued during the war and still goes on, but the League found time to put on a drive to furnish ambulances. Bridge-for-Ambulances was active in nearly all parts of the country. Prior to our entry into the war, the ambulances obtained through the British-Ambulance Corps to the several world where fighting was going on by the nations which were allies. Since December 7th the drive has been most urgent.

Bridge will not fold up but it is going all-out efforts to aid. The winter drive was sought by three cities—St. Louis; Columbus, Ohio; N. Y.; and at the last allotment of it, New York. The invitation from Mayor La Guardia made by far the most sincere effort, guaranteeing all of the cities near by the event, to be held in New York. The individual masters' tournament is the first event of the season, April 10th to 12th, followed by the derbilt Cup contest April 13th to 15th, and the master tournament is scheduled for Asbury Park, N. J., in May. THE END

"My wife trussed him up while we were waiting. She just finished her first-aid course"

Flight from Hong Kong

Continued from page 13

with Japanese military efficiency. Hong Kong's people still hoped for an immediate disastrous Japanese attack and therefore preferred to believe many wishful reports being widely circulated.

When the Japanese kept bringing contingents of troops, gave us days to have a good look at the hills and blue water of conquest, then issued them and sent them on. Japanese worked to slick up the thousand busses and limousines as the Hong Kong Club's roads.

Days of Waiting

At this time I became impatient and confined on Hong Kong. Japanese were prohibiting people leaving the harbor to Kowloon and land because most important in whom they might be interested on the island, where they wanted them. After more than a futile effort to get across, many others, I noted Japanese along the water front did not give duty until eight o'clock morning. At dawn on the tenth celebration I talked one sampan taking the run across for five. Never did the mile-wide stretch between the island and the mainland seem so wide. I got ashore on the island in plenty of time but another Japanese sentries machine-gunned a junk that had started a fire. Two men were killed.

Sea services out of Hong Kong were suspended, the only way to China was by a land route. I ordered and up the East River, but no man had a gun and every gun was a guerrilla when it met Japanese.

One morning a neighbor's serv-

ant came in through my back door and told me the Japanese had searched my abandoned home, unearthed some of the many photographs I'd taken that were probably unfavorable to their cause, and found my correspondence file which included, among others, the letter I'd recently received from Navy Secretary Frank Knox along with a Naval Expeditionary Medal sent me for my work during the bombing and sinking of the Panay.

They offered three hundred military yen to anyone who could tell them where I was. I got busy immediately, obtained a "return-to-native-village" permit under an assumed name, made arrangements for my family to leave later by a less arduous route and by 8:30 A. M. next day I was waving goodbye to my wife and my baby.

I joined a stream of refugees shuffling out of Hong Kong, dressed in my manservant's clothes and with a sizable growth of hair I'd been saving for the occasion during the twenty-eight days since Hong Kong fell. My faithful man Friday carried a sack containing clothing which I knew would cost me three years' salary to purchase in Chungking and a Leica camera which I'd not been without for the past eleven years. For days I plodded on with the rest of the footsore mass. At last we passed the last Japanese barbed-wire barricade at Shataukok, in the No Man's Land which the Chinese call "guerrilla sector." I met the last Japanese I've seen sitting on top of an armored car swaying to the mournful cadence of a mountain air being played on a flute by a Chinese lad. The thought came to me as I walked past: perhaps some Pied Piper might some day, somehow, rid China of those dwarfish creatures, but as I walked more steps into Free China I thought perhaps it might be better to set traps for them.

THE END

Any Week

Continued from page 4

we're looking about a bit. We look to the social life of the city for example. In Mom's apartment a very young American with a grievance. Mom's Place tolerated in some sections of the United States where a less real people huddle more readily than in the neighbors. This American, a recent graduate from the University of a chain grocery store, told us he addressed himself to two of the hostesses. The ladies were affrighted and asked him to sit down at a table. He did both. Where he began to speak what he had in mind. The ladies looked at him with alarm, abandoned their drinks and fled through a window in the parlor that separates the dance floor from the rest of the place. Further there is beyond. Further, they screamed to Mom to call the police. "What did you say to me?" he asked him. "Not a thing," he replied, except to explain President Roosevelt's good neighbor policy. But they don't understand English.

One day. She's a small, motherly woman. She presides over a cash register. She hears the motto of her place and says: Most of the People Most

of the Time. She asked us if we recognized the phrase, saying that it was uttered by a great American statesman "as he mounted his horse to lead the great American revolution against the usurper." We floundered about a bit and Mom came to our rescue. "The Abraham Lincoln," shrieked she triumphantly. "Are you a child to learn your history from a humble woman of Panama?" Mom has one formula for meeting trouble, exorcising it in its inception. If a brawl is about to occur on her premises she rushes to the scene with a dish of holy water and sprinkles the vicinity. Having done that, the practical woman shouts loudly for the police. The combination almost always restores peace. Money that she suspects of dishonest origin or that may be spurious she also sprinkles. We asked her how life went with her. "I am at peace," she replied, "with God, with myself, with the Republic."

NO JAPS yet—just rumors. Almost everybody here would prefer Japs to rumors. But in their absence Panama has plenty of rumors, almost invariably false. But even false rumors have their merit. Without them the tropics would fall asleep. And that's not advisable if we're to remember Pearl Harbor. . . .

THERE'S A DIFFERENCE WORTH KNOWING!

Rum 89 Proof—Schenley Import Corp., N.Y. Copr. 1942

including Hazel's grandmother, migrated to a four-story private house on Harlem's 118th Street. Hazel entered public school there while Papa went south to teach at a large Negro university and win bread for the family.

Besides acting as family tuning fork, Hazel amazed her mother by picking out melodies on the piano before she'd had any coaching in its mysteries. Grandma had the honor of hearing the infant Hazel's first one-fingered concert. She was awakened by music in the parlor. Tiptoeing in, she discovered Hazel perched precariously on an unabridged dictionary mounted atop the piano stool. She was playing her own arrangement of the lullabies that were nightly sung to her—a medley of Rockaby Baby and Gentle Jesus.

If this performance by the five-year-old caused Grandma Worrell to rejoice, it was also responsible for the birth of a stern resolve in the heart of Hazel's mother: Hazel would learn to play the piano. She would learn thoroughly, she would practice assiduously and she would become great. For three years Mrs. Scott taught her daughter, and when Hazel reached the mature age of eight, she played so well that her mother felt she had imparted all her own considerable knowledge.

"Dear," she said, drawing Hazel to her, "we must now decide what you are going to do with your life. Do you prefer a career of popular music or shall it be the concert stage?"

Since Hazel had long since relinquished schoolgirl thoughts of Prince Charming and a cottage by a waterfall, it only took her a moment to reach her decision. "'Pop' music would be fun," she said. "But concerts—hot dignity! That's for me!"

Big Praise for a Small Girl

As a direct and immediate result of this conversation, Professor Paul Wagner of the Juilliard School of Music was privileged to hear Hazel's rendition of the Rachmaninoff Prelude. And it was indeed a privilege, even though Hazel, finding that her childish fingers couldn't handle the octaves in the piece, cut it down to her size and played it in sixths. When she had finished, Wagner put his hand on her head and quietly remarked, "I am in the presence of genius." Forthwith, to the great embarrassment of Hazel and her mother, he began to cry bitterly. After a while Hazel began to weep, too, for no particular reason, and then Mamma joined the wailing chorus. It degenerated into quite a scene.

Wagner explained that Hazel was too young for a regular Juilliard scholarship but added that he'd be glad to teach her himself. He did so, until shortly after her performance of the Minuet in G at Carnegie Hall. Then he became seriously ill, whereupon Hazel's formal musical education came to an abrupt halt. From that time on, Hazel worked at her music alone, playing the standard classics over and over until she had them pat. Then boredom set in and she developed the "bad habit" of syncopating the symphonies for variety's sake.

She knew her mother would be unhappy about her swing, and her father would be wrathful. He was an academic man, proud of his daughter's tastes.

Papa's sense of personal dignity was constantly in conflict with American race prejudice and, in Hazel's fourteenth year, he came home for Christmas a beaten man. He had been involved in a lynch riot in the South and at once took to reading all available books on

the subject of race differences. He died there a few months later of pneumonia.

Mrs. Scott, now head of the family, took the first available job as saxophonist in Mrs. Louis Armstrong's all-girl band. Before long she organized her own women's orchestra, and naturally enough, Hazel popped up as pianist.

Fifteen-year-old Hazel liked working in the smoky Port Chester bar that hired the band; she liked the late hours, the shop talk. When her job was threatened by delegates of the musicians' union who maintained she was too young to be a member, Hazel, gaining confidence in herself in the world of jazz, shouted them down: "I am over eighteen! And I'll outplay, outswing and outsing anybody who says different!"

The band broke up by mutual consent after it had been in existence a year, and Hazel got a chance in the 1938 Broadway musical show, Sing Out the News.

Hazel was a featured performer and sang the show's hit song, Franklin D. Roosevelt Jones. The song and its singer were the recipients of standout reviews, and Hazel's salary promptly bounced upward to a hundred dollars.

The show closed. Came smoky little places; big, noisy, air-conditioned places; medium-sized places selling soft drinks and hard music—two of them at the New York World's Fair. Then, mainly on the basis of his own over-enthusiasm, an agent organized a band for Hazel. He called it Hazel Scott's Band, adding only "Fourteen Men and a Girl." Which was all too true, because eighteen-year-old Hazel was too girlish to give her band the thought and time it required. She preferred roller skating and polishing her nails.

Finally the agent couldn't stand it any more. "You should be ashamed of yourself," he told her.

Hazel, lugubrious and guilty, nodded and turned toward her fourteen men. "You're all wonderful characters," she said, "and I'm awful. I'm spoiled, irresponsible, selfish—unworthy to have a band of my own. Therefore, you're all fired."

Somehow this led her to an audition as blues singer at a new Greenwich Village night club called Café Society Downtown. In the eyes of the proprietor of the club she was all right for a three-weeks fill-in engagement. However, when he planned on that short shift for her, he had never heard her play her syncopated classics. The first time he did, he rushed up to her and said, "Hazel! Hazel! Hazel! You have a job for life."

That was three years seems to have been as word. With only occasional to do quick but remunerable jobs at places like Boston's Hotel Roof, Hazel has stayed home in the bright new built especially to house her.

Her salary has risen a gross has gone up, and she is only for the time necessary her movie contract. This is ever Mr. Orson Welles de the signal that his forthcoming, It's All True, is ready eras. In it, Hazel has signed feminine lead opposite Lou but she can't guess when come for her to hurry west that Orson," she says. "a vague character."

And the Money Roll In

In the meantime, she can self by watching her phone "Swinging the Classics" cor to breaking the sales record. In the first month it was or it sold out in many parts of and one New York departm loaded three thousand of im than two weeks. Her sing as Mighty Like the Blues Bars, Boogie-Woogie and C are selling no less well.

Then she always has f her own clothes, including l but she calls her "Hi, which she calls her "Hi, fits because everyone, n know her personally or n "Hi, Hazel!" whenever she them in Harlem. Then t evening gowns, which are u less. "I think my shoulders point. Don't you?" she sa has a great assortment of for those two or three occa when she gets herself to enough in the day to rent go for a canter.

Mainly, however, she spe surveying her newly pur and planning what to do "There," she tells anyone "I'm going to build a swim on the proceeds of the mo the right, there'll be a long I can entertain in the ev from record sales. And think I'd like to have a lan den going all the way down—I'll think of some way t Then she sighs wistfully: though, it'll be by swinging THE END

LOOKING HAIR

trucks loaded with all the things we need is passing down this road. And what do you think they will do if they see six young girls working in the fields bent over their hoes?"

Singloo did not answer, he was trembling too much.

"I will tell you," Cheng said. "The first who sees them will stop his truck and get out to have sport with our girls and then capture them and sell them. The other trucks will stop too, to watch and join in the play."

The men who had gone to the field had disappeared.

"We came here today," Cheng said, "from the mountains to attack the convoy but it would have been hard to stop them; some would have got through without this plan. So go, girls," he laughed, "go to the fields and stay bent over your hoes. Let them come up to you. The maidens have given you their knives. Use them. I must let them come right up to you and not start firing too soon for at that moment when they close with you and fling you down those who watch will have eyes only for the sport of hunting women; they will be in the road, crowded onto the drivers' seats and on the tops of trucks. At that moment as they grip you and you turn on them, we will open fire. But you must account for those who have you in their arms. We cannot shoot them, and you will only have your knives."

IT WAS not nice out there in the fields.

Singloo struck at a weed with his hoe, cutting it below the roots so that it fell on his feet. To his right and left the other boys worked, their bright clothes beautiful in the hot sunlight, glinting and shining as they worked. But it was not nice even when you knew that a hundred of your comrades under Cheng were concealed all round you.

He kept glancing sideways at the road. First there would be dust, then there would be the line of trucks and perhaps some armored cars. There might even be a plane or two. Then... he did not like to think further than that. He slashed another tall weed. The haft of Toa-Tuen's knife was hard against his belly as he bent. He thought of the knife. That it was fine, so handsomely ornamented, meant that she was of a great family. That she was a fine lady. He thought of his family. They had always been respected, his father said, but they had never been great, though one of them, Fuan-lo in the second century, had been a local governor.

And she had kissed him. He had never kissed or been kissed by a girl before. Of course in America it was different and he had seen a lot of it. He thought of the parked cars... Petting. But that was not for a Chinese. He was an American but in this he remained Chinese. He felt quite ill as he thought of that kiss. It would be a shame to get himself killed when, if he lived, she might kiss him again. Her clothes still smelled good, but the fragrance was dying as he grew hotter and as the smell of the cut weeds bled out into the summer day. In his mind he went over what he would do. The man would spring on him from behind, seizing his shoulder. He might use judo, but this was unlikely. He would not want to damage a girl. As he came he would drop his hoe, swing round and drive in the knife... the simplifier.

"Strike, turn and cut upward," she had said. How clear her instructions had been, how beautiful her voice, how fragrant her smell, how glorious her slender form—a humming bird of a woman, a lotus flower, a little living figure of ivory and ebony with dark laughing eyes.

They were coming. He saw the dust. "Do not look up, comrades," he said. "And when they come, kill. Remember

our sisters. We are boys," he said, "but we are also men."

The hoes rose and fell, the blades shining as the sun struck them.

The acrid smell of the weeds rose all round him. Now he could see the trucks. He heard the scream of brakes and some shouts and laughter. In a minute, he thought, in a minute...

"Do not run," he said. "Do not turn. Pretend we do not know they are coming... pretend we submit... pretend. Then turn and strike at their bellies."

He cut another weed, a thick one; there was a sound of running behind him, of heavy boots and the rustle of crushed foliage. The moment was coming...

There was a hoarse laugh; a hand was on his shoulder.

"Strike for China!" he shouted as he whirled round. The man's hand was dashed from the collar of his dress. He had torn it. His mouth was open with surprise as the simplifier flashed. How easily it went in. Nothing stopped the blade, there was no resistance—only a hot softness and a choking cry. Then came the shots and the beautiful chatter of Cheng's machine guns. He turned to help little Liopo; he had fallen beneath his assailant and was shouting for help. As Singloo ran toward him he could see the Japanese falling from the tops of the trucks; on the one nearest to him the driver hung half in and half out of the cab. His comrades were swarming over the convoy, dragging out the dead, killing the wounded, and changing clothes with them.

So that was Cheng's plan—not just to get some supplies for themselves but to steal the convoy. Those were Chinese truck drivers who had joined them this morning; he had wondered who they were. He heard the engines begin to roar as he drove his knife into the neck of the man who was holding down Liopo. It took him below the ear and the blood spurted on his shoulder in jerks. Toa-Tuen was beside him. Her bayonet dripped blood.

"You!" he said. "You... what are you doing here, so near?"

"I crept up," she said. "I was afraid

you might get hurt and dress back." She was laughing, her eyes were bright.

"I saw you kill him," pointed with a small foot.

Singloo bent over the belt. Now he would be embarrassed at having a belt out a scabbard. He wiped the ground, driving it in several times. It was for the top where the hilt was. He gave it to her and put c

OF COURSE he was to marriage. What would mother say when she heard if you were old enough to then surely the corollary, old enough to create one. It was a wonderful thought. "I am only a boy," he said. Toa-Tuen was picking of the hilt of the simplifier weed.

"It is dirty blood," she dirtiest this blade has ever

FEEDING AMERICA'S BIGGEST FAMILY

...s "double quick"—that's what it takes to feed the sailors in Uncle the *best-fed* Navy in the world! And the United States Navy has experience that there is thrift, speed, cleanliness and convenience in Edison Electric galley Equipment! For experience has proved that cook-quick electrical way conserves food, vitamins and manpower!

Come On In—the food's fine! The Army Mess-Sergeant, shown above—instructor at the Baker's and Cook's School, Camp Edwards, Mass.—demonstrates with a Hotpoint Fry Kettle how to turn out golden-brown doughnuts that would be a credit to the best home cook. He's learned from experience that you can *depend* on Hotpoint Electric Cooking for healthful, nutritious, economical meals!

rs "Overalls"—America's war workers—need meals, too! This Hotpoint-Edison Electric in mid-west war industry plant is typical of being used throughout the country.

Mrs. Raymond Matherson—one of more than a million Hotpoint Range owners—says, "I'm mighty proud of our range. It's clean and safe—economical, too. I save money and current by avoiding unnecessary use of high heat."

Mrs. A. W. Peterson, Kansas City housewife, agrees—"Our Hotpoint Refrigerator cuts food and current costs! I save money by buying food at bargain prices and storing it in my refrigerator. I also defrost at regular intervals."

Hotpoint, Hi-Speed Calrod Units are built so well they last for an fifteen years under normal kitchen use. Today, while production has to ar needs, Hotpoint research continues. You can be sure that Electric Appliances of the future will be even *better than ever before!*

How To Conserve With Hotpoint Appliances

Conservation was never more important than it is today. And in this respect, owners of Hotpoint Appliances are particularly fortunate. For these dependable appliances are designed to *save* fuel, food, time and money! Built for extra durability by America's largest manufacturer of electric ranges, they will far outlast the war emergency if given reasonable care. But to help you get the *full* benefit of your present appliances, Hotpoint has just issued an informative new booklet that explains how to conserve electricity, reduce food costs and prolong the life of your present equipment. Your Hotpoint retailer will be glad to supply you with this booklet. Or, if you prefer, simply fill out the coupon and send to us with 3c stamp to cover mailing cost.

FALSE TEETH

were Untrue to Grandma Gray
BUT THE KIDS ALL LOVE HER NOW!

The kindness of Grandma Gray
Made kiddies all adore her.
No wonder she was hurt when they
Decided to ignore her.

The truth was that they could not stand
The odor or the sight
Of Granny's FALSE TEETH;
though by hand,
She scrubbed them day and night.

Cleans, Purifies
Without Brushing
Do this every day: Add
a little POLIDENT
Powder to half a glass
of water. Stir. Put in
plate or bridge 10 to
15 minutes. Rinse, and
it's ready to use.

"Use POLIDENT," her dentist said,
"Its action can't be beat."
"You neither scrub nor rub; instead
You soak plates clean and sweet!"

Since Granny has, the kiddies make
Her life serene and nice.

If you wear PLATES, you too should take
This POLIDENT advice.

WHICH of these women has learned the secret of Fifteen Minutes a Day?

TWO women live in neighboring homes. They are the same age. Their husbands' incomes are about equal. They seem to have the same chance of social success and happiness. And yet one of these is seldom invited to go out.

The other woman is always the center of a group. She is sought after as a guest.

MAKE HER SECRET YOUR OWN

Her secret is very simple. She has learned how to attract people. She has read many things. Her mind is keen and alert, and people feel instinctively that she is worth knowing.

Make her secret your own. It is possible to secure all at once and at very small expense the few great books that enable anyone to think clearly and talk well.

You will understand how this is possible when you have read "Fifteen Minutes a Day"—a wonderfully interesting Free book which tells you about the

beautiful new Home Library Edition of The Harvard Classics—now easily available to the most modest home budget.

SEND FOR FREE BOOK

The fascinating book, "Fifteen Minutes a Day," containing eighty pages, furnishes you complete information about this marvelous set. It describes Dr. Eliot's own plan of reading and contains dramatic biographies of men whose immortal writings appear in The Harvard Classics. This book is beautifully illustrated and is a gem of literature. It will be sent you free, postpaid and without obligation. Simply send us your name and address today on coupon below.

had a single subscriber cancel. (We keep our advertisers happy by not having any.) . . . Steel yourself for some slightly incredible tales—such as the one about the beaver colony which went mad in a body when some Fort Greely guards wired a tree so it fell away from their dam—but be assured we shan't pull your leg. Alaska is incredible enough without any invention on our part."

NAPIER FIELD, Dothan, Ala. Pfc. Clarence Nelson had often looked back with nostalgia on the moneyed days he spent at the Havre de Grace track. He had never met his favorite jockey, Jerry Smith, but he always bet on him and usually won. Few days ago Pvt. Nelson got to talking with a new man sitting at the next desk in the field's Personnel Office. The conversation got around to horse racing and, as you've undoubtedly suspected, the new man turned out to be Jerry Smith. "Boy," said Nelson, "did I paste a lot of money on your nose!" Pvt. Smith leaned over the desk. "Just paste a War Stamp on it now," said he.

CAMP BOWIE, Texas. When the 31st Division was preparing to move here from Camp Blanding, Fla., everything was hush-hush as a cat in a velvet bag; but when regimental bands began playing Deep in the Heart of Texas, the cat got out.

PUT on K.P. duty soon after their arrival, three Dixie Division boys gave up hope of meeting any Texas belles, figuring their fellow wolves with more liberty would date every available gal for months ahead. But by the time the liberty boys got back to Bowie the three K.P.'s were smiling and humming tunes softly to themselves. Seems they'd called, and dated, the girls whose phone numbers they'd found on pie boxes delivered to the kitchen.

WITH ex-noncoms flocking back into the service from the ERC (Enlisted Reserve Corps), Barkeley is running over with strippers. The situation is being straightened out now, but some outfits have had sergeants and corporals doing K.P. and guard duty chores. Three companies of the 120th QM. Regiment are now settling the question of who's boss between the former topkicks and the guys who had been appointed to take their places. Company B neatly ironed things out by splitting the job. First Sgt. Ova C. Grantham, recalled from the ERC, takes charge of the men when they're in camp, and First Sgt. Paul Davis officiates when the company's in the field.

JACKSONVILLE NAVAL AIR STATION, Fla. Duncan White, of Glen Cove, N. Y., recently developed such an aversion to submarines he sat up nights figuring how best to give expression to it. He had a particular reason: he was third engineer aboard a Socony Vacuum tanker, and tanker engine room crews were taking a beating from U-boats. White is now an aviation cadet, and hoping fervently that before long he'll have the pleasure of dropping an ash can on one of the underwater sneakers.

CAMP BLANDING, Starke, Fla. Some months ago we revealed the case of the New Yorker who'd just been discharged from the Navy with a gunner's rating only to be drafted and assigned to a Blanding bakery school.

Here's the newest misfit and Edvar J. Andre, of Baton Rouge, a deep-sea diver with conscientiousness as such, is now a Blanding hospital detachment. A hunch the Navy would be a boatload of former truck Army for Andre.

THE Army can get tires a right, but the rubber shoe more work on Blanding. The boys have to check in sure before they step on the morning, and from time the day they inspect the cuts and gouges. The qua operating 450 trucks in an camp and they roll up a to miles daily. Yes, daily.

ARTILLERYMAN Pvt. I of Atlanta, Ga., says th quick for him. Cavin show line at his regimental dis before he realized what the to him one fellow had swa another had given him a and a third had eased to the entrance. "All I v nose drops!"

AND here's another on Texas tune. Pvt. Nor was wrapping himself arou order of ham and eggs in near Blanding when the j out with Deep in the Heart from Chicago, Apking was the melody, but a tall Texa to his table, accosted him a added: "When you hear tha up!" Anyhow, with so ma Blanding, the owner of ev within 100 miles has adda national anthem to the re the Lone Star Staters a bushels of nickels to hear

INLESSLY comparing calendar birthdays of officers with needs for efficient continuous duty of field duty under arduous conditions of modern field service, making wholesale transfers of personnel. Within a couple of months all officers inside the age limit for service with troops will be in troops or will be in schools for such assignments. The officers are rapidly taking over the housekeeping jobs, which service in various station commands; teaching; athletic, recreation and direction; and various serv-ants.

ag limits for service with troops: majors (commanding divisions), 60; brigadier generals, 60; colonels, 52; lieutenant colonels, 52; majors, 42; first lieutenants, 35; second lieutenants, 30. Don't, however, officer friend on an average job now you think he must be a There will be a few exceptions above rules and you might find a man who's yearning to be in it is kept elsewhere by special qualification.

O. D. NO. 3 is the official name of the new brown-tan necktie adopted to replace the black silk (winter) and cotton khaki (summer) cravats. The new issue is made of cotton warp with a filling of mohair and will harmonize with both the olive drab and khaki uniforms. Sounds a lot snappier; black ties always seemed to us to be out of place with a completely o. d. outfit.

THE way we hear it, the officers training center established by Lt. Gen. Walter Krueger at Camp Bullis, and mentioned in this department last Jan. 10th, is unofficially known as Krueger's Kollege of Practical Tactical Knowledge.

PILOT OFFICER T. R. LEE, whose address is No. 5 Service Flying Training School, Royal Canadian Air Force, Brantford, Ont., Canada, wants to "get in touch with the editor of the newspaper of some large American flying training school such as Randolph or Kelly Field or Pensacola. Our school is turning out multiengine pilots and I would prefer communicating with a school of similar nature." Pilot Officer Lee is editor of his station newspaper, Sky-Line. That's all we know about this, and we don't guarantee that any but qualified correspondents will receive any reply to communications sent to Pilot Officer Lee.

THOSE summer vacations the university and college R.O.T.C. boys used to get at Uncle Sam's expense are out for the duration and six months after that. Students who have completed military requirements and attended summer camps will be commissioned upon graduation; those who haven't had camp experience will go into basic training schools, then be commissioned. But regular R.O.T.C. camps? Nope! There's a war on!

ADD new slang: File 13 is any Air Corps wastebasket.

THE Army wants 3,000 registered nurses right away and will need 10,000 by the end of the year to keep pace with what's going on. The job pays \$840 a year plus maintenance and uniforms. A gal has to be an unmarried citizen between 22 and 30, at least five feet tall, a high- and nursing-school graduate and, of course, a registered nurse.

IT WOULD be a nice job for a recruiting sergeant. G. W.

When there's "nothing to eat but food," bring back your old time appetite with thick, savory A-1 Sauce.

With meats, fish, eggs, beans—it coaxes out flavor you never knew was there!

A-1 SAUCE

The DASH that makes the DISH

Jason gets off his stool and starts out. At the door he stops, turns around. "By the way, Peter," he calls. "wear a black tie, will you? Rule of the paper." He goes on out, before I can stop him—before, that is, I can recover from the blow.

Black tie. I haven't owned any dinner clothes for six months. They were the first to go. At the moment I am wearing a light gray checked suit, the loudest suit I could buy for a comedy part last year. It was the first thing I tried to sell, but no dice. Now it's all I have left. All. This and the raincoat.

I pick up the 1892 dime and put it carefully back into my pocket.

Joe comes along, wiping the counter. I feel like talking. "Well, Joe," I tell him, "that was almost a break. All I need is eighty bucks for a tux and I get a free meal."

JOE follows my glance, at my suit. He gets it. He grins. "That's a tough one, all right," he says. He keeps on wiping. After a while he says, "Listen, I got an idea. Up at my room I got a dinner jacket. Left over from a job I had waiting at the Alhambra last year, before it folded. We're about the same size. I also got a shirt and black tie."

"No pants?"

"Just the coat. I wore the pants out behind the counter here. I was hoping you'd have some kind of pants."

I shake my head. The only pants I have are on. And the only shoes; and the shoes are soggy.

A customer comes in and Joe goes to wait on him. I sit there thinking things over. Between me and grub lies a pair of black pants. I have no ideas. No ideas at all. When Joe comes back he glances at my raincoat. He says, "You got a raincoat there. If I was in your place, I'd wear the tux jacket and shirt and tie, and your pants, just like they are. Put the raincoat over the whole thing. See what I mean?"

"Sit down at the table in a raincoat?"

"No. The raincoat would be for later, for going out. What you do is, you go over there early. Nobody ever gets there before eight. Tell the headwaiter—the headwaiter won't even be on duty yet, it'll be somebody filling in—tell him you're to meet your friend at a table. Never mind if he looks at your pants. He can't do anything about it, see? None of his business. So when Jason gets there you're already seated. He can only see what shows above the table. When it's time to leave, you let him get up from the table first. Then follow right behind him, stay close to him, get your raincoat quick at the checkroom and put it on quick."

"Joe," I tell him, "I think you got something."

He reaches under his apron and takes a key out of his pocket and tosses it to the counter. "Around the corner at 217. Apartment 9."

I pick up the key.

I AM sitting in the Parakeet when Jason arrives at nine-thirty. The place is nearly full and I am feeling funny, sitting there at the table. I have drunk six glasses of water. Jason comes over to the table with the headwaiter and somebody who looks like the manager. It is the manager, I find as Jason introduces us. I start to get up, pretend to catch my knee under the table. The manager implores me not to get up. All right, I won't. Since you insist. Jason sits down, and the headwaiter gives me a menu with a grand flourish.

"Wait a minute," Jason says. He gets

up from the table and beats it. The headwaiter nods. "He'll be back in a minute," he says. "Excuse me." He goes away. I put down the menu.

Jason is talking to some people at a large table beside the dance floor. They laugh. He has told a joke. He comes back, looking around at people, smiling here, nodding there, waving a hand to somebody over in a corner. He sits down.

"Hal Galvern," he says. "Got a nice little item from him for the column. The producer, you know." Yes, I know. I tried his studio again this afternoon. I am a great friend of the doorman. Fine, sympathetic fellow, the doorman.

A waiter—evidently a special waiter sent by the headwaiter, and he is all bows and smiles—poises himself above our table. I pick up the menu.

Jason mutters a swear word. I look up from the menu. He is looking past my shoulder, toward the entrance, which is through the cocktail lounge. He is frowning. I look around. A fellow has come in with a beautiful girl. I am choosing my word carefully: beautiful. There are a couple of steps down from the cocktail lounge into the main dining room, which manifestly were put there to allow for a pause, as upon a platform, a stage, to give everybody in the dining room an eyeful of who you are and who you're with before you step down to the common level. Very effective. It is what is known as the Hollywood Entrance.

WHOWER this is, he is a master at the entrance. He hesitates just long enough to let everybody know this is something, here is somebody—and just long enough for three or four photographers, who have popped up from nowhere, to illuminate the scene with their flashbulbs—then ushers the girl down quickly, as though just now aware of the spotlight and anxious to avoid it.

"What's that?" I ask Jason.

He makes an impatient gesture. "Jimmy Blossom," he says shortly. "Runs the Hollywood column on the Enterprise."

"Who's the girl?" I ask.

Jason squirms in his chair. "Caroline Waite," he says grudgingly. He looks at me, evidently expecting me to whistle. "New York Waite," he adds. No register. "The society girl, you know. You must at least have heard of her. One of the old wealthy families. Started singing in night clubs about a year ago, as a sort of Junior League stunt. A dare, I think; something like that. Now she's out here, after the movies." Jason squirms in his seat some more, casts an uncomfortable glance toward them. "Blossom has her thrown and tied. On a leash."

"Engaged, you mean? Or whatever they call it here in Hollywood."

"No. Nothing personal. I think. Blossom's happily married. Just business. Those photogs were Enterprise men, planted there. Waite's a project of the paper, in a way. Of Blossom, anyway. A godsend to Blossom. In this business, Peter, this columning, you got to discover somebody, tie them up, make the people want to read about whoever it is, and they got to buy your column to do it."

I pick up the menu. The waiter is still there. New York steak, the menu says, three dollars and fifty cents. I clear my throat. "Well, Jason," I begin, "I suppose we may as well—"

"Peter!" Jason is leaning half across the table. His eyes are snapping. "Peter, how long have you been in town?"

"Two months."

New under-ar Cream Deodorant safely Stops Perspiration

1. Does not harm dresses, shirts. Does not irritate skin.
2. No waiting to dry. Can be right after shaving.
3. Instantly checks perspiration to 3 days. Removes odor of perspiration, keeps armpits fresh.
4. A pure white, greaseless, vanishing cream.

ceps, with three photographers.
rsh equipment is poised; there is
nd hungry look about their jaws.
er here," Jason says, loud enough
ybody to hear. He is pointing

ith Jason bringing up the rear, the
ogphers advance upon me like
k hops about to capture a pillbox.
y a still a dozen feet away when

they start shooting. Three quick flashes,
and they reload as they advance. Jason
comes around my right flank. "Thank
you, Mr. Hagen," he says in a very loud
voice. "Just a few more, for the London,
Rio de Janeiro and Capetown papers."
The photographers, deployed, shoot
again. One stands on a chair. Another
sits on the floor. The third takes a shot
from a leapfrog position.

A couple of fellows with pencil and
copy paper in their hands have mate-
rialized out of the cigarette smoke. I
can hear Jason:

"Peter Hagen, internationally known
bon vivant and world . . . leading parts
on the London and New York stage . . .
stopped off on his way . . . and Mada-
gascar. . . ."

Jason moves in on me. His forehead
is moist. "Mr. Hagen," he says, "I see
Caroline Waite over there. Would you
mind posing—" He leans over and
hisses in my ear, "Come on, quick! We
got things on the move! We got Bloss-
som!"

"Now, listen," I try to tell him, "I
can't do it. I can't possibly get up be-
cause—"

"Quick!" he says, taking hold of the
back of my chair and beginning to
pull it.

"I can't!" I tell him desperately. "My
pants—"

Too late. Jason has tipped the chair
just enough so I must either stand up or
sit on the floor.

I am not going to sit on any floor.

So I stand up. Jason has me by the
arm. We are moving toward the dance
floor. "The minute we get there," he is
saying into my ear, "take a bow. Just
bow. Never mind what I say. We're
stealing Waite for a picture. Then when
the music starts, dance. Dance! Grab
her gently and simply start dancing.
Never mind what anybody says."

SUDDENLY before me, out of the con-
fusion, is this girl. She was beautiful
at long distance. In a close-up she is the
most superb creature I've ever . . . She
looks frightened. She has plenty of
poise, but I'm an actor and I can see
fear beneath it, showing through, show-
ing through even her smile.

The flashlights blind me as I bow.

" . . . Hagen, internationally known
bon . . ."

The music starts. "Dance!" Jason
whispers hysterically into my ear.
"Quick! The boys are reloading!"

I am supposed to grab her and dance.
But I do not grab people and dance. Not

• One *trained* head is worth dozens
of untrained brains in modern busi-
ness and industry—if you doubt it,
compare the pay checks of the *expert*
in his line of work, and the man who
just knows enough to get by at
some routine job.

But there's no reason why you
shouldn't join the growing army of
trained specialists who get the more
important jobs and make more
money. I. C. S. training in your field
will make you eligible for a better

job, yet the cost is only a few dollars
monthly! Thousands of I. C. S. grad-
uates hold key positions in defense
industries, seldom have trouble find-
ing good jobs, even when times are
"tough."

even this one. I am asking Miss Waite for this dance, and she is saying yes, or I don't dance. So I ask her, and she says yes. And we dance.

Suddenly I am weak. I am cold all over. I look around. The worst has happened: I am the center of attraction. From the waist down.

Everything has gone blooie!

I hold Miss Waite close to me, so she can't look down, although I realize I am merely postponing the inevitable. The dance will have to end sometime. I have a great hope that when it is over I can somehow contrive to disappear in a clap of thunder. Hindu rope trick. First you toss a rope into the air, then you climb the rope, clap your hands, and . . . I can see Jason standing just beyond the edge of the dance floor, rigid, his arms stiff at his sides, looking at me with a sort of hopeless Hollywood horror in his eyes.

All right. Let's pick up what pieces we can; let's make one hard try. I maneuver my dancing companion over toward Jason, and arrive just as the first half of the dance is over. As I slap Jason playfully on the shoulder I whisper quickly, "Latest thing from London, from the Transvaal, from any place. From Sitka. From Nassau. New style. Hollywood by storm. Call the photogs back."

JASON'S eyes open wide, there is a light in them; he turns away, beats it. The music starts. Miss Waite has seen the worst now, but she lifts her arms and smiles, a friendly smile; so far as she is concerned, evidently, I am in perfect attire. We dance. I can catch glimpses of Jason rounding up the boys. Miss Waite is humming to the music; Miss Waite is a peach. Dancing with the latest thing from Sitka, from Nassau. The very last word from Joe's. . . .

The camera boys are coming, with their flashlights. Jason is grinning. Peter Hagen, Internationally Known Idiot, Makes Fool of Self—Had Hoped to Work in Pictures. . . . I guide Caroline around to the edge of the floor and the lights pop. The boys are kneeling on the floor now, getting pictures of us as we dance.

Jason takes me by the arm, pulls us off the dance floor. We are beside the large table to which Jason had gone to crack his joke when he first came in. Two or three men are rising.

"Galvern . . ." Jason is saying.

Miss Waite is saying hello to them all; she knows them. I shake hands a couple of times.

"Galvern . . ."

I am shaking hands with a smallish, pleasant-faced man with a bald pate surrounded on three sides by white hair. He is smiling; a sort of eager, appealing smile. "Very original," he is saying. The music still is going on. "Welcome to Hollywood, Mr. Hagen. Hope you . . . not too many commitments . . . could use . . ." He turns to his guests, jerks his head toward me. "Andy Bruceworth in His Father's Son," he says.

Everybody at the table nods. "Yes!" they say. Galvern nods. He seems delighted. He pats me on the shoulder just as another flash goes off. A photographer is taking aim. Galvern grabs my hand, looks at the camera, throws back his shoulders. Flash. He turns to me again. Jason has taken some copy paper from his pocket, is scribbling. Galvern: "Glad to be the first to . . . my office ten in the morning, if convenient to you . . . hope you can arrange . . . been searching for Andy Bruceworth all over the world; three hundred and seventy screen tests . . . soon as I set eyes I knew . . . Andy Bruceworth . . . terrific part . . . made to order . . . very happy . . ."

"Yes!" everybody says. They nod. Galvern nods.

I nod. "Yes," I say. Ah, yes, yes, yes. Yes, sir. Yes, sir.

Jason hurries away toward the telephones. He had a colossal story for his column.

With a parting bow and a final yes, I turn and sweep Miss Waite, as the expression is, into my arms. She is a very fine dancer. But suddenly she is not a fine dancer. Suddenly, or fairly suddenly, she is a poor dancer and she is heavy. She is very heavy. When I feel her being heavy I look around. Just off the dance floor, at one side of the orchestra, is a pair of large French doors, open. They lead out onto a terrace. Lights of Los Angeles below and in the distance.

I dance over that way, and we stop dancing and go outdoors, and she still is heavy, she is heavy on my arm. There is a concrete seat near by, and we sit down on it. Miss Waite sits down rather quickly. She looks at me and smiles a bit uneasily, and says something about the cool air, then she stops smiling and takes a deep breath and leans over against my shoulder and puts her hands over her face. This easily could be mistaken as a surrender to masculine charms: the girl is overcome. But in my case it always means, I have found, simply that the girl is sick.

"Is there something wrong?" I ask.

She nods weakly. Then she sits up and takes her hands from her face and looks at me, directly, frankly, openly. She measures her words:

"Mr. Hagen, I'm hungry."

It's the gong. "Miss Waite," I tell her with deep feeling, "I think I know what you mean."

"You're hungry, too?"

"Madame"—talk about deep feeling—"I never was so close to starvation in my life."

She looks around in a kind of charming, pathetic confusion. "We'll never get anything to eat here," she says.

Check.

We are in a cab before I remember that all I have is the 1892, and the fifty-cent piece in my watch pocket, which, by the way, otherwise is empty. Well, the four bits must go. This is rock bottom, at last. How far, I wonder, is Joe's, in terms of cab fare? Probably thirty-five cents' worth. That leaves two hamburgers and one cup of coffee.

"Could I interest you," I ask my companion, "in a little slumming expedition? I happen to know a place that looks, at first glance, like any other lunch counter. But this one is really the secret rendezvous of all sorts of interesting people. Opera singers, for example. They drop in for the specialty of the house. Hamburgers. It's called Joe's."

MISS WAITE does not reply. Well, I can't help it. We're going to Joe's. I direct the cab driver, in as happy a tone as I can manage, then sit back. No word from Miss Waite. Well, I'm doing the best I can. I have four bits and an 1892, and I'm in love. I'm sorry, Miss Waite. I'm sorry, Caroline. I'm sorry, dar—

She's crying.

"I didn't mean to," she says presently. We are getting close to Joe's. "Mr. Hagen, I've simply got to tell you something."

She stops.

I wait.

"See here," she says, sitting up very straight, "the reason I'm hungry is that I'm—hungry. It's not temporary; it's permanent. And that's not all. I've never been to New York in my life. My home is in Salem, Oregon. I came here to work in an insurance office, which I did until I got canned. I met Mr. Blossom at a party, and he had this wonderful idea. He would get me into the movies. All I had to do was let him build me up in the paper, in his idiotic

ka," Joe says. "Frances, I thought
be ou'd gone back to Oregon."

"Tomorrow," she says. She looks at
the coat I have hung up. She shakes
her head a little, as though to dispel a
bit of fog. "Do you mean," she asks,
but with the air of a person who doesn't
expect a rational answer, "that that's
Joe's—coat?"

"Yes," I tell her; "Joe staked me to-
night. The pants are my own. I'm
sorry, Frances; it was just a circum-
stance. I didn't mean to—"

"Then you're not a—oh, dear—an in-
ternationally known *bon vivant*?" She
seems delighted. Upon her face is a
brand-new expression, one I haven't
seen before, and it indicates that she is
in favor of the idea. "You mean"—she
moves her hands around, in a helpless
gesture like that of a little baby—"you
were hungry? Just like—"

"Same thing. Different columnists."
We just sit there. We are laughing;
we are having fun.

"Boy," she says, "I'm glad I told you
about—me."

"Why?"

"Because otherwise . . . I don't know.
Otherwise— Well, I don't know. I like
us best this way. I like—dear me, this
is lovely. I'm glad I'm not going back to
Salem."

"You said you were going back to-
morrow," Joe says. He is turning the
hamburgers.

"I did not," Frances says. "And if I
did, it was a slip. I want to see how the
screen test comes out. I helped get it,"
she says to me, "don't forget that. I
helped. I did something, after all."

"I'll tell you all about it at dinner to-
morrow night. All about it. Frances, I
love you; I wish I knew your last name.
Tomorrow night we'll really be *bon vi-*
vants. I'll get an advance from Galvern
and we'll—feast."

"Don't have to ask for any advance."

Joe says. "My friends' credit is always
okay here." He is slicing the buns.

"Toast them?" he asks.

"Rub mine around in the grease,
first," Frances tells him.

Joe looks at me and I nod. "Rub them
plenty."

"Extra pickle," Joe says.

I take out both dimes and put them on
the counter. Goodbye forever, dear old
1892. I look at Frances and she looks at
me and she is smiling. As I have men-
tioned, she is even more beautiful when
she smiles. At me.

THE END

Will you please remind the doctor? He gave me only six months to live"

MAN OF WAR

PETE is a quiet, peace-loving man. Treats his family fine and pays his bills and gets along with his neighbors. Hasn't struck a blow in anger since he was a kid and caught another boy mistreating a dog.

But today Pete is mad clear through. You'd never guess it to see him at home; if anything he's quieter than ever. He isn't the kind to go around gritting his teeth and calling names.

When you see him at work, though—then's when you realize the difference. For there's a deadly precision in the way he goes about his work. He's on the job a little before starting time; he pays more careful attention to what he's doing; he knows what he's building and for whom he's building it. And that's why he's probably the most dangerous, the "fightingest" enemy the Axis powers have.

For it's men like Pete—who feel the way he feels, who are doing what he is doing—who are manning the machines in America's factories today. And they're turn-

ing out the deadliest, most effective array of weapons the world has ever seen.

There are a lot of men like Pete among the 125,000 General Electric employees these days. In their off hours you'll find them acting as air-raid wardens in their communities. You'll find them among the more than 100,000 G-E men and women who, without any fanfare or hurrah-boys, have signed up for U.S. Defense Bonds to the tune of more than \$20,000,000 a year. But most important of all, you'll find them on their job—doing what they know best, giving it the best they've got.

Quiet, peaceable, determined men of war. They're the men who, a few months ago, took pride in building refrigerators, radios, washing machines, and all the other contributions of electricity to peacetime living. Today they're putting their whole heart into the building of grimmer things so that they and all of us may the sooner pick up the never-ending job of making better things for a better America. General Electric, Schenectady, N. Y.

GENERAL ELECTRIC

992-3186-211

There is no such thing as "national" advertising. Advertising, whatever its source, is local in its effect. **Magazine advertising** is "local" advertising on a coast-to-coast basis.

This is WAR!

SOME blood, some sweat, some tears, and frequent defeats have been our portion in the first four months of war.

General MacArthur's brilliant and valiant defense of Bataan has been almost the only cheerful news. Douglas MacArthur caught our imagination and gave us comfort. He stood for the brave success we like to think of as American even though we knew well enough the dreadful odds against him.

The months that have gone have been grim. Now we know how Abraham Lincoln must have felt those first few months of the Civil War when the Confederates defeated the Union armies and all but captured Washington. Lincoln and his generation had to take bad military news for two years before the tide really turned.

The pace is swifter now and we have had our losses quickly. Yes, and we have taken them in our stride. All of us know that because of early defeats the struggle will be prolonged and the price we have to pay for final victory will be the greater.

But no one is discouraged. Every man and every woman knows that we must win this war, whatever the cost. We did not start it. We did not want it. But we must finish it. If we don't finish it triumphantly we shall be finished as a free people.

Everybody is sure of that. There are no

important differences of opinion this time. Pearl Harbor unified the nation. Hong Kong, Manila, Singapore, Batavia, Rangoon, opened our eyes to the power of the Japanese military organization. Nobody west of the Rocky Mountains regards the war in the Pacific as secondary.

The fact is that we could not have been compelled to choose more difficult battlegrounds. The war inflicted upon us must be fought in distant lands and remote seas. We have to fight where our enemies are and where they attack.

The Japs and the Germans chose the times and places for their war. We didn't.

But we have got to give whatever victory costs. If we don't win we won't even have honor left, much less any material possessions.

We cannot afford to waste time or energy on anything that delays or endangers our victory. We cannot afford partisan politics or avoidable wrangling in industrial or labor matters.

Some of the early New Dealers in Washington act as though the success of their little programs of social reform were more important than a successful prosecution of this war. A fat chance social reform will have if Hitler and the Japanese militarists are not stopped.

Some of the farm leaders think that they can use the opportunities of war to enrich the farmers regardless of what happens in this world war. That is a great mistake. If the Nazis or

the Japs win this war there won't be any or prosperity or anything else desirable for American farmers.

Some of the labor leaders act as if their interests were more important than the national defense. Another blunder. Labor would not survive an Axis victory.

Some businessmen think that profits are possible in this war. This is not to haggle. Free enterprise won't endure if we win this war.

Some politicians think that this is a time to place friends in soft jobs. Many silly undertakings of Civilian Defense transferred to Paul McNutt's health when Congress began an investigation of Civilian Defense. So jobs were found for dancers and storytellers and others. They help to victory.

We have to do better if we want to survive. We cannot afford business as usual, if it tends to win this war.

Sacrifice is required and not merely poor and the inconspicuous or of the rich and the politically negligible. High and low alike and out, we have a war to win and no time for waste or delay. The American people are not complacent or fretfully impatient. They are serious and aroused. Any individual group that stands in the way of victory is fated for rough treatment. They deserve

Look! Is not this your Daughter?
Is not she young America?

She has a great Heritage,
A Future filled with Promise!

We see her a Woman, Sympathetic and
Smiling—with a Smile that owes much
to her Lifelong use of Ipana and Massage!

YOUR DAUGHTER—she is young America! Her future encompasses the things we stand for. We have helped give her the priceless dowry of strong in health, a mind shaped without compromise that faces the future hopefully and smiling!

Smiling! For even now this little girl knows the lesson in dental health that many an adult must learn. In thousands of classrooms* all over the country, youngsters of America are being taught the vital dental truth—that *firm, healthy*

gums are important to sound teeth and bright, sparkling smiles.

Never Ignore "Pink Tooth Brush"

If you see "pink" on your tooth brush—see your dentist right away. It may not be serious—but let him decide. He may simply say your gums have become sensitive because today's soft foods have robbed them of natural exercise. And, like so many dentists, he may suggest "the help of Ipana and massage."

For Ipana is designed not only to clean teeth brilliantly and thoroughly but, with massage, to aid the health of the gums. When you massage your gums with Ipana, that stimulating "tingle"

means gum circulation is increasing—helping gums to healthier firmness.

So get a tube of economical Ipana Tooth Paste today. Let Ipana and massage help you to brighter teeth, firmer gums, a more sparkling smile.

Ipana Tooth Paste

Product of Bristol-Myers

*At the request of over 85,000 teachers, Ipana and charts, teaching helps and other material for dental hygiene classes in American schools.

ANY WEEK

THE handsome young American on the cover is Victor Irving Crutchfield, of the Klamath tribe of southwest Oregon, now working in the huge Douglas plane plant at Santa Monica, California. He was formerly a Forest Service patrolman and truck driver. The Klamaths are one of the wealthiest tribes of Indians in the country, own wide stretches of timber and farm lands and maintain their ancient right to fish the salmon streams of the coast mountains in their own way.

WE'RE afraid that we shall never become an important war correspondent. We've had a go at it, having been wandering for the past few weeks up and down Central America with particular emphasis on the Panama Canal Defense and its immediate problems above and below. We started out with the Army's exhortation ringing in our ears: Ignore the trifling incidentals and keep your mind on the great goal. We gathered that the great goal was the winning of the war, but we had trouble with it. We're back with, among other things, an immense respect for professional observers, particularly the journalistic observers or experts who, after reading today's newspapers, dope out the lowdown for tomorrow's readers. We observed and observed, breaking one pair of glasses in the process, getting ourselves suspected at least once of espionage and being thrown out of several strategic positions. Guess we're just the trifling kind. In beautiful Guatemala City where there is a great deal of a warlike character to observe, we ran afoul a couple of Army intelligence officers, the F.B.I. and the local police when our feet began treading forbidden ground and our tongue gave forth with a few searching questions. We settled it nicely by having them all over to the Palace Hotel for a few drinks. Having established ourself, we wandered

about until we got to talking to Señor Jorge Minero Zaccano, a silversmith. We asked Señor Zaccano how the war went with him and his people. "We are flattered and aroused," replied Señor Zaccano. "As to the fighting we are in the hands of the United States and her latent might. We trust that you are conducting your national affairs as efficiently as we are asked to conduct ours—with indifferent success. We are interested to learn that in its conduct of the war, your country is employing dancers, musicians, expert manipulators of the bowling ball, cinema stars and other artists in many peaceful occupations. We understand that the pay is good and the risks of a minimum. Guatemala is a nation of artists. We are interested. As for the fighting part, we are very sensitive.

IT WAS in Guatemala we think (or perhaps it was Costa Rica) that we ran headlong into a sample of Central American efficiency. We think it was Costa Rica, one of the very few countries which actually look like their colored picture postcards. We ordered breakfast, specifying one fried egg. The bill was ninety cents. We protested, showing the waiter that an egg breakfast according to the menu was but sixty cents. "You speak the truth," he replied. "You will observe, however, that this sixty-cent breakfast is of two eggs. You ordered one egg. Therefore your breakfast was à la carte and as such more expensive than our special combinations. Nothing can be done. Tomorrow morning I shall advise you to take the second egg which you may dispose of as your humor dictates."

IT WAS while Admiral Halsey and his intrepid American squadron were raiding the Marshall and the Gilbert Islands with heartening vigor that one of Japan's dive-bomb fliers made his bid for immortality by diving straight at the admiral's flagship. He missed and died but he came so close that the admiral instinctively ducked—a completely understandable reaction we think. But when the admiral ducked, a kid seaman laughed. When the raid was over, the admiral spoke to the boy. "Don't you know," said he sternly, "that nobody of less rank than a chief petty officer may laugh (Continued on page 49)

COVER

Vol. 109 No. 17. Entered as second-class matter at Post Office, Springfield, Ohio, U. S. A., under Act of March 3, 1879, and at Post Office Department, Ottawa, Canada, by The Crowell-Collier Publishing Company, Springfield, Ohio, Publishers of Woman's Home Companion, The American Magazine, Collier's. Copyright, 1942, The Crowell-Collier Publishing Company, in the United States, Canada and Great Britain. Executive and Editorial Offices: 250 Park Avenue, New York, N. Y.; 6 Henrietta Street, Covent Garden, London. Published weekly at Springfield, Ohio, U. S. A. Joseph P. Knapp, Chairman of the Board; Thomas H. Beck, President; Albert E. Wenger, Executive Vice President and Treasurer; John S. Brehm, Vice President; William P. Larkin, Vice President; J. A. Welch, Vice President; T. L. Brantly, Vice President; A. H. Motley, Vice President; Denis O'Sullivan, Secretary. Manuscripts or art submitted to Collier's, The National Weekly, should be accompanied by addressed envelopes and return postage. The Publisher assumes no responsibility for return of unsolicited manuscripts or art. Price, 5 cents a copy in the United States, \$2.00 a year, two years \$3.50, three years \$5.00 in the United States and Possessions, Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Labrador, Mexico, Newfoundland, Nicaragua, Panama, Paraguay, Peru, Spain and Colonies, Uruguay and Venezuela. Price in Canada, 7 cents a copy, \$3.00 a year, two years \$5.00, three years \$7.00. Other foreign subscriptions including postage: \$5.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

“No, it isn’t Cancer—”

THIS WOMAN WORRIED and worried when she discovered that she had one of the symptoms often associated with cancer. Again and again she asked herself, “Shall I wait and see what happens . . . or go to the doctor?” Wisely, she chose the latter course.

Now, after thorough examinations and tests, she has just heard the welcome words, “No, it isn’t cancer.”

How wonderful those words sounded! How thankful she is that she went to her doctor at once! For, even though the symptoms usually associated with cancer do not *always* mean cancer, they do indicate that something is wrong.

If cancer is present, the earlier it is discovered and properly treated, the greater are the chances for a cure. The chances of curing early cancer of the breast, for example, are almost four times greater than those of curing it in its late stages; in early cancer of the pelvic regions, the chances are *eight* times better.

That is why anyone with a suspicious cancer symptom should go to the doctor immediately—

should never “wait and see what happens.” Fortunately, those cancers which give easily recognizable danger signals are usually the ones which can be treated most successfully. Here are some of the danger signals:

1. Any unusual lump or thickening, especially in the breast.
2. Any irregular or unexplained bleeding.
3. Any sore that does not heal—particularly about the mouth, tongue, or lips.
4. Persistent indigestion, often accompanied by loss of weight.
5. Noticeable changes in the form, size, or color of a mole or wart.
6. Any persistent change from the normal action of elimination.

The only positive way to tell whether cancer is present is a microscopic examination. If cancer is present, there are three forms of treatment—surgery, X-rays, radium, or a combination of these. Beware of quack remedies or “cures” for any condition which might be cancer.

Metropolitan will send you a free booklet, 52-C, “A Message of Hope about Cancer.”

● THE UNITED STATES NEEDS MORE STUDENT NURSES!

The Metropolitan presents this appeal for 50,000 well-qualified young women to enter approved schools of nursing during 1942. The appeal is made at the request of the Government by the Nursing Council on National Defense. Here is an opportunity for patriotic aid in meeting the emergency needs of the Army, the Navy, and Civilian Defense. It may also be a step toward a career of lasting usefulness and future economic security in post-war reconstruction. For further information apply to your State Nursing Council on Defense, or to the Nursing Information Bureau, 1790 Broadway, New York City.

KEEP UP WITH THE WORLD

By Freling Foster

A new invention to protect automobiles is a simple electrical device that sounds the horn in a series of short blasts when a thief tries to steal the car or to remove any accessories or parts, including tires.

The olm, *Proteus anguinus*, an aquatic eel-shaped amphibian inhabiting the waters of certain dark caverns in Austria, has been blind for thousands of generations. Yet, if this animal is exposed to red light when young, its eyes develop the power of vision.

Muta is a form of legal marriage among the Shiite Mohammedans, whereby a man and woman are joined in a religious ceremony for a specified time only, which may be a year, a month or a day. When the couple wish to remain together after their marriage contract has expired, they are obliged to renew it and have another wedding.

The flag of the U.S.S. Arizona, sunk at Pearl Harbor, continues to wave in Arizona, where it was adopted as the official banner of the state in 1917.—By N. W. Washburn, Miami, Florida.

Twenty-six foreign countries had given women the right to vote and the struggle for such political liberty had been in progress in the United States for seventy-two years before our 19th (Woman Suffrage) Amendment became effective in 1920.—By Mary Bak, New Rochelle, New York.

An unusual criminal case was that of Mike Spinelli, who killed three men in Pittsburgh in 1932 and fled to Italy knowing that he would not be extradited for a crime committed abroad. However, upon the request of our State Department, he was brought to trial, convicted and sentenced to thirty years' imprisonment in Salerno, Italy, merely on testimony in depositions forwarded from America.—By Claude B. Sweezey, Florence, Arizona.

The term "court" for playing cards bearing pictures of kings, queens and jacks has no connection with royalty. "Court" is a corruption of "coat," the cards being so named originally because they depict figures wearing coats.

When Anglo-Saxon countries married during the first century of Christianity, the groom paid the bride "for fairer and she promised always to be a 'buxom and bonny'."

The maximum penalty for a professional baseball umpire is more severe, states, than that for bribing a justice or a state, municipal official.—By Rob Pittsburgh, Pennsylvania

Confederate Memorial Day is observed as a holiday on May 30th in Alabama, Florida, Georgia, Mississippi, on May 10th in North Carolina and South Carolina, on May 30th in Virginia and on May 3d in Louisiana, Tennessee, until this year, in Kentucky.

Napoleon is one of the most famous figures in world history. His portrait has never appeared on a postage stamp of any country.—By George Vass, Springfield, Illinois.

More suicides occur between May 1st and May 31st than on any other two-hour period of the year. May is more than in any other month and between the ages of fifty-four years more than in any other five years of the life.

One of the greatest conquests of all time was Tamerlane's armies of Mongols who subjugated a large part of the 14th century. Although not successful in his ambition to dominate the entire world, he became the crowned ruler of many countries.—By Bernard New York, New York.

The Japanese soldier is paid \$2.36 a month, which \$1.89 is sent to his family. Thirty-eight cents is deducted for his compulsory savings and the other nine cents is given for spending money.—By M. Grant, River Forest, Illinois.

Five dollars will be paid for each unusual fact accepted for publication. Contributions must be accompanied by a factory proof. Address: Keep It World, Collier's, 250 Park Avenue City. CHAMPION SPARK PLUGS

Spark plugs put the kick in an engine, and the men who drive and operate the nation's leading fleets of buses and trucks know this. They know, too, that it's costly to use any but the best. That's why most specify Champions, and a very good reason why you should too.

*More Vital-
More Dependable
than ever!*

Your car is a real family asset, and a useful friend. Treat it as such and it will serve you faithfully and well during this period of war economy. Spark plugs are the heart and pulse of its engine so have them tested and cleaned at regular intervals, and replace old, worn-out spark plugs with new Champions—the spark plugs champions use.

Operators of fleets also know the importance of maintaining equipment at peak efficiency and regularly inspect, clean and adjust spark plugs. Since the foundation of a national competition among fleets, for economy and efficiency of operation, Champion-equipped fleets have won a big majority of the awards.

TO SAVE GASOLINE • KEEP YOUR SPARK PLUGS CLEAN

WING TALK

First Officer Charles Johnson of the American Airline Flagship Abilene mounts the standard after the landing run

THE shiny aluminum airliner, with brilliant red trim on the engine cowlings, nose, fuselage and tail surfaces, taxis to the loading ramp, flying a pennant from a stub mast outside the co-pilot's window. People who go to the airport to watch the planes readily identify it as an American Airlines Flagship. That fancy flag, bearing white stars on a field of blue and surrounded by a red border, is a bit of oomph that has paid off very well from a public-relations standpoint.

But how do pennant and mast survive a speed of 180 miles an hour or more? Wouldn't the wind whip them to pieces? Sure would, so one of the duties of the co-pilot is to hoist the flag when the plane has completed its landing run and leave it there until the ship is back out again ready for the take-off. Then he slides open his window, lifts mast and flag from its socket and away the ship goes.

AVIATION probably challenges the inventive nature of more people than any other modern science. This is natural. The ideal airplane has not yet been built.

Aviation people do not discourage ideas for improvements. One out of a thousand might be something the smartest guys in the business failed to think of. However, many are submitted which completely ignore the fundamental laws of flight and knowledge of aircraft structure, gained at great cost of life.

So that no promising ideas may be lost the government has set up the National Inventors Council in the Department of Commerce Building, Washington, D. C. This serves as a clearinghouse for inventions and suggestions that might prove valuable. In the past year, 2,600 suggestions and designs for aviation were sent in.

Inventors need not submit aeronautical designs to the government, but can take them up with firms in the industry and make a deal. If you offer something to the government and it's needed and wanted, the council is empowered to fix its worth—not more than \$75,000—and send you a check.

WHEN two experienced airmen go aloft together, there is usually agreement in advance as to who will take off and fly for what period. The other pilot then becomes a passenger.

There's a code of respect for the ship in the skies as well as on the seas, and many a pilot riding ger has sweated and suffered while the other fellow flew in a "passenger" regarded as a rageous manner.

We once knew two pilots cross-country in a tandem cockpit with dual controls. They ran into weather and the ceiling began to descend fast. The pilot in the back wanted to keep on going; the senger wanted to land right then. He fell to fighting for command and didn't get hurt, but never spoke again.

Not long ago, two pilots in a cockpit plane with no inter-communication understood the signal of a shallow dive, cut the telephone wires and crashed. The plane approached the ground, the pilot in front who had released the controls and believed his friend would make no effort to grab them. Neither did the pilot in the back seat. It was obvious the landing was not being attempted. They were several miles away from the airport and the engine was turning at cruising speed. This deep responsibility of each other's life of one and serious injury to the other.

A WIDE psychological gap exists between the student pilot and the private pilot, even though the experience may be but a few years apart. This has come to light in a thorough analysis of landing in private flying made by the Bureau of the Civil Aeronautics. And here it is: The student pilot shoots for a landing, while the pilot overshoots. The bureau signedly, that there is no ready solution for these tendencies.

HELP save the life of a pilot and the much-needed airplanes for the war by discouraging a very silly habit that is flourishing among fliers, of flying low, cutting through the air and shouting at people on the ground. Too many times have these pilots concentrated on being heroes.

(Continued on page 5)

What poem's about spring," warned Elsie, "at least one stanza for ice cream!"

LITTLE BEULAH, struggling with her first poem, puzzled: "But, mommy—how can ice cream fit in? I've got how all Nature wakes the Spring . . ."

One of the most delightful Spring awakenings," said Elsie, the Borden Cow, "is the way that the weather rouses folks' appetites for ice cream. Ice cream that's extra luscious and wholesome because it's made from milk and cream I produce for you."

"What's is?" interrupted Beulah:

"Oh, what is so nice on a day in Spring as Borden's Ice Cream — It's just the thing!"

"That's marvelous," Elsie applauded Beulah, "if you read it sort of fast. But, ice cream isn't the only good thing that's made with Borden skill and care in making my milk. A large family of delicious foods springs from the pure Borden's Milk of mine."

"That'd be right," asked Beulah, "to call that the cream of society?"

"I should think so," Elsie agreed. "Let's see—has your poem got anything about how the birds come back in the Spring?"

"Sure, mommy," said Beulah proudly. "There, in the second stanza."

"Well, it's just as certain," Elsie replied, "that people will come back again and again for more of the marvelous cookies, candies, and cake frostings that are made with Borden's Eagle Brand Sweetened Condensed Milk."

"That'd be right," asked Beulah, "to call that the cream of society?"

"I haven't finished this part," Beulah remarked, "about young things growing up and blooming."

"Just remember," said Elsie helpfully, "that lots of young babies start to grow up and bloom on Borden's Irradiated Evaporated Milk. It's so digestible and rich

in Vitamin D that many doctors approve it. And it's also the secret of grand cream soups and mashed potatoes."

"Do you think I should mention Spring Fever?" asked Beulah.

"By all means," answered Elsie. "And be sure to point out that one of the best pepper-uppers under the sun is Borden's Hemo—the grand new way to drink your vitamins and like 'em!"

Beulah was scribbling rapidly. "Something like this, mommy?" she offered:

*"With its vitamins and minerals galore,
Each glass of Hemo tastes like more!"*

"That's perfectly splendid, dear," beamed Elsie. "But don't forget to finish your poem with a nice moral folks will remember."

"I've got it, mommy!" cried the excited little Beulah:

*"Ice cream, milk, or other fine food —
If it's Borden's, it's GOT to be good!"*

Buy Defense Stamps and Bonds today
(Or, to put it as Beulah would say:)
"Taxes and bonds, bonds and taxes
—That's the way to axe the Axis!"

Home and Family—*

PHILCO

**BRINGS YOU THESE
NEW DELIGHTS IN RADIO
AND RECORDED MUSIC**

MUSIC ON A BEAM OF LIGHT

Just think what the *modern* inventions of Philco engineers have done to the pleasures of radio and recorded music! Because of "Music on a Beam of Light," you have no needles to change, you enjoy glorious new beauty from records, unmarred by surface noise. And they last 10 times longer! The new Philco Automatic Record Changer does away with the bother of changing records, handles them gently, reliably, without fear of damage. The Strobe Control insures absolute fidelity of pitch. All these are exclusive developments from the Philco laboratories, yours only in a Philco . . . they are the mark of a modern radio-phonograph! (Philco 1008 Radio-Phonograph, illustrated)

*America's Favorite
Radio Console!*

In this gorgeous, impressive cabinet of beautifully sliced and butt Walnut woods, the Philco (left) is radio's champion value in tone, performance and beauty. Its powerful 8-tube circuit is extremely sensitive. Its big Concert Grand Speaker and Bass and Treble Tone Controls give you glory for every type of program. *Yours on Easy Terms.*

**MODELS FOR EVERY NEED. SEE
TODAY AT YOUR PHILCO DEALER**

For the Service of Our Armed Forces

The research and manufacturing facilities of Philco are engaged in various phases of production for our armed forces. Its assembly lines are producing frequency meters, communications equipment and radio receivers for tanks and airplanes. Its heavy machinery is engaged in mass

production of artillery fuzes. The entire facilities of Philco in research, engineering and manufacture, with its complete equipment and skilled personnel, are now at the disposal of the government for the production of the weapons of victory, whatever degree the nation requires.

thumbs instead of the right index finger, and
they had seen the truth of it.

Now Duff heard the sound of the turkey's
scratching behind the screening thicket. A calf,
lost from its mamma, bawled. Duff held his
breath. The turkey began going putt! putt!
nervously, as the calf kept up his insistent
bawling.

The calf stopped bawling, perhaps having
been rejoined by its mother. Duff yelped again.
After an almost interminable time, the turkey
answered.

Suddenly the young gobbler stepped up on a
log, in full view. The sun glistened on its burn-
ished neck; its purplish-red head was alert.
Duff raised his gun with an excruciating slow-
ness. The turkey relaxed and ruffled its feathers.
Duff's gun was almost level; he could feel

the nerves in his left wrist jumping. A leaf crackled. The turkey's head went back up, and the disarranged feathers lay quickly down. The turkey went *putt!*

Aiming at the head, Duff pulled the trigger. The turkey leaped over backward, and flopped and kicked spasmodically in the damp leaves. Duff jumped up and ran, almost stumbling in his eagerness to reach the dying bird.

When the last feeble kicking passed, Duff leaned his gun on a log and picked up the turkey by the head, just as a man in brown leggings stepped from behind a tree with a Colt .45 in his hand.

"Stand right there, and don't move that gun," he said. "Didn't expect to yelp up no warden, did you?"

Duff stared at him.

"Them 'Posted' signs, buddy, wasn't put up just for looks," the warden said.

Duff tried to speak, but his voice stuck.

"Now come here, and bring that turkey with you."

"I got to have him," Duff said, simply.

The warden looked at him curiously. "You see what I got here in my hand, don't you?"

Duff knew that if he leaned over to pick up his gun, he would be shot. His gun was something he needed badly, but there simply wasn't any choice. *He may have more pistol there than he can handle, unless he's an old army man.*

Duff turned his back and began walking away, leaving his shotgun on the log. He slung the turkey over his shoulder.

"Hey! You wait!"

Duff kept walking, as if he hadn't heard.

"You better stop!"

Duff kept on, stepping unhurriedly over a bush. If he started running, he

would be shot instantly. But even the toughest warden would have to heat up a bit before firing at the back of a man calmly walking away.

"You hear me? I'm fixing to shoot!"

Duff shifted the turkey to the other shoulder. He paused to look interestedly at a wildcat scratch mark on a chinquapin tree, then continued walking.

"You better stop!"

Then there was a momentary silence, followed by the crash of the automatic. A two-inch dogwood limb abruptly broke and fell above Duff's head, and now the time to run had come. He shoved the turkey under his arm and jumped away, putting as much cover between him and the automatic as he could. The bullets were crashing like cannon balls now, but none of them came close.

At first the flight exhilarated him;

then he began to tire, and he stopped he found the coming with such ago that he was almost suff fingers could hardly ken the dead turkey.

The shooting ceased, time Duff heard the horse's hoofs. The warden back to where he had tie now was coming to try t Duff crept quietly under a bush.

Presently the horse came more carefully as it felt the litter of the bottom the warden's angry kick hear the animal's windy hoofs passed close by, away. The sound of t faded.

Duff lay still. An hour and again the warden woods, searching. Finally with it silence. Duff stretched, and started walk to the fence that marked boundary of the plantation.

After he reached the four hours down it, and in a creek swamp and b his turkey for roasting.

WHEN the turkey was day, Duff didn't see Tuesday.

Without the gun he Traveling aimlessly, sloping bridges, and avoiding far he were a fugitive, he developed a certain self-sufficiency. On a warm day he happened on a mondback that had con land-tortoise hole that it for the winter. perched on a powder
her people know it.
ives they have had to
order to exist, and they
w to get back in the
fight a guerrilla war

PETE never read any
by Winston Churchill. Pete
read the unforgettable one,
that goes, "We shall fight
in the streets, we shall fight
in the streets, we shall fight
in the streets." For Pete is a half-breed
who makes his living trapping
on the upper Tanana River, in the
interior of northern Alaska;
he managed to learn to read.
You tell Pete what was in the
books what he is doing for a
and nods his head matter-of-
factly, "Sure," he says, stroking
his hat's like we fight in Alaska,
back in the hills and fight if
they don't take us!"

He is an old six-foot muzzle-
loader. Pete is pretty handy with it.
Alaska are generally handy
with a single shot somewhere
and Pete says without turn-
ing, "Joe just kill a muskrat."

"You know he killed it?" you
ask. He shakes his head again from what
you said and looks at you in surprise.
"Didn't he?"

Pete is doing, you notice, is
cutting a long strip of lead with the blade
of a hunting knife, cutting the lead
into squares. He cups the square
in the palm of his hand and pours
it into the muzzle of his gun. You
ask him that for, Pete? Musk-

no Pete tells you, letting the
bullet slide casually down the mouth
of the gun. "Japs."

Over Alaska they are load-
ing their guns and cleaning their rifles
and repairing their boots and repairing
their sleds and caching food here
and there in the woods. They are
quietly methodical without ex-
citement, without much talk. They are
preparing for the war to come. They
are afraid, either. They are just
ready—the way they get ready
for a fisherman in Ketchikan
to pull the motor of his power trawler.
Down on the Bering Sea coast lays
a supply of dried salmon. A
man hides on the Kenai works
his wide thongs into his pack.
"If there's too many Japs, I can
hide in the bush. I can kill a moose.
I can live awhile."

"I can live years."

Look at the people of Alaska, the
unhunted sourdoughs, who faced
hunger and starvation and mos-
quitoes and made a go of it in a hard
land. As you think to yourself, "I'd
be a Jap and try to take Alaska."
You try to take Alaska away from

DAN HOLLAND

them!" You look at these Alaskans and
somehow you think of another army a
couple of hundred years ago, an army
of squirrel hunters and farmers and
frontiersmen who fought a trained mili-
tary machine and fought it to a stand-
still. Alaskans are frontiersmen, too,
independent and self-sufficient and used
to taking care of themselves. They
know how to live off the country if they
have to. They know how to fight be-
cause all their lives they've had to fight
in order to exist. They know how to get
back in the hills and fight a guerrilla
war. "Any Jap won't get near me. I'll
be watching him."

"What good will it do to watch him?"
"I'll be watching him through the
sights of my thirty-thirty."

The Alaskans are ready to fight. They
have to be; they know that right now
Alaska is perched on a powder keg.
They know that at any moment the
fortunes of a total war may explode this
remote Arctic territory into a major
World War II battlefield. They know
that Alaska lies right smack in the
middle of the most direct route between

the United States and Tokyo, and that
sooner or later there is likely to be
action. The late General Billy Mitchell
called Alaska the most important stra-
tegic spot in the world, and the late
General Mitchell has been proved right
about a lot of things. Whether the
action there will be defensive or offen-
sive, the people of Alaska, of course, do
not know, though they have their sus-
picions. But they do know that Alaska
is a big country—a fifth the size of the
whole United States, with a coastline
several thousand miles longer than that
of the States—and that only forty-seven
miles of open water lie between Alaska
and Asia.

Furthermore, they know that Alaska's
westernmost tip pokes out across the
Pacific to within seven hundred miles of
Japanese soil; its eastern tip, down on
the Panhandle, is only six hundred-odd
miles, bomber-flight, from Seattle and
the Pacific Northwest. Whichever way
the action goes, offensive or defensive,
they know they are likely to wake up
any morning and find their laps full of
Japs.

**Eskimo girls make cold-weather
clothes for U. S. Army fliers in
a schoolhouse at Nome, near an
Army post. The two fliers are
trying on mukluks and parkas.
The Army will foot the bill**

And Alaskans don't like Japs. They
have a pretty strong feeling about Japs.
Down in Bristol Bay, for instance, the
salmon fishermen remember vividly
how their nets were slashed and their
boats rammed and their salmon pack
stolen from under their eyes, until they
took the law into their own hands and
grabbed their guns and ran the Japs off
the fishing banks.

In the Aleutian Islands, the fox farm-
ers have a private score of their own to
settle with certain Jap poachers who
have been making off annually with
their precious fur supply. Down in
southeastern Alaska, the cannery work-
ers recall grimly how the Japs have tried
from time to time to jeopardize their

(Continued on page 54C)

America is the land of aviation? Don't kid yourself. There's enthusiasm here, but not many have knowledge that can be used. In Germany they give flying lessons in the kindergarten. We're going to do some teaching now too

WHEN German Stukas blasted a way through Belgium, destroyed Rotterdam and demoralized the great French army, a new period in history began. The raid on Pearl Harbor and the sinking of the British battleships Repulse and Prince of Wales off Malaya made the lesson still clearer. Whether we like it or not, we must fly or die. We are the last generation of earth-bound men.

Faced with this hard fact of history, America has been taking stock. There are thrillingly hopeful things to report and there are vast gaps to be filled. We are turning out planes at a speed never before known to science; we have developed thousands of fighter pilots and are training other thousands with a rapidity and success hitherto considered impossible. But we have one great job to do: We must "air-condition" the youth of America.

In urging such a program for this country during the past four years, I hit upon the term "air-conditioned" because the terms generally used—"air-minded" or "air-conscious"—did not express what I meant. You can love music all your life without being able to play a note. You can appreciate electric light without knowing how to replace a burned-out fuse. In short, you are conscious of these things, but to be "conditioned" means to be in a state of fitness—fitness to do something. An air-conditioning program must equip and impel youth to participate in aviation.

We are the most mechanical-minded people on earth and we have a background of flying that started with the Wright brothers at Kitty Hawk, but we have done almost nothing in the way of keeping our education in step with our traditions. Our school textbooks were written in the horse-and-buggy days and have not been kept up to date. When there is a problem in arithmetic, it is about a man walking from point to point, or sometimes riding a horse, or even a railroad train—but almost never flying an airplane.

A minor complaint? Yes, if it wasn't for one thing: Germany. Very thorough people, those Germans, with the most complete propaganda system in history pushing along behind. Where do you think those Stuka pilots got their original enthusiasm for flying? They got it in grammar school, many of them, starting their education along that line as soon as Hitler bamboozled old Hindenburg into giving him power.

We have youngsters interested in flying—almost 3,000,000 of them, according to the manufacturers who make miniature motors and flying-model airplanes—but the Germans have made air-conditioning a part of their educational system, almost the principal course in it. It would be impossible for a German boy under present conditions to graduate from high school without being thoroughly inoculated with the subject. He studies aviation, he practices it, he lives it, he eats it.

This has been done in an iron-handed way that Americans would never stand for and have no need to stand for. Our youngsters don't need the iron hand; they need only the opportunity. The best test of this is the success of our C.A.A. (Civil Aeronautics Administration) program, which got started early. Since 1938, elementary flight and ground training has been given to more than 70,000 young men. Remember that this has been a civilian and not a military program. Yet nearly 25,000 of these boys are already in uniform, more than half of them in the air services, and the others in activities that include aviation weather-forecasting, engineering, antiaircraft defense and communications. Another 25,000 of them are still in college, a great reservoir of licensed civil pilots. Others now are being trained at the rate of 4,000 a month at more than 700 colleges and an equal number of civilian flying schools.

Those training centers are putting on full speed under a recent plan announced by the War Department for use of their maximum output.

But air-conditioning must start even earlier. Today's twelve-year-old needs to know in detail about the character of the atmosphere above the earth's surface because he will travel in it. He needs to know what makes a flier "black out" in flight. Geographically, he must think of the earth as a globe. He must understand the Great Circle. He must realize that if a Japanese bomber were to set out, nonstop, for the Panama Canal, its best course would be north from Japan, then probably passing over Seattle and Galveston, flying southeast and approaching the Canal from the Caribbean side. This is not only a question for practical preparation for an eventual career but it opens new vistas for young minds in a time of change when only the alert can hope to survive.

The Germans have done all this and much more. The only other nation that has encouraged air-conditioning on a similar scale is the Soviet Union. But since Germany is the enemy, the sensible thing is to study their system with a view of taking from it what we need. We have no intention of copying it slavishly. We have no place for the mental rigidity of Naziism that makes robots of its students and slaves of its teachers; in fact we need not imitate it at all. But we can learn from it.

The information on it comes from German sources, a document entitled "German Ministry of Education; Decree of December 20, 1939, on Promotion of Aviation in Schools and Universities." The date of it is misleading. The program actually was launched, secretly, on November 17, 1934. It was not a question of Hitler asking the schools for assistance but of telling them what to do.

Air-Conditioning Begins Early

The instruction begins in the lower grades when little Fritz listens to the Story-Telling Hour. He is told of Icarus, who flew too close to the sun, and of Leonardo da Vinci, who made the first sketch of an airplane. When Fritz gets around to birds and bees and flowers, the lesson goes on. Why do certain fish glide? What distinguishes the effortless soaring of an eagle from the frantic flapping of a duck?

About this time, Fritz begins to use aeronautical terms in discussing the most ordinary things. Basic nouns or verbs, such as "flight," are combined with others—motor flight, model flight, power, gliding, long-distance, blind, and night flight. The fundamentals of aerophysics and flying theory are taught beginning in the sixth grade.

In the high schools the program begins to gather real power. Science subjects are literally crammed with aeronautical examples, while such supposedly unrelated topics as foreign languages, geography, history and art also make painstaking contributions to German air-mindedness.

From primary days, arithmetic has had an aviation flavor. Instead of adding two and one, the teacher says: "At recess we saw two planes; now another is passing by. How many is that?" They speak of Heinkels instead of oranges and apples. When the student gets into higher mathematics he is provided with problems concerning navigation and meteorology, take-off and approach angles, radio direction-finding.

Chemistry studies the supporting gases for lighter-than-air craft; emphasizes the problem of de-icing in the study of water; and stresses (in mining and refining) the aluminum alloys. Organic chemistry includes motor fuel and lubricants. Study of methods to create synthetics is, of course, emphasized. Physics courses are dominated by a thorough study of flight principles. Biology specializes in the physiological effects of flying on the human body—its limitations at high altitudes, when flying blind or when maneuvering at high speeds.

The science courses are so jammed with aviation that one might wonder how the kids could grasp it—until it is recalled that ever since the sixth grade they have been building and flying kites and model planes. In fact, many start this when only six or seven years old. They learn first the handling of tools in wood or metal work. They progress from simple gliding models to rubber-band (Continued on page 61)

Especially a Sergeant

By William J.
Breslow

THE trouble with this army," Arturo said authoritatively, "is that the guys in it ain't tough like the guys in the last war."

"Oh, I don't know," the chef answered. He was shelling green peas at a small table near the kitchen, partly hidden from the rest of the dining room by a wide pillar. "I guess they can get plenty tough when they have to."

"Nah! They're too soft," Arturo declared. He looked down the dining room to see if he was needed. At one table a fat man was eating bread and butter and drinking beer; at another, a young couple sat close to each other. Arturo rested his back against the pillar and helped himself to a handful of peas.

"Keep your hands out of that pot," the chef warned.

Arturo tossed a few peas back into the pot and hastened forward to greet three soldiers who came in. He guided them to a table, spread a menu in front of each, then walked back to the water cooler to fill their glasses. "There's what I mean," he whispered to the chef. "Look at them guys. Kids, and one of them with a sergeant's stripes. I'll bet he ain't more than nineteen; even younger than them two buck privates."

"I remember you telling me that you were one of the youngest sergeants in the last war yourself," the chef reminded him.

"Yeah, but that was different. In the last war a guy had to win his stripes one at a time, and he had to be plenty tough to do it. Especially a sergeant." Arturo balanced the three glasses on one hand and made his way down the dining room.

The three soldiers studied their menu cards, then looked questioningly at one another.

"The veal scallopine is very good today," Arturo suggested helpfully.

"None of that Italian mush for me," the sergeant declared. "Bring me some ham and eggs."

"Same here, with French fried."
"Me too."

Arturo relayed the orders to the chef. He followed him into the kitchen and started to place bread and butter on a tray. "What an army!" he muttered. "They come to an Italian restaurant and order ham and eggs."

"Maybe they like ham and eggs," the chef pointed out.

"In the last war soldiers on pass didn't order ham and eggs," Arturo maintained, "Steaks, that's what." He peered over the chef's shoulder. "Hey," he growled, "what about putting a couple of decent pieces of ham on them orders?"

"You mind your own . . ." the chef began, then turned toward Arturo, clicked his heels together, and saluted. "Okay, Sergeant, more ham it is."

"You're ignorant," Arturo said. "Saluting a noncom." He carried the orders out to the dining room. He essayed a military bearing, but his bald head and flat-footed gait made his effort seem ludicrous.

"Hey, fellows, how about some wine?"

the first private said. "I thought we come here to fuel up." He studied a menu. "How about a bottle of this here Lagrima Cristi?"

The sergeant took the menu away. "Dope," he laughed. "That stuff costs four bucks a bottle." He turned to Arturo. "Please bring us a pint of Chianti."

Arturo went out front to the bar and got the bottle of wine. On the way back he stepped into the kitchen for the glasses. "Wine," he said to the chef, and made a derogatory noise with his lips. He went out and poured their wine, set the bottle in front of them, then went back and leaned against the pillar, watching the three soldiers with amused disapproval.

THE chef had come in from the kitchen and resumed shelling peas, and in a few minutes he looked up to see why Arturo was so quiet. His eyes followed the waiter's gaze. "Nice-looking uniforms those boys are wearing, eh?" he commented.

Arturo made a depreciative gesture with his hand. "That's the trouble with this army," he insisted. "Too much comfort. Look at them. Wearing fancy uniforms and eating ham and eggs. And wine! No guys out of the outfit I was with in the last war would drink wine if they could get something stronger. Especially a sergeant."

"Yeah, I know. You washed your teeth with whisky every morning when you were a sergeant. Don't kid me, mister. You weren't any more hard-boiled then than you are now."

The fat customer tapped a spoon against a glass. He wanted some butter, and Arturo fetched it and also placed a few extra chips of butter on the soldiers' table. He hovered for a few moments near the young couple, but they were too engrossed in each

other, so Arturo came back against the pillar.

In a little while the sergeant came over and ordered another bottle of Chianti. Arturo brought a small basket of potatoes to the table. He rested his back against the pillar and stood hopefully watching the soldiers, wishing that they would sing or otherwise display exuberance. "Them guys are a bunch of Sunday school kids."

"What do you want the breaking dishes or something?" he demanded.

Arturo glared at him with contempt. "A-a-a-h, nuts," he said. "Do you know about army?"

The sergeant refilled his glasses and, noticing that the pillar was empty, he held a whispering conference with the two privates. Then he turned to Arturo. "What does it cost?" the sergeant asked.

Arturo figured it up. "Would you like to order else, sir?" he inquired.

"Not right now, thank you. You know later." The sergeant pooled their money. Arturo counted it, shaking his head sadly.

"Look at him," Arturo said, "probably trying to figure out how much dough he's got left over from the ice cream sodas."

The sergeant picked up the money and laid it aside on the table, the rest of the money in his pocket and the two privates sat back disappointed.

"That's the end of their business," Arturo whispered to the chef. "The Chianti and they'll tell the gang they had one more."

"I think the fat guy was kidding," the chef said. "He's ready to go."

Arturo hastened over to the pillar and placed it on the table. He glanced at the pillar, he glanced at the sergeant had laid aside

THE fat man had been sitting back to the soldiers. When he started to waddle out, he looked at the pillar for the first time. He paused at the pillar and said something to the two privates. They shook hands with them and then they left.

"They're leaving me a tip," Arturo told the chef. "You expect an army to be the guys in it are so easy dough?" He regarded the pillar with narrowed lids. "I'll tell you a match you. You win my tip, I'll tell you your half."

The chef brought out a coin and he said, flipping it in the air. "Heads," Arturo said.

"Fifty cents and went out for minutes he returned with Chianti and a bowl of pretzels. He headed for the soldiers.

"I thought you told me it was over," the chef said. "Is this bottle on the house?"

"It's the fat guy," Arturo said. "He bought it for them."

"Baloney. That guy was anybody the sweat off his bottle is on you and me."

"It's no dough out of my turo declared. "It's half of that sergeant's. You don't throw half dollars around. The trouble with this army

"Yeah, I know, I know," with heavy sarcasm. "The like the guys in your army a sergeant."

The chef brought out a coin and he said, flipping the air. "Heads," Arturo

Les Steers demonstrates the up-and-over "belly roll" form the results in his record-shattering high-jump performances. A preciative onlooker is Mrs. Steers.

LEAPING LESTER

By Arthur J. Daley

He looks more like a shot-putter, but Les Steers has broken the world high-jump record four times and he's still not content

THE first time Les Steers broke the world high-jump record he was loaded to the gunwales with soda pop, and the standards supporting the crossbar were shakily perched on two boxes and a board. It was only an exhibition performance but the fact that he had jumped 6 feet 10 $\frac{3}{8}$ inches convinced him that it could be done again in better and more official surroundings.

Since then the kid with the kangaroo legs has shattered the world record four times in a row with his best a quite incredible 6 feet 11 inches. If the war does

not interfere with his plans, Steers hopes and expects to be the first man in the history of sports to top the unprecedented height of seven feet.

Les had not even the foggiest notion that summer day in 1940 that he was headed upward. Cornelius Warmerdam, another human stratosphere climber and the holder of the world pole-vault record, had invited his San Francisco Olympic Club teammate to give a high-jumping exhibition at Tuolumne, California, where Warmerdam was teaching.

It was a school festival of some description and the ever-obliging Steers went over from Frisco. The pit was a hastily dug excavation and the runway was the lawn. By way of adding to his ease of mind, however, Les discovered that the high-jump standards were of midget size. The highest they would register was 6 feet 3 inches.

To you or me that might seem as high as Mount Everest but to Steers it looked as simple as jumping over a closely cropped hedge. In fact he was so confident of leaping over the crosspiece that he broke a self-imposed rule that he has never violated before or since. He took

a drink of soda pop. Perhaps he should not be blamed for it, because the temperature was 105 degrees. And he kept drinking soda pop until he could feel it effervescing inside of him.

When the Kangaroo Kid went over the bar at its highest he thought that his work was done. But the delighted Californians promptly fetched out a pair of boxes and placed the standards on top of them. So Steers went over again. Two more boxes were forthcoming and a pleasant jaunt began to take on the aspects of labor. Les cleared the height, and his hosts, now run out of boxes, placed a couple of boards beneath the boxes. According to the standards, he was jumping 7 feet 4 inches but a re-measurement of the sagging bar revealed it to be only 6 feet 10 $\frac{3}{8}$ inches, which still was higher than the world record. No whit daunted by that, Steers, soda pop and all, rolled over it. And he has been clicking away ever since—but without the soda pop.

As a high jumper Steers is a physical freak. He has the build of a heavy-weight boxing champion, over six feet in height and a solid 194 pounds in weight. Most of the top-notch jumpers have been of the string-bean variety—long, lean and, as one record holder, dark Cornelius Johnson, once put it, "I se split high. Ma legs ends where ma chest begins."

Steers is not like that. A normal human being, perfected unless it is that his shoulders are too broad and his chest too big to put him in among a score of field athletes and he would not be out as a likely shot-putter or thrower.

It was not until last year that Steers really came into his own. He started his phenomenal jump world record was 6 feet 9 $\frac{3}{4}$ inches. Then he cracked that at Seattle he had jumped 6 feet 10 $\frac{25}{32}$ inches (a record that must have been measured with a special hair splitter). Then he jumped 6 feet 10 $\frac{7}{8}$ inches, 6 feet 11 inches, and 6 feet 11 $\frac{1}{8}$ inches again.

Let us pause for a moment to consider what it means to leap over a bar at those astounding heights. If you are out of curiosity measure 6 feet 11 inches on the nearest wall and you are away shaking your head at the thought that jumping that high is a possibility.

Yet the Kangaroo Kid is not so odd enough, he was unable to win the National A.A.U. championship season of his biggest triumph though he had been undefeated through the campaign, had broken the record four times and had won the National Collegiate A.A.U. title.

As soon as his college career at the University of Oregon had ended in June, Steers took a job in a logging yard on the Coast and worked eight-hour days.

I laid thoughtfully. "It fits ug And somehow or other, enound out. How did she find erintendent?"

"You're not used to living in the country, Mr. Burton. It's a kind of miracle how things get around. First of all there's the telephone call. Who overheard it on your end?"

I reflected.

"I took the call originally. I called up to Partridge."

"Mentioning the girl's name?"

"Yes—yes, I did."

"Anyone overhear you?"

"My sister or Miss Griffith might have done so."

"Ah, Miss Griffith. What was she doing up there?"

I explained.

"Was she going back to the village?" "She was going to Mr. Pye first."

Nash sighed. "That's two ways it could have gone all over the place."

I was incredulous. "Do you mean that either Miss Griffith or Mr. Pye would bother to repeat a meaningless little bit of information like that?"

"Anything's news in a place like this.

"We went along by the stream, fishing. We didn't catch anything. We hardly ever do, but the boys enjoy it. Brian got rather wet. I had to change his things when we got in"

You'd be surprised. If the dressmaker's mother has got a bad corn everybody hears about it! And then there is this end. Miss Holland, Rose—they could have heard what Agnes said. And there's Fred Rendell. It may have got around through him that Agnes went back to the house that afternoon."

I gave a slight shiver. I was looking out of the window. In front of me was a

neat square of grass and a path and the low prim gate.

Someone had opened the gate, had walked very correctly and quietly up to the house, and had pushed a letter through the letter box. I saw, hazily, in my mind's eye, that vague woman's shape. The face was blank—but it must be a face that I knew...

The Personality Kid

By Kyle Crichton

Dona Drake's language is unique in night clubs and one-night stands since she was thirteen, her voice takes care of most situations. What's her—well, what's a girl got more?

THE trouble with getting a reputation body ever lets you forget it. Dona Drake, an actress at Paramount in Hollywood before that, she was Rita Rio, a young lady with her own orchestra, also made up of young people. She played the piano, sang and beat time for this outfit, sang and doubled in brass. She played the piano, the trumpet (blaring), the clarinet (stinking phone (ai-yi) and the drums (swell).

The result of this was a following of her own, and she was the principle that jive makes equal.

"H'ya, Talent," they would yell at Dona Drake had got placed at Paramount and was the best her past down.

"H'ya, Stuff," she would answer wearily. This revealed extraordinary humility. She had been reared in South Philadelphia. Drake pursued this course under the theory that she might otherwise find her high-hat. With this was the fear that some day she would be very glad to get back to the band and her minions.

Therefore, when her jive friends howl "cookin', pal?" she merely answered "meek much gives, chum," and went back to work. Of being a motion-picture actress—a rather ambitious at that point because she had done a bit in *Aloma of the South Seas* and had worked after for a period of six months, being paid but realizing that nothing establishes a career more rapidly than being in a picture. The theme song in *Louisiana Purchase*, a wiggle of the rear that entranced the nation in a short scene with Victor Moore.

It was at this juncture that a young man thoroughly hep met her on the lot one day cheerily: "What cooks, Snooks?"

She gave him a long, hard look, very big. "Scram, Gate!" she said tensely and immediately that her future must be before her she had definitely parted with the past.

A Lady Who Knows All the Angles

Getting the personality of Miss Dona Drake on paper is a difficult thing because one article contains only so many words, and Miss Drake has millions of them. She has just turned twenty-one and has been eight years in show business. She started at the age of thirteen with N.T.C. (Granlund) in the chorus of the *Paradise Club* in New York. Since then, she has known success as only few young people ever get it. She knows the life of the show girl, the life of the night stands on the road. She knows the life of the gentlemen-on-the-make, the shysters. She is an urchin, has the wisdom of an owl and understands herself perfectly.

"When did I ever live?" she asks bitterly. Hollywood to her is what it is to make a trouper—a place of rest in a harried life. But the negative reaction of the public is going to keep her from being a screen success. The business handling Hollywood will never stop her. She knows the angles of show business; no man that can frighten her. She forced her way into it but insisted on her price when she got in.

"Four hundred a week," she says grimly "to steal for Paramount."

Her real name is Una Novella and she is the daughter of a Mexican father and an Irish mother. She was born in Mexico City but the family moved when she was four and settled in Philadelphia where her father ran a chili parlor. They lived in Philadelphia, where life is hard, and since then nobody has ever kicked her without getting a return.

Her sister Renee got a job with Granlund's company was playing at the Earle T. Ford in Philadelphia. By the time (Continued on p. 10)

Dona Drake at 21 has eight years of show business behind her and a bright movie future.

molested? Smash him." But my es-
ort only turned pale and tipped his hat
and said, "Nice to've met you," and off
he walked.

The corner-boy gave a low mean
laugh and tried to give my escort a good
kick, and was I scared! So I gave a loud
scream and a policeman came. The cor-
ner-boy ran up in his house and the po-
liceman ran up after him and caught him
kicking his door and yelling, "Ma!" He
was yelling for his ma to let him in. So
the policeman brought him down and
I said, "He's the one," and did I give
him a piece of my mind! I said, "You
dirty big coward, afraid to fight soldiers
and policemen." So we all got in the
wagon and rode down to the court that

is open nights, and I cried and told the
judge how he always insulted and mo-
lested me and made my escorts tip their
hat and go, or hit them.

HIS ma was there too and she cried and
said she was only a widow and her
Claude—his name was Claude—was her
only boy and what would become of
her if he was put away? Well, I cried
too and the judge looked in his book
and saw where Claude's ma had him ar-
rested two times before for finding
where she hid the rent money, so the
judge gave Claude ten days and pro-
bation. I felt so bad. I cried and cried,
and I was coming out of the court and
Claude's ma was laying for me and gave

me such a sock in the eye I had a big
blue eye.

A big blue eye is so ordinary, par-
ticularly if a girl goes to business, and
I had it painted up in my beautician's
next morning so you couldn't tell it, ex-
cept it was closed, and I went to busi-
ness. And Mr. Wissel thought I was
winking at him.

I kept turning my blue eye away from
Mr. Wissel and looking at him side-
ways, and he thought I was winking at
him like anything. I never wink at my
boss, any office I was ever in. I never
start being friends, but if the boss wants
to start being friends, I am not silly, and
I just let him go on till I am sure I am

Russia Uncensored

By Alice Leone Moats

ILLUSTRATED BY HARDIE GRAMATKY

WHAT do Russians think about Americans?" is a question that has been asked me again and again since my return from the Soviet Union. The answer is simple: Russians don't think about Americans.

That is no doubt a puzzling statement to anyone who doesn't understand what a controlled press is. Soviet newspapers and magazines do not exist to provide news. They are printed to tell the people what the government wishes them to know, and apparently the government has no desire to keep them informed as to what is going on in the outside world. The back pages of Pravda and the other papers do carry foreign news but it can scarcely be called either complete or detailed coverage. A new pact signed between two nations will deserve mention, as will some war communiqués or a very important speech by a statesman. The reports, however, are miracles of brevity, with no interpretation or other frills. It's as easy as that to keep interest in the rest of the world at the lowest point.

Even since the German invasion of the U.S.S.R. there is no idle chatter about England and America, no high-flown references to "our gallant allies."

Stalin in his February speech made the official attitude clear when he said, "The Red Army, so far, has had no support." In that speech he also failed to mention that any supplies or equipment had arrived from Great Britain or the United States. Litvinoff, in his talk at

The author came home to write this story because it would never pass Russia's blanket censorship. Here's how the realistic Russians look at their war, and their allies, including us. We aren't flattered

the Overseas Press Club dinner, followed the party line by insisting that Britain and America must invade the Continent and remarking that the Russians weren't greedy; they were perfectly willing to share the glory of beating the Nazis.

Under these circumstances it is not surprising that the Russians don't think a great deal about Americans. There was a time, I understand, when great admiration was expressed for our industrial capacity and what was called the "Amerikanski tempo." Since stress has recently been laid on how little material aid we are giving the Soviet Union, even those matters don't come up for discussion. The only leftover from old times is the fact that the workers seem to be more aware of our existence than any other group.

Whenever the correspondents were taken to visit a factory, we would be asked if we had been over the du Pont

plant, and we created consternation by admitting that we had not. The subject of unemployment in the United States was invariably brought up, and the figures quoted were at least double any that we have seen discussed in our own press. Heads were shaken over the American government's failure to help the unemployed.

When I would try to explain the WPA and relief, everything I said was greeted with a cynical smile. Another notion that I found to be very widespread was the one that foreign visitors look so well dressed only because their governments provide them with clothes before they set forth. These garments, incidentally, must be given back when they return home.

In order to appreciate even further why there is so little interest in America, it must be constantly kept in mind that Russians are not encouraged to mix with foreigners. There are agencies set

up to deal with visitors. The agency manages certain visitors may not stay in an agency attends to such things as houses and apartments, pants, doctors, etc. Another international cultural Press Bureau takes care of visitors' permits must handing out gasoline coupons for ranging tours.

The employees of these agencies must necessarily mix with the ordinary man in the street but the relationship is kept on an official basis. Part of the job is to build a Wall of China around the ordinary man in the street and prevent his having any contact with the world. The job is so difficult in the eyes of the people themselves are very pleasant by instinct but tend to learn to curb that instinct in the consequences of fraternizing with foreigners. For instance, any Russian looking for a job must fill out of the questions on the "you know any foreigners well?" There is no position since the GPU is usually informed. Admission of most casual relationship with a foreigner means no job.

When someone does for a moment, he is sure to be punished. (Continued on page 22)

War makes little difference to hardship-conditioned Russians, who have probably developed special muscles from standing in queues

Wine of the Country

By Jim Marshall

Five years ago California's grape growers and wine makers were in the red (ink). Today they have a half-billion-dollar industry. Here's the story behind the spectacular increase in our wine consumption

A FEW years ago wine making in California wasn't so much an industry as a social problem. Today, without any federal help and against the bitter opposition of twenty-eight state legislatures, grape growers and wine makers are all making money. From the Oregon border to the Mexican line you roll through the lush valleys, with the vines sweeping in orderly lines across the levels and climbing the rolling hills. The wineries, big and small, lie in the cool shadows of the eucalyptus and madroña and oak trees. You roll a thousand miles and ask a thousand people: "How's business?" The answer you get is: "Swell!"

The grape growers and wine makers are proud of their prosperity because they went out and made it for themselves. Not five years ago they were facing economic ruin. There were oceans of wine stored away, little demand for it. Hundreds of tons of grapes went to waste every year. You couldn't produce either grapes or wine for the price you had to accept.

For many of the growers this was doubly bitter, because all through the prohibition years they had hung on grimly, maintaining their vineyards, keeping their wineries in order, against the day when wine would be legal once again. Now the happy day had come—but instead of prosperity it had brought only grief and red ink.

Most of this trouble was caused by a wild rush to produce wine—or anything resembling wine. The result was that oceans of very bad wine got mixed up with the good product. Wine got a bad reputation, through no fault of thousands of honest, painstaking growers. The market collapsed and there was California, with huge surpluses and no place for them to go.

Various schemes were suggested, including tearing out vineyards and pouring wine down sewers. Three separate attempts were made to get the growers into some sort of co-operative association; they all failed. They failed largely because wine growers are French and Italian, German and Swiss, Armenian and Russian and Greek—a score of nationalities, all very clannish and each suspecting the other.

Into this situation came a slight, soft-spoken man named Harry Caddow who could not be suspected of inclining toward any one nationality, because his background was English. Caddow went around among the growers telling them that the trouble wasn't overproduction, but underconsumption. He pointed out to the Italians that while in Italy the per capita use of wine ran to about twenty-five gallons a year, in America it was only half a gallon. The French growers contrasted that half gallon with the thirty gallons the average Frenchman drinks each year.

When this pertinent fact was thoroughly fixed in the growers' minds, they started to inquire how American consumption could be stepped up. Caddow and a handful of the more intelligent wine men then produced a plan. They went to the legislature and got themselves a marketing act. This provided that if sixty-five per cent of the growers agreed, every wine maker would pay a "tax" on every gallon of wine he made—a cent a gallon on sweet wine, half that on dry wine. This "tax" wouldn't be paid to the state, but to the wine industry itself, as a fighting fund.

The first year about ninety per cent of the growers signed up under this plan. Some of the rest balked and went to court—and lost. As the money came in, the growers' organization, known as the Wine Institute, started spending it to create markets. Caddow and the men at the top realized that their educational and advertising campaigns would help the sale of Ohio and New York and Michigan wines, too, but they knew that of every ten gallons of wine sold in America, California makes nine—and they could afford to be generous.

As the scheme began to work and sales climbed, other states started to erect trade barriers to "protect" their own growers. To date, twenty-eight states are fighting importation of wine by means of tariff laws, embargoes and discriminatory taxes. More than half the state legislatures have set up what are in effect departments for the Prevention of Interstate Commerce.

The three Pacific Coast states, in which more wine is consumed

Thousands of gallons of wine will remain stored in one of California's large wineries until the order to roll out the barrels

CHARLES KERLEY

than anywhere else in America, all have tariff walls against one another's wine. If you are a New Yorker, visiting in California, you cannot ship yourself a carton of wine; New York won't let you. Michigan won't allow a Michigander to import a barrel of wine. Florida makes it easier to sell French or Italian wine than the New York or Ohio vintage. Utah forbids any Utahian to make wine from Michigan or California grapes. Georgia imposes a thirty-five-cents-a-gallon supertax on out-of-state wine. Unless an Arkansawyer is content to stick to Arkansas sherry—unknown to connoisseurs outside Little Rock—he must pay a supertax of forty-five cents a gallon. And so on.

Wine making is at once the simplest and yet most complex of the arts. In essence, you merely crush grapes, run the juice into casks and let nature do the rest. Inevitably, you will get something resembling wine—but if you want good wine it's harder.

You have to start with the soil, plus a certain climate, plus certain kinds of grapes, cultivated in a certain way. That's just a start. Into the long process of "growth" from grape juice to bottled vintage there go years of experience and scientific knowledge worked out in private laboratories and state universities. It takes up to five years or more to produce a bottle of good wine—and neglect for a few hours during this period may ruin the whole thing.

Most of the wine made on the West Coast today is produced by the descendants of European vintners who settled there nearly a century ago. The result is that each winery clings to some extent to tradition and is proud of some special brand it produces. There are more than one hundred forty varieties of grapes grown in California alone, each of which may produce a distinctive wine. Wines made from combinations of two or more varieties are endless.

Wineries Small and Large

There are small family vineyards, such as that of the Salmina family at Larkmead, near St. Helena; there are huge affairs like the Italian-Swiss colony's yards and the winery at Asti, with its wine-barrel-shaped little church, its capacity for pressing eight hundred tons of grapes a day, its storage tanks and underground reservoirs filled with eight and a half million gallons of wine. Out on a railroad track Enrico Prati, the wine maker, will show you a line of glass-lined tank cars in which wine is shipped, and the hundreds of small and huge oak and redwood casks in which it is fermented. A good oak wine cask, incidentally, costs as much as an automobile, but lasts longer. Some in California date back to the 70's.

A family affair in the German tradition is that of the Beringer brothers—the Los Hermanos plant near St. Helena. Here, the wine is stored in huge caves dug back into the limestone hill by coolie labor—they had nothing to do after the railroads were built in the West and were put to work excavating wine cellars by hand. Wine likes hill cellars because the temperature there is cool and even, seldom varying more than a few degrees a year.

The French influence comes out in the near-by Beaulieu Vineyards, owned by the stately Mme. Fernande de Latour, who maintains a magnificent home and formal gardens in the old tradition, and follows out that tradition in her wine making. This is the top development, perhaps, of the family-circle ownership system, where producing fine vintages has definitely overtaken profit as an incentive—just as some gardeners think more of growing fine roses than of making money out of them.

Tradition helps in wine making—but

sometimes it proves an obstacle to selling. Many Americans have two fixed ideas about wine: That the older wine is the better; and that wine produced in some years is better than that produced in others. The first idea never was true anywhere; the second is true only in Europe.

As a matter of fact the wine Americans drink is, on the average, older than that drunk by Italians and Frenchmen. Most everyday wines are at their best from one to two years old. A few fancy wines grow finer with age, but only up to a point. After that, they begin to deteriorate. There is no general rule about wine ages: One variety may be at its best in six months; another in six years.

So-called "vintage years" are important in Europe, because it is only infrequently that the climate of the growing season will be just right to produce the best grapes. On the West Coast, in the wine valleys, there isn't enough annual

variation to make much difference. Hence there are no "vintage years." Or, to hear the Californians tell it, they're all vintage years.

One other fly in the ointment for American wine makers has been what is called the snob complex: The legend that imported wines are much, much better than the home-grown variety. In the early days of automobiles this complex resulted in a belief that the Renault, the Mercedes, the Lanchester, the Benz—any foreign car—was superior to any American automobile. It took some years to dispel this illusion, and the wine makers are hoping it won't take so long in the case of wine.

It's a Question of Taste

Curiously enough, the same complex among Europeans results in American wines being prized over there—just because they're imported. California wines, in fact, walked away with top honors at—of all places—the Paris Exposition in 1937.

Up to a point, good wine and poor wine can be set apart by chemical analysis, but past this it's question of taste. A few—very few—experts can tell you, from its bouquet or taste, where a wine comes from and perhaps the year it was made. But these people are not responsible for one tenth of one per cent of national wine consumption. Most peo-

ple like a wine because they like it, and minute differences of taste don't bother them.

The war, cutting off supplies of foreign wine, is helping the American product. People grumble as the price of French and Italian and German wine rises; finally they try the cheaper home products—and discover that in most cases they are better than the imports. Actually, imported wine doesn't amount to one twentieth of the national consumption—but it got talked about a lot more. After the war, however, it is doubtful if foreign wine ever will regain its position here. In 1934 we imported nearly twelve per cent of our wine; this year we will import hardly any.

America, for example, is making her own vermouth as French and Italian supplies come to an end. Vermouth is merely red wine spiced with various combinations of about twenty-five herbs ranging from angelica root through cinchona bark, marjoram, peach leaves

the first vines to what n is b in m Once in a while the pac sour and they would b from Spanish stuff from th California, complaining price of \$1.25 a pint.

If we drank as much wi as or Italians, our annu com would be around three the If the industry can sell lion gallons this year, it will be satisfied. This will mal lion-dollar industry and for one thirty-fifth of th California.

Californians now dri ab and a half gallons of w year. Citizens of Loui Washington, Oregon and away with more than But the national average couple of quarts. . . . I ments, American wineg French and Italian stati heavily.

The history of grape of curious twists. Most E today are grown upon A This comes about becau 1880's an insect plague out the California vin were full of imported everything else had been surviving vines were graf American wild grape roo immune to the insect. Ti

A Right to Individuality

A few years later, when ease attacked Europe American roots were sh battle the trouble. That So we now have Europea planted to California, the Europe to make Europea exported to America.

In future years you ma can names instead of Euro wine bottle. Many wines the locality from which the nally—Port from Oporto, Jerez, Moselle, Chablis Rhine, Champagne, a sc Some growers are startin their own brands and na theory that every wine has individuality. An Ohio wine right to be known as Sanc cinnati as Burgundy or Sa fonia wines should be kn Sonoma or Los Angeles, in Chianti or Riesling. Why from New York Madeira when it's really Niagara

This probably will com American wine consumpti creasing at its present rate two years, consumption h more than one third. And has turned what was almos dustry into a successful, m co-operative enterprise. 1 ber, was done by a compar group of vineyardists in group composed of strongl istic nationalities, in the fac of trade barriers and witi handouts whatever.

It was a tough propos thousands of Americans, m still steeped in the loves, ditions and ways of life of ropean countries, to build a save them from ruin—and to get them to work in unit the machine produce. But and the machine is working.

Today, the people whose from Italy and France, from Germany and Portugal, f and Switzerland and Arme working together as good a and discovering that the An pays off.

THE END

"I do hope he doesn't pick up a brogue!"

PERRY BARLOW

and rosemary, to yarrow. Since there are endless combinations of these, there will probably be scores of varieties of American vermouth.

Ohio, Michigan, New York and other Eastern states have their wine regions, but the great river of American wine flows out of the Pacific Coast states. Here in the warm valleys east of the Coast Range and, in the South, in coastal counties, is the heart of the industry. In the North, Oregon and Washington are turning out more and more berry wines, from loganberries, raspberries, blackberries, and even apples—any sort of fruit that will mature in the cool, mild summers. These states also produce grape wine from the hotter interior valleys.

In California, wine has been made continuously for more than one hundred sixty years, the first vines being brought in by the padres from Lower California, in Mexico. Ironically, native California grapes are no good for wine making and all grapes there are from imported stock. East of the Rockies, however, native grapes are okay.

The padres used Indians to make the first wine—some of the old mission records carefully relating that the grapes were tramped out by "well-washed natives." The first vintages were stored in hollowed rocks, later in jugs brought in from Spain, via the Philippines by galleons. Father Junipero Serra brought

only with a liquid-cooled engine can you build such a plane.

General Motors undertook the big job of developing the Allison engine—starting back in 1930.

Now that thousands of these engines have gone into service, America can be glad that someone tackled that job.

The experience of General Motors is full-rounded and without bias in the airplane engine field. In addition to the liquid-cooled Allison engine, GM is under license to build air-cooled radial engines in its Buick and Chevrolet plants.

ously Duff looked for a club

enough to be of protection. Fi-

nally he found a piece of fence post, from which he knocked off the rotted sap until a solid bludgeon of pine heart was left. He limped back to the dog, not sure, now that he had him, what he would do.

The pointer had ceased struggling to watch, his front feet braced against the wire. Duff touched him gingerly with the end of the club, and immediately the dog's jaws closed upon it. Duff twisted it free.

The dog watched him, his lips fluttering with a measured, rattling growl.

Duff's eye fell upon the dog's collar. A brass plate was upon it, bearing an inscription. He could see one word: REWARD.

Duff cut a limb from a black-gum tree with his knife and trimmed it to four feet, the thickness being that of a broom handle. Working patiently, he bored a hole through one end of the stick with the point of his knife, and through this he ran a strand of wire twisted from the fence. He removed his torn coat. With one hand he prodded the dog with the club; when the animal's quick jaw seized the wood, he instantly threw the coat over the dog's head. There was a momentary struggle as the dog fought the coat, but at last it was fast on him, with the sleeves tight around his furious head.

While the dog was preoccupied in trying to bite his way out of the coat, Duff quickly twisted the loose strands of the wire around the collar. That done, he had the dog fast on the stick and therefore under his control, so that he could neither attack him nor run away. The plate on the collar read, REWARD. Amos Hawthorne, Tafton, Ala. He raised the dog, taking the pressure off the bound hind foot and releasing it, and snatched the coat loose.

The dog's first move was to leap at Duff. In spite of the fact that he only hurt himself by trying to jump against the stick, he kept at it, circling and charging time after time. Finally he tried to get away, but Duff braced himself and held on against the dog's incredibly powerful pulling. At last the dog became reconciled to his capture, and stood watching the man, softly growling.

WHILE colored John Wesley Davis and his son Paul were putting the dogs in the wagon, Lucie Sullivan gave her horse an extra bit of grooming. Wearing old riding breeches and brier-scratched boots, she strapped him and picked his feet and adjusted the bridle. She loved the horse and liked to touch him and work on him herself. He was a bay gelding, four years old, a somewhat small, good-chested animal; still a little too nervous and full of colt foolishness to be a first-class dog-training horse.

The first time she had ever got on him the bridle broke and he bolted. As he ran, the saddle began to slip; holding on to the mane, she had managed to keep easing higher on the horse so that the saddle went on over without her, and eventually slipped off completely. When the horse finally tired of his gallop, Lucie was still there, without saddle or bridle. They had put an item in the Tafton Weekly Times about that.

The horse moved about impatiently, turning his ears toward the sounds of the eager dogs and the Negroes. John Wesley Davis spoke to the dogs with a natural familiarity, as if everything he said was completely understandable to them. "Okay, Mike, you gits another try-out today; only recollect we's pointing patidges and not stink-birds, if you don't mind. Look out dere, Nat, better not pick no argument with old Friendship, if'n you want to live to flesh mo' coveys."

Paul, his son, was a quiet, morose

SAVE OIL

SAVE MONEY

Keep Your Car Running Well

Oil filters postpone one of the most expensive of all car repairs, — engine overhaul. Oil filters keep sludge and dirt out of engine oil. Piston ring slots stay clear longer. Engine wear is retarded. Carbon forms slower. Gas and oil economy is protected.

So, replace your oil filter element whenever your oil gets dark. And, here's the simple way to—

See THAT YOUR OIL IS CLEAN

When you want your oil checked in the usual way, stop in where you see the AC sign (shown below). Have the attendant wipe your oil level gauge stick on an AC Oil Test Pad. Then, look at the Test Pad! You can easily see whether the oil is clean.

Do this regularly, and your car will run well longer, and you'll save money.

AC Oil Filters Get the Dirt

For engines not now equipped, AC makes complete Oil Filters which your dealer can install in a short time.

LOOK FOR THIS SIGN

NOTE: Follow the recommendation of your service man as to when oil should be changed.

type. As he harnessed the dog-wagon mules, he sang:

*I want to die easy when I die,
I want to die easy when I die,
Shout salvation as I fly.*

Lucie stopped brushing. She was a rather plain girl, with light hair and coloring; she used no make-up, which she figured was just as well. But her teeth were even and dull white, and her figure was good, and her gray-blue eyes were animated by an Irish love of life.

"For gosh sake, Paul," she said. "I don't call that dying easy."

The Negro boy stopped singing. He had a deep and pleasant voice, and had studied at Tuskegee Institute.

"What's the call for that?" Lucie asked.

Paul straightened and looked at her. "I guess it's just the nigger in me."

"Why can't the nigger in you sing about God's chillun having shoes or something, huh? It's too early in the day to be dying easy." She looked at him again. "What's the matter with you lately, Paul?"

"Nothing."

John Wesley heard and looked worried. "Yes'm, Miss Lucie, something's wrong wid dat chile, Lawd knows. He's troubled in his mind."

Paul looked at his father angrily, and went back to fastening the harness.

"Miss Lucie," John Wesley said, regarding his son with puzzlement, "he say he gwine away."

"You're leaving, Paul?"

"Yes, Miss Lucie."

"Where? North?"

"I guess so. I wish Papa hadn't said anything about it."

Lucie had known long ago that Paul wasn't meant to be just a dog trainer's nigger, although sometimes it seemed that he liked handling dogs even better than John Wesley did. She had known this as far back as high-school days, when the white boys had got Paul to do their algebra homework for them.

In those days, she recalled with a rush of memory, she had been going with Charley Bedlow. That was before Delia Phillips had appeared. Charley had taken her to her first dance, in his old car. On the way to the pavilion the car stalled, and she had to get out in her new long dress and push; but she had tied the dress up around her hips in the dark and thought nothing of it. At the dance Charley drank several bottles of home brew. She tasted it once, which was enough, and thereafter watched with awe as he let it flow from the brown bottle down his throat with hardly a gurgle.

UP UNTIL that time she had considered kissing immoral, so when Charley caught her off guard and gave her a thorough one on her horrified mouth, she responded with her fist—which, in his home-brewed happiness, he considered not worth getting sore about. Later, in bed, she reviewed the incident and found the memory of the kiss not at all disagreeable. Next day she apologized to him and asked him to please let her know in advance next time so she could be ready. "Next time," she said, "just knock."

For a while, then, she and Charley were doing what was known as "going together." This was more his idea than hers and, before long, getting rid of him amounted to a problem. And then it was that Delia Phillips arrived upon her awareness. For Delia, to Lucie's gratitude, stole Charley away.

Delia's swift and positive acquisition of Charley Bedlow, Lucie recalled, was the first indication of the power of this female electromagnet. Delia then was only a sophomore, which is low in the high-school caste; and it soon developed

that few boys interested her at all. But when one did interest her she threw the switch and whoever it was in the magnetic field was drawn inexorably in, and held fast there as long as she saw fit to keep the current on. "It's interesting to watch her work," one of the girls had said, "as long as it's not your boy she's working."

Charley Bedlow—soon dropped by Delia—failed to graduate, for, not caring to face Lucie, he quit visiting the kennels for aid from Paul. "Don't know as it matters much about Mister Charley not gitting by," Paul concluded. "His I. Q. ain't none too high anyway."

DRIVING out—they lived in town so as to be away from the noise of the dogs, and drove the four miles out to the kennels every morning—Amos Hawthorne had complained that his morning eggnog had slipped up on him, so Lucie decided not to worry him with the matter of Paul's going away. The dogs saw him coming, an erect six-foot-three man of seventy-odd, and they let out an excited, deafening chorus. For a moment he tried to talk against the noise, then whirled, as if hearing it for the first time, and squalled:

"Wha-a-a, you!"

There was instant silence, and the kennel pens emptied magically. Presently here and there a head appeared; a bold dog or two tiptoed out of houses into the pens, and before long most of them were out again, standing up on the heavy wire and whining to be carried afield that day.

Abruptly all the dogs began barking furiously, their attention now at the gate, where Duff Webster and the dog had turned in from the highway. Duff walked slowly; his clothes were unkempt, and one trouser leg was split to the knee, so that his calf was exposed.

John Wesley said, "Here come a tramp. And, look a-yonder, Mr. Amos," he added suddenly, "if dat ain't ol' Judas he got with him!"

All of them stopped what they were doing, and watched the approaching ones curiously. Lucie's horse snorted and moved restlessly.

Duff said, "I'm looking for Amos Hawthorne."

"That's me," Amos said, leaning forward to squint at him.

Duff licked his dry lips. "Red-shot, as if with fever your dog. I thought you to get him back."

Amos snorted. "That no good. Been loose two farmer in the county's gu."

Duff hesitated. "It say his collar."

"All my collars are t ain't no good, just an out a mean, hard-headed bol"

"Well, it said, 'Reward disappointedly."

"Well, you ain't gonna of me. We was taking him chloroform him the day"

"Pay him something, S interrupted. "It says it on probably earned it, gettin that device he's fixed ther"

"Lucie, I ain't paying no ward for no goat-killing d got my horse ready?"

"Yes, sir."

"Paul," Lucie said, ha key, "go get my pocketbo car. I'll pay the reward of cery money, and let the eat maypops and branch w days."

"Yes'm."

JOHN WESLEY then sp liberation, "Scuse me, but dat man's sick. Look streak up his leg!"

They looked. An angry p on the veins of his exposed

ing to stand there and let him put that dog in with Sam?"

Duff folded the bill with a preoccupied deliberation, creasing each fold with thumbnail and forefinger. His fingers were trembling, and the simple act seemed to take hours.

Lucie said, "Thanks for bringing our dog back."

"That's all right."

While the Negroes loaded the dogs into the dog wagon, she watched Duff as he walked toward the gate. He went slowly, with a careful tread, as if he were drunk.

"All right, Lucie," her grandfather called.

"Just a minute," she said. "Let's see if he's going to make it to the road, or fall in the yard."

Amos came back and watched, too, suspiciously.

"Them tramps and hobos like that, they got all sorts of tricks. Being sick and needing medicine is old as me, and that's downright old. Your ma, now, in her day, she used to fall for any crazy story."

"Sucker, wasn't she?" Lucie said. The man reached the gate, and now crossed the cattle gap, stepping from one pipe to another. "I imagine they were glad to get a sucker like her in heaven, to elect her chairman of the board or something," Lucie added. "Look, he's made the road. Now he's the county's responsibility, huh? Takes a load off my mind. I have my doubts."

"Just drunk, likely as not." The dogs were barking, and the two Negroes were waiting.

"They sort of get me, Squire, these derelicts on their way to sunny Florida," Lucie said meditatively. "Who are they, and where do they come from, and what's the matter with them? You take our friend about to fall on his beard yonder; I know it sounds funny, but there's an outside chance that under that front, there's a brain and a heart and capacity for work and love."

"If them fellows was any account," Amos said impatiently, "they wouldn't be in that fix."

"I guess that's true part of the time," she said, leading her horse forward so she could see the man in the road. She turned back. "There he goes. Wesley, go to your house and tell Sarah to have some sort of bed ready, then come down to the road and help us."

WHEN she got to the road, Duff was sitting on the bank, head in his hands, with his feet in the ditch. He didn't look up until the horse stopped beside him. He stared at the girl for a moment, his eyes fever-bright.

"Who are you?" he asked.

"Lucie Sullivan," she answered.

"What's your name?"

"Duff Webster," he said. "That's a nice horse."

"Look," she said, "now that I've got you in a confiding state of mind, when did you eat last?"

He pondered a moment and finally said, "Recently."

"How recently?"

"I forget."

She dismounted and stood in the road, holding the reins, and she talked to him while she waited: "Let's talk of something you might remember, then. When did you work last?"

"What's that got to do with it? I didn't come here and I'm not going to leave." Rubbing his hand across his mouth, he gently fell over backward, but his bright eyes remained open. When he talked his lips barely moved, so that what he said was almost indistinguishable: "On Saturday nights, late, even after the barbershop has closed, then's when you scrub the fount, and the ammonia chokes you and makes your eyes run, and I looked up and there stood

this . . . and what it seemed he had in his hand seemed like a . . . a gun . . . and I thought he was somebody just playing a, you know, a . . . the twenty-nine dollars he took out of the cash drawer was the most of any Saturday night except . . . then my eyes kept running water and he thought I was crying and I let him have the glassful of ammonia and blinded him and he shot down a row of medicine bottles . . ."

"Listen, you haven't been shot? Is that what's wrong with you?"

"I'm fine . . ."

"Oh, sure. Don't take me out, Coach, I'm all right," Lucie said.

THAT night, Teague McGinnis, on his way to the Free-for-All, stopped by to see Amos Hawthorne. McGinnis was a Texan, a small, pleasant, hard-riding, hard-working dog man not long ago moved to Alabama. His face was weather-burned, though not of the brown-parchment quality that generations of sun and cold and wind had imparted to old Amos'. McGinnis drank almost nightly, always in small, frequent swallows straight from the bottle, without any chaser except a deep appreciative breath; the liquor apparently had no effect at all on him, unless to make him even pleasanter than ever. His brag dog was Hotfoot, a fiery-going young pointer, somewhat small headed, but as Amos said the first time he saw the dog run, "He's got more style than a sheep's got guts."

"Lucie's at the picture show. When she comes in," Amos said now, "you-all can ride out and find a pen for your dogs. We'll put you up, too."

"Be sure you got room. I don't want to cause you trouble," Teague McGinnis said. "I aim to show your dogs up, same as ever."

"Young fellow, you sleep on my bed and drink my liquor, and welcome; but when we turn the dogs loose, we'll run 'em till the hair slips, right on."

"Don't believe I've had the pleasure of meeting your granddaughter, Lucie."

"She's a good hand, though being a woman she ain't got a good squalling voice for a field-trial handler," the old man said.

"I hear your eyes are going back on you some," McGinnis said sympathetically.

"Good as yours, young fellow," Amos said sharply. "Better, maybe."

McGinnis mumbled in embarrassment. Then: "Glad you've retired old Sam. He was always hard to beat," McGinnis said presently. "One grand dog!"

Amos looked at him levelly, "McGinnis, Sam ain't retired, as you'll find out at Grand Junction in February."

"Why, man, that dog's over ten years old!" McGinnis said.

"Yes, and I'm seventy-odd; but you better pray you don't draw against the old folks in the National!"

After Lucie had come in and they had talked a while, Amos said, "Take him and his old plug dogs out to the kennels, Lucie. I'm going to bed."

"I wanted to see our patient anyway," she answered. "Doc's going out."

They rode the four miles out to the kennel farm in Teague McGinnis' pickup truck. The dogs were in their cages in the back.

"The squire's some guy," McGinnis said.

"He'll be okay when he matures. He's just at the awkward age now," Lucie said. "If you're from Texas, you'll have to see my horse."

"I'm all for looking at anything that'll keep me out with you a little longer."

She looked around at him. "That's okay with me. Although I never thought I'd go for any man wearing those high-heeled cowboy boots."

After they put the dogs in an empty kennel pen, she led him to the barn, and

held the flashlight into colt Pete. McGinnis went over the horse slow.

Finally the girl said, "What's wrong with him?"

"He's okay."

"Just okay, huh?"

"He's all right," McC

"Just all right, huh?"

laughing. She took him toward John Wesley.

"That horse is a little row we're going to hit!

and let him work off a You think he'll object?

put to any plow."

"All I can tell you is to any plow you want to Ginnis said. "I'm sorry too early to see that."

Dr. Phillips was at the they got there. His hand Delia, who sometimes at him, opened the old black Webster was in Wesley's his head rolling. Two f on his cheek and he n noises.

Delia looked at him surprise me," she said s under that beard there good-looking face."

Lucie thought, "Uh Delia ought to revive hi Dr. Phillips, "How is he

"Two years ago," Dr rummaging in his cas septicemia like this wou for a lot of desperate transfusions; and he'd've way. Now we just sho zole to him, and, bingo, trying to get his fever d But there's no question a although I will say that enthusiastic about it."

Duff's head gradually twisting, and he said:

"The earth is iron, and brass,

And faint with fervor air

The languid hours pass

Lucie listened in amaz poetry."

"He been talking like cie," John Wesley said, tone that had overtaken left to go north. "Yere speak a piece give me Talk about down, down devil."

"He must have been a some time or other," said lips.

Outside, Teague wh "Yow, who's that girl in

e takes a train. And sleeps while he goes,

on a Pullman... in a soft, full-length Pullman bed.

Going by rail, you see, he's sure to get there, no matter what the weather. And going Pullman gives him the *sleep* he needs to be rested and ready to pitch in when he arrives.

That's something worth remembering, about Pullman travel, now that we're at war. It not only gets you where you're going when you have to be there, but it gives you the *sleep* going that you

must have in order to *keep* going at your war-time pace.

And that, we believe, is a part of Pullman's service to the nation... just as are the thousands of Pullman cars now engaged in troop movements.

ING in a Pullman lounge car, you slough off the of the day and prepare yourself for sleep. And what sleep you get... in a soft Pullman bed that's long to stretch in. Next morning...

FRESHENING-UP in the big Pullman washroom gives you a wide-awake start on the day. Pullman has delivered you not only safely and dependably, but refreshed both mentally and physically... ready to do another all-out wartime job.

**Sleep Going -
to Keep Going -
go Pullman**

Let's not FORGET the Foe at home!

GERMS never ask for an armistice. So, during the immense job of protecting America... we must not forget to protect health.

That is why progressive, civic-minded dairies now protect milk, the nation's most vital food, *all the way to your home* as well as in their own spotless plants.

The Sealright hood gives this sure protection by keeping the pouring-rim of the bottle safe from human hands and exposure during delivery. Public health officials, *key men in America's defense*, endorse this protection.

At the moment of filling, *while the top of the bottle is still sterile*, the Sealright hood is sealed on. This sterilized paper covering is water-proof and tamper-proof. You yourself must break the seal. Sealright Co., Inc., Fulton, N. Y.

horse has got to be worked hard and regular. If you won't let nobody else ride him, he'll have to be plowed. Wesley, put him up until tomorrow, and maybe by then he'll learn a little sense."

WHEN Lucie went in to see the sick man, she found him shaven and awake. She stood in stunned silence, seeing for the first time what he looked like. His burned skin clung tight to the bone. His chin and mouth were chiseled into lean lines, his nose was thin and almost Roman, his eyes were black as his eyebrows and hair; his eyes were boyish, but there were no laugh wrinkles around them.

"Hello," she said. "You must be feeling better."

"I reckon you'll be glad to have me off your hands," he said apologetically.

"Oh, not especially. Our dog bit you, after all."

Next day he was propped up in bed, and could see them having their trouble with the colt and the plow. He got painfully up, slipped on his old clothes, and limped out to where they were harnessing the snorting horse.

"Look," Lucie said. "Lazarus has arisen."

"The doctor say you could git up?" Amos asked.

"I forgot to ask him," Duff said, supporting himself on the fence. He paused. "It's not any of my business, but you're liable to hurt this colt. If you'll hitch him up again, maybe I can make him behave."

"He's had enough for today."

"I believe I could make him behave."

"What are you going to do?"

"Hitch him up and let me show you."

They hitched the colt up again. He was so wild they had to hold him by a twist on his nose.

"All right," Lucie said to Duff, "what now?"

"Turn him loose."

They released the twist from the horse's nose. He lunged forward, felt the plow catch in the earth, then reared and went over backward like some sort of mechanical tumbling toy.

"Gosh!" Amos said. "Git him loose, quick!"

"No, leave him alone!" Duff said, hobbling forward.

He reached the struggling colt, and fell upon his head. The colt's struggling ceased.

For thirty minutes Duff sat there on the colt's head, holding him down.

"Now let's straighten him out," he said, finally, "and see."

They straightened the gear, and Duff got up off the horse's head. The horse came up with a leap, and shook himself.

"Giddup," Duff said.

Pete danced for a moment, as if he were about to rear. Then he seemed to think better of it, and went forward into the collar with a smash, and the gray earth began to up-spill over the smooth moldboard of the plowshare. John Wesley had to get into a trot to keep up.

ON THE day Duff was dismissed by the doctor, Lucie asked him, "Where to now?"

"Down the road is all I know," he answered. He felt ill at ease.

She said, "Look, before you go, would you help me saddle Pete? Everybody's out now, and sometimes he acts up."

He followed her into the yard and to the tack room. It was a cold, somewhat windy day, and the moving air howled softly against the corners of the barn; the dogs stood shivering in their kennels, watching them. She noticed that he brought the bridle holding the mouth of the Pelham bit in his hands to warm it; he saddled the horse deftly, and tightened the girth gradually, one hole at a time, unhurriedly. Pete stood still.

He led the horse out past just as a delivery truck from up with a dog crate in the setter lay disconsolately.

When the dog had been un- said, "He's from Indiana. A pet. Good head on him."

"Looks like Sport's Peerless doesn't he?" Duff said.

She glanced at him sharply a son of Sport's Peerless."

"Anybody can see the re- "No, not anybody. Only that knows something about Look," she said directly. "T a job?"

"Why, you don't know about me."

"More than you think."

"We lost a hand last week. I the job or not?"

Duff felt suddenly trapped had thought he wanted was to way, alone, to return to the that he had found. He was st his overwhelming gratitude friendly, generous girl. And somewhere there was an urge

"Well?" she said. "You job?"

"I don't exactly know."

"Where could I find out quired."

Leaping Lester

Continued from page 18

take some of the spring out of his legs. Les could jump a mere 6 feet 9 3/4 inches to equal the world record at the National J. sw. At that height he was tied with Stewart, a Southern California man who was awarded the championship in accordance with A.A.U. The strange code provides that if an athlete misses a jump at the first try it is scored against him and, in the event of ties, the one with the fewest misses gets the title. A few years ago the old rules—college meets and intercollegiate—were changed so that the pair of them would have shared the crown.

Les Steers has only himself to blame for his defeat. At Philadelphia he was upsetting Stewart on the back, doing mistakes with him and doing so in a prompt coaching of his rival. Les has mentioned his generosity on the field brought back a lot of credit for him. The first break Les received was when he was moved from his birthplace, California, to Palo Alto, home of Stanford University and also the important item as far as Les was concerned—of Robert Templeton.

Les was the Stanford track coach, an enthusiastic citizen who was a member on the American Olympic team of 1920. Dink was a great coach and Les forced him to give up his job, and among his discoveries at the time was that Les was a grammar school some thirty years ago was an eleven-year-old boy who bore the name of Les Steers.

After a day the wide-eyed boy crossed the highway to Stanford and he varsity men work out. And after a day Templeton encouraged the youngster and taught him all he knew. At the time Steers had graduated from grammar school he was doing 6 feet 2 inches. He added an inch a year during his stay at Palo Alto High School.

Les Steers was a student at San Francisco Junior College in 1939 he won the A.A.U. junior championship. He Hunter's Olympic Club team the next day he came back to annex the laurels, the junior crown just for 6 feet 8 inches and the senior title for it, a feat that had not been accomplished in twenty years.

A Taste of War

Les should have gone to college that year but he took a side trip instead, an expedition that gave him conversational material for the rest of his life. He won a medal at the American track and field championships and was scheduled to compete in France, Germany, Switzerland, Greece and Italy. His small ten-man team cleaned up at the international meet in London. Les went to France for some more competition and meandered on to the Riviera, where they were when the war broke out.

The toll of war was heavy. The manager of the team and he strove to get the youngsters out of Europe. But the war was not sailing and the youngsters were buffeted about as efforts were being made to bring them home. The night when they were in their hotel in Cannes there was an ominous rumbling. Les shrieked. Obviously it was the end.

"The roar seems nearer now," Steers said to Charlie Beetham, the manager.

"Let's get closer to this wall," someone said.

Tense, silent and scared, they huddled against the wall of the hotel as the zoom of German planes seemed louder and louder. They could hear the steady throb of engines and suddenly Steers began to laugh. His teammates gazed at him in astonishment at such levity at such a time. Death was so close and Steers was laughing.

"Are you crazy, Les?" asked Joe Battiste, the hurdler.

"Do you know what it is, fellows?" chuckled Steers. "It's the ice machine in the cellar."

It was. And that was the closest they came to the actual war. The only way they could reach their port of Le Verdon, near Bordeaux, was to drive there in a broken-down truck.

Credit Where It's Due

By the time Steers returned to California it was too late for him to matriculate at the University of Oregon where he was scheduled to resume his studies. So he did odd jobs for a year and picked up the scholastic thread the following fall. He has been a tremendous athlete ever since. His record jumping feats really speak for themselves. Credit for his rise has been batted back and forth across the net by Templeton and his Oregon coach, the 78-year-old Bill Hayward.

Here's Hayward speaking: "I take no credit for Les' jumping. Dink Templeton taught him how and Les knew all about the event before he came to Oregon."

Here's Templeton speaking: "That's silly. Les Steers learned to jump as a boy. He went to Oregon where, in a year, Bill Hayward added three inches to his previous best performance. Name another California boy who has shown championship possibilities here—where training conditions are superior—and who has gone elsewhere to develop in that way. Steers was lucky to find Hayward."

Whatever the truth is—and most experts agree that Templeton is responsible for Steers—much of the credit has to go to the boy himself. He loves to jump. In fact, he is convinced that the only way to develop spring in his legs is to use those identical muscles in actual jumping. Certain training exercises may help others but not the Kangaroo Kid. He just jumps.

In style, he differs slightly from most athletes in that he takes off closer to the bar than the others. He pushes terrifically with his left leg, the last to leave the ground, and he's up and over. A few years ago he used the old-style Western roll, which meant sailing over the bar with back parallel to the ground. But he's changed to the newer and less euphemistically named "belly roll" in which he goes over with his stomach facing the ground. He's been doing better with it, too.

The Steers jumping has been so incredible that it brings to mind the story of the old Irishman who was told by a neighbor that a village lad had "lept" over five bars of a stile.

"Get along wid ye," said the Irishman. "No one can go that high."

"With me own eyes, I saw it," insisted the neighbor. "Sure t'was your brother Dan's son."

"Oh, him," said the Irishman. "He can go higher."

So it is with Les Steers. He can go higher, too.

THE END

Orchard-fresh Peach Shortcake!

1. If you've a man who just can't wait till summer and fresh Peach Shortcake—listen closely! Here's how to beat the

calendar, and serve him delicious Shortcake—with juicy, orchard-fresh peaches—right now, today!

2. Secret? Buy Birds Eye peaches—you'll never eat better! For these gorgeous golden beauties are picked at their plump-

est peak . . . and Quick-Frozen within 4 hours! All that full, tree-ripened, true peach flavor is sealed in—held for you!

3. Birds Eye Peaches come sliced . . . slightly sweetened . . . waste-free . . . ready to serve! And when he learns how little these

any-season Birds Eye Peaches cost, he'll lean across the table and exclaim, "Honey—you're terrific!" Try some today!

"By the Dawn's Early Light"

THE first low ray of the young morning lights his untroubled face, peaceful and serene.

If there are dreams behind the closed eyelids, they are boyish dreams of bikes and BB guns and the heroic exploits of Superman.

If there is concern here, it is a sort of puzzlement over what's come over Mom and Pop of late . . .

Pop doesn't get home so early as he used to, somehow isn't quite as ready to romp and play as once he was.

And Mom — she's quieter, and every now and then is caught looking at him, long and slow, a brooding tenderness in her eyes.

War? Sure, he knows there's a war. It's in the headlines, names

of faraway lands, unreal as any fairy tale.

Pop says they can't get new tires for the car because of the war; and instead of giving him nickels now and then to spend, brings home Defense Savings Stamps that he says will be spending money "after the war's won."

But what's all this got to do with a little boy?

He doesn't know, of course, that even while he sleeps here in the dawn's early light, somewhere soldiers, sailors and airmen stand vigilant guard—for his sake.

He doesn't know that while kids like him play their shouting games of dive-bomber and mock air alarm, real American planes are splitting the sky, real American shells are arching through the heavens, real American machine guns are chattering forth destruction — for his sake.

He doesn't know that vast factories hum in angry haste through seven three-shift days a week — that instead of making tires, tubes, belting, flooring and other good things of rubber, plants like Goodyear's are pouring forth countless plane

parts, gas masks, com
tank treads, self-inflating
and so on — for his sake

He doesn't realize, you
he is the coming Americ

He doesn't know he is
here with us today, living
of the one thing in the wo
fighting for — hope, and
the chance for a better li

He doesn't know that a
boys can be boys, men ca

TOWARD A BETTER FUTURE

War accelerates the pace of progress. Out of Goodyear's work on war goods already have come numerous developments that will be usable after the war is won, including:

Combat tires and bullet-puncture-sealing inner tubes for armored cars and military trucks. Even when riddled by machine-gun fire this new Goodyear tire equipment will carry a vehicle to its destination — without stopping for repairs. It means safer tires for you — after the war.

Mon and Pop understand
he will himself some day
be his a son of his own.

It's the billions we spend
in this war, not all our
s are the machines that are
—it will be the things men
the faces of little boys.

It's the willingness of fathers
to fight, but to work and
in fierce guardianship of
they love.

So may his sleep be sweet.

Some day he'll take up the burdens,
the fruitful tasks of manhood; it is
our job now to see that he can take
them up as a free man, fit to
fashion a better world.

TO HOLDERS OF TIRE CERTIFICATES:

It's to your own best interest to get a new Goodyear—because Goodyear tires have long been the world's first choice for mileage and safety. If you can buy a tube, get a LifeGuard, Goodyear's modern successor to inner tubes that enables you to get many thousands of EXTRA miles from your tires safely, and protects them from damage if a puncture occurs, by enabling you to come to a smooth, safe stop.

LifeGuard—T. M.
The Goodyear Tire & Rubber Company

HUNTER'S MOON

BY EDMUND GILLIGAN

ILLUSTRATED BY DAN SWEENEY

It will rise again for
them—hunter nor t

BEFORE moonrise the sound of firing far to then a silence, unbroken by the murmur of the Diesel submarine leisurely westward. A glare sped across the sea under the hunter's moon, immense and heeled upward from the wilderness. The vessel lay serenely between the heavy walls of water. The brass bellowed after, leaping from the making the wave tops burn with fire.

The talk among the crew changed to a whispering. A ward turned from his station, the spreading glow upon the face, wetted by the spray, white under the brim of his cap. The helmsman glanced back at the black wake that cut the green two. He turned toward the stood by himself, his wide staring full into the shadow gleaming meadows on the edge of the moon.

The captain took a step forward, whispered, "Alter course, then, as if angered by his said in a clear, loud voice, Heim. Two eighty. Do you hear?"

"Two eighty, sir."

"For fifteen minutes. Three twenty. A little do change, Heim."

"A little dog-leg it is, sir."

In the turn, a new and leaped over the vessel, clanged against the turret.

"That is well." The captain again to stare into the splashing hunter's moon. His thinner, less cheeks borrowed a brightness from the shining water. He seemed transformed into a young countryman, watching a moon progress over fields and pastures, his eyes stayed watchful in the night. They shone dark in the mask above his turned-up face.

THE moon left the billow higher. Its fire pierced the sky and the sea tossed black between its rim and the world. The moon's autumn changed swiftly to an opaque hills and plains became darker. This change was reflected in the captain's eyes. He shook his head in boyish ment, left off staring and called the helmsman.

"Under that moon, Heim, paused.

"Yes, Herr Kapitän?"

"Under that moon I've had hard scramble home with the County Clare."

"Yes, Herr Kapitän."

"I am thinking, Heim, weather holds, the torpedoes tated over the word—"the will run badly."

"Yes, Herr Kapitän."

"Dive in twenty minutes been too much in its light."

The helmsman turned to the pipe.

The senior engineer came the ladder, showed his head,

Then, as if the sight of that hull had shown him that lost, the horse turned away alongside the vessel in

Artur Rodzinski

brilliant conductor of The Cleveland Orchestra, and one of the many world-famous artists now recording exclusively for Columbia. Among his new Masterworks triumphs are Jerome Kern's superb symphonic arrangement of melodies from *Show Boat* and the *Symphonie Fantastique* by Berlioz.

Like a season ticket to Rodzinski's great performances!

NEW LAMINATION PROCESS OF COLUMBIA RECORDS

brings you an amazingly lifelike new brilliance of tone

55.3% Less Surface Noise

• "Naturally, when a conductor listens to recorded music, he constantly 'checks' it against the original performance," says Artur Rodzinski, world-famous conductor. "When I hear these new Columbia Masterworks, it is a great satisfaction to hear every overtone . . . every delicate instrumental effect . . . so clearly and beautifully defined—so amazingly free from surface noise!"

Finer Surface — Finer Tone

Lamination makes this possible. Columbia Records are made in layers—with two sound surfaces of a precious, highly sensitized material over a central core. This

superfine surface material would be prohibitively expensive if used in ordinary solid-stock records.

The result: Records that wear much longer . . . far finer tone quality . . . 55.3% less surface noise—measurements taken by the head of an independent, non-commercial communications laboratory.

Compare them with ANY other records!

Enjoy the difference! Note how you can turn up the tone controls and play Columbia Masterworks with true concert-hall realism. No need to blot out lovely high-frequency overtones in order to cut out surface noise. With Columbia Laminated Records you hear music just as it is played or sung by the world's greatest artists!

Columbia

Records

TAKE CARE of YOUR HYDRAULIC BRAKES

and your brakes, tires and car

will last longer

Follow these simple recommendations:

★ **DRIVE SLOWER.** You'll find you'll have fewer occasions to apply the brakes, and you'll find it easier to stop the car. The result will be less wear on the braking mechanism.

★ **DON'T JAM DOWN on BRAKES** except for an emergency stop. Quick stops from high speeds create excessive heat in the braking system and shorten the life of the tires.

Gradual application of brakes avoids creation of high-pressure "sledge hammer blows" within the braking system. Sane braking will assure long, dependable performance of all the parts which make up this important system in your car.

★ **SHIFT TO LOWER GEAR** when going down steep hills. Let engine do part of the braking. You'll keep the brake drums cooler, cause less wear on parts, and will reserve full retarding power of brake until needed.

★ **CHECK BRAKE PEDAL.** The brakes need adjustment or additional brake fluid is required in the brake system if the brake pedal can be depressed within an inch of the floor board.

If brake pedal action produces a soft, spongy feeling, the brake system should be "bled" to eliminate air.

★ **BRAKE FLUID LEVEL** in the master cylinder of the brake system should be checked at every lubrication period. Fluid should be added if the reservoir of the master cylinder is less than half full.

★ **HAVE WHEELS PULLED** at least once a year.

This should be done by a brake expert. His inspection may disclose wear and minor trouble which can be easily and inexpensively corrected before serious trouble occurs. He may find that brake wheel cylinders and parts need attention, or that the brake lining is badly worn. He will also inspect the master cylinder.

There's an expert brake serviceman near you. Better see him NOW.

★ **LOOK FOR A WAGNER SERVICE SIGN.** Drive in the shop or station displaying this red, white and blue sign. Ask the serviceman to check the brake system "the Wagner way."

If fluid is needed--FOR SAFETY'S SAKE specify

WAGNER LOCKHEED No. 21 HYDRAULIC BRAKE FLUID

No. 21 is recommended for all hydraulic brakes. It retains its highly efficient qualities under all driving conditions. It completely and properly mixes with all other approved fluids, furnishes necessary lubrication for working parts of the hydraulic brake system, and in general, preserves the essential characteristics of the entire system.

Behind this quality product are sixteen years of Wagner development and research. No. 21 is used by car manufacturers, and is recommended for the service needs of all cars and trucks having hydraulic brakes.

For safety's sake—why not have your car checked TODAY! There is a station near you. Automotive Parts Division, WAGNER ELECTRIC CORPORATION 6400 Plymouth Avenue, St. Louis, Mo., U. S. A. (In Canada: Wagner Brake Service Company, Ltd., Toronto).

there. He opened his mouth to speak, but the blaze of moonlight silenced him, made him whisper. "All charged. We've had time enough, thank God!"

"Dive in twenty minutes, Fleck."

"Yes, Conrad. Right. In twenty minutes. No propeller noises yet. Did you hear the firing? A destroyer?"

"Yes, Fleck. Far to starboard."

"Such a moon makes the English nervous."

They went below, breathing easily and with relish in the newly pumped air. The bridge watch followed. One man below laughed over a book spread upon his knees. The captain looked at him in pleasure, then stepped into the control room.

A bell clanged. A quartermaster spoke into the voice pipe: "All hands to diving stations!"

The grinning reader put his book down, sprang to his feet. Making ready for the downward slant, the Diesels ceased their murmur. The starboard electric motor took up the job, then the port chimed in, and a new humming filled the great hull. Erect and attentive at the diving-valve controls, the sailors repeated their orders, stared steadily at the dials. The vessel tilted, went by the head a little. Again a hush returned.

THE captain sat at his desk. He turned the bright light until its full force shone on the boat's position and course on the chart. For a little while he gazed and blinked, then he shut his eyes in a frown. The glare of the bare, pulsing bulb made his face bloodless again, bloodless and lightless, save for the harsh illumination. He seemed like a man sick of a secret sickness, borne down by a secret longing. He lifted his face and a sudden, sweet smile broke the stern planes of his cheeks and jaws. He reached out over the desk, reached into the gloom beyond the circle of light, and took down from the wall a handsome riding crop, well and stoutly made of good leather and bound ivory. Long ago his hunter's hand had worn its grip to smoothness.

He ran his fingers up and down the leather with delight. He smiled again and held the crop close to the bulb until he could read the letters dimmed by his sportsman's sweat and by the sweat of Irish horses. He read the words, "Crown-Dublin," and fell to dreaming over them. Once he gripped the crop strongly, reached out and downward with it and laughed in his galloping dream.

The bell clanged harshly. Instantly the motors ceased their humming. Aft in the seamen's mess a voice cried out in warning:

"Propellers coming!"

The other listeners at the headphones raised their hands in a warning signal. Onde ripped off his set, held it out to the captain and said, "Propellers, Herr Kapitän."

The captain adjusted the headpiece, listened, and nodded. "Two destroyers. At cruising speed."

He listened. In a clear, rapid beat, the screws of the enemy ships came onward, nearer and nearer. A tiny, yellow bead of sweat ran down the captain's forehead. He bowed his head slightly, then turned to look into the eyes of a listener near him. It was Heim. They exchanged a glance, in which fear and affection mixed, and they looked away. Higher and clearer came the twin beat and rumble. A clamor filled the world above, a noise like that of many seamen shouting or of hounds in full cry. And then the propeller whir reached the maximum beat and blow, poured down a harsh bray into the alert, listening hull. The destroyers raced onward, reached a position directly above the submarine.

The captain nodded eagerly, waved a triumphant hand to Heim and to the staring reader. Swiftly now the pro-

pellor beat began to waver, while, the captain took piece, blew out his breath.

"To the bottom. Call hear the convoy. It can't

The motors began, ceased then began again. The vessel slowly, serenely, the sun in the watery chasms, mended tenderly down to a black. The finger of the depth from fifty to sixty, then a hundred. The middle watch. The captain and the other.

Twice the captain laughed. Once he cried out a word then he awoke and went to his desk. There he toiled over the charts, studied the waiting for the betraying merchant vessels. Hours later the middle watch was known, senior engineer came out of his room, his face toughened with excitement.

"The first of them!"

Again the captain cleared his headpiece, again he listened. A clamor came down to him from the sea thickness. Propellers far to the west, many of them slow, steady throbbing gave minute into a louder clatter, steel vibrating in water churned by steel. Spread in convoy formation, the ships steered through the night of England. The ships sailed held down by the convulsion of the slowest tramp.

The captain gave his order after. Nine knots. Perish thirty minutes."

The finger on the depth to drop—one hundred and a hundred. The reader, an old first U-boat war, began to repeat the same wild phrase from the U-boat song: "Wagner England. Heim laid out oil clothing for the captain."

The captain poured coffee. "Homeward bound after Heim. Glad, aren't you?"

Heim smiled. "Home Yes, Herr Kapitän."

Men passed to and fro the spaces. One brought word of a compartment forward. The captain nodded.

Another reported: "Perish sir."

THE captain pressed his eye to the eyepiece, gripped the water, now receiving the first of dawn, swiftly changed to a translucent gleam of blue. And then, suddenly, a burst of light came. The handle, turned and frowned and whispered "Nothing yet!"

He drew away from the eyepiece, looked into it again. For while the officers and men waited in anxiety, he stared. At last he swept his hand slowly palm downward. He had seen vague shapes out there, gleams of light, gleams of light, whirled of mist. Short freighter smoke ran upward flatly westward in the Three ships came first, then a fifth came into his view, were the outer screen, a powder ships that kept positions.

He had hardly sighted the high bank of fog shut off rolled down upon the convoy ship vanished. One by one followed.

The captain drew away. The old U-boat man called "Follow after." The ca-

pass. "Nine knots. Keep a
out for stragglers." Then, as
ht had prompted his action,

t far, receding battlement of
reeze blew, making white-
it approached the hull. And, at
moment, there came from the
g in a mighty din, indistinct,
ss, it seeming to be a cry of pain
giar voices. Shrill blasts and
ng sounds rang through the ter-
horns, which waxed and waned
a hissing and a crackling of steel
nber. Now the breeze ran against
ped ship and blew away the
smoke.

It was then that the captain saw the
horses.

He held out his right arm stiffly. A
look of horror froze his triumphant face.
His lips dried.

The horses, long-legged, long-necked
remounts for officers overseas, reared
and plunged through the sliding litter of
their deck housing. Heads and manes
and hoofs flashed in the morning light.
From their gleaming jaws the din of ter-
rible noises poured and spread. A billow
of black smoke blew upon them and
many sprang forward, stumbling and
heaving, to the empty space amidships.
There they reared high and twisted
away from the yawning pit below, where
the waves rushed. A funnel fell roaring
down upon the wreckage of their stalls.
In terror they again sprang forward. At
last, a dappled gray, neighing in fear
of his coming death, leaped far out into
the foam. Another and another followed
until a panic seized them all and they
went diving, plunging into the sea to es-
cape the torture of the flames.

The captain shuddered.

A half mile away, on the port side of
the sinking hull, he saw the ship's boat
in line, towed by a launch. A naked
man in the last boat lifted his clenched
hand in a sign of cursing. The fog re-
ceived them.

The captain shuddered. His stomach
grew sick, wrenched him violently. He
could not take his eyes from the tipping
deck. Still the horses came, now in si-
lence, now in a new outburst of terror
and sadness. There were scores of them.
A white mare came stepping to the
bloodied edge of steel. By her side a
black foal trembled and cowered. When
the mare stopped and flung her beauti-
ful head toward the sky, the foal nuz-
zled her and whimpered.

THE captain became sick again. He
half fell to his knees when the boat
rolled beneath him.

A flame shot out from the deck litter
and licked at the mare's hindquarters.
She cried out at this; then bent her head,
pressed it against the foal's little body
until it staggered, fell and pitched over
the edge of steel. The mare gathered
her handsome legs under her and sprang
outward.

"Heim! Heim!"

The seaman moved closer. He said
nothing, knowing there was nothing to
be said. He kept his own eyes fixed on

MAKE SURE YOUR
RADIATOR'S

"A1"

1 MAKE SURE IT'S CLEAN

Get rid of the dirt that can clog up your radiator. Use Mobil Radiator Flush. It quickly dissolves grease, and emulsifies rust and scale so that they drain off easily. It is not caustic and is entirely safe to use. Leaves your car's cooling system clean, efficient.

Mobil Radiator Flush

2 CHECK RUST AND SCALE

By adding Mobil Hydrotone to the water in the radiator, you guard against further rust, scale and corrosion. It neutralizes corrosive action and treats the metal surfaces so that rust and scale won't form. One can lasts for months—costs only 49¢.

the water lapping at the curved hull beneath him.

The last of the horses then appeared. He was a great chestnut stallion of seventeen hands and more, an Irish weight carrier, fit to lift many stone over tough country. A blue ribbon in his braided tail flashed prettily when he advanced, in dignity and silence, and looked down at the struggling heads, sinking swiftly to merciful death. He lifted his forefoot and blew one blast out into the salty air. Calmness lay on his beautiful head. A star shone there. He stood in no hurry, in no panic. He surveyed the sea barriers and arched his strong, clipped neck. He looked to the east, where the boats had vanished. Long he stared there, as if his wise and mighty heart knew that Ireland and Ireland's hedges lay that way, far that way. He let his head droop. Once again he lifted it and turned to the west. He saw the living thing, a man staring upward at him.

The captain took one desperate step forward. The horse's beautiful eyes looked directly into his own. They kept the long, secret look, between horse and man, hunter and hunter. Each to each they thus related their secret of the steeplechase and of the ringing fields. Aloft against the golden sky, the horse sent down his beaming look of intelligence and affection. The captain groaned in a new spasm of horror.

HE THEN did a strange thing. He lifted his wet fingers to his mouth and blew two shrill notes, one short and low, one long and high, both piercing sweet, a huntsman's call. Three times he blew it, weakly at first, then clear and strong as ever he blew it among the hedges of the County Clare.

The chestnut stallion whinnied. He looked out over the sea and sought the eyes of the man. When he had found them, staring above the spray, he gathered his muscles, gathered his haunches, and jumped clear and high, away from the foulness around him. Through the gleaming air he fell, feet extended perfectly, tail correctly held, head ready for the strange contact below. He fell. He passed in a rainbow flash of water and sank, then emerged and shook his gallant, streaming head. And all his glory shone there. His wet star shone. He struck out with his forefeet and blew the salt water from his rosy nostrils. He

turned toward the submarine and swam in rippling grace.

The captain laughed in youthful joy, but the strange, hysterical laughter dwindled at once into a deeper groan. He lurched forward in a mad way and shouted words in English to the swimming horse: "Steady now, old lad!" The mask of his bloodless face changed again, changed into the mask of madness. All the nights and days of loneliness and grief and murder at the sea bottom now struck at him anew. And the beautiful creature coming to him in obedient confidence, that lost one broke the captain's heart, broke it as he stood lurching there.

"Heim! Heim!" Without looking at the seaman, he said, "My pistol! Quick!" When the seaman turned away, the captain cried out another phrase, words of gibberish that stopped Heim at the ladder: "Heim! Heim! Bring that thing over my desk. Quickly, Heim! Quickly!"

"You're talking like a fool, Mueller. An officer of your ability won't be purged for quite some time yet"

JOHN RUGE

Heim vanished and, before the morning horse had come a return, returned, bearing a pistol and a crop from Ireland.

The captain seized the right hand, the crop in his left, perched from the corner of his mouth: "Crash dive, Heim! We have no time. Destroyers! Stand by for crash!"

Heim roared to the helmsmen's hands to diving stations! The watch ran below. The cry came into the hull. It trembled.

THE horse came on. Striding sea boldly, he thrust his muscled shoulders against the came nearer, gazing away, waiting captain. The splash close to the boat at last, the sight of that cur hull had shown him that the horse turned away, swam the moving vessel in silence.

The captain lifted his pistol. He strove to steady his aim the barrel down again and sodden star. He failed. His voice calling to him. He turned Heim standing there, his hands in mute appeal. The captain's voice that cracked and whistled: "To your duty! To your duty! To the bottom, Heim. Or then—the homeward course. The seaman turned away.

The boat moved faster, faster and slant.

The captain let his pistol sagged in his place, clung to the gun mount and there sought the swimming horse. The on, striving to match his quickening movement of the his great head sank lower. He made one gallant thrust when the submerging vessel wash against him. He died. His heart broke and he drowned. He accepted his end and its magnificent body rolled and the wake of the vanishing. The blackened chestnut barrel over and over in the sea. At turn, a wave held him upright him forward and upward, a over a green, wide hedge, singing birds.

of them immediately. Often, when I dined in restaurants with members of the British Military Mission, a Soviet officer or other person would walk up to the table, wanting to shake hands with his ally. Immediately, a waiter or the British officer's GPU bodyguard would step up and lead the enthusiast away like an offending drunk.

Foreigners are treated as creatures apart. They always get the best available accommodations and all the food they want. A few days after we arrived in Kuibyshev, a store was set up especially for the diplomats and correspondents, where we could buy meat, sausage, cheese, eggs, white bread, candy, sugar and champagne. It was rather shaming to come out of the store staggering under enormous packages and having to pass Russians who could seldom obtain such groceries and, when they could, only after long hours of standing in a queue.

The first thing our tourist agent did on arriving in Kuibyshev was to throw all Soviets except officials out of the Grand Hotel where the correspondents and some diplomats were staying. On the

flight to Teheran in the plane with Ambassador Litvinoff, Ambassador Steinhardt, Sir Walter Monckton and the Iranian ambassador, we stopped overnight at Astrakhan. For two hours we were kept standing on a muddy airfield, supposedly waiting for cars to be sent from town. Actually, we were waiting for the hotel to be cleared and cleaned up. We had not been expected there that night.

Mr. Litvinoff Didn't Laugh

By the time we reached the hotel, all of the third floor had been emptied and tidied for us. There were militiamen at the front door and on every landing of the staircase, and several GPU boys on the third-floor corridor. In their haste, the servants had apparently dumped all kinds of things that they found in the rooms into the ladies' room, which was packed with odds and ends, including three smoked fish. I came out, proudly carrying one by the tail. Mr. Litvinoff was not amused.

The air raids proved to be a great help to me in meeting a few Russians. A

night spent in the subway or in a cellar would necessarily entail contact with the populace and a casual conversation sometimes led to further acquaintance. I also made friends with four who had flown in the same plane to Moscow from the Chinese. Coming from a small place, Ata, which foreigners seldom had, hadn't had it drummed into them that it was unwise to see outsiders, although we often gathered in their hotel room. They were never so foolish as to appear in public places with me.

A young army pilot who through one of my cellar parties invited me to tea at his sister's apartment. By that, I mean, one bedroom, for only the very placed ever have what we would call a certain station where Feodor was waiting for me. No sign of him ever passed between us. He came off down the street with me and I would wait for a few before going into the apartment. Once, I was followed. I never

termine whether it was a GPU man or just an ordinary masher. When I mentioned it to Feodor he turned pale. "I have been expecting my sister-in-law to denounce me for seeing you," he said. "But I had hoped that your visits had passed unobserved in other quarters." Then he shrugged and went on, "If this had been before the war I would have been in serious trouble. At the moment, they need me too much because I am an excellent flier."

A correspondent soon gives up trying to tell Russians about America, but matters don't stop there. We had difficulty in telling Americans about Russia. The censorship was so illogical that there was never any way of knowing ahead of time what would be cut out and what would be left in. Something passed in one person's cable would be deleted from another person's. I was not allowed to say that I was living in rooms once occupied by Lenin or that I had had a dress made at the same shop patronized by Madame Voroshilov. Yet, a mention of queues in front of bread stores was passed, although until then, the word "queue" had been taboo.

The surest way of bringing out the blue pencil was to include a paragraph intended as good propaganda. No explanation was ever given and I could only figure out that Russians and Americans didn't see eye to eye on what was bad or good propaganda in the United States.

Secrecy That Paid Off

One of the members of the Harriman-Beaverbrook mission took up with one of the officials the subject of relaxing the censorship. The answer was, "No changes will be made. You democracies tell everything you know, and look where it's got you." There is no doubt that secretiveness has acted in the Russians' favor, since it made it impossible for the Germans to have any definite idea of the extent of Soviet preparedness. It is still making it impossible for anyone else to know exactly what they have, and any so-called experts who announce the number of Soviet planes, tanks, guns and reserves, are merely letting their imaginations run away with them. There is no way in which they could possibly find out the exact figures.

Certainly no member of a military mission or military attaché could learn what the U.S.S.R. has on hand or even what it can produce. They are in contact with the High Command through GPU liaison officers, who tell them only what it is considered fitting they should know. It took General Mason MacFarlane, head of the British Military Mission, weeks of persuasion before he was allowed to spend a few hours at the front. The American military attaché's request to visit the front was refused. After the United States entered the war he was told that he might go sometime. Until now, that time has not yet come. The best example of how little is told to foreign military experts is the story of what happened to General MacFarlane on October 15th. At noon on that day, he took off for Tiflis by plane to meet General Wavell. Fifteen minutes after his departure, Sir Stafford Cripps was informed that he and his staff must be ready to leave Moscow that night. No inkling of a possible evacuation had been given to MacFarlane, so that when bad weather prevented his plane getting through to Tiflis and he landed in Kuibyshev, he asked when he was leaving for Moscow. "You are not," was the reply. "You are to wait here for the British embassy and your mission, which are arriving within a few days."

One of the things which the Soviets managed to keep secret was how ef-

ficient they could be in an emergency. Under ordinary circumstances, Soviets, like any other Russians, complicate the simplest transaction with bureaucracy, red tape and procrastination. Merely having a dress made, for example, entailed signing four different papers. Yet, the moment war was declared, everything began to move quickly and smoothly.

I had an opportunity to observe this miracle on the first day. The Russian people had never had an inkling that a German invasion was imminent. The stunned expressions on their faces a few minutes after Molotov had made the announcement that war had broken out would have been sufficient evidence if I had not already had other. By that evening, however, there was a total blackout in Moscow (the only exception was one lighted window in the Kremlin), and this in a country where curtain material is not only scarce but exorbitantly expensive. Those who either could not find or afford black cloth to cover the windows just sat in the dark.

Tenants in every building were assigned to perform certain ARP duties. Some were ordered to stand on the roof to watch for incendiaries, some were posted in the street, others were detailed to wake up everyone in the house when the siren sounded, those with medical knowledge were put in first-aid units. It was several weeks before the roof watchers were equipped with gloves, etc., for fighting incendiaries; they used their bare hands. The answer no doubt is that Soviet citizens have been trained to obey orders without question or argument.

The Soviets showed how capable they were of acting when action was needed by moving a great part of their industry from the Moscow, Leningrad and Dombas regions to the east. They claim to have saved all of their industry. That can be accepted as a slight exaggeration.

Former Ambassador Oumansky, taunting some of us one day with American slowness in getting equipment to England and Russia, said, "You Americans always make fun of us because you think we are not mechanical-minded or efficient. Yet we have managed to save one hundred per cent of our industry."

I pointed out to him that I doubted his figures, for on the trip from Moscow

to Kuibyshev, I had seen high with American tarpaulins. An engine showed the cars to me it would be a miracle if those tools were used. I drew Oumansky's attention that it was easier to Russia than it would States.

"What do you mean by asked."

I replied that, in the first place, we were not allowed in the second, that possible to transport men to small villages quarters for them, no sufficient food. We all that where the Russian superiority over us w United States, we would have prevented any damage by wrapping up every nut in cotton wool. But lost so much time doing mans would have arriving thing could be shipped circumstances, it was better per cent than nothing.

Hardships, as

One important factor assistance is that the people hardships. War makes their lives. It is no change from ordinary living. They have to stand in front of food shops; they doing that for years and developed a special set cles. In Moscow, they two or three hours before stopped running, in order cover to wait for a possible meant just that much more. The cities have long crowded, with anything fourteen people sharing ing in a few refugees does difference. Unused to sol air, a night spent in the like home.

Since the Soviets have trated on heavy industry bothered about consumer difficult to buy clothes. We be had in the Mostorg sto

Want to Help Build a Bomber...

IGHT IN YOUR OWN KITCHEN?

IF YOU THINK there isn't anything else you can do to help win this war, walk into your own kitchen. There isn't a kitchen like that anywhere else in this world. A gleaming white refrigerator that actually makes ice and keeps your food fresh—at a snap of a switch. A beautiful, compact range to make cooking easier...

Over there, a spotless white sink, and perhaps a dishwasher. Your toaster—waffle iron—food mixer—vacuum cleaner. Nowhere else in the world do women have these luxuries.

Or glance out the window at your car. Streamlined—powerful—ready to carry you in comfort wherever you want to go.

And now—for the first time—the source of these miracles in your life is closed. The places where they came from are now making planes, shells, ships, implements of war.

There can be no more of them now—until peace is

won. And peace will *not* be won until every American has made his share of sacrifice. This is that kind of a war!

What can you do? You can guard that kitchen—that car—everything mechanical or electrical you own—as if your life and the lives of those you love depended on it.

For lives *can* depend on the care you give your possessions! Even a small replacement part, made necessary by your neglect, can use metal desperately needed to win this war. Translate your neglect into guns without triggers, planes that arrive too late, ships held up on the ways.

I PLEDGE

- To adjust food, clothing and fuel purchases to the level of necessity. To hoard nothing. And to put a stop to all waste.
- To scrupulously guard and preserve everything in my home made of metals and rubber.
- To drive my car only for absolutely essential transportation.
- To use less paper of all kinds and to save—not burn—all waste paper.
- To repeat no word of rumor or gossip. To accept sacrifice and privation without complaint. To devote myself to the one task of winning this war.

You are being challenged to guard and preserve the things you have. Everything made of metal. Everything made of rubber. To help build the armaments and planes and ships—without which there can be no victory.

And for every piece of metal you save—mark up a contribution you have made to a bomber that may sink an enemy ship.

This message is published solely in the interest of speeding American victory. We have no ax to grind... our machines have been converted to the making of essential materials for war and war production. We look forward to the day when we may serve civilian needs again. How soon that will be—if ever—depends upon how well we all do our job now. There must be no let-up short of victory.

Served ON AMERICA'S MOST DISTINGUISHED TRAINS

On dining cars of crack modern flyers, at clubs, bars, restaurants patronized by those whose names are news, there you'll find Dixie Belle. It is a mannerly gin that mingles graciously without over-emphasis, but with definite authority. Truly, one of America's finest gins. CONTINENTAL DISTILLING CORPORATION

DIXIE BELLE Distilled DRY GIN

90 Proof—Distilled from 100% grain neutral spirits

pensive. A man's suit, for instance, costs 1,500 rubles; an overcoat 2,000, a pair of shoes 700. I paid 250 rubles a meter for some woolen material of inferior quality and by the time I had paid for the silk, the interlining and the making of a warm dressing gown, it cost the equivalent of a hundred dollars. When I went to Teheran, I carried four pages of shopping lists given to me by diplomats and correspondents. They included such things as coffee, tea, candles, curtain material, flashlights, woolen underwear, shoe polish, razor blades, thermos bottles, pots, pans, kettles, typewriter ribbons and a tin drinking cup. None of those items could be had in Kuibyshev.

In May, there was plenty of food to be had in the big cities. There is still plenty of food there. Faulty distribution caused a shortage of food in the country. The shortage still exists. Ration cards were issued at the end of June, with manual laborers being allowed more than office workers, who in turn were allowed more than dependents. However, anyone was free to buy more food if he could pay double the ordinary price. Not many could afford this, what with the average wage being three hundred rubles a month. Ordinary prices are staggering enough without doubling them. Butter, for instance, costs twenty-eight rubles a kilo (\$5.60 at the official rate of exchange; \$2.30 at the diplomatic rate); meat costs from five to fourteen rubles a kilo; bread 1.50 to 2.70 rubles; sausage 13 to 22. Hence, most of the population is accustomed to living on black bread and soup, which appears to be an extremely nourishing diet.

Don't Worry About Morale

There seems to be an idea over here that war was greeted in the Soviet Union with wild enthusiasm and cheering. That certainly was not the impression I gathered. In May the people looked apathetic and grim. After June 22d their expressions were the same. They went doggedly about their business, determined to fight but wasting no time on cheering. Whenever groups of soldiers passed through the streets, bystanders seldom turned to look at them and certainly indulged in no wild shouting. That might be taken as a sign of bad morale but it wasn't. Russians just seem to be that way.

The combination of indifference to and ignorance of the outside world and an excellent spirit makes our anxiety to seem friendly and helpful in order to keep up Soviet morale rather unnecessary. Soviet officials haven't bothered much to curry democratic favor by pretending to change any of their political views. They aren't simulating any great enthusiasm for their allies. Russians are realists and wouldn't in the least resent our being realists. All they ask of us is to send tanks, planes, guns and

ammunition. They don't sympathize or warmth. Ad take for granted. No amount of cheering from the side bolstering will keep them more day than they want lack of praise, cheering or ing will make them stop or if they don't see fit to do support which we can give in the war is equipment.

The Christian democrat carried away with the idea has brought about a change in Soviet attitude toward religion where that idea started. a correspondent cabling a no one else considered worthy about the Red metropolitan victory during a religious story was played up, and the of Canterbury was so enthralled what he took to be a complete of former policy that he addressed to Stalin, care of Embassy.

The embassy staff, having complete knowledge of the than the distinguished people bother to pass on the church theory that if the Archbishop of Moscow wished to indulge such notion, it was preferable he on his own time. Everyone the story apparently over things: 1. That there have churches open in the U.S. were something like two Moscow alone, always crowded tended almost entirely by 2. What would have happened Red metropolitan if he had himself to be co-operative? this, all Russians, whether in God or Lenin, definitely a foreign invader on their soil.

There is another widespread which is contradicted by what saw in the Soviet Union. It is the Russians are fighting for Communism. The impression obtained one who was in the country they were fighting for Russia newspaper propaganda new people that the war was being save Communism. The majority party members whom I met again and again that, at the important thing was Communism. What was important "the filthy, cannibalistic Fascist Russian territory. Nonpartisan felt the same way.

However, one woman said further when she summed up the people who were complete sympathy with the "Whether or not one likes Communism," she said, "the fact remains for twenty years, we have starved and died for it. For such a price we are now demanding anyone take it away from us."

THE END

New (and pretty) Passenger

CROCKET

The Baby of Bosco the Bum

Continued from page 17

Margaret sat and waited. Yes—her first day on her job—she'd hardly had her pretty dress under her new desk before the fire of Crystal Falls had begun. Miss Dunks? The new Child Welfare Director? We just wanted to know you know it's a shame, and then Shannon and Bosco the bum had no business adopting that dog. They did haul it out of the hotel fire! Miss Dunks, it must be done!

Very professionally, Margaret had said to her first four callers, "I'll investigate, of course, but when she'd learned that he was a bachelor and that Bosco was an Airedale, she'd begun with emphasis, "Something will happen."

So to the outer office slammed the door. "Come in and meet Margaret, Denny."

Shannon stopped dead still in the doorway and grinned at Mary Margaret's straightforward delight. He looked like a big Airedale, like a black-and-tan bear, grinning. He butted Doc with his head and then headed for Mary Margaret's stub tail jerking.

"Hey!" in warning. "All right," Mary Margaret said. "No dogs."

"This everybody loves him," the man said. "So he loves everybody. That, Bosco, and put that dog in your mouth."

He pounced over to say hello again. "All right," Mary Margaret stared at him. He didn't look like a prominent man. He had tight black hair, the shoulders of a bouncer and a glint of a left eyebrow. He was wearing a lumberjack jumper and a pair of swipers, and he had a pack on his back.

Off the pack; and there, in a flash, a man in a board, was a boy—sized blue eyes calm and steady, pink tongue stuck in his mouth like a cork.

Margaret hadn't been in the office long enough to be hard-boiled. "Well, bless 'um little heart," she said, and jumped over to where he leaned him against the wall. "um little heart."

Doc said sharply, "In the name of heaven, no baby talk!" Margaret jumped straight up. "You pardon?" she said, and emitted a word with her eyebrows. "I hear that goo on Bosco's head," Denny said.

Doc said, "Bosco doesn't mind it." Margaret hung out of the corner of her mouth. Bosco looked from Mary Margaret the baby and back, fatuous and human father. "And I'm a thoutfit," Denny said. "And I'm a thoutfit," Mary Margaret said, and was sure of that. I doubt that she'd okay the adoption.

Denny said, "Why not?" "Because," Mary Margaret said, "unmarried. Because you know about raising children." "I've been raising dogs all my life," she said. "What's so tough about a dog?"

Doc said, "Bosco rescued it from the fire."

"Yes," Mary Margaret said. "I saw that, and I think it was very noble of him." "No," Denny said honestly. "He only followed me up that ladder because he thought there was something cooking. He follows me everywhere."

Mary Margaret looked over at Bosco who had his head twisted sideways, close to the baby. He didn't look noble, but Mary Margaret knew he was.

For really, she had seen the start of the whole thing the first time she had been in Crystal Falls about her job, the night the Lockwood Hotel burned.

EVERYONE had got out of the hotel so nice and easy that no one had remembered the invalid woman on the second floor until almost too late.

Mary Margaret had stood in front of Rezin's drugstore and watched the volunteer firemen run a ladder up to the second-story window.

She'd watched Denny Shannon—though, of course, she didn't know him then—climb through the smoke that curled out from between the building's sidings. And right behind Denny, another figure had laboriously hooked its way upward, hanging on, desperately hunch-shouldered, every time the long ladder jiggled. It wasn't until his tan breeching went over the windowsill into thick smoke that Mary Margaret had realized it was a dog.

Fire was poking out on the wall in little living fingers when Denny'd come down with the woman on his shoulders and turned her over to the waiting Doc Madden. Then Denny'd looked up. For the first time, evidently, he'd seen Bosco with his head out the window, barking peremptorily like a bossy old man; and a white bundle on the sill between his paws.

The ladder had bucked like a springboard the way Denny'd gone back up. Flames, then, flexing like a man's arm, were coming from between the sidings, but Denny'd stayed at the window for an extraordinarily long time, and when he'd come down he'd had the bundle in his teeth; and the dog under his arm tried to lick his face all the way to the ground.

As it happened, the woman—an Edmonds girl; the family's all gone from around here now—died two weeks later. But, of course, Mary Margaret didn't know that until she got back to be Child Welfare Director.

But she remembered Bosco at the window. Softly she looked at him there in the doctor's office. "I think you're the nicest dog in the world," she told him.

Bosco let his tongue hang to his knees and grinned at her, gappingly, foolishly, happily.

Denny said, "What about that baby?" "It's very unorthodox—a bachelor adopting a baby," Mary Margaret said.

"Sure," Doc said. "And Mary Margaret has to investigate, don't you, Mary Margaret?"

"Certainly."

"Good," Doc said, and leaned back in his chair. When Doc Madden smiled his teeth were softly white and unstained as a child's. "You like to dance, Mary Margaret?"

"I love it," Mary Margaret said. "The firemen are giving their annual dance tonight at the city hall," Doc said. "Why don't you ask Mary Margaret to go, Denny?"

"If she won't talk baby talk," Denny said.

"I couldn't go," Mary Margaret said. "Sure you could," Doc said. "You're

new here and you're not acquainted. You'll be combining pleasure with duty—and dancing with him you'll get to know him much better than by having him fill out a questionnaire."

"Well..." Mary Margaret said. "Fine!" Doc said. "Suppose he calls for you at eight-thirty?"

Mary Margaret looked dubiously at the shoulders in the lumberjack's jumper. "Well..." she said. "All right."

"Bosco," Denny said suddenly, "what are you up to?"

Bosco the Bum stopped shoving his face against the baby, and cocked his head. Mary Margaret noted that for the first time he had his mouth almost completely shut.

Denny said, "Bring it back!"

Bosco sat down to attend to a sudden bite behind his ear. He scratched vigorously, all attention on his work, his mouth still shut.

Mary Margaret said with alarm, "He'll give that baby fleas!"

"No hair on the baby," Denny said, "and no fleas on Bosco. He just stole something for the baby and doesn't want to drop it. He's always doing that. Doc, you got anything back there that smells like candy?"

"Got some sugar tablets for people who just gotta have medicine but don't have anything wrong with 'em."

"That's what I thought," Denny said. "Bosco, drop it!"

Reluctantly, Bosco the Bum opened his mouth and three pills bounced out on the floor. He looked down at them with a puzzled, how-did-they-get-there look.

Mary Margaret said in a shocked voice, "He might have poisoned the baby!"

Denny said calmly, "Baby couldn't get his hands loose to take them."

Mary Margaret's lips tightened and she grabbed her purse and took a reef in her coat. She marched to the door, and there she turned. She said to Doc Madden, "I'll dance with him, but I won't enjoy it, I'll bet."

"Eight-thirty tonight," Doc called after her as she passed through the door. Denny grinned.

"You be nice to her," Doc said. "You show her you're a responsible young man. Do it tonight, too..."

At precisely eight-thirty, Mary Margaret opened the door to Denny's knock. "Oh," she said, and swallowed twice.

She'd been afraid that he'd look like a wild half-breed in a lumberjack shirt with the baby on his back, but there he was, smooth as a high-class bouncer, in black and white—and all alone.

"I'll be right with you," she said, and her voice was not at all professional, for she suddenly had a feeling that this was to be a very gay evening.

MARY MARGARET took the arm Denny offered; they went down the steps and around the icy corner by the gate post. And there she stopped. "Oh," she said again.

His whiskers full of frost, Bosco the Bum sat smugly beside the hand sleigh high-piled with baby and blankets. When he saw Mary Margaret, he got up and undulated with pleasure from the shoulders back.

Mary Margaret, taking four quick steps to Denny's one, said, "When does that child sleep?"

"Whenever he wants to," Denny said. "He doesn't have much else to do."

"I hear you have a lovely home," she said. "Don't you ever leave him there?"

"Only when I'm in court," Denny said. "Bosco balks any other time. You must come out and visit us some time."

"I intend to," Mary Margaret said, and then she shut up and hung onto his arm, for Denny was a fast walker and Bosco kept busting between them to let

them know that he and the baby were there, too.

Up the stairs of the city hall they went, Mary Margaret on Denny's right arm, a bundle of blankets under his left, and Bosco the Bum behind.

There was a crowd at the door, a crowd on the floor, and the orchestra on the auditorium stage.

They laid their coats on the checkroom counter, and Bosco reared up to watch Denny peel the wrappers down to the baby on the pack board, fat and happy with that cork of a tongue stuck in its mouth.

"Put him in a nice warm corner," Denny said to the fireman behind the counter. "Bosco, you stay with the baby."

Dubiously, the fireman propped the baby's pack board in a corner. Bosco scrambled over the counter and lay down complacently.

Denny grinned. "Fine!" he said, and held out his arms. "Let's dance."

It was Johnny Met's orchestra, a good outfit—"Swing and Sweat with Johnny Met!"—and Denny Shannon was a good man on his feet. Mary Margaret moved like a shadow on the leaves. They could dance together like sunlight on water.

It's a rare experience to find someone with whom one can join and move like that to music. It's sweet as the taste of a perfect marriage. It sets the heart to dancing, too.

But Denny had on his good-behavior clothes, and Doc had talked to him, so dutifully he said, "I'll bring people around," and then waited hopefully.

"Not tonight," Mary Margaret said. "Let's just dance."

"Good!" he said, and held her a little tighter.

And so they danced—joyously—until the pig got caught under the fence and kicked the calf in the cloakroom. At least that's what it sounded like. And then Bosco began barking, thunderously angry, and the checkroom attendant dove out onto the dance floor hollering.

"What now?" Denny said, and they rushed, hand in hand, through the couples, still joined but no longer dancing, frozen into jerky motion, their attention on the cloakroom.

Bosco had his head over the counter, barking for Denny. Behind him the ba-

by's head was just one rem from which came horrend sound.

"What did you do to demanded.

"Nuthin'," the fireman began hollerin' and Bosco Denny looked at Ma "What do you suppose.

purpose for relaxation of the mod-
d mit of us prefer now. When you
e yu help everybody to ease up

from the strains of the day, and be good
companions.

That seems to be the chief reason why
more and more people are coming to pre-
fer wine.

The friendly nature of wine suggests you
serve it simply — as tea and coffee are
served. If you'd like a new booklet about
wine serving, it's free — just write to the
Wine Advisory Board, 85 Second Street,
San Francisco. The Board represents all the
wine growers in California.

When you come to select wines, it's worth
knowing that judges find California wines
excellent by any standard in the world. Let
your dealer help you choose from among
the good wines of California.

A red table wine like Burgundy or Claret brings to perfection
the natural goodness of roast beef or any "red" meat. With
chicken or sea food, set out white-table wine like Dry Sauterne.
For evenings at home, refreshment wines such as Port or
Muscatel are justly famous. And as an appetizer — Sherry!

**What's
good for
COLLYWOBBLES?**

When eyes are bigger than stomachs, and youngsters overeat, they often get "colly-wobbles"—the stomach distress that follows too much of a good thing. Such a stomach needs gentle treatment. Take soothing PEPTO-BISMOL!

Never Upset an Upset Stomach!
Don't pile more trouble on an upset stomach by adding to its upset with overdoses of antacids, or harsh, drastic physics!

Take PEPTO-BISMOL! This pleasant-tasting preparation is neither antacid nor laxative. Its action is different. It spreads a soothing, protective coating on irritated stomach and intestinal walls... thus helping to calm and quiet common digestive upsets. Ask your druggist for a bottle today!

Recommended for children as well as adults. Three sizes at your druggist's—or by the dose at his fountain.

Take soothing PEPTO-BISMOL

... to relieve sour, sickish, upset stomach; distress after over-indulgence; nervous indigestion; heartburn... And to retard intestinal fermentation; gas formation; simple diarrhea.

would be purely professional, wouldn't it?"

Denny said nothing; only offered his arm.

Behind the shagging, ambling Bosco, the sleigh danced a slow, swinging dance while the baby hollered with sheer moon delight like a cat wrapped in a blanket. Following, Mary Margaret held to Denny's arm, and her feet hardly touched the ground, the moon was so bright and the air so crisp and that arm so strong.

DENNY'S house was at the edge of town, squatting in the snow and the moonlight, a happy, solid house of logs, waiting for them.

Bosco drew up with the flourish of a cart horse, and Denny kicked the door and slapped the light switch. "The joint," he said, and followed Mary Margaret in with the baby under his arm.

Saying her rosary before the fireplace sat a little bit of an old lady, all hunched up, with her coat and hat on.

"Why, Mrs. O'Shaunnessy," Denny said, "I thought I took you home!"

"I come back," Mrs. O'Shaunnessy said. "I wanted a look at the gur-rul."

She looked at Mary Margaret. "You're a pretty little thing," she said. "You make a nice couple, the two of ye."

"Thank you," Mary Margaret said.

The old lady got up and came close to Mary Margaret. Low-voiced, she said, "Ye're the first he's invited here. And God knows I've waited long enough. This baby business—cart before the horse, I call it." She gave Mary Margaret a little wink and a poke in the ribs. "I'll be goin' now. I don't want to cramp yer style, dearie."

"You'll stay," Denny said, "else you'll be talking all over town tomorrow."

The old lady slipped her rosary in her pocket, and abruptly that sweet old face twisted downward in the most insidious, most delicate of leers. "Your conscience will be clear," she said, "... I'm afraid."

And blithely, she skipped out the door.

"You lied to me," Mary Margaret said, though it didn't seem to disturb her greatly. "You were surprised to see her."

"I hated to see you go in," he said. "Forgive me."

"Yes," Mary Margaret said, and abruptly took her eyes from him. "What a lovely place," she said.

IT WAS a man's house. The furniture was low and very heavy; rugs and wall hangings were Indian. Over the fireplace there was hung a long cross-cut saw with a worn, silver-bronze shine to it; crossed below were two long, thick-headed axes.

In its own way, Mary Margaret thought, it was a strange and attractive room, though, of course, if she lived there she'd make a change or two.

"I like it," she said.

"Good!" he said.

He hung up the pack board and held the baby with one hand while he skinned wrappers from it. "I'll have to feed him," he said, "or he and Bosco'll be howling all night."

The baby, rolling his eyes like a groundhog in springtime, said, "Hi, hi, hi," over and over, waving his arms; and Bosco let his tongue hang out in wonder and admiration at the voice of him.

The kitchen was very neat, with a masculine neatness where everything hangs handy to a man's hand.

On the floor, Denny laid a blanket—upon which in turn he laid the baby—and then he dove into the icebox.

"Get your newspaper, Bosco," he said, and reluctantly Bosco headed into the basement and came up dragging a newspaper.

Denny spread that, and upon it he

laid a large, if not very meaty, bone. "Keeps him occupied sometimes," he explained. "Otherwise he keeps telling me I'm not feeding the baby enough."

When he picked up the baby, and later while he was bathing it, Mary Margaret noted with approval that his hands, big as they were, were very sure and very tender.

Bosco sulked around, grumbling like a coddling grandfather, while Denny and Mary Margaret got the baby ready for bed and carried him over to the crib next the fireplace.

Mary Margaret looked up at Denny. "You're different from what I thought you were," she said.

"Thanks," he said. "Did anyone ever tell you about the way your lips move when you talk?"

She looked at him, and again she knew it was coming. His chest was tight, as it had been earlier in the evening, but the look in his eye was not so wild. It was more pure and gentlemanly, Mary Margaret felt. So she kind of let her head fall back and half closed her eyes.

It came, all right.

A man who's accustomed to tossing his own four-foot cordwood about, and to hollering at a bullheaded Airedale across a cedar swamp, or a dumb jury across a courtroom, is likely to be a powerful man at kissing.

Mary Margaret leaned up against the wall and grabbed a handful of hair to stop the whirl of her head. She opened her eyes and looked at the baby—on his hands and knees, with one eye bugged at her through the pickets of the crib.

Bosco let his tongue lie right on the floor in astonishment. It embarrassed her.

She put her hand against Denny's chest and shoved. "No!" she said. "I'll forgive you this time, but this is a purely professional visit, and under the circumstances... I'm very much interested in that theory of yours..."

"All right, for this time," Denny said, and went over to the crib to turn the baby back bottom down. "You go back

to your bone, Bosco. That be a purely academic d afraid."

It did remain academic, surprising how much en is in watching the talk of a kissable mouth.

It must have been how small noise from the crib hysterical barking jumped the sofa as fast as would the appearance of Mary Margaret professor or her father's automatic shotgun.

The baby was arched in his face was bluish.

"He's sick!" Mary Margaret said. "He's got fits!" Denny jumped for the phone and den out of bed. "You don't epilepsy, Doc?"

"No," Doc said sleepily doesn't choke on his tongue sure he doesn't hurt him right out."

"Is it?" Mary Margaret said.

"Doc says no. Must be I'm doggone sure he didn't Bosco."

"He's foaming at the Mary Margaret said.

"Gosh!" Denny said. hydrophobia! Stay away from Bosco, even if he hasn't ma

ould kiss you like that if I
met it? Right here and now
ing you to . . ."

"We haven't known each other long
enough," Mary Margaret said.

The doctor said explosively, "Holy
smoke!" and bent over the crib. "This
is a nice thing to stick in bed with a kid,
Denny! No wonder he was sick."

Bosco backed suddenly away from
the baby and the doctor and the bone
Doc dangled between thumb and fore-
finger.

"You bullhead!" Denny said to
Bosco. "You thick-headed oaf!"

Bosco crushed himself to the floor,
flat as a rug.

"Oo poor ol' thing," Mary Margaret
said, and knelt beside him. Oo didn't
mean any harm, did oo? Oo jus' thought
he was hungry."

BOSCO sat up and put his head on her
shoulder and let his tongue hang
down her back.

"Mary Margaret," Denny said. "Re-
member what we agreed about that kind
of talk?"

Without turning, Mary Margaret
said, "That was before we were en-
gaged. . . . Us are practically related
now, aren't us, Bosco?"

Bosco let out another six inches of
tongue and drooled.

Denny, wordless, looked at Doc Mad-
den.

Doc Madden grinned at Bosco and be-
gan to roll down his sleeves, the job
done. He said, "Maybe she'd rather
marry Bosco."

THE END

Any Week

admiral?" The kid said simply,
"The only thing I can think
of for your breach of regu-
lated Halsey, still stern, "is to
you chief petty officer." And

OP with considerable fervency
at story's true. It comes with
nt authority and, anyway, it's a
story. But of the following we
no doubts whatever. It comes
ne of our Pacific Coast agents,
d Magee, one of the most alert
air-id wardens in Beverly Hills.
age was receiving class instruc-
from Los Angeles detective on
o do, in his rounds, the warden
core upon a suspicious-looking
r lurking in an alley. "You just
aid rowler," said the detective,
his down, and sit on him until
arives, meanwhile hollering for
ne. "Mr. Magee thereupon asked
rudons, should there be two or
rovers in the alley. "In that
udd," replied the dick, voicing
a that matched the great Cae-
maye you'd better find yourself
r ally."

EEF, however, did we find en-
m from the American soldier com-
to Señor Jesus LaDobra's. We
for LaDobra in David, Republic
am. "Such cleverness," cried
ch smartness we have never be-
th of the American soldier.
hou after he is among us he is
g Spanish with fluency. More,
complete command of the Span-
anne and custom. Our young
ar overwhelmed and we men
America are so impressed that
noting that the North Ameri-
dier should instantly become the
ou women." We were some-
ceptual and did a bit of investi-
W. It we discovered took some
keenness off the pride Señor La-

Dobra's words filled us with. David
and other sections of northern Panama
were being garrisoned by American lads
from the Rio Grande sector of Texas
and from southern New Mexico and
Oklahoma. Most of them were Ameri-
can Mexicans and the rest spoke plenty
of Spanish anyway. We didn't report
back to Señor LaDobra.

AND we have just heard of a young
actor who has recently been inducted
into the United States Army. He may
be a top sergeant by now. Give him
a few more months and we may have a
new general. Smart. He was working
in a stock company, under canvas, in
Boise, Idaho, when he got notice to re-
port. His salary was fifteen dollars a
week. The lady who owned the com-
pany said that she didn't have the fif-
teen, that she'd send it to him later.
This lad suspected otherwise, thought
fast, got tough. He called in the sheriff,
attached the curtain. Under the law
you are not allowed to touch anything
which has been attached for debt until
the court makes some sort of decision.
Thus the curtain could not go up and
hence there could be no show. And so
the actress-manager-owner produced
the fifteen bucks and our hero went off
to the wars, riding instead of hiking.
We shall try to keep our eye on this
young man.

AND Jim Marshall, back from observ-
ing the war on the Pacific Coast reports
that he beheld nothing of social signifi-
cance, except an ancient and almost
tireless jalopy filled with a large fam-
ily of Okies. It was leaving California
and rattling eastward. A large Ameri-
can flag flapped above its leaking radi-
ator as a display of proud patriotism.
But fastened to its rear, where in more
rubbery days a spare tire might have
been, was a large sign. Its bold letter-
ing read: "The hell with you, California
—you and your great big red gerani-
ums." . . .

None but the Brave

Continued from page 21

insulted, and then we have an understanding.

So Mr. Wissel thought I was winking at him and winking at him, because I kept turning my blue eye away and looking at him sideways, but he couldn't make up his mind for sure for the longest time, and he kept looking at me sideways too. Mr. Wissel was always lovely to work for, except keeping a person late in the office and he did altogether too much of that for any twenty-a-week, but he was always strictly business and no nonsense. He is a big fat old man, almost forty, and I was with him three weeks as secretary and stenographer and he never got a bit fresh or got any young ideas.

So I was passing him by and looking at him sideways and he was looking at me sideways, and was I dumfounded when he caught me like a great big grampus and gave me a big smack.

"Mis-ter Wis-sel," I simply gasped, pushing on him.

You'd have to know Mr. Wissel. He is a big fat glary-eyed man with no experience, and no wonder he never got married till so late.

Now he got all red and bothered and said, "Sorry, Miss Zaenker," and looked dumb, and I was so dumfounded, words failed me and I didn't know what to say to him, so I walked to my desk.

I SAID to him, "Think of Mrs. Wissel, Mr. Wissel. This will ruin her life and break her heart. Think of your lovely home, Mr. Wissel, and Mrs. Wissel and those two darling kiddies. You want to break up your lovely home, Mr. Wissel, and leave everything for me?"

"Why, no, Miss Zaenker."

"Why, no, Mr. Wissel?" I said. "Then you think I am some silly girl that you can keep late in the office for twenty a week, to hug and kiss and take liberties, and then go home to your lovely home and forget?" I looked at him sideways very sincerely and said, "Mr. Wissel, I cannot ever stay after five any more except I get overtime and a dollar for supper. I am only a poor working girl, Mr. Wissel, and only got my honor and good name, but I will keep that unsullied."

"Hell's bells, Miss Zaenker," he said, swearing, "why do you still keep winking at me? . . . Oh, you got a black eye, is it? Well, ha, ha—I mean I'm sorry, I made a mistake and it wouldn't happen again. Don't get so blame stuffy about it, Miss Zaenker."

"Blame stuffy, Mr. Wissel?" I gasped.

And I just sat right there and thought about all the unprotected girls that are told to bring their book at five o'clock by fat old rips that would have to pull in their stomach to fall down an air-shaft, and then get insulted, and I speak as one who knows. But I certainly never thought Mr. Wissel was that kind. So, thinking of everything, I began to cry and said, "And all for twenty a week and don't tell Mrs. Wissel? Oh, no, Mr. Wissel, you have made a dreadful mistake and I am only a poor girl and got only my morals and reputation, but—"

"Aw, just dry up about it," he roared like a big lion. "Anyway, where does Mrs. Wissel come in? She doesn't care a cent."

"Oh, Mr. Wissel, how can you speak so unloving of that lovely Mrs. Wissel?" I said. "Maybe you forget I saw Mrs. Wissel looking at you with my own two eyes when you weren't looking, the day I was in your lovely home taking dictation and you were down with the mumps and I know she loves you dearly and you are all the world to her."

I mean I wasn't smoozling Mr. Wissel about Mrs. Wissel because I saw her looking at him like that. I thought they were such an ideal couple. She was more his age, and settled, just the one for Mr. Wissel and I was sure they were so happy. Such a lovely home. A Central Park West duplex with upstairs and down and two in help; oh, Mr. Wissel had it. I am such a home girl and I love a lovely home and if I could have a home like that I would marry the boogeyman, I mean I would, and he could go out every night. But I wouldn't look at him when he wasn't looking at me like Mrs. Wissel looked at Mr. Wissel. I saw her.

So I said, "Oh, Mr. Wissel. You could put an ad in all the Sunday papers and

she really cared. Not that I would ever tell her, I am not silly, because suppose I told Mrs. Wissel she would only get some lovely present and I would only get let go; but Mr. Wissel would have to be more reasonable. Because if Mrs. Wissel didn't care a cent and Mr. Wissel could insult me for all of her, I would give him such a jab with my Fight for Freedom pin I have on my shoulder the next time he got fresh, he would holler murder.

WELL, except the way Mrs. Wissel looked at Mr. Wissel she didn't look as if she cared, I mean the way she looked personally. She didn't try to have appeal. She always looked bunchy, as if she just got up from her hands and

about Mr. Wissel? With who I love?"

"Oh, Mrs. Wissel," I said, la "Ha, ha, are you asking me? W Wissel is strictly business and t of honor and he hasn't a thou anybody but you, and I know asking for fun."

"Well, I never," said Mrs. "Miss Zaenker, how you talk. I a you are making it up and Mr. never thinks of me that way. just two very good friends."

"Oh, Mrs. Wissel," I said, loo her very sincerely, "Mr. Wisse wrapped up in you and your two kiddies."

Well, that was the malarkey, they were so smart and mode sick and tired of each other a good friends and Mr. Wissel cot and kiss anybody for all Mrs. cared, it was no place for an ir girl. So we dropped the subje talked clothes and Mrs. Wissel li clothes, as why wouldn't she, a was so sorry for my eye, an brought up my beautician who is sonal friend of mine and I am send her business, and I aske Wissel to try her once.

WELL, it might be three or fo later, and Mrs. Wissel was office again, and really.

I mean she'd done wonders. S that real natural figure that m very good foundation, slimme shaped and with control such a can't get in Bolger's Bargain Ba for any two seventy-nine, and h was revived and she had an encl smile.

Mr. Wissel looked out of hi and he pulled in his stomach an Mrs. Wissel a big smile and said, Minnie, you look like the first summer," and Mrs. Wissel pass by and gave him an enchanting and it never entered my mind was anything I said to them. Wa ninny.

After she went, Mr. Wissel to bring my book and after giving ters he asked me what's this Mr. sel told him about my eye.

"I got it off a gentleman admi and that I had arrested, Mr. Wi said. I thought I would tell him Claude, as getting an eye off a woman is so ordinary. I said, "Hi is Claude—something—and he a corner-boy standing there all da ing care of his nails, and every I go by he insults and molests n is twenty-four years old, white a gle," I said, saying what Claude the court, "and he never worked but he is a very nice dresser b he finds where his ma hides th money. So the judge gave him te and probation but he'll be back corner of 125th and Lexington Wednesday, and oh, Mr. Wissel scared, because he'll kill me, tho ma was more the one than me. S him arrested twice."

"Why, what an unspeakable Miss Zaenker!" said Mr. Wissel. ought to have an escort if you pa corner."

"Oh, Mr. Wissel," I said, "I many's the escort, but what's the He is a terrible fighter and th afraid to even put out their ton him and they tip their hat and g what will ever become of m Wissel?"

And I gave him a look to touch of stone, but Mr. Wissel is one o kind of men that only get me

"You want to see Mr. Henderson? You fascinate me—tell me more!"

DAVE GERARD

you would never get another wife like Mrs. Wissel and she loves you and do you want to ruin her life and break her heart? Such a true love, Mr. Wissel, comes only once in everybody's life."

"Kindly, Miss Zaenker," roared Mr. Wissel, "mind your own blame' business about me and Mrs. Wissel. What's it to you? And suppose I am only human like lots of other men and I would kiss a pretty girl that kept winking at me, or anyway I thought so, what's it to Mrs. Wissel? I think you are making it up and Mrs. Wissel is not that way about me at all, aren't you, really? But never mind, what you say about keeping you late is very true and after this you will have overtime and supper money."

WELL, goodness, I thought, what is overtime and a dollar for supper? It is no more than fair and what do I get for being insulted?

Though I was pretty sure Mr. Wissel would insult me again, if he would insult me with a big blue eye, but first I better find out about Mrs. Wissel, if

knees, no figure, no style; and her clothes—well! You could see as good on people getting out of a lifeboat, they didn't look as if they were hers. She had so many nice points but she looked like a good woman. Well, I would smash anybody said I wasn't a good woman myself, but a person doesn't have to look like one. I mean she made nothing of her nice hair and nice eyes and nice skin and everything.

She happened to come into the office next day and I thought I would find out about how it was with them so I would know what to do about Mr. Wissel next time he got fresh.

So I said, "Oh, Mrs. Wissel, pardon me, won't you, but I always wanted to ask you where you get your clothes. No wonder Mr. Wissel is so much in love, if I might say so, you are always so smart. That dress looks awfully well on you, pardon me, Mrs. Wissel."

"For evermore," said Mrs. Wissel, bright and staring. "This dress I got in Bolger's Bargain Basement for two seventy-nine—but what did you say

Now we know what "Total War" means... and we're for it!

MOST AMERICANS, we didn't understand what total war means.

...and a vague idea that it meant "going all out" by growing everything we have into the battle. Now we realize that total war means more than that...It means sacrifice, inconvenience, and work for each and every one of us.

For example, on March 6, the Government issued orders prohibiting the sale of any typewriter, standard or portable, new, used, or rebuilt, to the general public!

And on March 15, in agreement with the Government, we have drastically curtailed the manufacture of portable typewriters, and our future portable production is designated for use only by the armed forces.

Also, beginning March 15th, the production of standard typewriters has been sharply reduced, and such standard machines as we build in the future will go only to Govern-

ment agencies, to the armed forces, or to manufacturers of war supplies.

As a result of these changes, we shall now be able to increase our actual war production. All of the resources of the Royal Typewriter Company, as much as possible of our skilled labor, every available inch of our floor space, are being converted to the manufacture of ordnance!

THIS, WE NOW REALIZE, is the true meaning of total war...and we are *for* it, lock, stock, and barrel! We are proud of the fact that the Royal Typewriter Company has been called upon to halt its normal business in mid-air and to "go all out" for the defense of Democracy.

We believe that every manufacturer in the United States whose facilities can be used for wartime production will feel the same way. "Business as usual" has no place in the scheme of total war. It may be an inconvenience to you, may even be a sacrifice on your part, to have to do without a new Royal Typewriter. But... if the Axis powers were to win this war, it would be a long, long time before you could buy *any* new typewriter!

By manufacturing ordnance now, Royal is hastening the day when you, a free man living in a free country, can once more walk into any store in the land and buy anything you want!

THAT, AS WE SEE IT, IS WHAT THIS WAR IS ALL ABOUT!

ROYAL TYPEWRITER CO., INC.

Makers of Roytype* ribbons and carbon paper. Expert typewriter service available everywhere.

How's Your Social Security?

Put on a Wings shirt and you're set to look smart at the biggest business conference or at dinner with the Smiths. For Wings have a luxury look. Wings give you a "fluid fit". And they give you a world, and then some, of wear.

The Guardian collar keeps its smart lines for the life of the shirt. It can't fray. It can't wrinkle. It will look crisp and unwilted in spite of the most trying day and countless sessions with the laundry. There's luxury in every inch of the expensive looking fabrics. And satisfaction in the inexpensive price.

All your favorite fabrics...in sparkling whites, solid colors and smart new patterns.

\$1.75 and \$2.00

Wrinkle-Free Collar made under Celanese patent.

Ask to see the new **Comfortogs** leisure coats and slacks with an air of easy smartness. Modestly priced and handsomely tailored by the makers of Wings Shirts.

PIEDMONT SHIRT COMPANY, GREENVILLE, S. C.

curse and swear and do not get their chivalry up when a girl cries, and he said, "Please, Miss Zaenker, stop that blame blubbering. You say this unspeakable ruffian comes off the Island next Wednesday. And he hangs out at 125th and Lexington? I will give this my personal attention."

"Oh, would you, Mr. Wissel?" I said. "With such a real man as you, Mr. Wissel, so big and strong, a girl would feel safe anywhere, in a theater or having dinner somewhere together, for instance."

"An idea, Miss Zaenker," he said, giving me a bashful smile. "That reminds me. Do you go much to the theater? I don't, so I will leave it to you. Get two good seats tonight, for the best show in town, kindly."

"How nice, Mr. Wissel," I said, thinking I was getting insulted. "And dinner first, Mr. Wissel? I could reserve a table at the Ha Ha Club, that is a very hot spot and you will love it."

"Do that, Miss Zaenker. A table for just us two."

"And how about," I said, "a nice corsage, Mr. Wissel? I adore flowers. I adore orchids and gardenias."

"Flowers surely, Miss Zaenker," he said, smiling like a great big boy. "It is some time since I took a girl out. Get a nice big bouquet and have it delivered here to the office and I will deliver them myself tonight in person. Now I will call Mrs. Wissel, to meet me at the restaurant before I forget."

"Call Mrs. Wissel, Mr. Wissel, to meet you at the restaurant?" I said, thinking what is this now. "Oh, no, Mr. Wissel."

"You mean I ought to call for her in a cab, Miss Zaenker?" he said. "Yes, of course, and thanks for reminding me."

So it was Mrs. Wissel he was taking out and not me, and still I didn't get it. Was I the dimwit! I thought it is some anniversary, their golden wedding or something, and I will be the one next time and get insulted.

BUT the next time was that Wednesday, when Claude was getting off the Island.

Mr. Wissel was feeling very good that day and making jokes and laughing at them and he called up Mrs. Wissel and spoke so goofy I thought to myself you'd never know they were married. I couldn't understand what got into him and he went home early and never mentioned Claude.

So was I scared, thinking Claude will kill me, and I simply clutched my escort's arm and hung on as we went up the 125th Street subway steps, and he patted my hand. He was a gentleman, whoever he was. You meet the nicest men on the subway. I mean gentlemanly men that if you want to brush them off they brush off, and not monsters like Claude that see a girl once and make up their mind and she can make up her mind too, she might as well.

And there was Claude on the corner taking care of his nails, and did I hate him, I thought. Because a girl is a perfect ninny to do anything but hate a corner-boy. He saw us coming and he looked wicked at my escort, and I went up to him and said, "I hope you had a good lesson now, you unspeakable ruffian, the next time you think you can insult and molest a lady you are not introduced to."

"I would love," he said to my escort, "to give you a push in the mush."

"I would love," I said, nudging my escort to get his chivalry up, "to see you, you loafer. You think you are a terrible fighter, but you just dast give this kind gentleman a push in the mush and he will slap you happy. . . . Won't you, sir?"

"But I say," said my escort. And he said to Claude, "You cad."

"Who's a what's that?" said Claude, going for him, and my escort ran down into the subway and Claude ran after him and I screamed like anything, and who should come out of the cigar store but Mr. Wissel.

Mr. Wissel said to me, "Is that the ruffian, Miss Zaenker? I saw him here but he looked like any other young corner loafer, and not even such a bad one, so I thought I would watch."

Claude came back up after running my escort through the turnstile and it was good for him Claude did not have a nickel too. So Claude saw me speaking to Mr. Wissel and he came up to me and said, "Another one already? You can get them. . . . Go on and roll away, tub of lard, before I bust you on the beezer."

"None of your guff, young man," said Mr. Wissel. "I am here to give you fair warning. I hear you make a habit of annoying this young lady and if I hear any more of it you will find I am somebody in this town and you will not go on the Island for ten days but you will go up the River for a good long rest. Move on now."

"Yes, you cad," I said. "Move on, you cur, and never speak to me again as long as you live."

Claude went for me, and I got behind Mr. Wissel, and Mr. Wissel went for Claude and gave him such a blow with his stomach he knocked Claude flat on his back. He tripped up on him and fell on him and Claude would have been squashed by fat Mr. Wissel if he hadn't managed to squirm from under him. A second later, free, Claude bounced into the air and made a bee-line for home.

"I could handle him with one hand, Miss Zaenker," said Mr. Wissel. "Pshaw, I used to be a boxer fast as lightning in my days and even now I do not know my own strength. Hey, what are you blubbering about now?"

Mr. Wissel said that because I was crying and crying, I felt so bad.

"You are a timid little thing and that ruffian has upset you. So come in here and I will get you a drink of spirits," said Mr. Wissel, "of ammonia." So we went in the drugstore. "Well, you have seen the last of him now, Miss Zaenker, and you will never see him again."

"Oh, Mr. Wissel," I said, crying out loud. "You really think so? Oh, oh!"

It was so embarrassing, because Mr. Wissel didn't know what I was crying about, and I didn't either, except that it was something about Claude, so Mr.

Wissel changed the subject. "Mrs. Wissel and I took a mock last night, Miss Zaenker, and a lot of things over, and we t over too and we feel we owe I guess we did not know our o and what you said helped, Mrs. Wissel picks the day she me a happy man, you will be first we will ask."

He sounded so strange the how bad I felt, and I said, "P Mr. Wissel, for laughing, but sounds as if you are talking a ting married, you and Mrs. V ha!"

"What else am I talking at Zaenker?" he said with a big s are both young yet and why we think of settling down, b surprised? Ha, ha, that is a Wissel said people would be not know Mrs. Wissel is r Louie Wissel's widow, when that Mr. Wissel is marrying sel; they will say, 'And high t said maybe even Miss Zaenker surprised too, although you Wissel and her two youngst house the day she was takir me and I was down with the m you know how fond we are c other. . . . Well, and how are y now, Miss Zaenker? Will I w door with you or can you go yourself? I guess you live ju the corner."

"Oh, no, Mr. Wissel," I sa up on the Grand Concourse."

"YOU live away over in t Miss Zaenker?" said M getting surprised himself. "I are you doing over here in Ha and miles out of your way? so much afraid of that unspea fian, why are you always co here every night, miles out of and going up and passing by know he is hanging out? W you."

"Well, Mr. Wissel," I said he always standing on that when he knows I will pass by fair for one is fair for the c Look, there he is back there."

I looked through the drug d and there was Claude pe ng of his hallway and then he back and stood on the corner care of his nails, and look at drugstore.

"Good grief," said Mr. Wis mistake, Miss Zaenker, and

"He went in during Boys' Week, exposed and ousted the mayor and kept the job"

know now who is insulting and molesting who around here and it is not poor Claude. When I think that I gave that poor lad such a beating. Suppose I put you on the subway, so you can go home."

So we came out of the drugstore and Mr. Wissel saw Claude and he put his hand in his back pants pocket and walked right up to him.

Claude looked up from his nails and saw Mr. Wissel putting his hand in his back pants pocket and Claude began to run in his hallway but Mr. Wissel said, "No, wait, young man." And he took out his wallet and gave Claude twenty dollars.

"I have got a good lesson," said Mr. Wissel, "and I give up. I have got enough, and you win. I do not know what is going on here, if it is true love or what, but it is too much for me."

And he tipped his hat and said, "Good evening, Miss Zaenker," and he got into a taxicab to ride home to Central Park West. So I was left all alone with Claude and nobody to protect me and was I scared.

I said, "Oh, Claude, I guess you got me now. Even Mr. Wissel is scared of you and I can't get anybody can fight you."

CLAUDE kissed Mr. Wissel's twenty and put it down in his shoe and said, "Don't tell ma I got money. Bring them all on, big and little, and I will punch the stuffing out of them. I was that way about you from the minute I saw you first; you were the only girl for me."

"Oh, Claude," I said, "I guess I am the same way about you from the first time I saw you, only I thought I hated you. Because what are you? A girl has got to look out for herself in this world, or who will?"

"I got a good job today," he said. "I am a sand hog. Know what that is? We dig tunnels under rivers, and the air

pressure gives us heaves and bends and makes our blood boil and bubble. It is good money but you die young, if you live that long."

"Oh, Claude," I said, thrilled to pieces, "you did—for me?"

"Sure for you," he said. "And the probation officer."

But then I thought and I said, "But, Claude, didn't I see in the paper where the sand hogs went out on strike yesterday?"

"Sure we're on strike," he said. "What, do you want me to get my blood boiling and die young? Well, it don't make any difference now after all because I got my notice today. Just when I had a good steady job that would last me till I was off probation."

"So that's it," I said, seeing that I would have to give him up. "No, Claude, I would never have a corner-boy and that's all you are. So goodbye." I began to cry, but I walked right away, and I mean I meant it. "I will go home now and I will never, never walk by your corner again. Goodbye, Claude."

"What do you mean my corner—you mean your corner," he called. "I only stand on this corner because this is the corner you always pass by. And I won't be here any more anyway; I tell you I got my notice today, Class 1-A, because ma told them she was supporting me, and not me her, so I am going in the Army tomorrow morning."

"Oh, Claude," I said, stopping, "you are going for a soldier?"

Because I love a soldier. I could just see Claude in his uniform. "Well, I would not have an unspeakable ruffian," I said, coming back, "if he was the finest man in the world, but the Army will soon take that out of you, Claude. Oh, am I glad! Let's go up and tell your ma."

"Come on," he said, holding hands. "Say, what's your name?"

And we went up and told his ma.

THE END

Wing Talk

Continued from page 8

flying speed and spun in. Make him land if he has anything to say.

MAJ. R. W. (SHORTY) SCHROEDER, six-foot-three vice-president of United Air Lines, who was seriously stricken several months ago, is making steady, though slow progress toward recovery at the Edward Hines Hospital in Hines, Illinois. Shorty, the Elder Statesman of American aviation, has made so many contributions to its advancement as a pilot, engineer and exponent of common sense, that his friends are legion. They have been so concerned about his welfare that W. A. Patterson, president of United, resorted to the issuance of a form letter addressed "To All Friends of Major R. W. Schroeder" in making the latest progress report, ending with this: "If you want to do something to cheer him up during his long uphill fight, send him a card or letter occasionally."

AN OUTGROWTH of tests to prevent or control fires in engine compartments of airliners in flight, reported several months ago, is the decision to install shut-off valves for lubricating oil and hydraulic-system oil entering that area. Steps to combat the flow of gasoline already exist. The shut-off valves will be operated from the pilot's cockpit or the flight engineer's station. They must also work in reverse: restore the flow of oils if normal operating conditions are desired.

Fires in airliners in flight have been rare and confined to engine nacelles.

Therefore, if a pilot suspects a fire, and doesn't want to deluge his engine with his built-in fire extinguisher fluid, he can shut off the inflammable oils entering the engine compartment. If he has acted too hastily or guessed wrong, he can turn the stuff back on again and keep flying. By July 1st, all airliners will be so equipped and so will ships of comparable types in the military and naval services.

A COUPLE of weeks back you read in this department about Boeing's Untypical aircraft worker, Oxnard A. Fumblethumb, Esq. He now has competition from Ferdinand Fuddlebrain, chosen by the hardworking, fast-thinking employees of North American Aviation's Texas plant as their Stupor Man. Ferdinand is described as "the dreamy-eyed individual who unintentionally does more to hold up production than anyone else. He is a super-bottleneck with an A-1-A priority. He is that broken spoke in the wheel of progress, a sour note in the march of civilization—he's, he's—well, he's just a drip."

In each issue of the employee publications of Boeing and North American, the adventures of Oxnard A. Fumblethumb, Esq., and Ferdinand Fuddlebrain, who have relatives in every war production plant, appear in cartoon form. Self-respecting, conscientious war workers do not want to be known as Fumblethumb or Fuddlebrain. To be called that is to imply that they also look like these dopey borderline saboteurs. And they look awful. F. R. N.

Radiator RASH?

Rust puts radiators on the sick list. It clogs vital water passages and causes motor fever... inefficiency... loss of power. All water forms rust in cooling systems and hot summer driving causes more rust. Warner Cooling System Protector prevents rust formation.

Now is the time to repair and take care of your car so it will last longer. Don't let rust and muck bring faulty cooling to your motor. "Vaccinate" your cooling system with Warner Cooling System Protector... it keeps rust out!

WARNER-PATTERSON COMPANY

OUR FIGHTING MEN

MIDNIGHT MECHANICS. Two sergeants of the 53d Squadron at Randolph Field are shown above examining an engine at night. The 53d pioneered night maintenance, also holds the record of two hours for an engine change in the field

THERE have been one-man gangs and one-man riots and now the U. S. Army has a one-man squad, which has, at this writing, worn out one full squad of noncoms and is beginning on a second. Here are the details. Pvt. Joe Yardboyd—which is obviously not his real name—graduated as a merchandising expert from Northwestern University and has had some experience with mail-order concern. When he reached the reception center at an anonymous post, Quartermaster Corps brass hats broke regulations by grabbing Joe without waiting for him to go through his basic training. They needed his special talents and they were afraid they'd never see him again if he were transferred to a replacement center.

To keep things on the up and up, his superiors decided to let Joe absorb the basic course during his "spare" moments. Accordingly, noncoms took him out, from time to time, and taught him right and left face and how to juggle a rifle. That was okay. But when it came to school the squad, officers thought it wouldn't be quite right to make a whole gang of privates go through the business all over again just for Joe's benefit, so they hit upon the expedient of turning out a full squad of strippers to drill with him. Joe, unfortunately, wasn't so hot in the field, and the first squad of noncoms has wearily turned over to a second uneager gang the job of making a complete soldier out of him. Meantime, Joe does his quartermaster chores with neatness and dispatch.

FORT DOUGLAS, Salt Lake City, Utah. A couple of weeks before free postage for soldiers was made official, a gullible dogface was told that Congress had fixed it and that commanding officers already had the special envelopes on hand. The poor guy's letdown was terrific. Anyhow, the gag recalled to other soldiers a more classic rendition of the practical joker's art at another post. Told that a good place to get his laundry done was "at that house over there—and don't take any back talk from

the lady's old man," a rookie tossed behind the front door and snapped to the colonel there, "I want this back by Saturday." Caught on fast and merely asked the name of the individual named individual wound up doing the batch of laundry in the middle of the post with all present.

IF YOU contributed some of the 2.5 million harvested by the Victory Book Campaign, you might like to know that part of the Army this western area is reaching hundreds of related stations of half a dozen soldiers' other recreation. Because this section footing, the method of distribution works 9th Corps Area librarian differs from other area setups. After the local Victory groups have weeded out misfits (little books), trash (we won't mention titles) volumes, the books are hauled to post free by trucking companies. At each post (Los Angeles, San Francisco, Salem, Kane, Boise, Salt Lake City, Reno) the sorted and arranged into libraries of various the basis of two-thirds fiction and one-third non-fiction. The small (35-to-40-book) traveling libraries in small wooden boxes are mailed outposts; 30 to 40 of them can be put on an Army cargo truck and dumped out all over the place. Once a month the boxes are rotated. Titles on the box cover and anybody can act on which is the secret of the plan's effectiveness.

Students of the School of Librarianship at the University of California recently compiled lists of 35 titles, none duplicate traveling libraries which may be purchased for funds. Typical list includes 10 whodunit novels, three biographies or autobiographies, To . . . books, six current (Continued)

CONTROL OF THE AIR IS VITAL TO VICTORY

KEEP 'EM FLYING!"

Today is fighting for its life. Are you content to let it do the fighting for you? If not — if you're eager to give service to your country, this is your chance. Get in there and keep 'em flying!"

The Army Air Corps needs young men with courage and determination and needs them *now*. Join the thousands applying for Aviation Cadets — to become bombardiers, navigators, "The Three Musketeers" of the Army Air Force!

Now eligible if you are over 18 and under 27, in good physical condition, and either married or single. An intelligence examination determines whether you are qualified to complete the Aviation Cadet course. No credits from educational institutions are required for bombardier, navigator or pilot training.

You will be enlisted soon after passing your physical and intelligence examinations. And when you have successfully completed 18 months of the world's finest aviation training, you will emerge as a Flying Officer ready for active duty!

Wait no longer. Call at the nearest Army Recruiting Station and get full details on how you can become a member of the Army Air Corps. LET'S GO!

The Personality Kid

Continued from page 20

Dona was thirteen and had reached the eighth grade, she decided that Renee wasn't the only talented Novella and went off to New York to join the show. She got around the Gerry Society by using the work card of a cousin, and Granlund hired her for his Paradise show. After a week in the chorus, he conversed with her.

"You're a solo dancer," said N.T.G. "And do you know why you're a solo dancer? Because when the chorus goes one way, you go the other way. After this, get out there in front by yourself."

Since she still looks like a child, the chances are that she was no more mature at thirteen. In circumstances of this kind, the older members of a cast always become sentimentally attached to a baby and there was no resentment when she used the Paradise as a sort of private theater. Also, she was precociously talented. She danced and sang and had already started playing every instrument she got her hands on. At late shows when the drunken patrons cared very little who furnished the entertainment, she led the orchestra and presented various trumpet interpolations that were raucous, blaring and utterly unmusical.

Becomes Orchestra Leader

She was getting \$75 a week and was soon upped to \$150 when the customers showed appreciation of her hoofing and her tinny voice. When the show went on the road, and Granlund was using more principals, she was raised to \$400 a week and featured in lights.

"By the time I'm fourteen I'm buying my first fur coat," she says gloweringly, "and nobody's helping me buy it."

It was then that Orrel Johnson of Cedar Rapids, Iowa, came out of the West with a girls' orchestra and nobody to lead it. From being a player in the orchestra, Miss Johnson had gone on to managing it, and things were extremely favorable except for that one lack. A radio contract was waiting for the band; a big booking agency was ready to send it out on one-night stands. After trying seventy-five candidates without success, Miss Johnson heard about Dona, listened to an audition and begged her to take the job.

"You mean I'm to boss these biddies?" demanded Dona, who even then was old beyond her years.

Miss Johnson assured her this was the truth, and the deal was made. They had four successful years, and when Dona signed with Paramount, Miss Johnson came out to live with her. The band was the usual traveling outfit. For a while they went around in a bus but eventually they used a truck for the instruments and had four touring cars for the players. Dona drove one of the cars.

"Play till one o'clock in the morning and then drive four hundred miles to the next date," she says bitterly. "And people wonder where I picked up all these words."

Orrel Johnson and Dona owned the band jointly and they played theaters, hotels, honky-tonks, college dances, roadside stands and picnics. Dona still shakes her head angrily and mutters rumblingly when she thinks of the sheriff who attached her band because another band booked by the same management had been lax in the matter of a hotel bill.

This was bad but she treasures one last bad memory, being a little vague on the location because she can't recall whether it was High Point or Wilson,

N. C. In any event she hopes North Carolina will soon establish the fact. For them, she says, is the worst United States.

"We gave up our Christmas and drove all the way down New York for a thousand-dollar the guy gave us two hundred a kid manager and said that he'd done it was because he had a little smirk and sing a song and get three times the doing! I thought I ought to have had to hold me back."

What got her started on was cogitation. The band right, but for stage appearance management hired extra Dona would be assisted by son or Toby Wing or Faith. "I'd be up there knocking out," say Dona angrily, "and movie dames would come a little smirk and sing a song and get three times the doing! I thought I ought to have had to hold me back."

She showed up at Paramount Hollywood and pushed her way out of the way until she reached Sylvia, an old friend and the studio. She announced her bility for stardom.

"Go on away now, squint de Sylva in a kindly voice. isn't for you."

She went away, but on Dorothy Lamour, another friend, Lamour advised her to hold a bit of useless reassurance. Dona's determination to be down rather than confess failure the part of a native girl to Aloma of the South Seas, Miss Johnson hinted to the front office to wrap her sarong dangerously around the neck of the executive who little friend a job, and the soon settled.

"Dorothy is my friend," she threatened, as if some dare doubt it.

The New Dish Appears

The wait after that was but the part in Louisiana eventually turned up and something called Road to Nowhere the weeks after Louisiana released, she kept her boy taking her to see the picture got tired of herself.

"I'm sitting there one night keeping my eyes peeled for sensation, Dona Drake, and hind sees me come on the he says 'H'mm, not bad; then the camera switches on Moore, and this guy says idea, that old fish face? Let more of that new dish.' back and says to him 'Br ever let anybody talk you now on; you're a man of ment.'"

She is intensely serious an actress and worried gre her layoff. When she suggested Sylvia that she might employ in taking acting lessons he came very loud.

"Stay away from that yelled. "Do you want to ruin What De Sylva meant was an original, one of the found in Hollywood. She barely reaching five feet, and particularly pretty. When she is always uncomfortable

with a frightened air, as at the minute she's alone. As soon as she takes her shoes off her feet under her. She occupies in appearance, a scowl as if she were and has never told a gag she makes no attempt to be listeners literally roll on talk. She seems entirely of the impression she is making such response as a testimony of whatever she

hears of a good part at sets out after it, although contract to Paramount. eared in the toughest of life—the night club and nd—she does this naturally that the fittest always Tortilla Flat was being. she got in to see Victor director. He told her Hedy Lamarr had been e she had in mind and ise discussing it, but be- what had happened, he ng to her for two hours,

anging that kid would be id Fleming, shaking his edly after she had left. atch that personality on ebody'll get drowned in ney."

ag phrases, she makes no mly rambles on endlessly eative monologue with a he own. Much of it is too nily magazine, but none lge. She represents the life, king it as casually and rincess would regard the t. She talks like an in- igo who discusses Relativity with Einstein without ed about it.

Dorothy Lamour, idol- ple and divides her en- amatic actresses between

Bette Davis and Betty Field. She keeps herself in a turmoil for fear somebody will call her Donna instead of Dona. She lives in a hut high on a hill above Stone Canyon Lake and goes in for animals. She has two white rabbits, two Siamese kittens and a cocker spaniel. She has never had time for outdoor sports but she keeps up with her boxing. She used to bat her younger brothers around, and no man in his right mind would give her a free shot at his jaw even at this late day. She hates night clubs and won't go near them.

"I used to work in those traps," she says grimly.

Warning to Gossips

As is usual in Hollywood, that cavern of rumors, she has been talked about. This is on the theory that a name is not officially recognized in that town until it has been bandied.

Somebody—an agent, to be exact—bandied the name of Miss Drake. She called upon him personally in the matter.

"I just reached over his desk and got him by the neck and lifted him up," she reported matter-of-factly.

In answer to the looks of astonishment and horror that greeted this recital, she added, "I didn't hit him. I just sort of lifted him up and twisted him."

Since Miss Drake weighs only a hundred pounds and has the general aspect of a waif, this occasioned still more wonderment.

"Oh, I got muscle," she cried. "Feel that!"

The arm she presented had the approximate tensile strength of a railroad spike. There was no longer any doubt whatever that Miss Drake could lift and twist.

"I don't like people using my name when there's no truth to it," she finished.

This may be considered as a warning to people.

THE END

Sourdough Army

Continued from page 13

by introducing cheap labor and competition.

able natives of Alaska and the Aleuts, whose generations ago were of their Asiatic homelands by achievement of Jap barbarians— with a peculiar racial fury.

Alaskans realize that handful of them at best— 000 residents in all the srawling 600,000 square d at the real defense of ustie in the hands of the om the States. The old s have come to have a whole- ped for these fighting men olside—the tough young leaping in tents at Dutch Har- gh the bleak Aleutian winter; geosailors and Coast Guard ding watch in sixty-mile gales s' ricked seas; the soldiers ay Texas learning to mush at in the deep snows of Anchor- airnks and Nome.

Ready and Waiting

admire men like them- en who can take it and not ; as they have taken these rs t their hearts. Their own kno, is to back up the armed be they can. They'll fight thn, stolidly, shoulder to Ty'll fall back if they have

to—and there's no tougher guerrilla fighter in the world than an old sourdough with a rifle. They're prepared to evacuate their towns swiftly and silently, without confusion; the way frontiersmen break camp in the night.

Take the town of Petersburg, for instance: a picturesque fishing village on Alaska's famed Inside Passage, squatting precariously at the very base of the snow-capped coastal range. On either side, forbidding glaciers fan downward from the mountain passes; behind it, the mile-high peak of Devil's Thumb rears against an icy blue sky. Usually Petersburg is very quiet in the winter; the salmon fishing and shrimp packing are all over; the fishermen take out their motors and overhaul their boats for spring.

This year it is different. This year every motor is in place, tuned up and ready. Extra bunks have been built in the tiny cabins of the boats, and their holds and lazarets are crammed with dried food and canned goods and extra blankets. Fishing gear has been cleared out to make room for spare drums of gas. Searchlights have been rigged on the pilohouses. Today every dory and tender and trawler in Petersburg's fishing fleet is standing by, ready to cast off at a moment's notice and get under way.

"We can move every woman and child out of town in an hour. We've got little coves and islands picked out, up and down the coast, where they'll be

You too, Dad,
HAVE AN ARITHMETIC PROBLEM!

Ovals!

And a double Hooray for the way these new Carter colors dress up one's writing!

Smooth-flowing, quick-starting inks of unusual depth and brilliance of color in new wide-mouthed, smartly streamlined bottles as good-looking as they are convenient to use.

In a full range of colors—and in both permanent and washable inks—15¢ for full 2½ ounces.

"Ovals" are packed in gay, colorful cartons to match their picture labels.

Such a hit was Carter's American Blue, presented a year ago in the smart new "oval" bottle, and so many requests have come in for a complete line of inks in this modern package that Carter offers not only a complete line of colors . . . but completely new colors!

**And for a dime
Carter's Cubes are tops**

No question about Carter's Cubes being the best looking and most popular 10¢ inks everywhere—Midnight Blue-Black, Blue and Black, in Washable Blue and Black and the popular "Sunset" colors, red, green, purple and brown.

CARTER'S INK

safe. We know what to do. We're ready!"

You find the same fighting spirit all over Alaska, from the Panhandle to the Arctic, from the Yukon border to the Bering Sea. They're ready; they know what to do. Each inhabitant has assigned himself a special task of his own. An old-timer in Seward gets out his rifle and does a little target practice with a tin can. A power trawler in Chatham Strait sneaks in and out of the tiny bays and inlets, ready to report the presence of possible subs. A roadhouse proprietor on the Steese Highway north of Fairbanks keeps a weather eye out for planes. A prospector near Iditarod climbs out of his shaft a couple of times a day and scans the sky for parachutists. A fisheries patrol boat, seasoned by years of duty in the treacherous waters of the gulf, helps guard the vital approaches to Kodiak and Seward.

Alaskans are individuals; sometimes they have their own ideas of how to help. Down on the Kuskokwim, on December 7th, a lone beaver trapper heard the news of Pearl Harbor over his homemade battery set. Enemy submarines were rumored off the Alaska coast, enemy aircraft were virtually overhead; and a mile away, he knew, along the runway of the Army's new emergency landing field, stood a hundred drums of aviation gas, open and unprotected. It would never do to let this prize fall into Jap hands!

Fortunately he was equal to the situation. There had been occasions during a somewhat checkered past when he had engaged in a few extralegal transactions in "hot" fur; and he knew all the tricks of caching things where they couldn't be found. Within an hour he had gathered a group of Indians from the adjoining village, hauled every last drum back into the woods, covered them with snow, and planted the tops of the mounds with spruce branches. He remembered even to drag a few boughs behind him on the way home, to obliterate his snowshoe tracks. Then he hitched up his dog team, and headed for Fairbanks.

"Thought I'd better tell you where I hid your gas," he informed the startled Army official at Ladd Field, "in case you might want to find it again."

Even in the barren Arctic, north of the Circle, they are doing their bit, though sometimes the results are not quite up to expectations. Near Point Hope, for example, a remote Eskimo village decided recently to hold a practice blackout. It was the schoolteacher's idea; but the Eskimos fell in with it enthusiastically. They hung rags in the doors of their sod dwellings and igloos, daubed soot over the few precious panes of glass, extinguished all their fires, and then ran outdoors and took their places

on a near-by hill to view the
Their faces fell.

"Blackout no good," they moped.
"Can't see nothing."

Individuals, civic group organizations are all taking part in Alaska's home defense. The Territorial Department of chambers of commerce, the Legion, the big commercial throughout the Territory the last man. Pan American and its subsidiaries—the commercial pilots of the Army virtually formed the defense. P. A. A.'s old-time operators know Alaskan flying ground up (and, more important, down again) and long experience Arctic has taught them all fighting blizzards and sleeping combating ground storms a of scouting new passes treacherous mountain ranges den fog blots out the regular

Every Man a Soldier

Alaskans are ready. They are loaded, their trigger fingers are steady, their shooting eyes are steady. They won't be taken by surprise. They are prepared to siwash in the snow if they are off the land if they have to. They have nothing new for a lot of time. Alaska is still a pioneer country. It thanks to the farsighted game laws of the Alaska Game Commission that it has the herds of caribou and moose, there is game and there is time for them to exist a long time. The life resources of Alaska, which the game commission has struggled so hard to protect, could be the margin between life and death for Alaska's guerrilla hunters.

That's the sourdough spirit,
eve of anticipated action is
They will defend Alaska.
fight on the beaches, in the
the streets; they will fight
They will never surrender!

THE END

"I'm afraid this isn't much fun for the rest of you!"

Moving Finger

Continued from page 19

and Nash was saying: "Steady, patient elimination—so very many people are now."

"Any women clerks who work all the afternoon. It's the schoolmistress. She was the district nurse. I know yesterday. Not that I was any of them, but you see, Mr. Burton, definite times now on the street—yesterday afternoon before. On the day of the death from, say, three—the earliest possible which Agnes could have been in the house after her quarrel with the postman. I can get that fixed with the postman. And ten minutes to three when Megan Hunter left the house. If past three or more, or past three, as Agnes might change."

"You think happened yesterday?" "I think a certain calm and smiling. Maybe she asked for Miss Megan, she had brought a parcel. She turns around to get a parcel or to take the parcel in. The caller bats her on the suspecting head."

"The ladies around here carry large sizes in handbags. What might be inside it?" "She stops her through the back of a bundle her into the car. Wouldn't that be a hefty job?" "Nash looked at me with a queer expression. 'The girl isn't normal—not by that type of mental intensity with surprising strength. It's a girl.' He paused and said, 'What made Miss Megan look in that cup-

"I said, 'Why drag her out of the car? What was the point?' " "The girl was before the body was more difficult it would be to get death accurately. If, for instance, fell over the car when she came in, a doctor could fix it within ten minutes—might be awkward for

"But if Agnes was of the person—" "She wasn't. She just thought it all was a slow-motion picture. I imagine, and she was only suspicious with a feeling that was wrong. She certainly expected that she was up against a world of murder."

"I asked, 'What was the thing we have foreseen. Fear in the mind?'" "Superintendent Nash,

and somehow his words made the whole thing seem absolutely horrible. "We're up against someone who's respected and thought highly of—someone, in fact, of good social position!"

Presently Nash said that he was going to interview Rose once more. I asked him, rather diffidently, if I might come too. Rather to my surprise he assented cordially.

"I'm very glad of your co-operation, Mr. Burton, if I may say so."

"That sounds suspicious," I said. "In books when a detective welcomes someone's assistance, that someone is usually the murderer."

Nash laughed shortly. He said, "You're hardly the type to write anonymous letters, Mr. Burton." He added: "Frankly, you can be useful to us."

"I'm glad, but I don't see how." "You're a stranger down here, that's why. You've got no preconceived ideas about the people here. But at the same time, you've got the opportunity of getting to know things in what I may call a social way."

"The murderer is a person of good social position," I murmured.

"Exactly." "I'm to be the spy within the gates?" "Have you any objection?"

I thought it over. "No," I said, "frankly I haven't. If there's a dangerous lunatic about, driving inoffensive women to suicide and hitting miserable little maidservants on the head, then I'm not averse to doing a bit of dirty work to put that lunatic under restraint."

"That's sensible of you, sir. And let me tell you, the person we're after is dangerous. She's about as dangerous as a rattlesnake and a cobra and a black mamba rolled into one."

I gave a slight shiver. I said, "In fact, we've got to make haste?"

"That's right. Don't think we're inactive in the force. We're not. We're working on several different lines."

He said it grimly. "I had a vision of a fine, far-flung spider's web..."

Nash wanted to hear Rose's story again, so he explained to me, because she had already told him two different versions, and the more versions he got from her the more likely it was that a few grains of truth might be incorporated.

WE FOUND Rose washing up breakfast, and she stopped at once and rolled her eyes and clutched her heart and explained again how she'd been coming over queer all the morning.

Nash was patient with her but firm. He'd been soothing the first time, so he told me, and peremptory the second, and he now employed a mixture of the two.

Rose enlarged pleasurably on the details of the past week, of how Agnes had gone about in deadly fear, and had shivered and said "Don't ask me" when Rose had urged her to say what was the matter. "It would be death if she told me, that's what she said," finished Rose, rolling her eyes happily.

"Had Agnes given no hint of what was troubling her?"

"No, except that she went in fear of her life."

Superintendent Nash sighed and abandoned the theme, contenting himself with extracting an exact account of Rose's own activities the preceding afternoon.

This, put baldly, was that Rose had caught the 2:30 bus and had spent the afternoon and evening with her family, returning by the 8:40 bus from Nether

"Old Town Boats"

Mickford. The recital was complicated by the extraordinary presentiments of evil that Rose had had all the afternoon and how her sister had commented on it and how she hadn't been able to touch a morsel of seed cake.

From the kitchen we went in search of Elsie Holland, who was superintending the children's lessons.

As always, Elsie Holland was competent and obliging. She rose and said, "Now, Colin, you and Brian will do these three sums and have the answers ready for me when I come back."

She then led us into the night nursery. "Will this do? I thought it would be better not to talk before the children."

"Thank you, Miss Holland. Just tell me, once more, are you quite sure that Agnes never mentioned to you being worried over anything—since Mrs. Symmington's death, I mean?"

"No, she never said anything. She was a very quiet girl, you know, and didn't talk much."

"A change from the other one, then!"

"Yes, Rose talks much too much. I have to tell her not to be impertinent sometimes."

"Now, will you tell me exactly what happened yesterday afternoon? Everything you can remember."

"Well, we had lunch as usual. One o'clock, and we hurried just a little. I don't let the boys dawdle. Let me see. Mr. Symmington went back to the office, and I helped Agnes by laying the table for supper—the boys ran out in the garden till I was ready to take them."

"Where did you go?"

"Toward Combe Acre, by the field path—the boys wanted to fish. I forgot their bait and had to go back for it."

"What time was that?"

"Let me see, we started about twenty to three—or just after. Megan was coming but changed her mind. She was going out on her bicycle. She's got quite a craze for bicycling."

"I mean what time was it when you went back for the bait? Did you go into the house?"

"No. I'd left it in the conservatory at the back. I don't know what time it was then—about ten minutes to three, perhaps."

"Did you see Megan or Agnes?"

"Megan must have started, I think. No, I didn't see Agnes. I didn't see anyone."

"And after that you went fishing?"

"Yes, we went along by the stream. We didn't catch anything. We hardly ever do, but the boys enjoy it. Brian got rather wet. I had to change his things when we got in."

"You attend to tea on Wednesdays?"

"Yes. It's all ready in the drawing room for Mr. Symmington. I just make the tea when he comes in. The children and I have ours in the schoolroom—and Megan, of course. I have my own tea things and everything in the cupboard up there."

"WHAT time did you get in?"

"At ten minutes to five. I took the boys up and started to lay tea. Then when Mr. Symmington came in at five I went down to make his but he said he would have it with us in the schoolroom. The boys were so pleased. We played Animal Grab afterward. It seems so awful to think of now—with that poor girl in the storeroom all the time."

"Would anybody go to that storeroom normally?"

"Oh, no, it's only used for keeping junk. The hats and coats hang in the little cloakroom to the right of the front door as you come in. No one might have gone to the other storeroom for months."

"I see. And you noticed nothing unusual, nothing abnormal at all when you came back?"

The blue eyes opened very wide. "Oh,

no, Inspector, nothing at all. Everything was just the same as usual. That's what was so awful about it."

"And the week before?"

"You mean the day Mrs. Symmington—"

"Yes."

"Oh, that was terrible—terrible!"

"Yes, yes, I know. You were out all that afternoon also?"

"Oh, yes, I always take the boys out in the afternoon—if it's fine enough. We do lessons in the morning. We went up on the moor, I remember—quite a long way. I was afraid I was late back because as I turned in at the gate I saw Mr. Symmington coming from his office at the other end of the road, and I hadn't even put the kettle on, but it was just ten minutes to five."

"You didn't go up to Mrs. Symmington?"

"Oh, no. I never did. She always rested after lunch. She had attacks of neuralgia—and they used to come on after meals. Dr. Griffith had given her some powders to take. She used to lie down and try to sleep."

Nash said in a casual voice, "So no one would take her up the post?"

"The afternoon post? No, I'd look in the letter box and put the letters on the hall table when I came in. But very often Mrs. Symmington used to come down and get it herself. She didn't sleep all the afternoon. She was usually up again by four."

"You didn't think anything was wrong because she wasn't up that afternoon?"

"Oh, no, I never dreamed of such a thing. Mr. Symmington was hanging up his coat in the hall and I said, 'Tea's not quite ready, but the kettle's nearly boiling,' and he nodded and called out, 'Mona, Mona!'—and then as Mrs. Symmington didn't answer he went upstairs to her bedroom, and it must have been the most terrible shock to him. He called me and I came, and he said, 'Keep the children away,' and then he phoned Dr. Griffith and we forgot all about the kettle and it burned the bottom out! Oh dear, it was dreadful, and she'd been so happy and cheerful at lunch."

Nash said abruptly, "What is your own opinion of that letter she received, Miss Holland?"

Elsie Holland said in a low voice, "I think it was wicked—"

"Yes, yes, I don't mean to think it was true?"

Elsie Holland said firmly,

"No, indeed I don't."

"I found Megan before leaving. She was in the garden almost back to her usual cheerful. She should come back for a while, but after a moment's hesitation she shook her head. I think I'll stay. It is—well, I suppose it's me. And I dare say I can help a bit."

"It's as you like." "I think I'll stay. I could—I

"I don't know." She looked at me. "Things seem rather like that. I don't know." "I don't know." "I don't know."

"Of course. But what do you think might happen?" "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

"I don't know." "I don't know." "I don't know."

here—nobody could have had a grudge against us."

"You're failing to allow for the mentality of a Poison Pen—all is grist that comes to their mill. Their grudge, you might say, is against humanity."

"I suppose," said Joanna thoughtfully, "that that is what Mrs. Dane Calthrop meant."

Nash looked at her inquiringly, but she did not enlighten him.

The superintendent said: "I don't know if you happened to look closely at the envelope of the letter you got, Miss Burton. If so, you may have noticed that it was actually addressed to Miss Barton, and the a altered to a u afterward."

That remark, properly interpreted, ought to have given us a clue to the whole business. As it was, none of us saw any significance in it.

Nash went off, and I was left with Joanna. She actually said: "You don't think that letter can really have been meant for Miss Emily, do you?"

"It would hardly have begun 'You painted trollop,'" I pointed, and Joanna agreed.

Then she suggested that I should go down to the town. "You ought to hear what everyone is saying. It will be the topic this morning!"

I suggested that she should come too, but rather to my surprise Joanna refused. She said she was going to mess about in the garden.

I paused in the doorway and said, lowering my voice, "I suppose Partridge is all right."

"Partridge!" The amazement in Joanna's voice made me feel ashamed of my idea.

I said apologetically, "I just wondered. She's rather 'queer' in some ways—a grim spinster—the sort of person who might have religious mania."

"This isn't religious mania—or so you told me Graves said."

"Well, sex mania. They're very closely tied up together, I understand. She's repressed and respectable, and has been shut up here with a lot of elderly women for years."

"What put the idea into your head?" "Well," I said slowly, "we've only her word for it, haven't we, as to what the girl Agnes said to her? Suppose Agnes asked Partridge to tell her why Partridge came and left a note that day—and Partridge said she'd call around that afternoon and explain."

"And then camouflaged it by coming to us and asking if the girl could come here?"

"Yes." "But she never went out that afternoon."

"YOU don't know that. We were out ourselves, remember."

"Yes, that's true. It's possible, I suppose," Joanna turned it over in her mind. "But I don't think so, all the same. I don't think Partridge has the mentality to cover her tracks over the letters. To wipe off fingerprints, and all that. It isn't only cunning you want—it's knowledge. I don't think she's got that. I suppose—" Joanna hesitated, then said slowly, "they are sure it is a woman, aren't they?"

"You don't think it's a man?" I exclaimed incredulously.

"Not—not an ordinary man—but a certain kind of man. I'm thinking, really, of Mr. Pye."

"So Pye is your selection?" "Don't you feel yourself that he's a possibility? He's the sort of person who might be lonely—and unhappy—and spiteful. Everyone, you see, rather laughs at him. Can't you see him secretly hating all the normal happy people, and taking a queer, perverse, artistic pleasure in what he was doing?"

"Graves said a middle-aged spinster."

"Graves said a middle-aged spinster."

"Graves said a middle-aged spinster."

"Mr. Pye," said Joanna, "is a middle-aged spinster."

"A misfit," I said slowly. "Very much so. He's rich, but money doesn't help. And I do feel he might be unbalanced. He is, really, rather a frightening little man."

"He got a letter himself, remember." "We don't know that," Joanna said. "We only thought so. And anyway, he might have been putting on an act."

"For our benefit?" "Yes. He's clever enough to think of that—and not to overdo it."

"He must be a first-class actor." "But of course, Jerry, whoever is doing this must be a first-class actor. That's partly where the pleasure comes in."

"For heaven's sake, Joanna, don't speak so understandingly! You make me feel that you—that you understand the mentality."

"I think I do. I can—just—get into the mood. If I wasn't Joanna Burton, if I wasn't young and reasonably attractive and able to have a good time, if I was—how shall I put it?—behind bars, watching other people enjoy life, would a black, evil tide rise in me, making me want to hurt, to torture—even to destroy?"

"Joanna!" I took her by the shoulders and shook her. She gave a little sigh and shiver, and smiled at me.

"I frightened you, didn't I, Jerry? But I have a feeling that that's the right way to solve this problem. You've got to be the person, knowing how they feel and what makes them act, and then—and then perhaps you'll know what they're going to do next."

"Oh, gee!" I said. "And I came down here to be a vegetable and get interested in all the dear little local scandals. Dear little local scandals! Libel, vilification, obscene language and murder!"

JOANNA was quite right. The High Street was full of interesting groups. I was determined to get everyone's reactions in turn.

I met Griffith first. He looked terribly ill and tired. So much so that I wondered. Murder is not, certainly, all in the day's work to a doctor, but his profession does equip him to face most things including suffering, the ugly side of human nature, and the fact of death.

"You look all in," I said. "Do I?" He was vague. "Oh! I've had some worrying cases lately."

"Including our lunatic at large?" "That, certainly." He looked away from me across the street. I saw a fine nerve twitching in his eyelid.

"You've no suspicions as to—who?" "No. No. I wish I had."

He asked abruptly after Joanna and said, hesitatingly, that he had some photographs she'd wanted to see.

I offered to take them to her. "Oh, it doesn't matter. I shall be passing that way actually later in the morning."

I began to be afraid that Griffith had got it badly. Curse Joanna! Griffith was too good a man to be dangled as a scalp.

I let him go, for I saw his sister coming and I wanted, for once, to talk to her. Aimée Griffith began, as it were, in the middle of conversation. "Absolutely shocking!" she boomed. "I hear you were there—quite early?"

There was a question in the words, and her eyes glinted as she stressed the word "early." I wasn't going to tell her that Megan had rung me up. I said instead, "You see, I was a bit uneasy last night. The girl was due to tea at our house and didn't turn up."

"And so you feared the worst? Very smart of you!"

"Yes," I said. "I'm quite the human bloodhound."

"It's the first murder we've ever had

A SPECIAL PREPARATION FOR SHAVING FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush Not Greasy or Sticky

Modern life now demands at least 1 man in 7 shave every day. This daily shaving often causes razor scrape—irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to glide over your skin, cutting your whiskers close and clean without scraping or irritating the skin.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men in responsible positions—doctors, lawyers, businessmen and others who must shave every day—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider has been developed by The J. B. Williams Co., who have been making fine shaving preparations for over 100 years.

TRY A TUBE AT OUR EXPENSE

We're so positive that Glider will give you more shaving comfort than anything you've ever used that we'll send you a generous tube **ABSOLUTELY FREE**. No stamps—no cartons—no dimes. Just send your name and address to The J. B. Williams Co., Dept. EG-06, Glastonbury, Conn. On this **FREE** trial test, we rest our case entirely. Don't delay—send in a penny post card today for your free tube of Glider. Offer good in U. S. A. and Canada only.

FIGHT HEADACHES

3 ways at same time!

Get after Headache's Vicious Circle this proved, sensible way

• A headache disturbs your nervous system; with jumpy nerves often goes an upset stomach, in turn affecting the pain in your head—thus making a "vicious circle". Mere single-acting pain relievers may still leave you feeling dull, sickish.

Bromo-Seltzer is so effective because it acts 3 ways at the same time; not only helps stop pain, but also helps calm nerves, settle stomach. Next time, try Bromo-Seltzer.* See what a difference it makes!

*Use only as directed on the label. For persistent or recurring headaches, see your doctor.

BROMO-SELTZER
AMERICA

NOW IS THE TIME FOR CLEAR-EYED VISION

FULL SPEED DEFENSE PRODUCTION is dependent upon accuracy. Accuracy depends upon alert, straight-shooting, unfailing vision. This is why millions of American workers are using EYE-GENE today.

JOIN THE ARMY of workers for Victory who use safe, stainless hygienic EYE-GENE for maximum vision-efficiency. Start using this Specialist's formula today. See how clear and up-and-doing your eyes look...how refreshed they feel! Buy EYE-GENE at any drug, dep't, or 10¢ store.

plays and novels, three travelogs and an anthology. The USO and Red Cross provide funds for the VBC; the American Library Association, through thousands of members, does the lion's share of the distribution work. The original VBC goal, by the way, was 10,000,000 books and it's never too late to help. Take yours to the nearest public library.

FORT FRANCIS E. WARREN, Wyoming. Fully clothed and somewhat sleepy, Pvt. Frederick Brug, Co. M, 5th Qm. Training regiment, appeared in the company orderly room at 1:30 A. M. one recent morning and told the charge of quarters that he was ready. "For what?" asked the startled CQ. "Oh," replied Pvt. Brug, now slightly more conscious, "I guess I must have only dreamed we were off to Australia." Pvt. Brug spent the remainder of the night in more peaceful slumber and ate breakfast with considerable gusto.

RANDOLPH FIELD, San Antonio. At cadet headquarters, in a special Hall of Fame, will be hung photos of all this field's graduates officially cited for distinguished service in the current war. Cadet Commandant Capt. M. F. Taber cooked up the idea, figuring that, in addition to honoring Randolph's heroes, it might provide inspiration for future classes. Brooks Field (Air Corps Observers) has instituted a similar plan. Not a bad idea for other Air Corps installations with vacant wall space on their hands.

SCOTT FIELD, Ill. Pvt. Charles L. Beatty, whose home address is Flatbush, N. Y., and whose peacetime but not particularly peaceful job is piloting a subway train, is learning code for the second time in his life. First was in 1918, when his military service in the Argonne ended in a French base hospital. Now, with a silver plate in his skull and mustard-gas scars on both legs, the 42-year-old veteran is dit-dit-dashing here for tactical duty with the Air Corps radio men.

PATTERSON FIELD, Fairfield, Ohio. Word comes from Pvt. Chester Modelwski, of Goodello, Mich., that he and a buddy enlisted in the Air Corps last December, and passed the physical examination nicely, thanks. Last February, though, the buddy—Pvt. Paul Polovich—got a card from home telling him he has been placed in 1-B, physically unfit for military service. Pvt. Polovich is getting along fine in the Air Corps and feels dandy and hopes his local draft board won't be annoyed if he stays in the service.

FORT BENNING, Georgia. "Now you've done it," writes Lieut. John N. Hutchinson from this home of the 2d Armored Division. "You mollified us when you corrected, in your column for Mar. 7th, the statement you made Jan. 31st that the 16th Engineers bridged the Chattahoochee River in record time. The 17th, who really built it, are your friends again. But the rest of the division, and probably the whole Army by this time, is sore because of the story of Mar. 21st about the Navy's part in the recovery of a medium tank from the much-publicized Chattahoochee.

"We did call on the Navy for help and two Navy divers came up from Pensacola with diving equipment. They tried for two or three days to hitch towing cables to the sunken tank, but the Chat-

tahoochee was too swift and cold for them and they finally gave up. So what then? So a private from our Co. B of the 67th Armored Regiment, the outfit to which the tank belonged, climbed into the rubber suit with the lead shoes, had the helmet clapped on his conk, and went down into the muddy current.

"Well, he not only hooked the cables on but he got inside the 28-ton tank and threw the transmission out of gear so the tank could be towed, not dragged. This was a very dangerous enterprise and was contrary to the instructions of the officer in charge who was afraid the air hose might foul. The soldier, Pvt. Henry B. Saunders, who turned out to be a veteran diver and who is now at the Fort Knox officers' candidate school, recently received a letter from the Navy divers. They congratulated him for pulling a job they admitted was too much for them."

That's the end of the story of the tank in the Chattahoochee River and we hope we don't get a blast from the Navy maintaining the whole thing was pure propaganda.

IF COFFEE actually does keep them awake, the soldiers at Benning are the most alert in the world. Latest discovery of the quartermaster corps is that the average soldier consumes four cups a day. Rationing is on a yearly basis—45 pounds per man. When it comes to dessert, pie (guess which kind) takes first place. Other favorites are, in the following order: ice cream, doughnuts, chocolate cake, cherry pie, coconut cake, mince pie, fruit cobbler, banana pudding and butterscotch pudding. Rice pudding comes last and pretty unenthusiastically at that. Without raisins and cream it's pretty flat.

FORT BRAGG, Fayetteville, N. C. Out at the 178th F. A. during a long pep talk anent guard duty, one Pvt. Rufus Patterson stuck his hand in what he thought was a box of cookies. When he began to eat, the lecturer and entire class stopped to watch Pvt. Patterson munch on parts of a jigsaw puzzle.

Later he confided to his buddies that he thought the cardboard in the animal crackers gone stale.

high schools, as well as in trade of professional schools, there are regulars in aviation, covering aircraft construction, air traffic, communication instruments, meteorology, motors and air law.

the time they are lapping up the news about the prowess of the new aviation. They hear nothing of the Wrights and Santos-Dumont, Blériot and Curtiss, but much of Linthal, "the first flier." They know of Richtofen and Udet and they have no chance of staying in aviation if Hitler wants them.

National Socialist Fliers Corps (NSFK) not only in charge of local clubs throughout the Reich but has a number of teachers in the schools. They give orders; the teachers obey. The system is hard and fast—and it produces not only fliers but a nation of fliers who are air-conditioned.

Aviation—Aviation, Art

typifies the thoroughness of the training more fully than its other arts. Art education is not for art's sake; it is "to win the creative work the hearts of the Germans to the aviation idea." The study to be done, the progress, these incredible examples of art: "Landscape and cloud study by Rembrandt and Dürer; flight in painting and sculpture by G. E. Resurrection and the 'Bistine Madonna.' In modern art, teachers are instructed to translate stories of daring in foreign wars, transport of pilots.

on we do in the face of that? have done as well, at the college level, as any nation in the world. This mission of ours was under way on the eve before the invasion of Poland. It was stepped up to 45,000 "temper" pilots a year, soon after the invasion of the Low Countries. The long has been plain to many that most of our elementary and high schools had a blind spot in the subject of aviation. I began to study this problem last summer with a number of educators who had been supporting my ideas on mass training of pilots. We agreed that the

work of model-airplane clubs was useful and helpful but that the greatest effect could be attained only by introduction of the aviation angle into regular school courses. Then the model-work would become laboratory-testing of regular classroom study.

Before Pearl Harbor, these educators had become an advisory committee on education to the C.A.A. Their enthusiasm has been gratifying. They are requesting the school systems of the country to act as soon as possible. Meetings are being held now and will continue until late May. State and local school authorities are taking part.

Supplemental pamphlets are being prepared to supply aviation deficiencies in current textbooks until the books can be revised. Authors whose works now have wide acceptance are writing aviation supplements on mathematics, geography, biology, physics and chemistry.

There has been no attempt to force this upon our educational system and no necessity for it. The ability of our leaders in free education to keep pace with a dynamic society is one of the basic tests of democracy.

The American Way

The experience of the C.A.A. has shown that this country is ripe for aviation. One of the best stories I know to illustrate this concerns C. C. Calkins and his son Dwight. The father was a manufacturer in Spokane. He decided he'd learn to fly for the fun of it. Because his son got airsick on his first time off the ground, his father got ahead of him. Kicked into trying again, Dwight soon got enthusiastic, too. He took the C.A.A. elementary course and then went on to advanced work, eventually becoming an instructor.

They rented planes for a while, the two of them, and then bought one. They found that salesmanship in the field of light planes was so spotty that they ended by being agents for a manufacturer. The man who owned the hangar decided to sell and they bought it. The airport—hangar and all—was taken over by the Army, so the Calkins built a port of their own. Then they started training pilots.

C.A.A. trainees learn fast and travel far. Outstanding was the case of Albert W. Strauel, of Alamosa, Colorado. In June 1940, he had never been off the ground. Less than a year later, as an officer of the R.A.F., he took tea in London with the king and queen.

Others flocked to join in the Battle of Britain. Two thirds of the American Eagle Squadron in England learned to fly with C.A.A., according to a survey by Pilot Officer Harold Strickland, a Chicagoan and an Eagle himself.

George Swartz Welch of Wilmington, Delaware, who took his C.A.A. training at Purdue University in the fall program of 1940, was one of the first cited for outstanding achievement in the Pacific after war began.

America can fly; Americans want to fly. It is not a question of every individual piloting an airplane. But nations must fly or die, economically or socially, as well as militarily.

It is a pleasant and exciting prospect, rather than an alarming one. Every flier who has looked at his work from the dimension of the air knows this to be true. We are going to win this war in the air, we are going to keep it won when peace is re-established. America was the pioneer flying nation; it is soon going to be the greatest flying nation.

THE END

How can industry provide products to meet essential civilian needs when strategic materials must be confined to our war effort?

Hundreds of manufacturers are finding the answer to this question in the use of Masonite® Presdwood® Products. These remarkably versatile hardboards are pinch hitting all along today's production line . . . helping to conserve strategic

materials . . . replacing metals, asbestos, hard rubber and other vital supplies.

Combining great strength with light weight, Presdwoods are readily adaptable to a wide variety of industrial uses. Easy to work with, ideally suited to high-speed production methods, these modern materials will help you do a faster, better job at lower cost.

IN THE FRONT LINE AND ON THE HOME FRONT

In fighting equipment for the Army, Navy and Air Corps . . . behind the scenes in countless civilian and war industries . . . for essential housing . . . Presdwoods are working day and night for victory.

New and important uses are constantly being found for these durable, grainless,

moisture-resistant hardboards. Their versatility, adaptability and ease of fabrication are earning for Presdwood Products today a permanent place on the production lines of tomorrow. . . . Masonite Corporation, 111 W. Washington Street, Chicago, Illinois.

Thorough-But Fast!

THE mighty force of American industrial capacity is beginning to produce the weapons of total war at a magical rate.

Against the background of bad military and naval news in the Far East and on the oceans we have had cheering reports from the great factories now dedicated to the making of the tools of offense and of defense.

The accomplishments of the men and women who tend our industrial machine are miraculous. American productive capacity based on technical science, business organization and mass methods has long been the envy and the marvel of the world.

There is nothing pretentious or unreal about our American capacity to produce in quantities unapproached elsewhere in the world. The initiative, the energy, the technical inventiveness that enabled us to build and to use more motorcars, more telephones, more radios, more washing machines, more of all the endless tools and machines that made possible the American way of life are now our chief reliance for ultimate victory in the terrible war forced upon us.

The American corporation, football of politics for more than a hundred years, is the agency that once brought us relative economic abundance and is now our chief reliance in our days of anxiety and danger.

The corporation, first created for private profit and now dedicated to national defense, gave us the means of arming ourselves at a pace unattained in any other land.

The picture of great bombers weighing thirty and forty tons coming off assembly lines in San Diego, and coming or soon to come in other parts of the country, is a stimulating sight.

All over the land great establishments are making guns, ammunition, planes, tanks and other necessities of war with tremendous rapidity. Donald M. Nelson reported that in the four months after Pearl Harbor war-plane production increased fifty per cent. Mr. Nelson described the tanks and guns we are making as the best in the world.

That is sober fact and not exaggeration. But Mr. Nelson observed that the great increase came after Pearl Harbor.

We had not accumulated great stores of weapons either for defense or offense before Pearl Harbor. There is no profit now in trying to assess responsibility or blame for our refusal to create great armaments before we were attacked. Not so many years ago the great majority of Americans thought that it was safer to be moderately disarmed. We changed our opinions as the war came closer. Some thought faster than others. By December 7th, as a nation, we were of one mind. Happily for us, our industrial machine can work quickly. Because great productive corporations existed we are able to escape the fate of France.

Nobody can go to near Detroit or in Hartlepool or Birmingham or Los Angeles or any other of industry without feeling courage and confidence. The women of our factories are perfectly to the emergency.

But war planes in what do not fly themselves. A ration manager can produce bombers within an incalculable time but the training of these monsters of the air is consuming.

The Army and the Navy have a tremendous training problem. Not the years the Japanese and Germans had for schooling men to fight the war they started. What we do as in manufacture, must be swift.

We must train fast as the enemies our boys in tanks and ships must train fighting men. We cannot afford the blunder of handicapping by inadequate training, unable to give them the best the world. We must let the skill to use these weapons be their best advantage for themselves.

This is no easy task for reinforcements is so. The decisions our naval commanders have to make are so urgent and so hard to make. It is certain, however, that methods of training are practicable. Men must fly the great bombers in years.

The only possible way to examine our training is the same open-mindedness and imagination that the engineers and mathematicians brought and are bringing to the production of power numbers.

Traditions creep into training as into other of all human activities. The problem is how to shorten the period so that we shall be able to fly and fight with magnificent weapons we are making. The enemy won't wait for us. We must not pit ill-trained men against drilled fighters.

The only recourse now is ways of imparting quick knowledge formerly were very slow. Men can learn rapidly if given proper opportunity.

But the problem won't be solved. Capable, imaginative men must be detailed to the task and equipment and authority must be given.

We owe it to the valiant men sending out to fight for them. They are entitled to the best we can give them, including the knowledge that will save them and lead to the moment of supreme

★ **Another Example of How Truck-Trailers Are Aiding America at War!** ★ ★

Ralston Purina Solves Two Tough Hauling Problems ... and Contributes to Victory!

RALSTON PURINA COMPANY, St. Louis, Mo., makers of breakfast cereals and stock poultry feeds, have an important part to play in the task of feeding America.

A few years ago, this company saw in the Fruehauf Trailer the possible solution to one of its two . . . difficult hauling problems. One of these was the run from the mills in the country to the big warehouse in East St. Louis. Five miles through heavy traffic and over the busy Municipal Bridge. The problem was the economical distribution of Purina products to dealer-customers in many territories.

Fruehauf Trailers immediately handled both of these jobs so well that Ralston Purina now has a fleet of forty-seven . . . all Fruehaufs!

And, moreover, Ralston Purina's Fruehauf Truck-and-Trailer combinations are paying dividends that weren't even really anticipated when the equipment was purchased . . . dividends to America at War!

FEWER TRUCKS ARE REQUIRED, because the "shuttle system" is used in the

haul from mill to warehouse. Two trucks handle five Fruehauf Trailers. Each truck is constantly busy pulling a Trailer while the other Trailers are being loaded and unloaded. No waste of time or equipment. Two motor units do the work of five!

SECOND—SMALLER TRUCKS ARE USED. For much of its distribution from mills and warehouses to dealer-customers, Ralston Purina uses economical 2½-ton rated trucks, pulling Fruehauf Trailers with 10- and 12-ton loads. Heavy-duty trucks, large enough to carry such loads, are thus freed for military operations in which they are indispensable.

THIRD—GASOLINE IS CONSERVED. The smaller trucks use less gasoline than would heavy-duty trucks, despite the fact that they haul even bigger loads. Moreover, there are fewer trucks to use gasoline!

So . . . Ralston Purina handles its work better and more economically with Truck-Trailers . . . and America profits, too!

World's Largest Builders of Truck-Trailers
FRUEHAUF TRAILER CO., DETROIT
Sales and Service in Principal Cities

FRUEHAUF TRAILERS

"Engineered Transportation" Reg. U. S. Pat. Off.

★ **CONSERVE RUBBER** ★
★ **AND STEEL, TOO!** ★

● A Truck-and-Trailer combination, with a load capacity of 11 tons, requires 1180 pounds of tires. Two trucks, with a total load capacity of 11 tons, require 1416 pounds of tires. Thus, for the same load capacity, the Truck-and-Trailer uses 236 pounds less tires—a saving of 16.6%.

● The empty weight of the above Truck-and-Trailer combination (less tires) is 12,417 pounds. The empty weight of the two trucks (less tires) is 16,638 pounds. Thus, for the same load capacity, the Truck-and-Trailer uses 4221 pounds less steel and other essential metals—an important saving of 25.3%.

A big step toward Victory!

Has the war created new problems in your hauling operation? The trained, experienced, practical men at the Fruehauf branch nearest you will be glad to help you if they can . . . and they probably can. No obligation at all. That's their principal job these days. Just write to us.

DON'T BLAME YOUR BLADE

If you get poor shaves too often . . . if your beard doesn't always "come clean", or your face feels raw and tender and irritated, don't be too quick to blame your blade. Blades today are really well made. It might be simply a matter of getting the right cream for your face, so

Change your cream. Try Listerine Shaving Cream with the same blade you were complaining about! No matter how tough your beard, no matter how sensitive your skin, if you're not 100% satisfied with Listerine Shaving Cream, just send the partly used tube to the Lambert Pharmacal Co., St. Louis, Mo. Your money will be promptly refunded. *That's* how sure we are that this *different* shaving cream will delight you!

ANY WEEK

WASHINGTON, a city of political foxholes, seems to us to be divided into two classes of people—those who are working desperately to do a good job and those who are trying desperately to hold onto a good job. This is not producing, in the nation's capital, the unity that the first class above-mentioned are exhorting the rest of the country to achieve. Every time a new bureau is created to make a better job of what some other bureau has failed in, existing bureaus bury the hatchet long enough to gang up on the newcomer—but only that long. We got to talking about this to a fellow who shared a knothole with us. We were trying to see what was going on within the eight-foot barricade around what is soon to be the new \$600,000 home of Mr. Lowell Mellett's Office of Government Reports. Practically everybody in Washington, with the exception of the President, Mr. Mellett (Mystery Man Mellett) and the regiment of ladies and gentlemen who will work for him, seems to be vigorously opposed to Mr.

Mellett's new ivory tower, already known as Mellett's Madhouse.

We soon discovered that our knothole sharer was working for the Office of Facts and Figures, in the halls of which you do not hear the praises of Mr. Mellett. "The OGR—spelled without an E," said the fellow, "will take on the job of directing bewildered businessmen to where, in Washington, they may find the guy they've come to see, provided he's here or still has the job he had when the caller left home. Already, however, there are so many people in the OGR that they are talking of creating OGRD—Office of Government Reports Directory—which, when it is properly organized and housed, will have the job of telling the businessman how to find the guy in the OGR who is able to tell him where he can find the guy he came to see. The OGRD will of necessity be located some distance from the OGR because of the lack of near-by building space and because that's the way we do things here. But maybe it will work. You see, the War Production Board, thinking to keep businessmen out of Washington—save them time and money—has established 136 information offices throughout the country. Maybe these will be able to direct callers to the right person in the OGRD

who can tell them whom to see in OGR to direct them to somebody in WPB who will probably tell them to consult one of the 136 information offices scattered around the country. It's quite simple." In the meantime La Maison Mellett is rising with the overnight swiftness of the palaces wanded into being by Aladdin's genii, consuming more than 650,000 board feet of lumber and many tons of priorities metals. Our OFF man told us that it will contain, among other things, a number of electric refrigerators with "a great big one for Mr. Mellett."

THE foregoing is what you may suspect it is—a bellyache. We can't help it. We've just come from a few weeks with our troops in Central and South America. After the spirit of simple sacrifice and purpose we saw there, Washington is rather tough on the digestion. On our first night back, we had dinner with a group of apparently overpaid bureaucrats who were regaling one another with funny stories about the ludicrous errors of new draftees and ninety-day wonders—the latter being brand-new Army and Navy lieutenants. Presently the lady sitting next to us yawned, announced that she was going home. "Obviously," said she, "these ninety-day wonders are hopelessly inefficient. Obviously they will lose the war for us unless we civilian job holders do something. So, having finished our crêpes suzette, thereby increasing our own efficiency, why not abolish new draftees and ninety-day wonders, bring them home, and proceed to lose the war ourselves in our own way right here in Washington? We could do it quicker, thereby saving money, and on all fronts simultaneously."

WE ALL went home after that, giving us an opportunity to read a letter from Mr. Charles Colebaugh, an acquaintance of ours who is managing editor of this magazine. Mr. Colebaugh, who has been having a holiday in Florida, wrote: "The morning after Collier's published that article about Hampton Institute—Hampton Fights the Battle of Jericho, Mr. Waller Smith sat at his desk humming Nobody Knows the Trouble I've Seen. Mr. Smith is president of the Bank of Clearwater, Florida. While Mr. Waller Smith was thus

Price in Canada, 7 cents a copy, \$3.00 a year, two years \$5.00, three years \$7.00. Other foreign subscriptions including postage: \$5.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

24 HOURS A DAY- 7 DAYS A WEEK IS *OLD STUFF TO US!*

We cheered, too, when the Government called on industry to work twenty-four hours a day, seven days a week, *until this war is won.*

But continuous production is nothing new to the electric industry. We've *always* worked that way — all year round — in peace or war. That's one big reason why we were *prepared* to power the factories that are filling the sky with planes, the earth with trucks, and the sea with ships.

Production schedules that stagger the world are possible only because America is so power-full. America has far more electric power than all the other countries combined — *five times* as much as we had in the last war. And today's power is quickly available at almost any point of need

because of carefully planned, interconnected transmission systems.

How has all this been done? Why does the average household get about *twice* as much electricity for its money as it did fifteen years ago? . . . Simply because America's electric companies have been built and operated *the American way* — by good business management.

**"I HELPED THE LOOKS OF MY HAIR
WHEN I CHECKED DRY SCALP!"**

"I STOPPED DOUSING!"

"Because my hair is naturally dry, I used to douse and soak it. Then it would be plastered down to start with—and sticking up again in an hour. But one day I found something you don't have to douse on. Something that fights the cause of dry, bushy hair: Dry Scalp—and actually keeps my hair neat and natural-looking all day long. So...

"WHAT A DIFFERENCE!"

"When I comb my hair in the morning, I put a few drops of 'Vaseline' Hair Tonic on my comb and run it through my hair. And once in a while I put some on my fingertips and rub it on my scalp. That's all—but what a difference! My hair looks better; it stays in place without being plastered-down. What's more, I've checked loose dandruff and that itchy-ness in my scalp.

Before I wash my hair, I massage my scalp with plenty of 'Vaseline' Hair Tonic and that makes up for the natural oils that get washed away. So now I've got better looking hair and a healthier scalp too. Why not try this yourself?"

KEEP UP WITH THE WORLD

By Freling Foster

Nearly all banks in India maintain a large room, with windows opening on the street, where passers-by, day and night, can see numerous metal boxes filled with rupees. This permanent display of real money is necessary to secure and hold depositors and to keep the confidence of the public, which has no faith in mere figures.—By Mrs. J. R. Duke, Dallas, Texas.

Among Americans, the three favorite food odors, in order of preference, are those of hot coffee, strawberries and apples; while the three most objectionable food odors are those of garlic, lard and olive oil.

For four years after the first transcontinental air mail service was inaugurated between New York City and San Francisco on September 8, 1920, the planes did not fly after dark because there were no airway lights. The mail went on through the night by train.

In virtually every defended divorce case in the United States today the woman asks for alimony. But in undefended suits, less than ten per cent of the women request such a settlement.—By Ruth Smith, Madison, Wisconsin.

A recent survey of the ages of Hollywood's motion picture players, excluding extras, revealed that one third are under thirty-five, one third are between thirty-five and fifty and one third are over fifty, the average age of the actresses being thirty-four and that of the actors forty-six.

Americans who are blind in one eye, from any cause, are four times as numerous as those who are completely blind. Persons who have been blinded in one eye, from an accident, are twelve times as numerous as those who have lost the function of both eyes.

A water flea, *Daphnia Pulex*, has only one black eye and its body is encased in a transparent shell. Thus a person using a low-power microscope can watch the pulsations of its heart and the movements of its other internal organs.

Fluorine is the most poisonous and active of all the elements. In fact, this pale yellow gas is so active that it dissolves most metals and a variety of substances such as alcohol, turpentine and other.

Even when London is bombarded heavily night after night, 2,600,000 of its people sleep in public and private shelters. Other 6,500,000 continue to sleep in their own homes, and in their own beds.—By Watters, Chicago, Illinois.

Of approximately 2,000 elephants in the United States, only twenty are owned by circuses. The rest are in wild-animal farms, five by circuses and vaudeville acts. Ringling Brothers own more than these animals than any other twenty-odd circuses.—By A. Morton Smith, Chicago, Illinois.

Twenty years ago, 25 per cent of all men's shirts had a neckband and required a collar. Today, at least 75 per cent of all shirts are made with a collar attached.—By Fruitdale, South Dakota.

As the result of changing diets, the famous masticatory, more than men, women and children out the world have blabbered.—By Fred West, New York.

Niccolo Paganini (1781-1840), of the world's greatest violinists, could play a sonata on a single string. His *Moto Perpetuo* at sixteen notes a second, five per cent faster than any other musician, even to this day. Of his compositions were that he alone could play Clifford A. Kroening, Ohio.

Packard Owners! Save with Packard's Wartime Service Plan

PACKARD Wartime Service Plan will save you money!

designed specially for these times, when we must conserve on tires, gas, oil and maintenance.

Dealers tell us that many owners have adopted this thrifty program when it was announced a short time ago. It was an immediate success, because it protects car owners against needless big repair bills and delays.

With the Wartime Service Plan protection your car running longer and better:

1. A free inspection and "Car Health" analysis.

Your Packard dealer gives you a report on your car's condition and requirements—tells you what, if any, work should be done to catch little troubles before they grow up. There is no charge, no obligation. You get a complete report based on an expert inspection. The rest is up to you.

2. Monthly Protective Service Contract.

This contract—a money-saving part of the Wartime Service Plan—entitles you to a substantial discount on certain essential services, such as chassis lubrication, oil change, wheel "toe-in," tire cross-switch, etc., for your next 10,000 miles of driving. Here is your chance to make real

savings on service you *know* your car will need during the next 10,000 miles. Worth looking into, isn't it?

Your Packard car is a friend which will—and must—stand by you for the duration. Protect it—treat it well. Your Packard dealer is eager to do his part. See him today.

PACKARD IS WORKING TO WIN!

... by building Rolls-Royce aircraft engines for the Army, and Packard marine engines for the "PT" boats of the Navy!

BUY DEFENSE BONDS AND STAMPS

inspection and "Car Health" analysis—Packard mechanics check your car carefully. If needed, they classify it as follows: (1) T—do now; (2) IMPORTANT—do soon; (3) R—do later. No charge, no obligation. No work done without your authorization.

Save money on Service with a Monthly Protective Service Contract! Thanks to this important part of the Wartime Service Plan, you can save substantially on certain essential services on your car in the next 10,000 miles. See your Packard dealer for details of this thrifty maintenance program.

Packard men built your car—Packard men know how to keep it running at its best! Your Packard dealer has a staff that is Packard-trained. They use genuine Packard parts and methods developed by the factory. Their equipment is designed by Packard to do the work correctly and economically.

Save engine wear!*

WITH

SEALED POWER PISTON RINGS

Here's a good way to save money and to make sure your car will perform efficiently for a long, long time to come: Have a competent mechanic inspect your engine and make all repairs needed. Install a set of Sealed Power Piston Rings! These remarkable piston rings end oil waste, gas waste and save engine wear. They're packaged in sets—and individually engineered for your particular make and model of car. Made by same engineers who create rings for leading airplane, car, truck and tractor manufacturers, they fit properly and protect your investment in your car. Keep your car rolling economically. Install these rings now. You can't buy better piston rings at any price! Ask for them by name. Sealed Power Corporation, Muskegon, Michigan, and Windsor, Ontario. *Piston Rings for all types of Automobile, Aviation, Diesel, Stationary, Marine Engines*

WING TALK

Standard equipment for P-40 fighters is the 1,325-horse Allison engine—"an OX with hair on its chest" in pilot lingo.

THE Curtiss OX 90-horsepower V-type eight-cylinder water-cooled engine was the power plant of the hour for training planes in the last war. So many were made that after the war they were sold at delightfully low prices to people who wanted to make their own planes and for many years the letters "OX" meant airplane power in civil flying. All this is by way of clarifying for you a statement we overheard a pilot make the other day that "an Allison is an OX with hair on its chest." And for late arrivals, the Allison is a V-type 12-cylinder liquid-cooled engine of 1,325 horsepower now being produced by a division of General Motors, and is standard equipment in the Army's P-38, P-39, P-40 and P-51 fighters.

SO MANY accidents in civil flying in the past have been blamed on pilots for carelessness, inexperience and negligence, that whenever we can show there are others who have responsibility for safety in flight and who do not perform their duties as they should, we like to do it.

Since these instances occurred in civil flying and before Pearl Harbor, we will discount all possibility of sabotage. But had they occurred in military or naval flying before or after, it certainly would look like the work of enemy agents.

In the first case, a small, tandem-cockpit monoplane carrying pilot and passenger was making a shallow turn when the rear spar fitting bolt holding the wing to the fuselage fell out. The wing swung forward. The passenger, a fellow with supernatural calm, leaned out and held it in place while the pilot sideslipped to a landing. Bad enough to have an overhaul man forget to lock the bolt on the rear spar, but further investigation showed he also forgot to put a cotter pin on the front spar bolt too. This negligence, criminal in character, easily could have caused a fatal and devastating crash that would have resulted in but one conclusion—wing failure and a black eye for the manufacturer.

Then a very careful pilot decided to give his secondhand plane a major overhaul. His detailed examination revealed that at some previous time a steel tube in the fuselage had corroded through. The repair had been made by filling the corroded hole with putty, smoothing out the surface with sand-

paper and spraying on a coat of paint. And when a mechanic safety-locked the control stick in a control ship used for acrobatic action, the stick came out during steep wingovers. When the plane went into a dive, the fabric wing ailerons and a fatal accident was on its way had not the pilot's front seat grabbed his controls.

THE government had a huge bomber plant built on the edge of a city under construction a few miles from a big city. This was a great people from all around the airport to see it. The projected bomber plant was fed up with questions, so to erect a sign.

On a crude board and an unsteady hand were these words: "Bomber plant over—don't know nothing about it."

WHEN United Air Lines' W. A. Patterson stepped to receive the certificate of the Safety Council, awarded him for having flown more than 30,000 passenger miles last year without an accident, he was not alone every right to be. Instead with him, as co-recipients, were Capt. James Templeton, Kline, mechanic, and St. berta Schilbach. These three sent United's 3,500 employees emphasized Mr. Patterson's speech theme that "A Teamwork."

TO MOST people it makes no difference whether the winging airplane blend unnoticed airport or drop onto the tarmac! However, among pilots, a razzberry offer is a reminder of it.

That's why an airline pilot who was humiliated at an apple-cheeked stationer's airline stop who, in answer from the pilot compartment, all the delay was about, replied: "We're searching the calendar for the senger's tooth jarred loose."

officers chat on the
deck of the Australia-bound
troopship. To right are Ma-
jor J. O'Malley, Jr.,
Lieutenant Whipple, Brigadier
General Frank S. Clark,
Colonel J. T. Wrean

**Australia,
We
Come!**

**By Courtney
FROM MELBOURNE**

Soldiers sail away
and with them goes
Collier's reporter
to the big and little
towns to make a troop-
ship a memorable
part of the life of any man

On what was once
the deck of a great luxury
ship have been dis-
posed where they might
be of movement but
with immediate reach

ADDED TO COLLIER'S

His face watched your ship
from the dock that night. For
a long time, there was only a
cold wind from the blacked-
out streets.
The lights and the noise of the
city seemed real and remote—like the
life which, in an hour, had
gone away. At hand, you were
aware of the last sound made
on his homeland shore—
the loud calling of his own name
on the boarding rolls. There was a
stamp over the gangplank. In
brief passage across this pool of
water, each soldier
with his shoulder pack and rifle and
his duffel bag, each soldier
cast a shadow upon the alley of
water that fretted between hull
and pier.
For long hours, whenever you
looked down, one man was always
on the dock. It was our

PUBLIC LIBRARY
Burlingame, Calif.

general; sturdy, compact, middle-aged,
with an air of competent alertness.

All day and night he kept vigil on
that cold and drafty wharf, personally
shepherding his men aboard. Now he
stepped out, chuckling, to aid a boy who
seemed to have more bags and bundles
than hands to carry them; again to help
one readjust his straps or to pick up a
dropped helmet for another, even with
a tough but fatherly word.

You figured, if the mothers of these
American boys could have but witnessed
this solicitude of their general for the
least of his buck privates, they would
sleep more comfortably this night. It had
been your lot to travel and live with
various armies these past few years—
German, Italian, Japanese—and here
was a refreshing change from the cold-
eyed generals of totalitarianism. It
gave you the warm feeling inside that
if you had to go off to the wars again,

how nice it was to be going for once
with your own good people.

Still another factor provided an espe-
cially poignant contrast for you this
time, because on this very ship at this
very dock less than three years ago you
had arrived home from a certain foreign
war. Then it was a ship of peace—of
bunting, confetti, gay sports clothes,
merry welcomes and hullabaloo. Now,
as it necessarily must be always when a
troopship casts off, it was somber and
furtive and sad.

Among you, pensive at the ship's rail,
someone recalls the story of Rupert
Brooke, England's great soldier poet
who, as he sailed for the Middle East to
find a lonely grave in "some corner of a
foreign field that is forever England,"
paid a dockside urchin a shilling to
stand and wave goodbye to him. But
there was no one here even to pay to
watch and to cry for us.

There was, in fact, only Stinkey.

His small wail is the farewell that
hundreds of men will remember longest
about this sailing. They stood about
desolately—cursing rabies quarantine
laws that made it imperative to leave
Stinkey behind, and listened to him and
called to him until at length his land-
bound benefactors took him off to a new
assignment, and his barks trailed away
and could be heard no more.

A tall young sergeant from Laconia,
New Hampshire, explained to you
about Stinkey who became, it seems,
the official mascot of this outfit through
biological chance. His itinerant
mother in her hour of need had wan-
dered into the hands of kindly but
strictly amateur accoucheurs in a camp
somewhere in Dixie. Spartan-minded
regimental officers ruled there could be
but one addition to the roster, despite

(Continued on page 52)

A SHORT SHORT STORY
COMPLETE ON THIS PAGE

"I never heard of the man in my life," Gloria said. She started to tear up the letter. Milly stopped her. "I want it," she said. Gloria looked at her in surprise

that evening. Milly had danced with him. That was so bitter that he had fallen for Gloria.

"And when I would you did."

"Yes," Milly said. "I. Somebody had to write your name to my letter. You he had written to hear from."

Gloria laughed. "No jam!"

"Not if you'll help me."

"What can I do about it?"

"If you'd stay here and let him take you to dinner afterward it would be him," Milly said.

"I've got a date with him."

"But you can have a any time. Couldn't you evening to a private whi

Gloria went to the cl dress she was going t knew she was getting an a dinner dress over her

"You know what you said. 'And you know What do you think Bill stood him up?'"

"You could explain it hesitated and made the 'You could even tell hi pened—about my writi and signing your name."

"I'm not going to pass Bill for anybody," Gloria id.

"You have dates with c r me."

"Not many—any more so Bill won't be too sure."

MILLY shut her teeth s he w cry. She had so clea i prem what she'd done to Jeff.

"Don't you see how ple Gloria asked. "You mee ff w gets here and let him take u ou that what you really wan

Milly shook her head. He do want me. I'm no knock —like That's what he thinks b com Chicago for—two days wi you. W he finds he's stuck with e—h nice about it, of course— a that of man. But he'll be disap hnted I—I'll just sink through he flo can't do that to him."

"You're a little fool. Lo of men a girl who's quiet and ser s."

Milly just sat there rigi hile G got ready to go out. Ther e saw it was after six. She ha nly a minutes in which to dress She pu her tailored suit because ne tho it was the most becoming ing she and she liked the hat that ent n Besides, Jeff didn't have ch ma being in the Army. If she re an ning dress he might feel h ad to her to some swank place.

She waited in the lobb for Jeff, trying to think w him, how she could mak him. She could say that previous engagement, not time that he was coming about tomorrow and the ne could she keep him from nding then?

She saw him coming tow ing. Her knees were so we hardly stand up. But she smile at him.

"I don't suppose you w to see me," she began.

"Who do you think I was see?" He put his hands on held her so she had to look "Gee," he said, "gee, Glo Gloria!

Milly started to tell him wasn't time. And, anyw knew which girl he want seem to matter that he'd g mixed up.

Untangled Web

By Lucian Cary

ILLUSTRATED BY JOHN HOLMGREN

MILLY had known that some day Gloria would get home before she did and find one of those letters from Jeff. She could explain it. Gloria wouldn't care.

But when it happened Milly was scared. She came in and saw Gloria reading the letter. The envelope was lying on the floor where she had tossed it. Gloria was sitting with her legs flung over the arm of the big chair. She looked as if she had just had her bath and got half dressed before she stopped to read her mail.

"Of all the cock-eyed guys!" Gloria said. "Listen to this—"

The telephone rang before she could go on. The telephone's ring was always for Gloria.

Milly sat down. She had a minute to think while Gloria smoothly kidded the man who had telephoned. He wanted a date and he wasn't going to get it and Gloria was going to keep him hopeful. Milly almost hated her. She was so darned pretty and so darned clever with men. The most anybody would say of

Milly was that she was nice-looking. That wasn't Gloria's fault, of course. But it made everything harder.

Gloria put the telephone down and went on to read the letter aloud:

"Dearest Gloria:

"Your letter made me happy. I've read it over and over again. I've got big news. They've given me two days' leave. Two days with Gloria. Two days of heaven. Train due in Chicago tomorrow evening. I'll be at your house by 6:30. Till then, goodbye.

"Yours, JEFF"

"And," Gloria finished, "I never heard of the man in my life."

She started to tear up the letter. Milly stopped her. "I want it," she said.

Gloria looked at her in surprise. "You do?" But she handed over the letter. It meant nothing to her.

Milly was afraid her face was red and she knew her voice was hard and tight as she spoke. "It's an answer to a letter I wrote him," she said. "We—we corre-

spond with each other—just a little."

"What!"

"Don't you remember that nice boy we met at the Hamiltons' two months ago? It was a dinner party and afterward we went dancing."

Gloria frowned with the effort to remember.

"His name was Jeff Hewitt," Milly said.

"I don't remember him."

"You ought to," Milly said. "You got a letter from him a few days later and you wouldn't answer it. I told you I thought you ought to be nice to him. I said I thought the least you could do was to write him a friendly note. He knew he'd get leave again and he wanted some place to go—somebody to take out."

Gloria nodded. "I remember now," she said. "A big blond farmer in a private's uniform who stepped all over your feet when you danced with him?"

"He didn't step on my feet," Milly said.

Gloria had danced with him just once

white 57 on her flat bow plates. She was
always good for that one about "the old
pickle boat."

But now, on this misty, nippy spring
day in 1942, the old 57 has become a
lady again—a flagship, no less. She's
mistress of the Inshore Patrol of the
Thirteenth Naval District, which takes
in Oregon, Washington and Alaska.
This is probably the most important
district we have, because it runs out to
the far western end of the Aleutians
and because, for league upon league, its
fog-shrouded coasts are practically un-
inhabited and, in a thousand spots, offer
ideal hideaways for lurking U-boats.

The United States and Alaska have
more than twenty-eight thousand miles
of mainland and island coast line—and
of this, Alaska has more than fifteen
thousand. The thirteenth district alone
has more than sixteen thousand miles
—four sevenths of the total we have to
guard. Our first line, far out to sea, is
the Offshore Patrol—destroyers, sub-
marines, planes—cruising endlessly,
watching eagerly and listening.

Then, ringing the coasts, comes the
Inshore Patrol—a motley mixture of
hardbitten Scandinavian and Yugoslav
fishermen, wind-reddened naval officers,
smooth Annapolis graduates and men
who, a few weeks ago, were arguing
cases in court, selling shoes, working at
lathes, worrying about the stock market
—making a humdrum living in cities
and on farms. The array of ships in the
patrol fleet runs from trim twenty-foot
speedboats up through forty-foot cruis-
ers to seventy- and ninety-foot ex-purse
seiners and halibut boats. And this
fleet grows day by day.

A white-hulled seiner, with gay red-
and-green trim, chugs into a Navy base
and in a few hours chugs out again in
command of an ensign or junior lieuten-
ant, manned by a tough, experienced
crew. Every inch of her is a grimy gray;
fearsome gadgets are scattered about;
guns poke their noses aloft and maybe

VEHICLE VOCABULARY. Names of Army vehicles have been interchangeable and confusing (see text below). Study the pictures on the other page, then see if you can identify the trucks shown above

Our Fighting Men

ABOUT this business of Army truck names: if our fighting men all want to speak the same language they might take a gander at the opposite page and see what gives. It's the pay-off on a project started last November when we suggested maybe somebody ought to standardize the nomenclature of military vehicles. People were calling peeps jeeps, and vice versa. Even the guys who were driving pickups were calling them weapons carriers or carryalls—three altogether different conveyances, it turns out.

Time went on and peeps were still jeeps, etc., depending on where you were. So in February we mentioned the subject again, this time with a little

more steam; and this time it brought in some definite opinions. "A peep," wrote more than one soldier, "can't be a jeep. The latter is a half-ton recon car, so named because it resembles—especially when its nose is on a downgrade—the fantastic jeep of the Popeye comic strip." And from the Quartermaster Replacement Training Center at Fort Warren, Wyoming, came an elaborate study of the whole question. Final result is, we this week present in pictures the first all-out effort to settle the regional differences in the use of names for our motorized heaps. There it is, gentlemen—and if you don't like it, don't blame us. All we've done is given the winners the most votes. Amen.

CAMP ELLIOTT, Calif. Veterans of the old 40th Division will remember Camp Kearny, sprawled over the rolling mesa north of San Diego. After the last war it was dismantled and turned over to quail and jack rabbits; but last year, new-style two-story barracks began popping up on the old site and now it's Camp Elliott, Marine Corps Training Area. It's hot and dusty, or cloudy and clammy most of the year and the atmosphere helps give brand new leathernecks their rough and tough

fighting angles. At the big Marine Corps Base on San Diego Bay, a dozen miles away, they get their parade ground, dressy training. This place is so lush with flowers the hard-boiled Marines feel at first like yoo-hooing one another, but in spite of its tropical, movie-set appearance the base has turned out thousands of Grade-A scrap-pers.

THE Camp Elliott officer of the day and his victim (or maybe it should be the other way around) have been transferred, so we're not doing anybody dirt by revealing this one. A detachment of Marines went to a seaside camp to practice the-Marines-have-landed, and it was no picnic. Training began at 6 A. M. and went on for 16 hours, with night guard duty tossed in for bad measure. One 2:43 A. M., after a typically tough day, a Marine sentry in front of the clink felt he had to have a nap or cave in. By the time the officer of the day came along the guard was lying on his side, having knocked off about 35 of his 40 winks. The O.D. cleared his throat, tapped the sentry on the shoulder and asked what was going on. The sentry opened one eye, shivered and thought fast, then scrunched an ear even closer

to the ground and whispered, "I think I hear some of the pri to dig their way out." The O.D. grunted. But, as we heard got a safe distance away from guard he leaned against a n laughed until he was fit to

Worth More than a Cow

By Robert Thompson

That's what they think of human beings in Meeker County, Minnesota. Since Meeker led the nation in saving cows from t.b. it is now doing as much for man

MECKER COUNTY, Minnesota, looks like hundreds of other rural counties, but its 19,000 people form the first community in the nation to do for human beings what all communities do for cattle: Battle tuberculosis through a county-wide plan of testing and treatment.

In May, 1923, Meeker County farmers were first in America to ask complete testing of their dairy herds to end tuberculosis. The movement spread to other places, stirring up court fights, riots, objections. But in 1940 the last holdout county came in out in California, had its herds tested, watched its diseased cattle destroyed. As a result, today, the whole United States is completely free from bovine tuberculosis.

What it accomplished with cattle, Meeker County believes it may accomplish with men and women and children. So let's have a look at Meeker, and then at the plan:

Meeker County's folk raise corn and small grains, dairy cattle, hogs and sheep and poultry. Homes and barns are well kept, as a rule. The place was settled in pre-Civil War days with immigrant families and Down-East Yankees. When the Sioux attacked, Swedes, Germans, Irish, Yankees, English, Bohemians and French sought common refuge in the log stockade at Forest City. Today the mail boxes along the roads are lettered for Broadbents, Murphys, Olsons, Schoelkopfs, Ruotsinojas, Johnsons and Novaks.

Let's visit the Novaks—they're typical. Last spring, Winczel Novak, riding his gang plow, was tired. And puzzled and worried.

Not before in forty years had his strength and spirits failed to respond to the springtime. Always before, the heavy work of plowing and planting went easily.

This year shoveling snow and breaking his truck

through the drifts to the highway had been cold. Stubbornly, the hacking in his chest had been day by day, a load of weariness and a cloak that couldn't be dropped.

At fifty-three, a man with a halibut nose, yet to raise shouldn't be that way. Of his first married years, when he worked in a factory, Winczel had kept close to now, it had done well by him.

With the coming of May, Winczel coughed. He said little of Rosie, his wife. On his first trip down to the chickens and eggs, he stopped in to see the doctor.

Suspecting what was the matter, Dr. Macklin took him over to the hospital at Litchfield, the seat. The X-ray said his guess was on the film between the dark ladder and the light.

Action was swift. Two days later Winczel was in the Minnesota State Tuberculosis Hospital at Walker. The name of the place was Ching, the Chippewa Indian word for "doors."

He arranged for his boys to take care of the farm. He was more worried now not about himself, because he knew the eight kids at home without his mind, and so was the farm. There was on relief. The soil that had sustained him should not now put them on bounty.

After Winczel left, Mrs. Novak and her youngsters were on Doc Sellers' mind. The tuberculosis germ stop with a sin family.

Doc Sellers drove up through the northeast corner of the county, out to the farm. He took along his syringe, with alcohol, and plenty of tuberculin serum. He explained the Mantoux test.

Danger Signal for Tuberculosis

By this test, dead germs are forced to tell the surviving fellows. The dead germs are the tuberculin serum, but the fluid they inject between layers of skin, the serum tells if tuberculosis germs are present, or if they are active there. Many times, there will be a reaction but no tuberculosis. Doctors say that a reaction means tuberculosis and no reaction.

"The test is harmless," Doc Sellers explained to Rosie and the kids. "It's like a burglar alarm. It shows if there are any of them on the side, ready to steal your health. It even shows if they are prowling around and haven't been working yet."

Forty-eight hours later, the physician called on the nine Novaks again. Nine sleeves were bled, nine strong arms. Nine angry red blotches showed the merit of Dr. Sellers' concern. Exposure had done as he expected. Nine positive reactions.

There was another trip to Litchfield and the X-ray.

Fortunately, the films showed on active case. Florence, the eighteen-year-old girl, who hadn't been helping her mother, was sent to Ah-Gwah.

Thus, the Novaks were the first active case in a campaign that is unusual in local history.

When that campaign is finished, the residents in Meeker County will have had the Mantoux test. Everyone showing a positive reaction will have been X-rayed. All this, the Minnesota Medical Society and the resident physicians at no cost to the people.

If the campaign works out as the medical men expect, it will be a triumph in the fight against tuberculosis. True, t.b. will always be a menace, but it will be circumvented. No longer, (Continued on page 19)

Trial by Marriage

By Vereen Bell

ILLUSTRATED BY ELMORE BROWN

The Story Thus Far:

TROY WEBSTER (once a professional horseman) earns a precarious living as a dog trainer and "field-trial" man. With his wife and Duff his young son, he travels thousands of miles a year, in the hope of winning prize money with his dogs. Sometimes he wins; more often, he does not.

Bored by the nomadic existence she is forced to live, Mrs. Webster rebels. Intimidated by the woman, Troy gives up his field-trial work and becomes a druggist. After which—when Troy becomes known as a shiftless ne'er-do-well, Mrs. Webster kills herself.

Like his father, Duff understands dogs and horses. Now—with his mother dead and his father a weak failure—he regards himself as privileged to leave home. And leave home he does—with an old shotgun and no money but a wild desire to be free, unfettered.

In the course of his wanderings, he almost starves to death. Then, one day, he finds a dog—a fine black pointer with a white blaze. The dog has just killed a goat; he is savage and unfriendly. He is wearing a collar, on which is a plate bearing these words: "Reward: Amos Hawthorne, Tafton, Alabama."

With the aid of a long stick, and a noose, Duff captures the dog. After which, he finds his way to Tafton, where he has a talk with Hawthorne, who informs him, brutally, that the dog ("Judas") is worthless, and that no reward will be paid.

Fortunately for the boy, Hawthorne's granddaughter, Lucie Sullivan, is present during the interview. She befriends him, gives him five dollars. Then, when he almost faints because of lack of nourishment, she summons Doctor Phillips (whose daughter, Delia, is the prize "vamp" of the region); and, when the boy is well, Lucie tells him that she wants him to take the place of a "hand" who has recently left.

And so, despite the strenuous objections of old man Hawthorne, Duff goes to work. By way of preliminary, he goes out to see Judas, at the kennels. Judas makes it obvious that he hates the boy, he bares his teeth, and growls.

"Don't worry," Duff says, "you're liable to get another chance at me."

II

EVERY morning Duff walked the four miles to the kennels from Tafton. Leaving before daylight, he walked rapidly in the cold early morning. At first he had simply helped around the kennels, saddling and tending the horses, and caring for the dogs.

"Tain't like de old-timey days," Wesley said, the day they were worming the dogs. "Us used to have a whole yardful of dogs round here. Didn't have no empty pens. Now we got just twenty er so dogs and most of dem just shooting dogs to be trained for folks. De field-trial owners, dey recollect bout Cap'm Amos gitting to be eighty er ninety years old, and dey just naturally send dey dogs to somebody else. 'Oh, dere never was a better one dan old Amos, in his day. De beat of him didn't live,' dey say—and send dey dogs on to somebody else. Dey don't see dat Cap'm Amos ain't no common soul; he's a miracle de Lawd done passed. He can cave in a hoss wid dem old long legs, right today, and blow a bulge in a dog whistle."

"You see dat old Ambling Sam dog yonder, sitting up dere grinning in de sun, wid his eyes closed like he thinking bout sump'm? He all we got dat can win. But dey ain't no better dan him never been turned loose. It ain't happened for him to win at Grand Junction in de National yet, but dat's jest de way de numbers fell. He goan be de next National Champion just as sho as de Lawd loves de truf."

"Old Sam, he de banker-man. He furnish de cash,

right on, one year to de next. 'Old Sam, he do nothing dis year,' dey say. Den I right on along and he take a fust hy hyar, and befo' long we done made c

"But he de last. W'en he pass bad. Old Sam, he gits good puppies dem to somebody else to train, no dat old fool Judas."

"Judas by old Sam?" Duff asked

"Right straight by him. Cap'm some kind of throwback. I'm got dat printed from my head to my tail. brain in his head. Turn him loose a come back. Kill hogs er calves er an way. He bit a man's bull one day, he did! How you goan train a dog catch him, and den when you catch touch him?"

"What they going to do with Judas?"

"Feed him till he dies of his own

"They told me they were taking be chloroformed."

"Dey was taking him, but dey to At de last minute, dey ain't got de of old Sam's puppies. Cap'm Amos, hardhearted, but he don't fool nobody old Sam dog, and I guess he got a litt any o' Sam's puppies. But won't nobody dat Judas."

When the trainers were gone, and hind had tired of their unhappy howl to the pen where the dog Judas was some wild beast. Judas was standing watching the departing horses, but he of disappointment, nor ran up and de the frenzied manner of his neighbors. looked at Duff unemotionally, yellow thought suddenly, "Maybe Amos Hawthorne be so down on me if I broke this dog stared at Judas. "I wonder if I could hearted old devil like you?"

DUFF worked hard at his job, expecting that his interest would lag or that Amos would find his interest in him. But so far he found his interest steady, and Amos paid no attention to grunt curtly at him. Tafton offered him except a movie, or a pool parlor. At usually ready to go to his boardinghouse, boarders had accepted him immediately they were young men—mechanics, drug filling-station attendants.

Sometimes they had a nickel poker game on Friday night it might be a quarter game with whisky with it. Other Saturday night boys would lava-soap the grease from put on their best blue suits, and off to the of Montgomery they would go. Monday go to work stoically, red-eyed, heavy-lidded by nightfall they would have recovered per there would be some laughter again there had been some incident (Continue

She stared at Judas coming to her lips "Can make water come out like Moses did?" "Never tried that,"

Wrong Turning

By William O'Farrell

ILLUSTRATED BY WALTER DOWER

Out of a storm two people emerge much wiser and stronger for their experience

THE gathering storm spattered a preliminary warning across the windowpanes but the two people in the living room did not hear it. They sat in a self-imposed silence oblivious to everything but each other's presence and their desperate need for ending this thing quickly while they were still in control of themselves.

After what seemed an interminable time, the man stirred. He looked across the room at the girl who awaited his words sullenly, her forehead creased in tension and the corners of her mouth drawn sharply down.

For a moment a great desire was on him to throw reason to the winds, to smooth the forehead with caressing fingers and to kiss the pout from the red mouth.

He mastered it. "Sorry I've been such a flop Jean," he said. "I should have given this office job a try before we got married. Guess I was just cut out to be a field man and nothing else. Sorry."

He paused hopefully but, when she made no reply, he continued in the same monotone: "So it's back to the field for me, I suppose, and the best I can do is get you clear before they tell me officially. Your family's lawyers will know how to handle it. You can call it incompatibility, if you like, or desertion; desertion might be better because tomorrow I'll ask to be sent back to South America."

For the first time the girl moved. The hand lying in her lap twitched nervously and her sultry eyes, meeting his, widened a little. "Tomorrow?" she asked. "Tomorrow?"

"Yes." He nodded. "I'll be driving you home to your family this afternoon. If we leave at three we should be in Brownsville by eleven. Will you be ready?"

She continued to stare at him as if she had not understood the meaning of his words. Then gradually her eyes narrowed again and their old sullenness returned. She shrugged.

He rose from his chair and looked out the window. The raindrops were beating against it heavily now. "The storm's coming from the north," he said. "It won't bother us once we're out of town, but be sure to bundle yourself up." He turned and walked slowly to the door. "Will you do that?" he asked. "And be ready by three?" His voice was still on the same controlled level.

The girl sat with her fists clenched, her slight body trembling. "Anything!" she said tightly. "Anything at all! Only get out. Leave me alone!"

The man looked at her, sighed and, turning away, climbed the stairs heavily to the second floor. He went into the bathroom and, taking a thermometer from the medicine locker, placed it in his mouth. While he waited he timed his pulse.

TEMPERATURE 99.8—Pulse 126. Tom Martin screwed the thermometer back into its container and slipped it into his vest pocket. He considered his face in the mirror.

Would he be able to carry it through? Malaria, as he knew from long experience, was tricky. This particular attack had been going on for twenty-four hours now, kept under control by constant dosings of quinine. Did he dare risk the six- or seven-hour drive to Brownsville?

The serious, not unhandsome face in the mirror smiled wryly back at him. That was a foolish question, it seemed to say. He had to risk it. He couldn't wait, couldn't have Jean in town when the final blow came tomorrow—and there was no other way of getting her back to her family. No railroad ran through Brownsville and he couldn't let her drive alone. Not through a rainy night for seven hours. Not a girl like Jean.

Tom opened the medicine locker again and took out the quinine bottle. . . . Not a girl like Jean. . . . He repeated the phrase to himself. That's the answer to the whole mess, he thought; I had no business marrying a girl raised the way she was. A guy like me—a hard-boiled, malaria-ridden, practical engineer—has no place in his life for luxuries; I should have married some Indian squaw fresh from the jungle. I might have made her happy. But Jean—

The thought of his wife's (Continued on page 44)

He nodded and, Jean's arm linked through his, they trudged stolidly toward the small cabin which showed a blacker spot in the darkness

Tumult Between the Tracks

By Maxwell Hunter

DOC WEBB runs a drugstore in St. Petersburg, Florida, which he says is the biggest drugstore in the world. It probably is. If not, it still is the most unbelievable piece of retail exhibitionism that ever catapulted a one-horse apothecary shop into a merchandising upheaval that refuses to admit a point of saturation.

"There is no point of saturation," declares Doc Webb and, to prove it, he reminds you that he opened his business on a shoestring in a town of 40,000 at a time when other local concerns were going into receivership, and the nation into a panic; and that he ran an annual gross from \$38,000 to \$4,000,000. Which is to say that his business now fits the town about as well as the Brooklyn Bridge would fit a millpond.

Doc's competitors say no man can sell at a loss and stay in business, which they accuse him of doing, along with ignoring all the other rules of economics and operating strictly by tantrums. Doc Webb's performances certainly encourage such beliefs. For a long time, he had no display windows in his store; he still has no office, nor even a chair to sit in. He operates at home, sitting cross-legged on the floor. He comes to work around three in the afternoon, usually goes home at four.

Doc has expanded his store from 270 square feet of rented floor space to 96,000 of his own, and has increased his employees from six to four hundred. His business has swallowed the building as well as the block in which it started, and today is one of the tourist attractions of Florida. Upward of 30,000 persons have visited Webb's in a single day.

Doc Webb prefers to concentrate rather than spread. He has declined to join chains or to be exploited into a chain himself. He is perhaps the best publicized small-town merchant in America. He puts his personal acquaintanceship at 200,000.

Too Much for the Post Office

Doc is not adverse, however, to promoting himself. Once he had printed what he labeled "The World's Largest Postcard." It was ten by sixteen inches and contained interior views of his store. He charged a penny for it but its enormous size intrigued his tourist customers, and before long, the local postmaster was calling on Washington for help. By the time 50,000 of the unwieldy cards had cluttered up the mails, the postal department made a special ruling, fixing the postage at three cents.

"That was the first time the post-office department ever had to do a thing like that," Doc gloated.

He maintains that his separate lines are not departments but separate businesses, even though they are under the same roof, and some of them blend together. For instance, his men's-wear counter protrudes into his drug department; which enabled him to sell 2,600 men's shirts one Sunday, a transaction that stirred blood-curdling protests among the clothing stores.

His grocery department also merges with his drug area and so runs nights and Sundays. But Doc Webb insists that he runs a drugstore and boasts that he employs more registered pharmacists

He tossed all the rules out the window and proved you can get rich by selling merchandise at a loss. Even his competitors come down to buy at his uproarious sales. Doc Webb's drugstore resembles a three-ring circus, complete with side shows — and customers

James Earl Webb is "Doc" to an estimated personal following of 200,000 people and runs his tremendous business from a room in his home, where he sits cross-legged on the floor. Here he's checking a competitor's advertisement which he may decide to display in his store with an offer to cut its prices an additional 10 per cent

The huge Webb drugstore, located in a standard residential district in St. Petersburg, Fla., utilizes 96,000 square feet of floor space and has attracted as many as 30,000 customers a day

than any other drugstore in the world. Counting pharmacists or their "equivalents" he has thirty. Under the law, it takes at least an equivalent to sell a bottle of rubbing alcohol, so half of them work on the floor. As for Doc, he says he is a "druggist by experience," which probably rates him the next thing to an equivalent.

Doc thinks in terms of carload lots, one-day turnovers and circus tumult. He can whip up more excitement with a bargain than Ben Hur could with a chariot. He did this once with a cheese, the biggest cheese in the world—at least, he said it was—a Wisconsin Cheddar that weighed 2,480 pounds. He whittled it up and sold it in a day.

He can dramatize a pill just as readily.

Once he put on a 25-cent liver pill at 13 cents. In one day he sold 3,204 boxes. He regularly disposes of a carload of soap a week.

His signs proclaim his place "The World's Most Unusual Drug Store," but those boards could more accurately read "The World's Most Unusual Drug Store in the World's Worst Location." It is not below the railroad tracks; it is between them!

In 1926, the year he opened up, the Florida boom had just exploded, and Central Avenue, the main business street, was honeycombed with empty store-rooms, but he ignored Central Avenue and selected a site on Ninth Street South, which bisects a Negro district and is nowhere near the established retail section.

Trains snorted—and still do—along the north and south sides of this block. Across the street when he moved in were ramshackle Negro stores; to the rear, a cluster of Negro shacks. Half of the frontage of his choice was occupied by a one-story boarded-up store building, the other half by an ice plant. Furthermore, the store was within easy sniffing distance of the municipal gas plant.

Dob Webb rented a corner in the deserted building, knocked down the boarding and hauled in a truckload of merchandise, mostly remedies to ease the miseries of the surrounding Negro population.

However, as times got tougher the carriage trade found him. At first feminine shoppers from the better parts of town were squeamish about invading this scabrous district, but such lures as five pounds of sugar for a dime overcame their fears. They only hoped they would not be seen, but they were—by nearly all their penny-saving social acquaintances, including the wives of (Continued on page 32)

Beauty at bargain rates is only one of the many side lines that attract the custodians of the family purse. Webb's beauty shop employs 29 operators, and is the biggest in the state

PHOTOGRAPHED FOR COLLIER'S
BY SANDY GANDY

Doc dismays both competitors and non-competitors with surprising bargains: A three-cent breakfast of bacon, egg, toast, grits and gravy; 100 postcards for a nickel; coffee at a price that sold over 8,000 pounds in one day; canned peaches priced to move carload lots in a few hours; men's shirts at 68 cents (he sold 2,600 of these one Sunday), and meat specials. Doc's meat department once outbid packers on a 30,000-lb. order for the Coast Guard

MOVING FINGER

By Agatha Christie

ILLUSTRATED BY MARIO COOPER

The Story Thus Far:

AN INVALID, following the crash of a plane he had been piloting, Jerry Burton, a young Londoner, takes his sister, Joanna, and goes to the small town of Lymstock, where he hopes the fresh air may hasten his recovery.

No sooner is he settled than he receives an anonymous letter—filthy, insulting. Then—after he has been worried sick for a time—he learns that others have received, and are still receiving, somewhat similar letters. He learns, furthermore, that two capable officials—Superintendent Nash and Inspector Graves—are investigating.

Among the Burtons' neighbors are Richard Symmington, a lawyer, and his wife. Living with the Symmingtons are their young children; Elsie Holland, a nursery governess; Megan Hunter, the lawyer's stepchild (whom the town does not understand, because she is not "interested" in anything); Agnes Woddell, a maid; and the cook, Rose.

The town holds Mrs. Symmington in high regard. But for some reason or other (known only to herself) she kills herself, after receiving a "poison-pen" letter. Then, not long after she dies, Agnes Woddell is murdered. . . . No one has any theories to offer, regarding the two deaths—except Superintendent Nash. Nash believes that someone—he does not know who—brought the letter to the Symmington home and thrust it through the letter box, shortly before Mrs. Symmington committed suicide. He believes that Agnes had been looking through a window when the letter had been brought in; he feels sure that Agnes had seen the person who had brought the letter! . . .

Mr. Pye is a well-to-do dilettante who lives not far from the Burtons. Joanna is inclined to suspect him as the murderer. So, meeting him, Burton proceeds to discuss the case with him. Mr. Pye makes numerous comments. Then—"Notice," he says, "what people do with their hands, and their little tricks of manner and what they do with their food, and if they laugh for no apparent reason. That's the way to find out who killed Agnes Woddell."

"Mad?" Burton queries. Mr. Pye stares at him. "Quite, quite mad," he says, "but you'd never know it." "Who?" Burton asks. Mr. Pye smiles. "No, no, Burton," he exclaims, "that would be slander to all the rest of us."

And, without another word, Mr. Pye walks away—quickly.

VI

AS I stood staring after Mr. Pye the church door opened and the Rev. Caleb Dane Calthrop came out.

He smiled vaguely at me. "Good—good morning, Mr.—er—er—"

I helped him.

"Burton."

"Of course, of course, you mustn't think I don't remember you. Your name had just slipped my memory for the moment. A beautiful day."

"Yes," I said rather shortly.

He peered at me.

"But something—something, ah, yes, that poor unfortunate child who was in service at the Symmingtons'. I find it hard to believe, I must confess, that we have a murderer in our midst, Mr.—er—Burton."

"It does seem a bit fantastic," I said.

"Something else has just reached my ears." He leaned toward me. "I learn that there have been anonymous letters going about. Have you heard any rumor of such things?"

"I have heard," I said.

"Cowardly and dastardly things." He paused and quoted an enormous stream of Latin. "Those words of Horace are very applicable, don't you think?" he said.

"Absolutely," I said.

There didn't seem anyone else I

could profitably talk to, so I went dropping in for some tot bottle of sherry, so as to get some humbler opinions on the matter. "A narsty tramp," said the verdict.

"Come to the door, they said, and ask for money, and then I was alone in the house, the My sister Dora, over to she had a narsty experie drunk, he was, and selli printed poems . . ."

The story went on, er intrepid Dora courageous door in the man's face and and barricading herself i retreat, which I gathered cacy in mentioning it, mu tory. "And there she stay came home!"

I reached Little Furze j a few minutes before lunch time, standing in the drawing- am doing nothing at all an look though her thoughts were nile.

"What have you been yourself?" I asked.

"Oh, I don't know. No lar."

I WENT out on the veranda chairs were drawn up to a table and there were two glasses. On another chair at which I looked with a little for some time.

"What on earth is this?"

"Oh," said Joanna, "I this is a photograph of a diseased spleen. Dr. Griffith seemed to be interested to see it."

I looked at the photograph with interest. Every man has a little of courting the female sex. I myself, choose to do it with a little of spleens, diseased or otherwise. I doubt Joanna had asked

"It looks most unpleasant," I said.

Joanna said it did, rather

"How was Griffith?" I asked.

"He looked tired and very thin. I think he's got something on his mind," she replied.

"A spleen that won't yield to treatment?"

"Don't be silly. I mean a real spleen."

"I should say the man's got a real mind. I wish you'd lay off him."

"Oh, do shut up. I haven't time for such things."

"Women always say that."

Joanna whirled angrily and strode back into the house.

The diseased spleen was curled up in the sun. I took it down and brought it in to my room. I had no affection for it, but I presumed it was one of Griffith's treasures.

I stooped down and picked up a heavy book from the bottom of a bookcase in order to press the photograph flat again between its covers. It was a ponderous volume of sermons.

The book came open in a rather a surprising way. In a minute I saw why. From the middle of it a number of pages had been cut out.

I stood staring at it. I looked at the title page. It had been published in 1840.

There could be no doubt at all. I was looking at the book from the time

I heard a sound ahead of me to my right. I took a flashlight from my pocket and switched it on. Immediately a low, sharp voice ordered, "Put that out!"

Here's the greatest drink since my cestors invented milk!

SAYS ELSIE
THE BORDEN COW

WITH HEMO YOU CAN
DRINK YOUR VITAMINS
AND LIKE 'EM!

JUST ONE GLASS OF HEMO GIVES YOU:

The Vitamin A in 3 boiled eggs!

PLUS

The Vitamin B₁ in 4 slices of whole wheat bread!

and a HALF DONE overhaul
won't stop Oil Pumping—

Replace Worn Engine Bearings!

Make your car last longer, save money and help conserve America's vital supplies—correct oil pumping *now*. But remember that with new piston rings the job's only HALF DONE. Wasteful, motor-fouling oil pumping starts at worn connecting rod bearings and correction must start there, too!

When connecting rod bearings are worn, excess oil floods the cylinders, is forced into combustion chambers, where it burns to carbon on the best of new piston rings, on valves and spark plugs. Result: Continued sluggish performance, oil and gasoline waste, and another overhaul within a few thousand miles!

Do the WHOLE job now and save money. When the engine is opened up for new rings, replace the connecting rod bearings with a set of Federal-Mogul Oil-Control Bearings to restore power, pep and economy for the long run! Your service man recommends them.

FEDERAL-MOGUL CORP. • DETROIT, MICH.

Worn Engine Bearings Cause Oil Pumping!

FOR VICTORY

Submarines, aircraft carriers, minesweepers, rescue tugs, dredges are equipped with Federal-Mogul bearings and other precision parts. With added production capacity, Federal-Mogul works "all out", manufacturing bearings and precision parts for planes, tanks, guns, boats—and millions of bearings to service the automobiles carrying defense workers and materials to their jobs. We "keep 'em rolling"!

which the anonymous letters had been put together. Who had cut them out?

Well, to begin with, it could be Emily Barton herself. She was, perhaps, the obvious person to think of. Or it could have been Partridge.

But there were other possibilities. The pages could have been cut out by anyone who had been alone in this room, any visitor, for instance, who had sat there waiting for Miss Emily. Or even anyone who called on business.

No, that wasn't so likely. I had noticed that when, one day, a clerk from the bank had come to see me, Partridge had shown him into the little study at the back of the house. That was clearly the house routine.

A visitor, then? Someone "of good social position." Mr. Pye? Aimée Griffith? Mrs. Dane Calthrop?

THE gong sounded and I went in to lunch. Afterward, in the drawing room I showed Joanna my find.

We discussed it from every aspect. Then I took it down to the police station.

They were elated at the find, and I was patted on the back for what was, after all, the sheerest piece of luck.

Graves was not there, but Nash was, and rang up the other man. They would test the book for fingerprints, though Nash was not hopeful of finding anything. I may say that he did not. There were mine, Partridge's and nobody else's, merely showing that Partridge dusted conscientiously.

Nash walked back with me up the hill. I asked how he was getting on.

"We're narrowing it down, Mr. Burton. We've eliminated the people it couldn't be."

"Ah," I said. "And who remains?"

"Miss Ginch. She was to meet a client at a house yesterday afternoon by appointment. That house was situated not far along the Combe Acre road—that's the road that goes past the Symingtons'. She would have to pass the house both going and coming . . . the week before, the day the anonymous letter was delivered and Mrs. Symington committed suicide, was her last day at Symington's office."

"Mr. Symington thought at first she had not left the office at all that afternoon. He had Sir Henry Lushington with him all the afternoon and rang several times for Miss Ginch. I find, however, that she did leave the office between three and four. She went out to get some high denomination of stamp of which they had run short. The office boy could have gone, but Miss Ginch elected to go, saying she had a headache and would like the air. She was not gone long."

"But long enough?"

"Yes, long enough to hurry along to the other end of the village, slip the letter in the box and hurry back. I must say, however, that I cannot find anybody who saw her near the Symingtons' house."

"Would they notice?"

"They might and they might not."

"Who else is in your bag?"

Nash looked very straight ahead of him. "You'll understand that we can't exclude anybody—anybody at all."

"No," I said. "I see that."

He said gravely, "Miss Griffith went to Brenton for a meeting of Girl Guides yesterday. She arrived rather late."

"You don't think—"

"No, I don't think. But I don't know. Miss Griffith seems an eminently sane, healthy-minded woman—but I say, I don't know."

"What about the previous week? Could she have slipped the letter in the box?"

"It's possible. She was shopping in the town that afternoon." He paused. "The same applies to Miss Emily Bar-

ton. She was out shopping early yesterday afternoon and she went to see some friends on the road past the Symingtons' house the week before. I shook my head unbelieveingly. I was bound, I knew, to direct the owner of that house to remember Miss Emily yesterday so bright and lively . . .

Hang it all—excited. I cited—pink cheeks—surely not because—not

I said thickly, "This is for one! One sees things things—"

Nash nodded sympathetically. "It isn't very pleasant to fellow creatures one meets as criminal lunatics."

He paused for a moment, "And there's Mr. Pye."

I said sharply, "So you've

Nash smiled. "Oh, yes, I've seen him all right. A very nice character. He has no children, alone, on both sides. So you're not one of those women?"

"I don't think a man would—in fact, I'm sure of it. Graves—always excepting that is to say, who's got a female streak in his character. We've checked up on every day for a week. That's your see. You're all right, and so's your sister, and Symington didn't leave his office there and Dr. Griffith was the other direction, and I checked on his visits."

He paused, smiled again. "You see, we are thorough."

I said slowly: "So you've narrowed down to those three?"

"Oh, no, no, we've got a couple more—besides the vicar's lady."

"You've thought of her?"

"We've thought of every body. Mrs. Dane Calthrop is a little mad, if you know what I mean. She could have done it. I was wood watching birds yesterday afternoon—and the birds can speak to her."

HE TURNED sharply away. The fifth came into the police station.

"Hullo, Nash. I heard you were asking for me this morning. Important?"

"Inquest on Friday, if the Dr. Griffith."

"Right. Moresby and I P. M. tonight."

Nash said, "There's just one thing, Dr. Griffith. Mrs. Symington was taking some powders that you prescribed for her."

He paused. Owen Griffith said in a low voice:

"Yes?"

"Would an overdose of them have been fatal?"

"Certainly not," Griffith said. "Not unless she'd taken at least five of them!"

"But you once warned her about exceeding the dose, so Miss Symington."

"Oh, that, yes. Mrs. Symington was the sort of woman who would overdo anything she was told to do. That to take twice as much as twice as much good, and you anyone to overdo even penicillin—bad for the heart. There's absolutely no doubt about it. It was cyanide."

"Oh, I know that—you mean. I only thought of committing suicide you'd

a soporific rather than to prussic acid." On the other hand, prussic ramatic and is pretty certain. With barbiturates, you can bring the victim a short time has elapsed." "Thank you, Dr. Griffith," started, and I said goodbye it slowly up the hill home. But—at least there was no and there was an enigmatically scribbled on the book presumably for the other Partridge or myself: "Fifth rings up, I can't go on could manage Wednesday eyebrows and went into room. I sat down in the comfortable armchair—none of very comfortable; they were straight backs and were of the late Mrs. Barton—my legs and tried to think out.

I suddenly annoyance I remembered Owen's arrival had in conversation with the d that he had mentioned people as being possibilities. I who they were.

perhaps, for one? After book had been found in this Agnes could have been quite unsuspectingly by de a mentor. No, you couldn't tridge.

who as the other? perhaps, that I didn't Cleat? The original local

sed my eyes. I considered the these strangely unlikely in rn: Gentle, frail little Em-ton What points were there ac- age st her? A starved life? ated and repressed from early od? Too many sacrifices asked He curious horror of discussing "t quite nice"? Was that ac- n of inner preoccupation est these themes? Was I getting Freudian? I remembered a on- telling me that the mutter- ger- e anesthetic were a revela- Yo- wouldn't think they knew

iffith? nothing repressed or inhib-

ited about her. Cheery, mannish, successful. A full, busy life. Yet Mrs. Dane Calthrop had said, "Poor thing!"

And there was something—something—some remembrance . . . Ah! I'd got it. Owen Griffith saying something like, "We had an outbreak of anonymous letters up north where I had a practice."

Had that been Aimée Griffith's work, too? Surely rather a coincidence. Two outbreaks of the same thing.

Stop a minute, they'd tracked down the author of those. Griffith had said so. A schoolgirl.

Cold it was suddenly—must be a draft from the window. I turned uncomfortably in my chair. Why did I suddenly feel so queer and upset?

Go on thinking . . . Aimée Griffith? Perhaps it was Aimée Griffith, not that other girl. And Aimée had come down here and started her tricks again. And that was why Owen Griffith was looking so unhappy and hag-ridden. He suspected. Yes, he suspected. . . .

Mr. Pye? Not, somehow, a very nice little man. I could imagine him staging the whole business, laughing . . .

That telephone message on the telephone pad in the hall—why did I keep thinking of it? Griffith and Joanna—he was falling for her. No, that wasn't why the message worried me. It was something else. . . .

My senses were swimming, sleep was very near. I repeated idiotically to myself: "No smoke without fire. No smoke without fire. . . . That's it . . . it all links up together. . . ."

And then I was walking down the street with Megan, and Elsie Holland passed. She was dressed as a bride, and people were murmuring, "She's going to marry Dr. Griffith at last. Of course, they've been engaged secretly for years . . ."

There we were, in the church, and Dane Calthrop was reading the service in Latin.

And in the middle of it Mrs. Dane Calthrop jumped up and cried energetically, "It's got to be stopped, I tell you. It's got to be stopped!"

For a minute or two I didn't know whether I was asleep or awake. Then my brain cleared, and I realized I was in the drawing room of Little Furze and that Mrs. Calthrop had just come through the window and was standing in front of me saying with nervous violence:

"It has got to be stopped, I tell you!"

I jumped up. "I beg your pardon," I

Judy and the Judge

THE JUDGE is a man of firm words and fixed opinions. And there's grim decision in his voice as he lays down the law to his daughter. "Young lady," he says, "when you're faced with a little trouble like mine, there's only one course to follow. Take a good stiff, old-fashioned purge!"

BUT JUDY is not the Judge's daughter for nothing. "Judge," she says, "you are guilty of horse-and-buggy habits. Did it ever cross your legal mind to find and correct the cause of your trouble? Well, that's a little matter we'll 'tend to right now! Come with me."

"**I OBJECT!**" roars the Judge.

"Objection overruled! This crisp, crunchy cereal, **KELLOGG'S ALL-BRAN**, has just what it takes to correct the cause of constipation due to lack of 'bulk' in the diet. It may be the very thing you need! Just eat it every day, and drink plenty of water."

"I've lost your way"

IRVING ROIR

"**HOLD ON THERE!**" says the Judge. "You little minx, why didn't you tell me how good it tastes? If **ALL-BRAN** can make me 'Join the Regulars,' I'm giving it a lifetime appointment right now!"

YOUR CAR NEEDS THE "AIR WARDEN"!

Let Your Mobilgas
Dealer Help You Save
Your Tires...

COME IN EVERY WEEK FOR FREE AIR

1 LET US INFLATE YOUR TIRES TO CORRECT PRESSURE

Incorrect inflation can reduce tire life as much as 25%! Too little pressure—or too much pressure—both can cause excessive wear. That makes regular, expert tire service important!

Come in every week, regularly, whether you need gasoline or not, and let us bring all your tires up to correct pressure. You'll find the few minutes it takes for a careful check-up all around will be time well invested.

2 LET US SWITCH TIRES—HELP YOU SAVE RUBBER

Three good tires won't last long—you need at least six. Come in and let us switch your tires regularly. It's done every 5,000 miles.

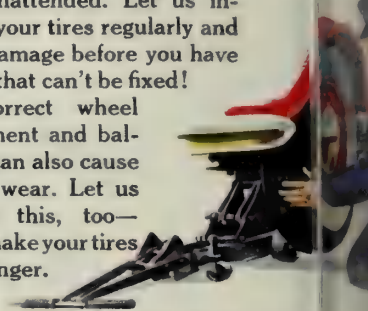

The figures in the

show the relative wear for each wheel. The tires, for example, wear much faster than the others. Regular switching—carefully done—helps make the wear on all tires... helps make the tires last longer.

3 LET US INSPECT YOUR TIRE REGULARLY FOR SAFER, LONGER MILEAGE

Little bruises and cuts grow if left unattended. Let us inspect your tires regularly and stop damage before you have a tire that can't be fixed!

Incorrect wheel alignment and balance can also cause rapid wear. Let us check this, too—help make your tires last longer.

How your Mobilgas Dealer helps keep your car on the road... helps make it last longer.

1. Free Air? Sure—we'll be glad to check your tires once a week!
2. Let us switch tires each 5,000 miles, inspect for cuts and bruises—check wheel alignment, too!
3. Your battery needs our check-up every 2 weeks.
4. Let us change your oil every 1,000 miles—we'll put in clean, tough Mobiloil!

5. Let us Mobilbrake your car every 1,000 miles—protect every chassis part from costly wear!

6. We'll protect your car's finish, too! Let us wax it every 3 months!

7. Let us flush cooling system twice a year—conserve fresh water to guard against damaging, clogging sludge!

8. Let us make sure your gears are protected—we'll check every 1,000 miles.

9. Let us clean your spark plugs every 5,000 miles—help you save gas.

10. Let us check your oil filter every 2,000 miles—change your oil filter every 8,000 miles.

I could say anything more, e Calthrop nodded her head at aid in a quick, confident tone: ing to see about it right away." e went out of the window again.

ext week, I think, was one of earest times I have ever passed It had an odd dream quality. seemed real.

quest on Agnes Woddell was the curious of Lymstock at- masse. No new facts came to the only possible verdict was "Murder by person or persons

or little Agnes Woddell, having

had her hour of limelight, was duly buried in the quiet old churchyard and life in Lymstock went on as before.

No, that last statement is untrue. Not as before. . .

There was a half-scared, half-avid gleam in almost everybody's eye. Neighbor looked at neighbor. One thing had been brought out clearly at the inquest—it was most unlikely that any stranger had killed Agnes Woddell. No tramps or unknown men had been noticed or reported in the district. Somewhere, then, in Lymstock, walking down the High Street, shopping, passing the time of day, was a person who had cracked a defenseless girl's skull and driven a sharp skewer home to her brain.

And no one knew who that person was.

AS I say, the days went on in a kind of dream. I looked at everyone I met in a new light, the light of a possible murderer. It was not an agreeable sensation!

And in the evenings, with the curtain drawn, Joanna and I sat talking, talking, arguing, going over in turn all the various possibilities that still seemed so fantastic and incredible.

Joanna held firm to her theory of Mr. Pye. I, after wavering a little, had gone back to my original suspect, Miss Ginch. But we went over the possible names again and again:

Mr. Pye?

Miss Ginch?

Mrs. Dane Calthrop?

Aimée Griffith?

Emily Barton?

Partridge?

And all the time, nervously, apprehensively, we waited for something to happen.

But nothing did happen. Nobody, so far as we knew, received any more letters. Nash made periodic appearances in the town but what he was doing and what traps the police were setting, I had no idea. Graves had gone again.

Emily Barton came to tea. Megan came to lunch. Owen Griffith went about his practice. We went and drank sherry with Mr. Pye. And we went to tea at the vicarage.

I was glad to find that Mrs. Dane Calthrop displayed none of the militant

ferocity she had shown on the occasion of our last meeting. I think she had forgotten all about it.

She seemed now principally concerned with the destruction of white butterflies so as to preserve cauliflower and cabbage plants.

Our afternoon at the vicarage was really one of the most peaceful we had spent. It was an attractive old house and had a big, shabby, comfortable drawing room with faded rose cretonne. The Dane Calthrops had a guest staying with them, an amiable, elderly lady who was knitting something with white, fleecy wool. We had very good hot scones for tea, the vicar came in, and beamed placidly on us while he pursued his gentle erudite conversation. It was very pleasant.

I don't mean that we got away from the topic of the murder, because we didn't.

Miss Marple, the guest, was naturally thrilled by the subject. As she said apologetically:

"We have so little to talk about in the country!" She had made up her mind that the dead girl must have been just like her Edith.

"Such a nice little maid, and so willing, but sometimes just a little slow to take in things."

Miss Marple also had a cousin whose niece's sister-in-law had had a great deal of annoyance and trouble over some anonymous letters, so that, too, was very interesting to the charming old lady.

"But tell me, dear," she said to Mrs. Dane Calthrop, "what do the village people—I mean the townspeople—say? What do they think?"

"Mrs. Cleat still, I suppose," said Joanna.

"Oh, no," said Mrs. Dane Calthrop. "Not now."

Miss Marple asked who Mrs. Cleat was.

Joanna said she was the village witch. "That's right, isn't it, Mrs. Dane Calthrop?"

The vicar murmured a long Latin quotation about, I think, the evil power of witches, to which we all listened in respectful and uncomprehending silence.

"She's a very silly woman," said his wife. "Likes to show off. Goes out to gather herbs and things at the full of the moon and takes care that everybody in the place knows about it."

"And silly girls go and consult her, I suppose?" said Miss Marple.

I SAW the vicar getting ready to unload more Latin on us and I asked hastily, "But why shouldn't people suspect her of the murder now? They thought the letters were her doing."

Miss Marple said finally:

"Oh! But the girl was killed with a skewer, so I hear. Very unpleasant! Well, naturally, that takes all suspicion away from this Mrs. Cleat. Because, you see, she could ill-wish her, so that the girl would waste away and die from natural causes."

"Strange how those old beliefs linger," said the vicar. "In early Christian times, local superstitions were wisely incorporated with Christian doctrines and their most unpleasant attributes gradually eliminated."

"It isn't superstition we've got to deal with here," said Mrs. Dane Calthrop, "but facts."

"And very unpleasant facts," I said.

"As you say, Mr. Burton," said Miss Marple. "Now you—excuse me if I am being too personal—are a stranger here, and have a knowledge of the world and of various aspects of life. It seems to me that you ought to be able to find a solution to this distasteful problem."

I smiled.

"The best solution I have had was a

Teacher Jones flunks test

MISS JONES NEEDS A LAXATIVE, but she has to be in class by 9—with a hard day ahead. "Better put off taking anything till tonight," she decides. She doesn't know about quick-acting laxatives.

MISS JONES, annoyed by constipation symptoms, can't manage the children at all. When the principal visits her class, Miss Jones is irritable and unfortunately makes a bad impression.

Teacher Smith scores triumph

MISS SMITH NEEDS A LAXATIVE; she has to be in class by 9. Her day is crowded, too.

But she doesn't put off till tonight taking the laxative she needs this morning. She takes speedy Sal Hepatica!

MISS SMITH—free of discomfort—is at ease when the principal visits her room.

Her students are models of good behavior. She is grateful for Sal Hepatica's speedy relief.

Whenever you need a laxative —take gentle, *speedy* Sal Hepatica

DON'T PUT OFF till tonight the laxative you should take this morning! Take *speedy*, gentle Sal Hepatica!

It usually acts within an hour. Brings gentle, effective relief by attracting needed

liquid bulk to the intestinal tract. No griping. No discomfort.

No wonder 3 out of 5 doctors interviewed recommend Sal Hepatica.

And bear in mind, Sal Hepatica does even *more*: it has a decidedly helpful effect in reducing excess gastric acidity; helps turn a sour stomach sweet again.

Next time you need a laxative, take speedy, sparkling Sal Hepatica.

SAL HEPATICA

"TIME TO SMILE!" Tune in EDDIE CANTOR—Wednesdays at 9 P. M., E. W. T.

dream. In my dream it all fitted in and panned out beautifully. Unfortunately when I woke up the whole thing was nonsense!"

"How interesting, though. Do tell me how the nonsense went."

"Oh, it all started with the silly phrase 'No smoke without fire.' People have been saying that *ad nauseam*. And then I got it mixed up with war terms. Smoke screen, scrap of paper, telephone messages—no, that was another dream."

"And what was that dream?"

The old lady was so eager about it, that I felt sure she was a secret reader of Napoleon's Book of Dreams, which had been the great stand-by of my old nurse.

"Oh! Only Elsie Holland—the Symingtons' nursery governess, you know, was getting married to Dr. Griffith and the vicar here was reading the service in Latin—('Very appropriate, dear,' murmured Mrs. Dane Calthrop to her spouse)—and then Mrs. Dane Calthrop got up and forbade the banns and said it had got to be stopped!"

"But that part," I added with a smile, "was true. I woke up and found you standing over me saying it."

"And I was quite right," said Mrs. Dane Calthrop—but quite mildly, I was glad to note.

"But where did a telephone message come in?" asked Miss Marple, crinkling her brows.

"I'm afraid I'm being rather stupid. That wasn't in the dream. It was just before it. I came through the hall and noticed Joanna had written down a message to be given to someone if he rang up."

Miss Marple leaned forward. There was a pink spot in each cheek. "Will you think me very inquisitive and very rude if I ask just what that message was?" She cast a glance at Joanna. "I do apologize, my dear."

Joanna, however, was highly entertained.

"Oh, I don't mind," she assured the old lady. "I can't remember anything about it myself, but perhaps Jerry can. It must have been something quite trivial."

Solemnly I repeated the message as best I could remember it, enormously tickled by the old lady's rapt attention.

I WAS afraid the actual words were going to disappoint her, but perhaps she had some sentimental idea of a romance, for she nodded her head and smiled and seemed pleased.

"I see," she said. "I thought it might be something like that."

Mrs. Dane Calthrop said sharply, "Like what, dear?"

"Something quite ordinary," said Miss Marple.

She looked at me thoughtfully for a moment or two and we all fell silent.

Miss Marple had resumed her fleecy knitting. "You know," she observed pensively, "to commit a successful murder must be very much like bringing off a conjuring trick."

"The quickness of the hand deceives the eye?"

"Not only that. You've got to make people look at the wrong thing and in the wrong place—misdirection, they call it, I believe."

"Well," I remarked, "so far everybody seems to have looked in the wrong place for our lunatic at large."

"I should be inclined, myself," said Miss Marple, "to look for somebody very sane."

"Yes," I said thoughtfully, "that's what Nash said. I remember he stressed respectability, too."

"Yes," agreed Miss Marple. "That's very important."

Well, we all seemed agreed.

I addressed Mrs. Calthrop. "Nash thinks," I said, "that there will be more

anonymous letters. What do you suppose?"

"If the police think that, they have to be, no doubt, said Mrs. Dane Calthrop."

I went on doggedly. "Mrs. Dane Calthrop: 'Are you still a writer?'"

She flushed. "Why not?"

"I don't think I agree with you, dear," said Miss Marple. "No case."

I said hotly, "The woman to suicide, as a cause of misery and heartache."

"Have you had one, Miss Marple?"

Joanna gurgled: "Oh, most frightful things."

"I'm afraid," said Mrs. Dane Calthrop, "the people who are young and apt to be singled out by the world."

"That's why I certainly think that Elsie Holland had a right to be said."

"Let me see," said Mrs. Dane Calthrop, "that the Symingtons' governess—the one you dreamed of, Burton?"

"Yes."

"Dear me," said Miss Marple, "that's very interesting. That's an interesting thing I've heard of."

"Why not?"

"Because Mrs. Dane Calthrop said it."

"You don't really believe it?"

"I'm not sure. She's a queer one."

It was two nights later that I was in the car for the first time. I had had dinner there and it was all dark and got into Lymstock.

Something was wrong with the lights, and after slowing up and going on and off, I finally got what I could do. I was trembling, but I managed to fix finally.

The road was quite deserted in Lymstock is about the first few houses were just ahead of them the ugly gabled building Women's Institute. It looked dim starlight and something made me to go and have a look at it.

I knew whether I had a glimpse of a stealthy figure through the gate—if it had been so indeterminate at it register in my consciousness and suddenly feel a kind of curiosity about the place.

The gate was slightly ajar. I pushed it open and walked in path and four steps led up to it.

I stood there a moment. What was I really doing here? I knew, and then, suddenly, I caught the sound of a woman's footsteps.

I took a sharp turn and saw the corner of the building. The sound had come from there.

I couldn't see anybody. I again turned a corner. I was at the house now and only two feet away from the window.

I crept up to it and heard nothing, but somehow I felt convinced that there was someone inside.

My back wasn't too good as yet, but I managed to get myself up and drop over the side.

I made rather a noise, but I stood just inside the window. Then I walked forward, outstretched. I heard the sound ahead of me to my right.

"Yes. But somebody's very cunning.
Mr. Burton. Somebody knows all the
tricks of the game."

I could imagine some of the network
that Nash had spread abroad. I had no
doubt that every letter written by a sus-
pect and posted or left by hand was im-
mediately inspected. Sooner or later the
criminal would slip up, would grow
careless.

For the third time I apologized for my
zealous and unwanted presence.

"Oh, well," said Nash philosophically,
"it can't be helped. Better luck next
time."

I went out into the night. A dim fig-
ure was standing beside my car. To my
astonishment I recognized Megan.

"Hullo!" she said. "I thought this was
your car. What have you been doing?"

"What you are doing is much more
to the point," I said.

"I'm out for a walk. I like walking
at night. Nobody stops you and says
silly things, and I like the stars, and
things smell better, and everyday things
look all mysterious."

"All of that I grant you freely," I
said. "But only cats and witches walk
in the dark. They'll wonder about you
at home."

"No, they won't. They never wonder
where I am or what I'm doing."

"How are you getting on?" I asked.

"All right, I suppose."

"Miss Holland look after you and all
that?"

"Elsie's all right. She can't help be-
ing a perfect fool."

"Unkind—but probably true," I said.

"Hop in and I'll drive you home."

It was not quite true that Megan was
never missed.

Symmington was standing on the
doorstep as we drove up.

He peered toward us.

"Hullo, is Megan there?"

"Yes," I said. "I've brought her
home."

Symmington said sharply. "You
mustn't go off like this without telling
us, Megan. Miss Holland has been
quite worried about you."

Megan muttered something and went
past him into the house.

Symmington sighed. "A grown-up girl
is a great responsibility with no mother
to look after her. She's too old for
school, I suppose."

He looked toward me rather suspi-
ciously.

"I suppose you took her for a drive?"
I thought it best to leave it like that.

4134 CHECK MARKS FROM ONE POINT WITHOUT RESHARPENING

Innumerable service tests prove that one VERITHIN pencil point will make over 4,000 bold check marks before it needs repointing! You will use fewer pencils, with fewer interruptions, when you work with Eagle "Chemi-Sealed" VERITHIN's stronger, longer-lasting lead.

A PERFECT POINT IN ANY SHARPENER

The countless tiny filaments interwoven in VERITHIN's patented lead make it so tough and flexible that it takes a needle point in any type of sharpener and stands heavy pressure without breakage.

PROTECTS YOUR RECORDS, TOO

Because every one of its thirty brilliant colors is made from insoluble pigments, notations made with VERITHIN will not smear under moist hands, nor run from accidental wetting.

downtown merchants, who were equally hot on the scent of Webb's bargains.

Neither husband nor competitor nor a combination of both could do much about that. As a matter of fact, when the downtown merchants learned what was going on they urged their wives to raid Webb's bargains as the quickest way to put him out of business.

But they misfigured. They also had to put up with a lot of raucous jeers from the soot-and-cinder belt, in his advertising. Doc had a knack of harpooning his competitors while inoculating housewives with his own brand of bargain virus.

They tried to blot him out with bigger ads. But Doc came back with still bigger bargains. They decided to take bargain losses by turns in order to hurry matters along. Doc offered to meet all their advertised prices. Customers brought in the competitive ads. They stayed to buy the other fellow's bargain from Doc. Then to save them the trouble, he posted those ads in his store, and added a postscript.

When the executive of a national drug chain landed in town to see what ailed their special sales, the local manager led him up to Webb's and pointed. Across the bottom of their latest ad was printed "Ten per cent off these prices at Webb's."

Fair-trade practice and price-fixing laws, it was hoped, would put an end to his abysmal initiative and primitive enterprise. But Doc Webb nominated himself the champion of the common people in their fight against the statutory increase in the cost of living.

The first of the Florida price-fixing laws jumped the price of milk. Then came laundries, dry cleaners, barbers and beauticians, and up went the Monday wash and face lifting. Doc pretended he had never heard of these laws while their validity was being tested, and even afterward there was nothing, for example, to keep him from selling ice cream at the fixed price of milk. To dispense beauty at a bargain, he employs twenty-nine operators in his beauty parlor; which he says makes it the largest in the state or, if he is feeling expansive, in the country.

He operates continuously under injunctions and counter-injunctions. With the federal government prosecuting price-fixers, and state governments prosecuting non-price-fixers, about all anybody knows is that Doc Webb, with jail staring him in the face, defies all the laws of fair trade and foul in behalf of his customers.

Little Big Businessman

"Those laws were hatched by big businessmen to help themselves," he snorts. "Every one of them jumped prices. I don't care about those fellows. It's the people that count."

With such a reputation, a person might expect to find Doc Webb a bellowing mastodon, but he is nothing of the sort. He is just a cocky bantam, five feet five in his shoes, weighing 123 pounds. Except for fixed, penetrating eyes that remind you of those colored-glass orbs sometimes found in white marble statuary, he could easily glide through life unnoticed.

Doc Webb, or James Earl Webb, was born August 31, 1899, at Nashville, Tennessee, and he was twenty-seven when he went off like the Fourth of July in St. Petersburg. Before that, he had held two drugstore jobs, one in Nashville, the other in Knoxville. He thought he was worth more money on the second, but

his boss thought otherwise. So Doc Webb indignantly pocketed his savings and headed for the then fabulous land of riches, just as Florida's fantastic boom went blooey! He started one of his own.

With \$2,000 and a partner, he rented a room at \$25 a month without a lease. At the end of the first year his gross totaled \$38,000. He decided he could do better without a partner. Bills payable exceeded \$6,000, and his inventory totaled considerably less, but he made a deal which, by the time he got a free hand, cost him \$18,000.

The second year, he grossed \$90,000 and began to kick out partitions and take over adjoining rooms. By the time of the national depression of 1929, his gross had mounted to \$300,000. By the time the depression hit bottom, the gross had reached \$500,000. In the recession of 1937, it passed \$1,000,000, and by the time World War II broke out in 1939, it had passed \$2,000,000. In 1940, the figure topped \$3,000,000, and in 1941, more than \$4,000,000.

Seldom does Doc Webb show up at his store before midafternoon, which is looked upon as a business heresy; and then he stays little more than an hour, which is even worse. A snappy dresser, usually in white, he also wears a hat that disguises him as a customer, as he moves swiftly about, consulting with department executives. No employee can be induced to point him out. Doc rates somewhere between a curiosity and a legend.

"I've got to see an architect," he protested and started to flee when trapped flat-footed in the middle of his store. "Fellow in here last week wanting a story," he complained. "Offered me a hundred dollars to dig up records that'd take a week. But if I can tell you what you want to know in a minute, come on."

He led the way up a flight of stairs little better than a stepladder to a cubbyhole balcony, where his general manager, surrounded by buttons and switches, controlled the madhouse below. The one-minute interview stretched into three nerve-devastating hours. Doc Webb is a self-winder who stays wound. He never sat, and much of the time he

was springing halfway down. He seemed to transact business on those steps. Maps and records were brought up and down.

"I want every statement told his manager. Then he cleared up why he spends so little time. 'I sit down only at home of the time, it's on the floor under me,' he explained. 'I take at least six hours daily that telephone. So my wife has a special cushion.'"

Many local tobacco stores took him instead of from what takes more than a carload of attention of the tobacco people. Doc. "It takes trainloads of president of a national tobacco told me himself that his firm of a certain brand of pipe than to all the rest of the industry put together." Doc had 1000 cigarettes in a week.

Till-Music-Symphonic

By actual count, his till registers have withstood in a single day. He freed \$50,000 worth of checks from \$75,000 to \$100,000 nights. He has two experts to handle this detail. Out of 50,000 checks cashed a do not exceed \$100, because makes it hot for a bad check.

The outside of his place a sight. "I kept it that way said Doc, 'so ordinary folks afraid to come in. I did windows, because people in this neighborhood if they coming to Webb's.'"

Then he bought and tore plant next door, put up a and a new front on the old block-long front he installed of brilliantly illuminated windows.

Doc Webb attributes the business to two simple things: a retail store on a wholesale basis doing business entirely on low's money.

"I turn my stock fifty to

"Ha, Ha! . . . I was right after all. Eh, Doc?"

PURLINGAME
PUBLIC LIBRARY
Purlingame, Calif.

Coups of people like this, meeting in blacksmith shops, in taverns, stores, and on street corners, demanded that the Constitution be amended to guarantee certain rights. Among these are Freedom of Speech . . . Freedom of the Press . . . Freedom of Religion . . . Freedom of Assembly.

To these Four Freedoms . . . add another

BANKING in importance with these freedoms is another that Americans have added . . . Freedom to Plan One's Own Future.

Nowhere on earth is a man so free to plan his own future as he is in America. Of all the world's life insurance, 70% is owned in the United States where men, women, and children enjoy to the fullest the right to pursue happiness and security in their own way.

This right is not something that just happens to be in the air we breathe. Men had to fight and wrest it from the forces of oppression.

Today, these forces are at work against us again. They have thrust upon us a fight that requires more on our part than the will to win. Victory requires tanks and planes and guns

and battleships, huge armies, munition plants, and all other implements of total war.

To build enough of these things, fast enough, takes money—unheard-of sums of money. And the United States Government needs that money right now . . . today!

★ ★ ★

Your life insurance companies, through investment in Government Bonds, are helping to fill Uncle Sam's war chest. You also can help by buying all the U. S. Savings Bonds and Stamps you can . . . every week, every month! Every Bond you can buy is urgently needed to help defend America, and all its people, including you and your family! Make every payday, Bond day. U. S. Savings Stamps may be pur-

chased at any Metropolitan Office, or from any Metropolitan agent.

No other leading dentifrice gives such Beauty to Teeth with such amazing

Safety

Wonderful new liquid dentifrice,
Teel, cleans and beautifies your
teeth the safest way—without
scouring ingredients!

Of course you want your teeth to sparkle with dazzling natural beauty! But do you want this *temporary* beauty at the expense of some *lasting injury* that will mar their loveliness? Well, millions of Americans, unfortunately, are using dentifrices containing ingredients which *can* cause this injury.

Yes! Most dentifrices today have scouring materials in them, so fine you can't notice them. Tests show these scouring ingredients can gradually cut grooves or cavities in the soft part of the tooth along the gum line—when this part is exposed by receding gums, as so often happens. All too often then teeth lose their beauty, may grow painful and require filling, too!

Why Teel avoids this serious injury!

Teel, wonderful new liquid dentifrice, is different from any leading tooth paste or powder. Not only because it is *liquid* . . . but because it contains *no scouring ingredients*, as other popular dentifrices do!

That's why, of all leading dentifrices today, tests prove Teel is the only one which simply cannot cut ugly gum-line cavities in the exposed, soft part of the teeth.

And yet, Teel helps brighten and beautify teeth thrillingly! In fact, no other leading dentifrice does such a wonderful cleansing job . . . with such amazing safety. For, instead of scouring ingredients, liquid Teel depends for its super-cleansing action on a new-type, patented, cleansing ingredient. Thus, Teel is actually as safe as water on teeth.

So for bright, naturally shining teeth . . . with complete safety, too . . . change to Teel. You'll love Teel's refreshing taste—and you'll be thrilled by the beauty results! To further protect the beauty of your teeth, visit your dentist regularly.

AT DRUG, DEPARTMENT
AND 104 STORES

Use this Teel method for removing stains!

Most people find Teel easily removes ordinary surface stains from their teeth. Due to unusual mouth conditions, however, some find it difficult to remove these discolorations. In such cases, an occasional scouring may be needed.

For these people, we recommend this easy method: (1) Use Teel twice each day. (2) Use salt and soda or any ordinary dentifrice *not more than once or twice a week*. For remember—*regular* use of anything that *scours* may be dangerous to the exposed, soft part of teeth and cause trouble.

THIS SIMPLE TEST WILL TELL YOU WHETHER YOUR TEETH ARE IN DANGER

Starting from the gums, run your fingernail up and down several teeth. If your nail catches on a groove near the gum (grooves usually come first in the "eye" teeth) then you know the soft part is exposed and in danger. So choose your dentifrice carefully! Play safe! Start right away to use Teel—new liquid dentifrice guaranteed to contain no scouring materials.

Change to Teel

THE NEW LIQUID DENTIFRICE—
USE IT INSTEAD OF TOOTH PASTES AND POWDERS

year," he declared; "allow no credit and convert merchandise into cash well in advance of the ten-day deadline for taking discounts."

The importance of these discounts came to light when the Internal Revenue agents were probing for hidden profits. They too insisted that a business had to net a certain percentage of its gross or go broke. The only thing Doc seemed to net was that two per cent discount for cash.

"That's plenty," he protested. "What other druggist around this town netted sixty thousand dollars?"

Doc is a master of timing, surprise and provocation. His special sales overlap, but by appealing to different groups, he creates the effect of waits between bargains. No competitor can tell who will be the next. Before one calms down, Doc takes a fall out of another. It may be a carload of bridge tables, 50,000 rosebushes, or a bargain tour to Cuba.

Once he sold a carload of cantaloupes at two cents apiece and blandly remarked that this helped the fruit stores. "I sold those 15,000 cantaloupes in a day and did not reorder," he explained. "That gave 30,000 persons half a cantaloupe for breakfast at a cost of one cent each, which didn't hurt anybody. Many got an appetite for melon and patronized the regular fruit markets."

On another occasion, he offered paint at \$1.79 a gallon and posted a \$1,000 reward for proof that a better paint existed at any price. Then, as an extra added insult, he threw in a free paintbrush.

At the time he added a butcher shop, the U. S. Coast Guard sought bids on 30,000 pounds of meat. Local distributors bid and so did Doc Webb. He got the order. He had to buy the meat from one of the losers, but the fact that a drugstore outbid the meat packers made wire news; and this, together with the circus parade of delivering the 30,000 pounds of meat, forced Doc to hire eighteen meatcutters who had to work in such close quarters that on big days they fell to butchering one another.

Coffee—and Doughnuts

When someone tries to take a fall out of him, Doc really works up a lather, and that is usually when he adds a new line. Selling a national brand of coffee at nine cents a pound turned him into a coffee importer. He was warned, then his supply was cut off. That was seven years ago. Since then, he has sold more than 4,000,000 pounds of his own brand. He regularly sends a buyer to Colombia, Guatemala and Mexico to purchase coffee beans for what he terms the largest *individual* coffee business in the world.

On February 18, 1940, to mention but one date, he staged a special sale and sold 8,578 pounds of his coffee. For once, he ran out of stock and had to issue due bills. Doc Webb sees to it that the last customers to come are served too or given a due bill for later delivery of the bargain. He sold 9,453 dozen doughnuts of his own make the same day and he sells at least half a million loaves of bread a year.

Serving cut-rate meals at his fountain caused the cafeterias to strike back with a nine-cent breakfast. He retaliated with a cafeteria, put on a three-cent breakfast and kept it going for six months. It consisted of "one fresh yard egg, three slices of select bacon, three slices of buttered toast, grits and ham gravy." That breakfast also became wire news and the theme of a national broadcast. Doc Webb received letters from England wanting to know how he did it. The answer was a loss of \$20,000, but today he operates the biggest cafeteria in town.

He once gave cigarettes uproarious scale and ending on the toughest business tackled. He announced a silk hose, and immediately women's store came back rate sale on cigarettes, stand-by. They slashed and Then, as he put it, rather around any more, he offered rettes, two packages to a cut lines were more than a bit two days but Doc was in super-rages; he added a second his building and installed ready-to-wear store.

That department has been headache. To even up, the store installed a cut-rate ment and a lunch counter steal his sugar special.

Rationing Ends a Bo

Five pounds of sugar for been his first bargain. It Monday eradicator and star with a stampede. When out in 1939, other local sugar sales to five pounds five cents. Doc told his come and get what they were cents a pound. They came carloads in two days, and the end of the local sugar of the sugar war. This occasional pitch where the store would give away ten Saturday, and Doc twelve Monday, until rationing battle.

Doc's attempt to finance building was perhaps the of his spectacular career. I had as independent in his act U. S. mint. But now he needed a \$200,000 preferred-stock approached local brokers but to warm up. Local stock bad enough without Doc W sensational methods.

"All right!" he yelled. "stock myself!" He took an section in the Sunday paper nouncement that was about impudent piece of effrontery boom days when prospects jump fast or lose a fortune. exactly one week to subscribe fied the public.

He had a prospectus prior a table in his warehouse and a siege of vocal persuasion morning he ran a page ad "Today is the Day." The w back.

Monday morning his st prospects into the warehouse undertook to explain his They would not listen. He had copies of his prospectus. them away unread. He co started. Nevertheless, his morning ad read, "\$73,400 and paid for." Wednesday read, "\$126,600 sold and pa Thursday, "Thank you." He away scores, some of whom take the entire issue.

"That was money right heart," exulted Doc Webb. who stopped to use their h had a chance."

Though the new building pleted, the din of pounding which began when Doc first store in 1926 continues un gives the impression of a race to keep ahead of a bu constantly threatens to bur its walls.

"When you don't hear around here," proclaimed parting shot, "I'll be broke Which adds up to no moral a ing anybody had better try

THE END

Ranzo Goes to War

Continued from page 19

port and, provided the coast was clear, he picked us up, he'd make sure by asking for our mate of the Robin Moor at ship's papers over to the Vanguard if the mate of the Vanguard to bring her papers over to the Vanguard put over the dirtiest Irish the night of the Big Wind

smiled upon Mr. McNamara. "I knew it," he piped. "I'll get money on it. And just to the plot and make it more probable, the Vanguard is under the flag of Panama. Not shooting German submarines and we are, damn us, of pussyfooting hypocrites the guts to make it official and with the America Firsters! A investigate us before open-

you know it, sir? You have been to me until today."

are personnel cards for? Your run down for me some time had two years in the training before you were eighteen; did four years in the Navy, all marines and were discharged as a pedo-man, which is a rating men achieve on their first enlistment. So I suspect you were good. From bosun to chief mate of the Arrow Line and I notice by the time you were in the pilothouse you had unlimited license as master. A high-American, born in Boston, it seemed reasonable to suspect you were blown out of the fin-

very great risk." McNamara thrives on risks. I don't like the gun but I think, sir, you're not a fire it."

Why not? I'm eighty-six years old and I'll fix it so the Arrow Line will take care of the dependents if you don't come back. support your mother. Well, we'll never."

remind you, sir, that if we

wage a private war on a nation with which we are not officially at war, we'll be pirates under the law—"

"Oh, rot!" said Ranzo. "Let's beat the gun. I've always wanted to be a pirate. There's such a thing as being too danged pure all one's life."

"Only the sinful have fun, sir."

"Give me your battle plan, mister."

Mr. McNamara outlined his idea in brief, succinct sentences. "The only trouble I'll have," he added, "is to get the wrecking material."

"Give you a letter to the president of the New England Wrecking Company," Ranzo promised. "I'm a big stockholder there and I know they always keep that sort of wrecking material on hand. You run up to Boston tonight and get it and I'll take over your job tomorrow. I could write a book on the proper stowage of cargo."

Ranzo now adjusted himself more comfortably on the day bed, laid aside his pipe and closed his eyes. Presently Mr. McNamara heard a thin whistling, like a six-knot breeze passing through a ship's rigging. . . . Ranzo, his present problem settled to his satisfaction, had dropped off to sleep. Mr. McNamara, however, continued to sit there—he would not depart until dismissed.

Half an hour later Ranzo said: "You're off duty, so if you choose to take a drink, that's your business. Press the button yonder and when the room steward comes tell him to hustle up here with a quart of champagne. I always celebrate the discovery of real seafarin' talent and until you came aboard I always thought I was the only man living who realized what a risk the commander of the sub that sank the Robin Moor ran when he had the mate come aboard."

"The mate suspected nothing; so he wasn't ready."

"Just like our old, senile, trusting boob of an Uncle Sam," Ranzo snarled. "Mister, you renew my faith. Every little while I have to get the stench of automobiles out of my nose, and pure ocean ozone does it, so I'm going out with you as master this voyage. I'll lead the assault. My grandfather was a privateer when the French and British were picking on our merchant ma-

rine because they thought the nation was too weak, after the War of the Revolution, to defend itself.

"He was a great hand to come alongside the enemy, grapple her and lead his men aboard with cutlass and pistol. If I let a German get away with stuff like that his spirit'd ha'nt me."

"By the way, sir, we'll have to have a fast runabout aboard—say a twenty-six footer capable of doing forty miles an hour. We'll need her for the trip from the Vanguard to the submarine—that is, in case we're ordered over."

"Get it," said Ranzo. His eyes narrowed to slits and Mr. McNamara realized the old gentleman was profoundly irritated. He had been brooding over the President's foreign policy much too long and was worried as to the outcome of it. "Those fly Japs offered the Red Arrow Line a high price for three of our old ships, but I could block the sale and I did. Catch me furnishing those devils with scrap to make shells and bombs to kill us with when we're not looking. And you know where those old steamers are now? They're carrying lend-lease aid to Britain. They were down to eight knots and that's fast enough in convoy; if they're sunk the real loss will be their cargoes."

"Yes, indeed, sir," Mr. McNamara murmured politely. "Of course, since you're hell-bent on connecting up with a submarine we'll have to use the radio freely and not run in a blackout."

Ranzo snickered. "In making a rabbit stew, mister, the first thing you got to do is ketch the rabbit."

THE Vanguard was snorting along at fifteen knots under a clear, starry sky when Mr. McNamara came on duty at midnight. He got a star fix and figured out the ship's position, which would place her approximately three hundred miles due south of the Cape Verde Islands. Here, he reflected, was about where that other U. S. freighter had got it—and if the German Intelligence was worth a dime, news of the Vanguard's sailing and destination must be known to any raider in these waters.

He smiled bitterly as he recalled the government's plea for a voluntary censorship by the newspapers regarding the movements of vessels, when all anybody had to do to possess the information was call at the customhouse and ask for it.

The third, whom he was relieving, came out of the chartroom where he had been making a final entry in the rough log and said to him, "I thought I caught the beat of a propeller a little while ago, Mr. McNamara."

The chief mate took down the receiver of the underwater telephone and listened. "I should say," he answered coldly, "that it is a propeller and that you shouldn't think. You should know." The third was only twenty-four years old and Mr. McNamara believed all modern youths should be castigated frequently for the good of their souls.

"If that's a submarine she probably can't do better than fifteen knots on the surface and this packet can step up to seventeen in a pinch. If we only knew for sure, we could outrun her."

"Hard to outrun a six-inch shell," Mr. McNamara replied dryly.

"And we ain't runnin'," came a piping voice from the door that led from the wheelhouse into the master's suite.

Ranzo was standing there, attired in an old woolen dressing gown and green carpet slippers, and his long white beard was bobbing in and out with every word. He took down the engine-room howler and handed it to the chief mate. "Cut her to twelve knots," he ordered. "All o' my people were nervous in the face of danger and I reckon I've inherited that tendency, because I just can't stand suspense. I got to have it over with.

Call me if anything worth mentioning turns up."

He returned to his quarters and the third said, "Mr. McNamara, that old boy is crazier than a hoot owl. He's asking for it. He won't run in a blackout and he's used the radio. Doesn't he realize a vessel all lit up can be seen ten miles away and that there's such a thing as a radio-direction finder?"

"When you're older, lad, you'll not question the actions of your superior."

"Sparks tells me the commanding officer of a neutrality patrol boat raw-hided us yesterday for breaking radio silence to permit Grandpappy to send birthday greetings to somebody and promised to report it to the Maritime Commission."

"We're not at war, the air's free, and speech is supposed to be," Mr. McNamara ground out passionately. "The old man finds it hard to pussyfoot, to play politics. He's little, but he's de-

when the dawn light was just beginning to spread out of Africa—Mr. McNamara saw a light blinking off the starboard quarter. He knew the international code and called out the letters to the second, who looked their meaning up in the code book. The first group of three letters meant: What ship is that?

MR. McNAMARA switched on the Vanguard's blinker lamp and replied, "Steamer Vanguard—Panama registry—New York to Cape Town with general cargo. Who are you?"

"Submarine," came the answer. "Heave to. Do not use your radio. Send boat over with papers and manifest of cargo." To that Mr. McNamara replied that he understood and would be over.

En route through the wheelhouse he set the engine-room telegraph to "Stop." Instantly the cessation of the engine throb awakened Ranzo; he was on his feet reaching for his trousers when Mr.

deck. Ranzo, with a thick hand, crossed safely over the gangplank.

He was a weird and w to meet at sea, for he wa divine service rather than submarine. He wore a silk trousers, frock coat, Asc suède gloves and spats. Sa submarine he lifted his bowed very formally. grinned and bowed even m "Welcome aboard my v Neptune," he greeted Ranz English.

"Permit me to introduce said Ranzo amiably, ret twitted. "I am Captain A I imagine you did not se Panama painted on the side sel, else you would not h to ask for a look at our p as how the Republic of Pan tal nation."

The submarine comma good-humoredly. "We kn due about here, of course, said, "and we knew also Panama was merely camo ever, if you are not bound port we may be inclined blind side to you."

"We're bound for a B Cape Town," Ranzo confes "but we are not carrying and just to prove it I have over a copy of our cargo addition to the ship's pap

"You are very kind, C submarine man said, and of yellow flimsy Ranzo l "but I must remind you upon being the sole judge a your cargo is or is not cont cuse me, please."

HE DISAPPEARED into tower and Ranzo, as little boy, followed him, st inside and watched him the bowels of the submari

One of her crew had, i while, tied the painter of t to one of the stanchions railing that ran around the The other handed his boat McNamara for the latter boat with at the stern, and a then resumed their search zon and the sky with binocu instantly one of them cried others turned as he pointed Vanguard.

Mr. McNamara droppe hook in the lifeboat, picked off automatic shotgun, swu trio and said cheerfully, "Sii ren—and lots of it." He taj to interpret his command.

They may not have unc words but there was no mis ing his action. So when Mr. waved them forward they

"So far so good, mister," F "That pirate only went d pretend to study the mani ship's papers to furnish an e us we're carrying contraba have to send us to the bo go through the forms. No neutral vessel without sear ing time to get the boats ov

In about ten minutes the commander appeared on Ranzo claimed his attentio with a shrill: "Well, what's mister?"

"You have a large cons steel rails aboard. Our enem steel rails for delivery to a C on the list of contraband, s no less than outlaw steel rai ery to a British port. I regre sity for sinking you. Retu vessel immediately. Twen after you reach her I shall pedo into her and start sh

scended from a line that fought naked to the waist with cutlasses and boarding pikes and served, barefooted, muzzle-loading guns on decks that were slippery with blood; a line that had a hot iron for a disinfectant following an amputation without an anesthetic. So he has an old-fashioned, probably obsolete, idea of national dignity and personal honor.

"Your generation wouldn't understand that, because somewhere along the road during the past twenty years a new and strange Americanism has been born." Mr. McNamara was so disgusted he forgot himself and spat to windward. He found it difficult to be patient with the cocksure opinions of the third, who, only a few months before, had been an A.B. with nothing more on his mind than schemes to dodge work and claim overtime.

AT FOUR o'clock the beat of propellers was loud and distinct. Mr. McNamara had remained on the bridge after the second had relieved him; he searched the sea to starboard while the second searched to port. At a quarter past four

McNamara opened his door to announce they would depart on the great adventure as soon as he was ready.

The runabout was swung out with her gunwales on a level with the Vanguard's rail when the bosun lifted Ranzo in. Mr. McNamara was the only other occupant of the boat and he had the motor turning over slowly, warming it; as the boat was waterborne he threw in the clutch and they chugged away toward the submarine. It was fairly light as they came up to her and Mr. McNamara noticed four dun-garee-clad men on her deck.

One of the Germans beckoned him to come on, so Mr. McNamara realized that would be the commander. He ran the motorboat alongside and two of the seamen snagged her with boat hooks and held her. There was scarcely a ripple on the ocean but Mr. McNamara would take no chance on Ranzo's injuring himself climbing from the lifeboat to the deck of the sub, so he tossed out two twelve-foot boards an inch and a half thick and extending from the rail of the lifeboat past the curve of the U-boat's

How to keep a good car good

EVERY car in use today must, as a matter of national need, now last the longest possible time.

That calls not only for *use* carefully considered to avoid waste of the country's supply of rubber, gasoline and oil, but even more importantly for *care* designed to conserve your car to the utmost. • If you can set a spark plug and have it right, adjust a carburetor for most efficient use of available fuel, align a wheel or adjust brakes to give longest tire mileage — fine. • If those things are beyond your mechanical bent, remember that your General Motors dealer is expert at maintaining

cars as well as repairing them.

• Right now, all of his interest and attention is centered on *keeping good cars good*, because he knows that for the present, war production comes ahead of providing replacements. • Meanwhile — he furnishes quality parts. He maintains an expert servicing staff. His shop equipment is modern and complete. • He is the man in your community best qualified to work with you to keep your car fit and efficient, to the end that the country's existing supply of automobile transportation will be sufficient to see us through to the day of final victory.

The Automobile User's Guide answers your questions about taking care of your car in wartime. For a free copy see any General Motors dealer today or write Customer Research Staff, General Motors Building, Detroit.

The same Imported
Briar you've
always smoked

Imperial

\$1.50

Billiard shape

There are lots of new materials everywhere these days, and substitutes, and a lot of them mighty good, too—but you won't find any in IMPERIAL. No substitute-wood. No artificial wood-graining on the surface. Because we believe that for real, solid smoking-satisfaction, and dependability, there's nothing like the genuine imported Mediterranean briar. Very little of it has come to this country for two years now, but we have it (being the world's largest pipe-makers, we've always carried great stocks). As long as we have it, you get it—at the same price you always paid for IMPERIAL (since 1933) \$1.50. No "breaking-in" these pipes—they have the exclusive IMPERIAL Honey-Treatment. Real honey blends with your tobacco, "mingles" with it, mellows your pipe as you smoke it. Get one today.

handed Ranzo the ship's papers. He had retained the manifest.

"Take a look at your target," Ranzo invited him sweetly.

The German took a look at the Vanguard, then another at Mr. McNamara's dark implacable countenance behind the automatic shotgun, then forward to where his men huddled. "Ah," he murmured, "funny business, eh?"

"I could die laughing," Ranzo said. "He who laughs last laughs best, my Yankee friend."

"The second you went below, mister, that was noted aboard the Vanguard. After all, we have twelve-power glasses in the pilothouse. So she immediately resumed her voyage, changing her course to due east, in order to present her stern to your torpedo. You couldn't hit her now, could you?"

"No, but I can put shells in her up to a range of ten thousand yards."

"I see you have a cannon on deck but if you try to use it the big fellow in the motorboat will be under the necessity of spraying the gun crew liberally with buckshot."

"I have no desire to sacrifice my men, and my submarine isn't the only one operating in the South Atlantic. In about five minutes my second-in-command will begin to wonder why I have not returned below with my crew and given the order to bring my craft into position to fire a torpedo into your steamer. Naturally he expects me to get rid of you very promptly, because there is always an element of risk when a submarine remains on the surface. So he will come up presently, very cautiously, to see what has happened. When he sees it he will go below and order a crash dive. Can you swim, Grandpa?"

"I BELIEVE," said Ranzo, "I'll go back aboard my motorboat. It would never do for a man of my age to get his tail wet. However, I'm an American and addicted to the habit of collecting souvenirs, so if you will kindly slip out of that belt with its holstered pistol and set it and your very nice marine glasses on my gangway I'll consider that a very gracious gesture on your part."

"Your desires are so modest, Grandpa, I haven't the heart to refuse them. Now what do you do?"

"When your second pokes his inquisitive nose up over the conning tower my official executioner will bust his bobstay," Ranzo declared.

But the German had his answer ready: "His body will then fall down into the control room and the third-in-command will immediately close the conning tower and order a crash dive. He'll know war has been declared and, in war, consideration of the safety of a few men must not be permitted to prejudice the safety of the ship. We will be left in the drink, of course, but we can all swim and after the vessel has surfaced again out of range of your shotgun you will be worked on with a machine gun and shell and shrapnel. I think you'll be gotten."

"Dang my buttons," Ranzo wailed, "looks as though we ain't as smart as we thought we be. Well, we got another ace up the sleeve of our vest. Trot forward, son, and join your men."

Ranzo waited until the German was about thirty feet away, then he pulled back the zipper on his brief case and brought forth a flat can, which he tossed down the conning tower, then stood on his toes, opened his mouth and thrust a thumb in each ear.

A second later there was an explosion and greasy gray smoke began to climb up from below. Ranzo shivered, recovered, picked up his brief case and souvenirs and walked with great dignity to the end of the gangplank where he paused, faced the submarine commander, bowed and shrilled, "Dive an'

be damned to ye! We're goin' home."

He stepped down into the lifeboat. "Pull in the gangplank, mister," he ordered Mr. McNamara. "No sense to wasting good lumber."

The Germans ran to the conning tower and were waiting there for the smoke to clear below as the two privates departed. Mr. McNamara tendered them that vulgar form of recognition colloquially known as the bird and touched off a day rocket, the signal agreed upon to let the Vanguard know they were returning. Ranzo came and sat beside him. "Let's shudder together," he quavered, "and, if need be, go to perdition together."

MR. McNAMARA grinned slyly and said: "If that sub's interior layout follows the customary pattern, the control room is just under the conning-tower hatch, sir, so that quart of nitroglycerin I got from the New England Wrecking Company exploded there and ruined every gadget, gauge and control, including the Heinies standing by for a crash dive. I hope for the best, but we may get the worst. However, that was the chance we had to take."

Mr. McNamara cut loose from the submarine and fled from there at forty miles an hour. Presently Ranzo shrilled: "Oh, my great patience! They're going to shoot us."

As the shell whooshed over him and exploded a hundred yards ahead of them Mr. McNamara said: "Over! Direction good!" Then he let out the battle cry of his race, "Faugh-a-gallagh," which, for the benefit of those not versed in the Gaelic language, means "Clear the road." He turned at right angles and dodged another one that was much shorter but far to the left. He reduced speed and one fell short on his right; shell fragments ricocheted off the runabout's hull, singing a devil's chorus.

"This is wonderful," Ranzo yelled. "I feel just like my grandfather."

"I'm glad I don't feel like mine," Mr. McNamara shouted back. "The British hung him—the Lord ha' mercy on him."

The submarine finally despaired of hitting such a fast-moving and skillfully maneuvered target and presently Mr. McNamara turned the wheel over to Ranzo and chugged away at trolling speed. He looked back at the submarine through the captured German glasses. "Yes," he declared, "we certainly messed up her innards. She can't dive and she can't surface completely, so she's headed west under a slow bell, to intern in some Brazilian port."

"If she gets there," Ranzo said, "her captain'll report to Hitler that he was exercising his right, under international law, of search, and we declared war on him—after he had told us we could proceed. Can't you just picture Adolf screaming like a drunken parrot and foaming at the mouth when he hears that? And some time tomorrow morning our State Department will be radioing us for a report and asking us what we meant by waging war on a nation we ain't at war with."

"And what will you say to that, sir?" "I'll tell 'em all to go an' pick on somebody their size. Still, mister, I reckon we'll be charged with piracy."

There was only one answer to that and Mr. McNamara gave it. He was quite out of patience with the United States of America's great exhibition of patience, so he said, "T'hell with 'em," and let it go at that.

AS THE motorboat was being set back into its cradle on the Vanguard's boat deck, the second mate met them. "What happened?" he asked anxiously.

"Oh, we argued them out of it," said Ranzo casually. "Sometimes I think I should have been a lawyer."

"I counted seventeen sounds I took

no is that nice-looking girl I
th lock crying and throwing
ye when we left Bush Termi-
rute Mrs. McNamara, sir."

Ranzo shook his skinny old fist under
Mr. McNamara's snubby nose. "You
marry her as soon as we get back," he
ordered. "I'm opposed to long engage-
ments because they tend to take a man's
mind off his job. You can afford to
marry her then because you'll be skip-
pering the Vanguard."

"Sorry I cannot accept the berth, sir,
but thank you for offering it. I'm a lieu-
tenant commander in the Naval Re-
serve and back in Washington this
minute some personnel officer is thumb-
ing my card and saying: 'Where's Mc-
Namara? We're going to need him any
day now.'"

"Since you're a reserve Navy officer
I reckon I'll have to radio the Secretary
of the Navy all about how you got that
German submarine. You should get a
piece of hardware for that."

"My girl would like that," McNamara
said carelessly. "I'll settle for com-
mand of a submarine so I can go nosing
around where I'm not wanted."

"Well, I'll not live to see the end of
this war, son, but I'll leave orders that
if and when you come in and demand
your rights you'll get them. And your
girl will still get that furnished home to
wait in."

Mr. McNamara had no chance to
make reply to that generous offer, for
at that moment Sparks burst into the
room, wild with excitement.

"We're at war," he yelled. "Japan
just attacked Pearl Harbor!"

Ranzo, for one shocked moment in his
life, was speechless. Then, with char-
acteristic speed, he bounced back. With
a wide grin he turned to his mate:

"Bless my buttons, Mr. McNamara.
We didn't get under way any too soon,
did we?"

"Chief," Mr. McNamara said fer-
vently, "you are the very devil of a fel-
low for hitting a nail on the head."

Ranzo went over and sat down
weakly. "What an exciting way we chose
to spend the Sabbath," he murmured.

our readers have cudgeled
out their alert minds—slogans
will. They hope, inspire their hun-
d they some million fellow citi-
defe our enemies with dispatch
ality. The colonel has manufac-
o slen but he recalls Mr. Wild

Jim Wilhite. "Mr. Wilhite," says the
colonel, "became famous in the Ouach-
ita River valley because he never
wore shoes while plowing and required
all his hired hands to make barefoot
contact with Mother Earth. He insisted
that the shoeless system enabled work-
ers to 'Make Every Toe Push a Little.'
Wild Jim's friends are claiming that his
was the system used by MacArthur and
his men on Bataan. I have the honor
to report that we in western Arkansas
have adopted the Wilhite motto and
that we unselfishly offer it to the nation,
including Washington: Make Every
Toe Push a Little."

AND we are sure that you'll be pleased
to know that, in the interests of na-
tional defense, the War Production
Board has refused to release the alumi-
num necessary to the manufacture of a
large number of fudge warmers for our
Army training camps. That's right—
fudge warmers. They are, or would
have been, cunning pans in which fudge
is warmed. We never saw one nor had
we ever heard of one before meeting an
extremely irate WPB gentleman who
had just come from the meeting at
which the No Fudge Warmers policy
was adopted. He had fought fudge
warmers with great vigor, even making
an impassioned address to his fellow
conferees, concluding with these unfor-
gettable words: "We must throw the
enemy on their Axis without fudge
warmers." . . . W. D.

You can TIP YOUR HAT TO a guy named JOE

YOU and willing millions of
other car owners have cut down
thirty, fifty, seventy-five per
cent, in the use of your auto-
mobile. You do it gladly, beyond
buying bonds, beyond paying
taxes, beyond war work, as your
contribution to American victory.

And do you realize that your
favorite service station is match-
ing your contribution—match-
ing the contributions of all of
its customers?

Thousands of the boys have
changed their station uniforms
for Uncle Sam's, but those who
are still behind the oil cans and
the pumps have lost business to

just the extent to which you've
stopped buying their oil and
gas. They can't sell you tires.
Unable to replace boys gone to
war, many stations are short-
handed, and are working long
hours. All out for victory; all in
at the end of the day.

Yet Joe (or Tom or Fred or
Larry) is cheerful when you
stop for your less frequent oil or
gas, for that free air to keep
your tires in shape, to have your
windshield wiped, your battery
or your radiator inspected. Yes
sir! You can tip your hat to Joe.
He's sacrificing as you are, and
just as willingly, to win the war.

100% Pure Pennsylvania Motor Oils play a vital part today in the
efficient operation of planes and battleships, tanks and trucks, and,
of course, millions of automobiles, old and new, both in military and
civilian use. Made entirely from Pennsylvania Grade Crude Oil—
the world's choicest crude—they are the preferred lubricating oils
for every form of motor transport.

For your protection, fine oils made from
100% Pure Pennsylvania Grade Crude
are entitled to carry this emblem, the
registered badge of source, quality,
and membership in our Association.

Pennsylvania Grade Crude Oil Association publishes this advertisement not
alone to emphasize the high quality of its motor oils, but also to pay tribute
to the hearty co-operation with America's war effort of the thousands of service
stations and other motor oil dealers.

USE IT WISELY!

The Tycoon of Battles

Continued from page 15

could catch the sound of a half-crown rubbing against the lining of someone else's trousers. He got quite a reputation for being cute before he got out of school. Everyone said Ennery would end up either a millionaire or in Dartmoor. But he was too cute to do anything wrong. Anything the law might object to. He didn't need to.

I started to work for my father when I was seventeen. Ennery had already gone into wholesale in Cheapside. He was doing well in a small way.

I don't know where he would have wound up if this feller 'Itler hadn't started mucking about; though it wasn't 'Itler that sent Ennery into the army, dragging me along with him. I thought it was—but I should have known Ennery.

I hadn't been seeing much of him. He had a girl. Heard enough about her, I did. Fair made me sick. Mother and Aunt talking about her—how her old man had lots of cash and her giving Ennery presents. And how well set up he'd be if he married her. I didn't give no mind. I'm satisfied with little and without Ennery around I could keep that.

BUT along come 'Itler. He put one over on Mr. Chamberlain and then rubbed it in. He give Poland the push and what was there to do? Aye, that's the right of it, mate. We thought so too at home. Old Winnie took over and Pa and Uncle Fred talked about the Contemptibles and how France would give 'Itler his comeuppance and everything would be all right.

I believed them. But one night Ennery meets me when I'm leaving for home. He's little, but he's big in the shoulders. Impressive is what you'd call him, mate. He says, "Hullo, Bert," and I say, "Hullo, Ennery," and put my hands in my pockets before I remember I'm stony. Not a farthing. I'm safe.

He says, "Come along. Let's have a pint."

"I haven't a penny," I say.

His face doesn't change. It's sadlike which makes me curious for he's usually very chipper. He looks at me. "That's all right."

I don't like it a bit. It ain't Ennery. But the look on his face has got me so I go along with him.

We crowd up to the bar and Ennery orders two bitters without even chaffing the barmaid. He takes a long draft. He puts down his mug and looks at me. "Bert, we're for it. England's in it up to her ears."

I consider that. I say, "Yus."

Ennery nods. "Every man should do his duty. There was your father and mine. They did theirs the last time."

"Uncle Fred was conscripted," I remind him but Ennery just lifts his pint again. He says, "I been thinking. We should be in it—me and you, Bert."

I look at him. I ain't thought of it before. I guess no one had. We was at war but there ain't been no war really. But he'd made me think. He started talking and the end of it was I felt he was right. I was for it. He called for more beer and I was sorry for all the horrid things I'd ever thought of him. I was ready to tell him I was sorry but he didn't give me time. He stood tossing up a florin and shaking his head.

He says, "We'll go home. We'll tell our people."

We went home. Ennery left me at the corner and I went on.

I remember we was having tripe and onions with a real apple dumpling—steamed—to follow. My favorite din-

ner. I told Pa and Ma I was enlisting. Ma started to cry but Pa just looked at me. Then he nodded. He said, "Come, Ma. Serve up the pudding. And don't forget the custard neither." He stared at his fork. "Our Bert can't do no less, lass."

I didn't have a chance to tell them Ennery had got me to go. I was too bothered with Ma and the lump in my own throat.

We was having our tea when Uncle Fred, Aunt Mariar and Ennery come over. Ma blurts right out that I'm going to join up. She starts crying. Aunt Mariar pitches in. Uncle Fred says thoughtful, "Someone has to go," and I look at Ennery.

He is standing there in our dining room. He has been forking up the remains of the apple dumpling. He turns

up the whole scheme because he'd discovered his gal's pa had lost his cash.

Couldn't he have told her? Ennery? That wouldn't be him. He has to go roundabout with everything.

WELL, I joined up and got into the Marines. Ennery, being as wide as he's tall, went into the Lunnon Rifles. I didn't see him, which was fine, since I had a paybook and without Ennery around I had money in my pocket.

I heard of him, though. Blime if I didn't. Nothing else but. He was in the Magginnot Line. He was in Paris. Where wasn't he? He'd been made a corp'ral. He'd been made a sergeant. He'd been made a company sergeant-major. I was going up, too, but you'd never have known it. All I ever heard was Ennery. It fair made me ill.

BUTCH

By Larry Reynolds

"At first he denied any guilt—then we mentioned that it looked like the work of a mastermind"

just as if he'd never heard about it. He says, "What? Bert's going to enlist?"

Ma says, proud but sniffing, "He is. Your cousin's going, Ennery."

"Well," Ennery says. "Well, if my cousin is going, and him younger than me, I got to go too. Ma—Pa, I'm going to join up with Bert."

YOU should have heard them carry on. It was fair terrific. No one even looked at me after that. Even Mother perks up and beams at Ennery. Then Aunt Mariar says, "Poor Aureliar. What of her, Ennery?"

Ennery puts his hand over his eyes. He says, broken like, "My duty is clear, Ma. My duty is clear." He looks at us all, solemn, then back at his Ma. "I can't bear to tell her. You tell her for me. Tell her I can't expect her to wait for me. Tell her I release her, Ma."

Noble? Is it noble you say, mate? You don't know Ennery. He'd thought

Then the war bust out proper. Holland, Belgium—and Ennery somewhere in the midst of it with the Rifles. I began to feel like a scrimshanker. You'd think I was in mufti to hear how they talked about Ennery and never looked at me.

I was at Plymouth when the big fuss came. Holland out—Belgium quitting. Our flank exposed and the French getting rubber legs. Who knew what to think? Something was going on but we didn't know what.

I was in the barracks this morning when up comes my corp'ral. "Captain wants yer, Sergeant," he says. "I think we're pushing off."

He had the right of it. Half an hour later we're on a destroyer making for France.

Yus. That's what it was. Dunkirk. But we didn't know it then. All we knew was that as we got closer to where the haze was we could hear a terrible sche-

mozzle. Ships was sta- ing in the shore and we coul- t bel- eyes when we saw the each- was covered with tro- and French.

PROVIDE FOR THE COMMON DEFENSE, TO PROMOTE THE GENERAL WELFARE"

medicine for big bombers

to spoil a bomber's aim is to hang a curtain of steel over your ship and dare him to fly through it.

That curtain of steel up there requires flexible guns—anti-aircraft batteries that throw explosive shells into the air to approximate machine-gun fire.

The plant of the Westinghouse Electric Company the Navy, a few months ago, plans for such a gun. And to Westinghouse given the important job of building what would control the aiming of these quick-firing guns . . . enable them to bring enemy aircraft like an avenging angel.

and the Navy Said, "Well Done!"

Now that Westinghouse plant, there floats a "E" pennant—for excellence—the service can offer, testimony to the way in which this Westinghouse plant works for Uncle Sam's fighting forces. This plant is able to learn the new tech-

niques involved and get into growing production of these mounts so quickly? The answer lies in a Westinghouse characteristic called "know how"—the ability to get things done in the best possible way.

This Westinghouse "know how" makes itself felt wherever Westinghouse craftsmen build things . . . wherever Westinghouse products are in use. Whether for the common defense or the general welfare, this "know how" is doing a job. The same skill that made so many splendid things for peacetime living is now being applied to many important war weapons.

"Know How" Will Work For You Again

We look forward to the day when we can give your home,

your farm, or your factory the full benefit of Westinghouse "know how" again. To speed that day means just one thing to us: to produce, in ever-increasing quantities, the tools with which to get the victory job done.

of the boys are aboard. We're going up the road a bit."

He looks pained. But I know it's about his tea.

I swing aboard when the lorry comes by. The corporal's still grousing but he is loving up the Bren with one eye on the sky.

We push along at a fair clip. All I know is that Ennery is up there and maybe he's for it. Blood is thicker than water. Ennery has got to be helped.

We don't get strafed by no Jerry planes. There's bigger meat at the water and they're all headed that way.

Just outside the village the captain spoke of. I have the driver slow down. There's firing up ahead. We push on cautious and come onto the cobbles of the main street.

The houses are deserted. Some of them have been bombed pretty thorough and there's still smoke and some flames. But not much.

The road splits in the middle of the village. Splits in a Y into two smaller roads. And right at the fork is the pub the captain was talking about.

I give orders to swing the lorry around. There's no room further on. I tell Corporal Isaacs to keep a couple of men with him and cover us with the Bren. Then I have the rest of the men fix bay'nets and we go on the double toward the pub and the firing.

I holler. I get to the door first. It opens. A Lunnon Rifle trooper sticks his bay'net out first and then his homely pan. "Hullo," he says. "Come in, Sergeant. We've just finished tea."

I'm fit to be tied. "Is Sergeant-Major Corkle here?" I ask.

"Inside," he says.

I PUSH past him into the public room.

It's one of them big beamed rooms with the windows sunk in the walls, and the walls is three foot thick. They've got the windows knocked out and a couple of Brens mounted to face the Y. The men are at their posts, not paying much attention to the Jerry sniping. And away in a corner, in a sort of alcove, is Ennery and a sergeant. Sitting at a table with the Crown and Anchor mat between them. As I come up I hear Ennery say, "You lose again, Sniffen. Better luck next chance. Play up, lad."

I'm so mad I can hardly speak. Ennery looks up. He says, "Hullo, Bert. You here?" and looks down again.

I say, "What the ruddy hell's the matter with you, Ennery Corkle? Don't you know the ruddy Jerries is right on your tail?"

"I'm sitting on it," Ennery says. "And mind how you talk to your superior officer, Sergeant Corkle."

This sergeant with Ennery—this Sniffen says hopeful like, "Is there an officer with you, Sergeant?"

"There ain't," Ennery says.

"Shouldn't we stop?" Sniffen asks and Ennery glares at him.

"You still got three quid, seven and six."

"But I had twenty pound when you ordered us in here," Sniffen grumbles.

Ennery gives him a look. "Sure you had. Cleaned out the sergeants' mess you did when I was attending headquarters meeting. Couldn't postpone your little game until I got there. Make your play, Sniffen."

That was when I knew, mate, that Ennery was incurable. That was when I felt me bile the most—or at least I thought it was. I said, "You did this on purpose. Just so Sergeant Sniffen couldn't get home with his cush before you got it away from him. You put us all in danger because of—of—"

"Why, Bert," Ennery says. "You know it ain't so. Someone had to stay and give Jerry a halt. We're waiting for him to get done scratching his head and figuring just who is here holding up

his progress. Me and Sergeant Sniffen is having a bit of a game to pass the time away."

Sniffen gives me a mournful look I don't need. I swallow to get breath to give Ennery what for. I don't have time, though. A lad at a window cries, "Here they come again, Major. Them ruddy cycle Jerries."

Ennery says, "Dust them off. I won't be a jiffy. Come on, Sniffen—shove it out."

I run to the window. Up them two narrow roads come Jerry motorcycles. Four singles up front and behind four more with sidecars and machine guns.

They come pretty close and the snipers in the houses lift their fire. I push one of the lads away from his Bren. I hear a chair grate and I turn my head. Ennery is stuffing Bank of England notes into his tunic pocket. I don't see Sniffen but I think I can hear a hollow groan. Ennery makes for the other gun.

He looks at me. "We'll give them a bit of a dusting. Whenever you're ready, Bert. How did you leave Ma and Pa, and Aunt Em'ly and Uncle Charley, by the way?"

I hadn't time to cuss him. He cut loose with his Bren and I followed suit. We mowed the leading Jerries, and the others disappeared quick as quick.

It was good shooting, but trust Ennery. "You're aiming high, Bert. Watch it. You don't want them to tip their hats. You want them to bow—permanent."

I JUST glared at him. He was stuffing the Crown and Anchor mat back inside his tunic; fastening the buttons again. He looks around. "What about our rear? You seen to that, Bert?"

"I've a lorry with a Bren," I say. "Facing the way we should be going by now. If you've got all the poor man's pounds, shillings and pence, can we be moving on, Sergeant Major?"

"No sarcasm," says Ennery in high good humor. "There's time. While we're here we might as well keep Jerry scratching. What's the hurry?"

He starts counting his money, happy as a lark. Jerry begins sniping from both sides. It doesn't do much harm. The bullets spang off the pub walls and go singing every which way. We give

them a couple of raking bursts, and more glass showers down in the streets.

I was getting windy, though. I could just feel the whole Jerry army with 'tler himself in high boots goosestepping at us from behind the houses. I wanted to get back. But Ennery just counted his money and smiled.

We kept a nice even fire on them houses. We didn't see any Jerries. No one got hurt. They stopped firing—so we stopped, too.

THEN I heard one of the men yelling from upstairs. I put an eye over the windowsill. I couldn't see anything, but I could hear. It sounded like a wedding party with pots and pans.

Ennery folded his money and put it away. "Tanks," he said. "Big, too. Time to get going, lads."

I didn't see no tanks. I didn't see how the street was big enough for any tank to pass. Then up ahead one of the

spread its innards on b... ing the road behind us... free breath for the da... when I hear a bullet pi... Ennery is two paces ah... always faster of foot... next one got me instea... felt something hit me—... push. Thank you kindly.

What's that? You do un... I feel? Of course you do... man would understand.

That Ennery! Victorier... Ph-l-l-u-u-r-r-t!

THE END

We've stolen a year's march on the Axis

**Right NOW we're building airplane engines at the rate
we were expected to hit in late Spring 1943**

*stn to this, enemies of
America:*

Probably know our first
moment in Uncle Sam's war
program — building engines for
our aircraft.

Yet you even knew what our
production schedule was sup-
posed to be — though we won't
lead it, on the chance you
weren't heard.

We will let you in on this,
by way of giving you some-
thing to chew on:

During the month of March we
built engines at the rate set for
the month of December.

In the first three months of '42,
we turned out as many plane
engines as were asked of
us by the end of June.

For this month's output —
April — it's already 1943 by our

rate-of-production calendar; en-
gines are now rolling off the line
at the pace projected for *a whole
twelve months from now!*

And if you add April's engines
to those we've already built, they
total more than were expected
of us *by the end of this coming
September.*

We can tell you something else
— these engines are *good*. They're
built to be *unbeatably* good; there
are as many man hours of work
in one of their crankshafts as in
a whole Buick car.

The *very first one* passed Uncle
Sam's tough requirements with
colors flying, and one of the first
dozen (which is something of
a record) faultlessly passed
the type test in record-breaking
time.

They're passing flight tests, too,

very handsomely — doing their
job in a way to match the gal-
lantry of the boys who fly them.

And all the while we're stepping
up the number of men at work.
One of our plants had more
than three times as many men
on the job in March as three
months earlier, while another
had almost four times as many.

So we're doing pretty well with
our time, short as it is. Yet we're
far from satisfied.

We've squeezed six months into
three, will squeeze a year into
six, and we're going on from
there — which looks like we've
stolen a year's march on your
calendar, doesn't it?

All of which we thought you
ought to know in case you're
revising your timetable.

There's a Time to Give Your Throat A Rest!

Change to Spuds

Enjoy Their Soothing Coolness!

Whenever smoking seems "hard on your throat," change to *mildly mentholated* Spud Imperials. They're specially designed to protect your throat from irritation caused by cigarettes made the usual way. In Spuds you get:

MILDER MENTHOL—Because there's *just enough* menthol, distributed evenly throughout the cigarette by an exclusive patented process. *No menthol overdosing!*

GREATER SAFETY—Because the special moisture-retaining agent used in Spuds produces none of the common throat irritant found in the smoke of nearly all cigarettes. And, with their 20% greater length, Spuds give you a cooler, better-filtered smoke.

EXTRA QUALITY—Because only the finest vintage tobaccos—aged to perfect mellowness—are blended into Spuds. No coupons in the package—just fine tobaccos.

Try these new improved Spud Imperials for a few days. Or smoke them regularly, as thousands do, purely for pleasure. But by all means change to Spuds whenever your throat is irritated.

Wrong Turning

Continued from page 21

delicate beauty and all it stood for crept unwelcome into his mind: the security that comes only with generations of unquestioned wealth, of quiet living on accepted acres of inherited land. And the vision that replaced this thought was less pleasing: Jean, the product of a life like that, brought face to face with reality; a year of married life with a not too successful engineer; bewilderment deepening into sullenness, and protest into a pout.

The picture hurt him and he shook it from his mind, tilting the quinine bottle. Two white crystalline pellets fell out; he tossed them in his mouth and washed them down with a glass of water. Then the bottle was empty and he looked at it doubtfully.

Oh, well, he recalled, there's another bottle in the car. The fever's on the downgrade anyway. I'll get her home safely, and after that—

He went into his bedroom and lay down on the bed. For a moment the room seemed to swing around him and there was a buzzing in his ears. Then things quieted down.

And after that, his thought persisted—after that I don't care what happens.

DURING the last hour the wind had shifted. It had swung around to their rear and grown in intensity until it seemed to hurry the little car through the night. Tom knew there was no chance now of outdriving the storm. It would chase them, howling at their heels all the way into Brownsville.

That worried him at intervals. There was the possibility that the slippery roads might slow them up, make them waste time which he could not afford. It was after nine now—more than eight hours since he had taken his last dose of medicine—and he knew that he would have to stop soon, have to find some excuse—

But there were other intervals when he didn't worry at all, when he felt quite free and lightheaded and strangely sure of himself.

He tried to tell Jean about this once. "I've learned to be practical," he said. "I had to learn it, leading the kind of life I have." He thought about it. "A rotten life. Bad food, bad water, discomfort, hardship. Thank God you've never had that sort of thing. You couldn't stand it."

"Why not?" Jean asked. But she didn't turn around. She continued to peer straight ahead through the windshield, her face set and white in the darkness. "There's a light ahead. It's the crossroads store—Mr. Browning's place."

Tom pulled over to the left and ran the car under the dripping eaves of a rickety wooden structure standing by the side of the road. He shut off the engine. "Only fifteen more miles," he said in the sudden silence. "Go in and get Mr. Browning to give you a cup of coffee."

She started to say something, changed her mind and went up the stairs into the store. As soon as the screen door had closed behind her he opened the compartment in the dashboard and felt for the quinine bottle. His fingers groped through the darkness, nervously at first and then frantically. He took the electric torch from its rack and flashed it into the black space. Gloves, driving license, cigarettes were there, but not the thing he wanted.

There was no bottle of quinine.

Temperature 103.6—Pulse 150. Tom put the thermometer and the watch

away and stared bleakly at the rain. He remembered the nasty part of malaria spaces in your mind. It was in the pocket of his coat.

Fifteen miles to go and the temperature rising to a hundred couldn't be done; he would have to drive the rest of the night. He thought, I can't do it; it's too groggy to resist her. He lay in bed in that Union Station call home, with a dozen army of flunkies to wait everybody will be very k sorry! Sorry I didn't have go off and die by myself.

His ungloved hands gripped the wheel tightly. Somehow I've got to get through.

If only it were a little less.

Something happened to track of time. His mind wandered where else and, when it was still sitting there and waiting to himself laugh. It laugh, starting as a chuckle on a high suspended note, alarmed, he cut it off short by the window by his side shouted. "Come on. Let's go."

The answer came softly beside him. "I'm ready to go."

"Oh!" He stared at the road.

"Sorry. I didn't hear you."

He stepped on the starter clutch and turned the wheel to the left. Jean said quietly, "Brownsville was straight ahead."

"I know." It was hard laughter from breaking out again. "But this road is shorter. Don't you remember just below the schoolhouse a bridge?"

"I remember." She said.

as was though for the first time an interest in where they were going. She thought it's a very good idea in an almost savage tone.

THE car scurried along the road like a muddy lizard, its headlights flung the darkness and the road plunged almost immediately into a grove of trees which grew closer together as they passed the road narrowed to two into which the wheels of almost axle-deep.

Tom sang to himself. In his ears was much louder than the meaningless words of the song. He looked at the speedometer surprised to find that the only four miles since leaving the road; it had seemed infinitely far.

Jean was talking to him to pay attention but it was involved. The phrases he repeated and examined apart context made little sense.

"... and I loved you, a married." Yes, that was had been married and he himself a washout, a false who couldn't afford the luxury who had to take her back family. "... you treat them they did. You wouldn't was grown up ... a woman you couldn't expect her to she wasn't raised that way her fault. It wasn't any just the rotten way things ing out.

he said again. And this time

It was shortly after dawn when he
awoke the next time. He quietly
propped himself up and watched Jean
as she brewed coffee. The early sun-
light fell on her loose hair and tinted the
outer edges into a halo of gold. She
was humming softly to herself and there
was a smile on her face that he had not
seen for a long time. Not since the first
days of their marriage, he remembered,
and thought it was funny that she could
find anything to smile at.

"Well," he said aloud, "I guess this is
the day."

She whirled around, startled. Then,
as the meaning of his greeting sank in,
the smile faded from her lips and the old
sullenness crept back into her face. The
corners of her mouth drew down and her
eyes were listless once more.

"Yes," she acknowledged tonelessly,
"I guess it is. Have your coffee. I can
leave whenever you're ready."

He was surprised to find how weak he
was, but the scalding liquid put new
strength into his legs.

She came in quietly, dressed for the
trip. "The car's waiting," she said. "I
knew you'd be in a hurry. I dug it out
yesterday."

He looked at her, at the white fore-
head creased again in tension and the
red mouth settled into what seemed a
permanent pout. He looked at the deli-
cate hands, daintily gloved now, and
wondered.

"Well," he said, "well, we might as
well get going."

They walked out and climbed into the
car. He swung it around and headed it
back along the winding road that had
brought them to this place.

When they came in sight of the cross-
roads he eased the pressure of his
foot on the accelerator and the car
slowed down. To the left and right ran
the main highway which they had left
two nights before. To the left was
Brownsville and to the right the city to
which he must soon be returning.

"Jean," he said, "I haven't thanked
you yet. A lot of people have had
medals given them for doing less cou-
rageous things than you did."

"Forget it." Her voice was thin and
tight. "You were sick; there was nothing
else for me to do. Besides, it was
my fault. You'll have to hurry if you
want to get back to town today."

HE KEPT the car at its snail's pace
and the highway drew slowly nearer.
"Your fault? Hardly, Jean. You can't
be blamed because I got malaria."

"No," she said, "but I can be blamed
because I let you take that wrong turn-
ing. You see, I knew the bridge was out.
Mr. Browning told me."

Things suddenly became very clear
to him; he marveled that it had taken
him so long to understand. The car
jerked to a halt and he let the motor
idle in neutral. After a moment, "Dar-
ling," he said slowly, "this is a funny
thing to say and a funny time to say it,
but it's now or never." Then, with a
rush, "I love you, but right now I can't
afford luxuries. Where I have to go
there isn't room for them."

Jean's eyes were on the hands
clenched tightly in her lap. "Is a wife
necessarily a luxury?" she murmured.

Tom shook his head. "No," he said
very definitely. "Sometimes she's a
downright necessity." He slipped the
car into first and gave the wheel a
wrench that pulled it around to the right
—the way which led back to the city.
"Okay?" he asked her.

Jean didn't answer. She just smiled
with lips that were no longer pouting,
and looked at her husband with eyes
which held no trace of sullenness. Then
she settled back in her seat, noting what
a bright day it was now that the storm
had passed.

THE END

NO. 4 IN A SERIES OF SYMBOLIC STATUETTES

Bellin

Long

Midway

Over-Knee

One Contact that's Not Binding!

Jockey Underwear hugs your body with the sleek, smooth contact of a second skin—there's no bind, bunching or crawling. None of that "tied-up" feeling illustrated by our Jockey dog's leash curled around his master's mid-section. And there's good sound reason why!

Jockey Short

Jockey Underwear—originated and manufactured by Coopers—is tailored to fit the male figure everywhere. The patented Y-front* construction provides mild masculine support. The knit fabric adjusts itself to every motion of your body. Jockeys are buttonless, easy to launder, and need no ironing. Now first choice of millions of active men, Jockey is famous as the "underwear that ends squirming." And, because the construction features are patented, no other underwear can give you quite the same combination of comfort and hygiene as Jockey.

Two-piece . . . varied leg lengths . . . contoured shirts to match. Children's sizes down to four years. For widest selection of fabrics, visit "Quality Corner" at your favorite store. And always look for the words "Jockey" and "Coopers" on the label. They're your assurance of satisfaction.

Worth More than a Cow

Continued from page 18

though, must it be a major cause of death. It may even be forgotten as the subject of a crusade at Christmas time.

By early October, Minnesota doctors believed in the ultimate success of the experiment. In less than five months, 5,251 of Meeker County's 19,000 residents had submitted voluntarily to the test; 814 positive reactors had been found and 782 of these were X-rayed.

Before milk was made pure through bovine tuberculosis tests and destruction of diseased cattle, pathetic little patients coming to hospitals for crippled children in Minnesota showed 70 per cent of their ailments traceable to tuberculosis of the type contracted from cattle. Today, that figure is down to three per cent.

This is one reason why Dr. J. A. Myers and his committee on tuberculosis of the Minnesota State Medical Association went to Meeker County for the new campaign. Veterinary surgeons nowadays test all dairy cattle regularly for tubercular infection. Never before has such a universal test of all humans in any community been made.

Doc Sellers put it in a simple question.

"If the vets can do it," he asked, "why can't we?"

The other docs in Meeker County agree with him. They haven't any legal compulsion to force tests on their neighbors and friends, as the veterinarian had. There's no compulsory testing law for humans yet.

But the Meeker medicos are an exceptional baker's dozen. If they weren't, they wouldn't have volunteered to give away their services. Those services, at ordinary billing to Meeker County residents, would cost \$75,000 to \$100,000. The thirteen doctors, plus one just across the county line at Kimball, are splendid samples of the best country physicians.

Co-operation Means Strength

What a traveler would not see casually is the feeling in Meeker for co-operative effort. Land O' Lakes Creameries, largest dairy co-op of its kind in the country, was launched at Litchfield. Electric power flowed through the first co-operative REA distribution line in the Middle West to farms in Meeker County. Frank Marshall was the first county agent in Minnesota. Now, he supervises one of Uncle Sam's first tenant-purchase projects, with 105 Meeker farms. This was one model used by Congress in framing the far-reaching Farm Tenancy Act.

Naturally, the farmers have divergent political opinions. The conservative Farm Bureau has a strong membership. A lot of Meeker County farmers were on the rolls of the radical Farm Holiday Association. Republicans and Farmer-Laborites fight it out with their ballots on election days.

When it comes to co-operation, political hatchets, if not buried, are at least held behind backs or put in belt sheaths. Perhaps the social seed planted behind the Forest City stockade took firm root and has grown since into a healthy crop.

That's why Dr. Karl Danielson, county chairman of the tuberculosis test campaign, and his colleagues are pretty certain of success.

The white-haired healer, known to everyone as Dr. Karl, is dean of the county's physicians. He adds a dignity to the title of country doctor. Thirty years of trading with the people of Meeker County have been profitable

for both. He gave them skill and understanding, long hours of unselfish service. They gave him comfort, friendship, admiration. By any standard, his career spells success.

When he first came to Litchfield, he had a small family, his skill, his instruments, and a horse and buggy. He felt he had found the right place, went to work. He is still working, at sixty-six.

It was to Dr. Karl that Dr. Myers went with the tuberculosis committee's proposal. Other physicians met with them at Dr. Karl's call. The other doctors are the same kind of men as Dr. Karl, but younger. Whether they are members of the State Medical Association or not, they have acute infections of the Meeker County co-operation bug.

"The State Board of Health will furnish the serum," Dr. Myers told them.

from Eden Valley. Dr. G. E. Sherwood, the man from Kimball, across the line in Stearns County, agreed to help.

The medicos remembered that when the cattle-testing project began, all was not so easy, even with a law for authority. Some of the farmers united and fought the plan clear to the United States Supreme Court before giving in.

Incidentally, that ruling paved the way legally for dairy cattle testing all over the United States. It wasn't the effect the objectors expected.

To help forestall possible opposition, Dr. Karl and his group lined up support from as many community leaders as they could. They enlisted the aid of Frank Marshall, and of Ralph Wayne, the present county agent. They called in Mrs. Gladys Keyes, the county nurse, and Miss Ruth Peterson, the superin-

"We'll furnish films and the cost of X-ray technicians. If we can't pay all the cost, we'll raise the money somehow. You fellows will do the work free, through the X-ray stage. When you find active cases, they will have to be taken care of just as in normal practice. Will you do it?"

The answer was a chorus: "We will."

In addition to Dr. Karl, the group included his son, Dr. Lennox, and Dr. Lennox's wife, Dr. Julia Danielson. There were Dr. C. A. Wilmot and Dr. H. E. Wilmot, Dr. V. J. Telford and Dr. W. E. Macklin, all of Litchfield. Dr. G. K. Sellers, who examined the Novak family, and Dr. A. C. Peterson drove across from Dassel. Dr. J. Y. Feinstein had come from Grove City. Dr. Frank Brigham and Dr. F. J. Lindseth were in from Watkins, and Dr. D. C. O'Connor

tendent of schools. Each of these and many others worked to prepare the way for the new plan. It was another epidemic of co-operation.

A public meeting at the Litchfield High School was the official opening. Famous doctors from around the state were there. County and city officials and leaders appeared.

Immediately the campaign was launched, the doctors concentrated on testing school children. In this way they would learn how parents and other adults viewed the project. No serious opposition developed. Public support became evident through the 5,000-odd tests in less than five months, and the subsequent X-rays.

From some of those X-rays came swell arguments for the project.

There was a sixty-year-old bachelor.

SOUND YOUR Z

PENNZOIL

OVER 700 CHANCES FOR ERROR...IF YOU'RE NOT CAREFUL!

• Yes, if you just ask for "Pennsylvania oil" you may get any one of more than 700 different brands. You don't have to take that 700 to 1 chance, and this looks like a good time to avoid it.

When you sound your "Z" for

PennZoil motor oil, you have the satisfaction of knowing that your engine is as well lubricated as any on the road. That it will give you all the trouble-free miles it has. And that you have taken care to conserve your car for those last thousands of miles when you may need it badly.

Better chassis and gear lubricants are as important to long car life as is better motor oil. You can get them both at the yellow PennZoil oval sign. Just be sure to sound your "Z"—and avoid mistakes.

WHY IT'S BETTER FOR YOUR ENGINE

Much wear in modern engines starts with oil breaking down to form sludge and varnish on vital surfaces.

Because of its 3 extra refining steps, PennZoil resists sludge and varnish. Your engine stays cleaner and therefore lasts longer.

GIVES YOUR ENGINE AN EXTRA MARGIN OF SAFETY

Be Oil-wise
Sound your "Z"

Our Fighting Men

Continued from page 16

in them. But she's getting back at him. "Saturday night," she wrote him, "a certain party called up and we went places I can't identify for you. After dancing until an hour I don't think I should mention we drove to a pretty spot, which I can only describe as X, where we talked along lines I cannot divulge." Pvt. Gretz says he's standing firm in his determination to give no details of his activities but that she will—or else.

NAVAL TRAINING STATION, San Diego. When Haldane Holstrom arrived here he took a look each at the bay and the Pacific and yawned. First time he was given instruction in handling a boat he was entitled to a third yawn; instead, he was the most attentive and interested sailor in the group of new men. Holstrom built himself a boat, once, near his home in Coquille, Oregon; then toted it over to Wyoming's Green River, loaded it with food and water and shoved off. That was Sept. 29, 1937. Fifty-two days and 1,100 miles later he nosed his craft against the concrete of Boulder Dam, the first man ever to run the rapids and gorges of the roaring Colorado River. Remember? The Navy did and is glad to have Apprentice Seaman Holstrom.

FORT SILL, Lawton, Okla. Civilians may be doing without pants cuffs for the benefit of the Army but the Army is cutting down, too. Under the new table of basic allowances, men at Sill are trying to make two pairs of shoes do the walking four pairs did before. Moreover, the four summer uniforms have been reduced to two, the eight handkerchiefs to six, and so on along the line. Orders to turn in surplus equipment caught some of the boys short and a lot of borrowing went on until the laundry came back. No. 1 casualty in the confusion was Sheppard Field's Pvt. Richard Walker, who turned in \$55 with his two pairs of khaki pants, then dug through the pockets of 600 pairs in the supply room without striking pay dirt.

ARMY FLYING SCHOOL (formerly Sloan Field), Midland, Texas. Latest addition to Army language is Bombardier Talk, developed by the Hell from Heaven Men at this egg-dropping academy (Our Fighting Men, April 4th). A cadet "on course" is on his way to a date, but when he complains of a "dry run" (fruitless trip over a target on a bombing mission) he's been stood up. "Incendiary" means about the same thing whether applied to a bomb or a gal. "Mark Four" (name of a 300-pound demolition job) describes a gal built with overgenerous proportions, while a mouse who's "M38-A2" (official designation for a practice bomb) is strictly of the one-date variety. Favorite cadet sport is to cloud the air with some of the more complex bombardier chatter and let the gals puzzle out what's being said about them.

FORT SAM HOUSTON, San Antonio. The off-again, on-again civvies are off again in this part of the country, so if you see a guy dressed in anything but khaki in San Antonio, chances are he's a civilian. Until recently, though, M.P.s assigned to keep an eye on the town's taverns were having a tough time figuring just which guys came under their jurisdiction. The system they finally doped out was simple enough. When a ruckus started, M.P.s hustled around yanking up the pants legs of the peace disturbers. Seems that nearly

every soldier who shucks his civilian clothes goes for G. I. socks.

CAMP BARKLEY, Tex. The argument is whether jujitsu or (b) superior American style. "Hans" rado State wrestling coach have pinned down 14 of the titles, has let it be jujitsu wrestler ever d American matman, and stuff may be effective kid, American wrestling Taking the other side is Harry Morimoto, J. Barkeley's jujitsu class announced his willingness his points with a demonstration petition can be located.

Minute Man

Continued from page 14

and a mellow drink and a strong pipe, but he loves a good joke. Another of his best friends is Jack Earle—"Sky High, the Cowboy Giant"—who stands almost as much more than six feet as Harry is less. When Jack was with the Ringling side show, he and Harry used to sneak off every afternoon for a walk through the busiest streets of the town—the midget loudly addressing the giant as "Junior," and ordering "Sonny" around, and the giant meekly replying, "Yes, Daddy . . . Yes, Daddy . . ."

Harry's favorite gag, though, is to be "discovered" peering intently through a spool. One of Ringling's canvasmen fell for this one not long ago and asked what he was looking at.

"Nothing," said Harry, whipping the spool into his pocket. "Nothing at all!" A few minutes later, the man caught him at it again. "Come on, Harry," he begged. "Gimme a look too!"

Harry was firm: "Nope. If I let you look, everybody else will be wanting a look. Beat it! You're interrupting me."

Finally the man's curiosity made him offer a dollar. Harry took it and handed him the spool.

"There's nothing there," the man complained. "There's nothing at all."

"Exactly what I said," Harry told him. "You ought to be ashamed to be a sucker at your age!"

A Midget's Worst Moments

Harry's reputation as a ribber lets him in for a good deal of mischief from side-show "talkers," especially when they have him on the platform out front for a "bally."

"And now, sir," they say, "tell these good people your age."

"Thirty-nine."

"The little gentleman says he is fifty-nine," the talker drones. "That's hard for you to believe, but—"

"Thirty-nine!" Harry shouts.

"Excuse me, sir! He says he is sixty-nine," the talker continues smoothly, "and he remembers General Ulysses S. Grant just like yesterday."

Harry's rage soon evaporates, though, and later that night, he and the talker will probably be playing blackjack and eating pigs' feet in the side-show car. The talkers are merely occasional nuisances. Harry's list of occupational hazards does not include them among its five items. These are, in descending order of importance, storms, drunks, women, smart alecks and dopes.

Storms are by far the worst, especially windstorms. Even a brisk breeze will send a midget scurrying for a lee, fearful that he will be blown off his feet and bowled to disaster. Harry will never forget the night a gale blew down the cookhouse—the dining tent—and a falling pole cracked him on the head. He was lost under the collapsed canvas, unconscious, for an hour. Since then, if a storm comes up, even in the middle of a performance, the whole Doll family will shinny down the ladder from their platform and scamper to the safety of the side-show wagon.

Harry's fear of drunks dates back to a night in Mobile, Alabama, fifteen years ago.

"There's a heel in Mobile," he says grimly, "and what should happen to him shouldn't happen to Hitler!"

Harry was standing at the front of his platform when the drunk grabbed his hand and, pretending to shake it, squeezed. It was like squeezing a wren, and Harry had just as much chance as a wren. He nearly fainted, but he didn't cry out. Someone in the audience saw

what was happening, and a

cop hauled the drunk away.

That experience, and other over-motherly woman to keep well out of the

"Do you want to get coddled into 200 pounds of fat?" Harry asks. "Well, I don't know."

Cute women are also known: the kind that want to tum home with 'Hell, no!'—unless they're very pretty, yes! and I go, too!"

The smart alecks all think of J. P. Morgan's figure of peculiar interest ever since he was p 21-inch Lya Graf, of show, seated in his la

"Not that Mr. Morgan," Harry explains, "match dollars with his every time a wise guy

'Hey, Shorty!' or 'Hey, Shorty!'"

As soon as Harry gets to the audience wear "We've got a clown folks. Maybe you'd rather than look at me."

The dopes are the stupid questions, "What small?" and "What did you that way?" and "too much?"—things like

Harry says, "I tell you the sad story—give you the sad story—so sympathetic—but tonight. Here, take the and put it on your tear for me some ten cents." And boy, the rolls in!"

Take three adults of inches, and one may be the second is a pygmy dwarf. Pygmies belong of mankind, dark-skinned. Their average height is five feet, but they are not children will be pygmies.

Dwarfs are common all over the world. They are born dwarfs, with nearly so, but with stunted limbs. Their parents are normal, and their children are also normal.

Midgets are also common—commoner than is generally supposed. There are perhaps 2,000 midgets in the world; they are born midgets; they are not children will be pygmies. Their parents are normal, and their children are also normal.

Little Fathers of 1 Children

There are abundant fruitful marriages between a midget man and a normal woman, and between a midget mother and a normal man, all of which result in the birth of a midget child. Harry's fear of drunks dates back to a night in Mobile, Alabama, fifteen years ago.

Ne infrequently, midgets sink
espe and, as time passes,
n almost insufferable ego-
om pensation," psycholo-
ove. The men, for instance,
ize eir virility by flirting with

every woman they see, strutting with
heavy canes, wearing conspicuous
clothes, puffing enormous pipes and
cigars, and—if they can—by cultivating
bushy mustaches.

Gradually these little bucks become
so accustomed to their roles that they
do not relax even when they are alone.
In their private apartments, they in-
sist on full-size chairs, beds and basins,
even though it means hauling up a stool
to use them. A normal man would not
make a parachute jump from a plane
that is about to land safely, but a cocky
midget will deliberately risk a buffet-
ing by a revolving door when there is
an ordinary door beside it.

The Dolls are too intelligent to in-
dulge such dangerous vanities, or any
others. Chairs in their house are short-
legged, and light switches are no more
than a comfortable three feet from the
floor. The stocks of Harry's .22 rifle and
.410 shotgun—he shoots quail, dove,
rabbits and even rattlesnakes—have
been cut off almost at the grip, and their
barrels are only fourteen inches long.

"Those short barrels make the shot-
gun sound like a cannon," he says, "and
boy, does it kick! It's like putting your
shoulder under a pile driver!"

Daisy cooks on a squatting stove. Be-
ing the tallest, she drives the family car,
with the help of extension pedals, and
being the most chic, she designs and
sews her own and her sisters' dresses.
Harry's best clothes are tailor-made,
but he doesn't scorn to buy his working
clothes at children's shops—socks, shoes
(8½, baby size), underwear, hats (6¾)
—things like that.

He uses a child's toothbrush and,
when he's at home, a child's table silver.
When he's with the circus, he has to
make shift with regular equipment, but
he carries a small box, painted blue, to
put on his chair at the cookhouse and
raise himself to eating level. He'd carry
it into theaters, too, if it weren't so much
trouble. As it is, he simply sits on the
arm of his seat.

The Dolls have a stateroom that runs
the whole width of the side-show per-
sonnel's special Pullman. The three
girls sleep in a lower berth. Harry used
to have an upper, but he decided that
it was a waste of space, so he had it torn
out and replaced with a hinged shelf.
It is 45 inches by 22, or about the
size of a piano bench. He reaches it
by a rope ladder.

No Lettuce, Please

Harry's associates like him im-
mensely, not only because he is pleas-
ant and modest, but because he is slyly
generous. In fact, his only enemies in
the circus are the cat animals, which
try to get at him every time he passes.
Lions, tigers and especially leopards
are notorious for hating all children.
Three years ago, before Gargantua's
cage was glassed-in and air-conditioned,
he winged Harry with a head of let-
tuce, and ever since then the talkers
have been getting a rise from him by
telling audiences that lettuce is his fa-
vorite food.

Harry enjoys circus life. He has been
trouping for twenty-seven years now,
and he'll keep it up indefinitely, unless
he falls in love again. Last time, it was
with a French midget in a carnival, but
it didn't pan out. If it pans out next
time, he'll retire to Sarasota with his
wife, open a cigar store, and do a little
hunting and fishing on the side.

He is secretive about how much
money he has saved. When his friends
kid him about being a millionaire and
remind him that Croesus, the richest
man in fable, was also a midget, Harry
shakes his head dolefully.

"Yes," he says. "Yes, but he didn't
make it in any circus. . . ."

THE END

Lady Buxtons are
priced from \$1.00

\$5 "Three-Way" with
Magic Purse in selected Goatskin.

I carry only the Magic
Purse. I unsnap the but-
ton, lift out the ingenious
"Raplock"—and I'm set
to go. To replace the
purse, I just reverse these
motions. I know it will
stay put—double locked
into my Lady Buxton.

For shopping Lady Bux-
ton gives me a thought-
fully organized "pocket
file" right in my hand-
bag. Nine convenient
compartments to keep
everything—simply
everything—in apple-
pie order where I can
find it in a split second.

When I travel I bless
Lady Buxton's secret
hideaway for important
bills and papers. I just
reverse the inner parti-
tion . . . lock it back in . . .
and no prying eyes can
see what I'm carrying.

As a glamour girl in my
fanciest "formal," I need
a colorful, wafer-thin bill-
fold. So, by just taking
the inner partition out
entirely I have a com-
plete, streamlined and
very swank fold for my
evening bag!

LADY BUXTONS come in
fine leathers, chic colors and
smart designs to meet your
billfold needs all around the
clock. They can really boast
"eternal youth," too, with
their unique, patented give-
and-take construction that ex-
pands smoothly or slides back
into place as you cram them
full or lighten their load. No
wonder smart women insist
on Lady Buxtons by name.

You Have Always Wanted Them! Now You Can Have Them!

Read how you can have The Harvard Classics at an extraordinarily low price and on most liberal terms.

HERE is your great chance to own Dr. Eliot's Five-Foot Shelf of Books. Now this supreme library can be had at a cost per volume one-third the price of current fiction.

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS (THE HARVARD CLASSICS)

Dr. Eliot, Harvard's most distinguished President, has brought together in The Harvard Classics from his lifetime of study the pure gold of the world's literature. Dr. Eliot realized the need of a library offering everyone the culture which a university strives to give. THE FIVE-FOOT SHELF OF BOOKS is the magnificent result of his inspiration and knowledge.

NEVER BEFORE SUCH A BARGAIN

Brentano's, the famous booksellers, recently stated that for only the partial contents of The Harvard Classics in ordinary clothbound editions, the cost would be \$402.00—yet in a beautiful edition, handsomely printed and illustrated, and uniformly bound, you can obtain these superlative writings at a fraction of that cost. This is the

rarest of opportunities. Here are the complete marvelous contents of Dr. Eliot's Five-Foot Shelf of Books. Fifty volumes, 22,407 pages of superb reading, 418 of the world's masterpieces, the Lecture Volume, Daily Reading Guide, and Index of 76,000 entries, costing \$50,000 to prepare is the key to the treasures of The Harvard Classics.

YOURS FOR ONLY 50¢ A WEEK

Today for an initial payment of as little as \$2.00, you may have a complete, luxurious edition in your home with all shipping charges prepaid by us. But we urge you to act at once as manufacturing costs are rising rapidly.

FASCINATING BOOK—FREE

A most interesting book, "Fifteen Minutes a Day," furnishes you with full information about The Harvard Classics . . . tells about Dr. Eliot's fascinating Reading Courses . . . and how you may have this priceless library for little more than the average person spends for newspapers.

Send for the famous book, FIFTEEN MINUTES A DAY. It is yours without obligation and without cost.

OWN THIS FAMOUS LITTLE BOOK—FREE!

Send for this Free booklet that gives Dr. Eliot's own plan of reading.

P. F. COLLIER & SON CORPORATION
250 Park Avenue, New York

I am interested in receiving by mail, free and without obligation, your valuable booklet, "Fifteen Minutes a Day," describing the famous library, Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics) and containing Dr. Eliot's own plan of constructive reading. HCP-742

Continued from page 11

the lady's far more generous contribution. None of her children resembled Mamma, who ate a hearty meal, then resumed her light travels forthwith. So it was no question either of beauty or Mendelism that led to Stinkey's enlistment.

"We just picked him by heart," declared the sergeant, "and he turned out to be a real soldier. He knows his stuff better than most of them dumb privates. He's got no use for civilians. There was a couple of guys who used to come into our mess hall sometimes on business and we had all we could do to keep Stinkey from biting them. On week ends we had to keep him locked up when all the fellows' girls came."

Weeks later in a distant land you would meet soldiers who still talked about Stinkey. They still missed him but reasoned, "Stinkey is still in the Army back there in the States and not feeding sharks like them two poor mutts these jerks in that other outfit smuggled aboard in their barrack bags."

Here was, of course, a philosophical resignation, compounded of youth, time and distance.

But in our early days at sea, grief over the parting from their pal was voluble, profane and real. This was a good thing of itself because it occupied minds that might otherwise have been filled with more important anxieties.

Three-Part Adventure

Troopship voyaging to overseas service divides quite naturally, so far as a young soldier is concerned, into three parts. In the first he is filled with thoughts of home—parents, friends, last "dates" and the familiar routine of jobs or schools lately abandoned. Nearly every face on deck is a telltale of homesickness. Then there comes the long intermediate state wherein shipboard routine is like a curtain of blank time that is lowered and raised between his old life and the new. The third period is occupied by a swift rush of curiosity, interest, speculation about the land to which he is going. This is the time when excitement and imagination often get the better of him with amusing results. To illustrate: Our vessel had a post office in which it was possible to deposit mail written aboard for return to the United States.

The major in charge of censorship was somewhat astonished to find in many of the letters complete accounts of the enthusiastic landing reception of our troops as well as intimate descriptions of the people, the city streets, the landscape, even the strange animals, but mostly of the girls of the country to which we were going—three days before we got there!

So goes to war the generation we feared might not have the spirit or will or morale necessary to an army, because it was born to peace and disarmament and cynicism with respect to our Allies, to All Quiet on the Western Front and The Case of Sergeant Grischka; yet it goes to war no differently from the manner in which former generations of young men less schooled went to war—with high good humor and joking and only petty heartbreaks. The opinion of every First World War veteran aboard was that we might close our eyes and be on the North Atlantic in 1917 all over again. The same gags, the same rumors, the same wisecracks and horseplay, the same gripes.

There was even Hinky Dinky, although Home on the Range and Rose O'Day had taken the place of Wabash

Blues and The Mission. The soldiers themselves were buskier, bigger, less groomed and infinitely more of the Thirty-second First World War (and a buddy, Mark Harold Michigan) and the Th Army of Occupation summed it up with a conscious nostalgia: *guerre!*

All this came out in the passage. It is the thing by troopship over ocean offers the most daily life and friendship get along with the men and day on your neck, and feet, or you wish. This part of the trip ties to the landlubbers' census more than ninety ship's company had never before, while many looked upon salt water.

So it's life aboard that would most like to know many of you now still have similar experience. President Roosevelt of his fireside radio in his famous illuminated ing what he calls "lessor thousands, perhaps millions have to go to far-flung democracy before our lives are secure again.

Once aboard the transport interest is the vessel and the greatest indication of wealth and modernity of a country lies in the food you are afforded by other nations. Neither, however, is the stark hardship elsewhere. The Japs were thrown into a ship to expect to carry more than number. The Italians were days on spaghetti, dry wine, against our attractive menus. One Englishman among us who had just "East" on English troops last war and this one traveling at our comforts greatest surprise to us whereas English transport canteens, our ships for men are bone dry.

A Bridal Suite for

Our liner belongs to the sisterhood known in town as the "luxury" class. Once formerly bedded two. We profess suitable awe but no greater comfort in the hushed reminder that a room used to be \$1,800 one way for the trip free. "It was," he m bridal suite."

You would never guess all beauty and gracious rendered to the utilitarian and clumsy big lugs wash socks and iron underp salt water in a bowl that dainty rinsings of a bird stockings. The only sign are stenciled flowers on built-in dresser and a b in a drawer. We all sit o

across to Dr. G. A. Spencer of Scars-
dale, New York, who, shirtless and
powerful in the bartender's accustomed
place, punctures us with anti-this and
anti-that while the ship heaves through
tropic swells.

The first-class dining room has been
converted into a cafeteria for the en-
listed men. The tourist dining cabin is
for the officers. The men have the better
of this situation because the former is
huge and air-conditioned while the
latter is poky and, in the hot latitudes,
with ports sealed for the blackout, it be-
comes an odorous Turkish bath that is
too formidable to brave until sheer
hunger drives you.

Such rearrangements of course do not
distinguish any particular American
liner. They are typical.

The job of feeding our ship's company
is colossal and virtually endless. Around
it all daily routine must revolve. There
is no reveille and, except for guard and
calisthenics and special details, no work.
Breakfast lines begin at six-thirty and,
between eating and cleaning, the dining
room is occupied until late at night.

The men who eat breakfast last can
sleep as late as chorus girls if that's their
pleasure, because the general figures
there's no use having all hands milling
about. Both cooking and K.P. are pro-
vided by the transport's crew but labor
union regulations bring up certain hour
problems that are settled amicably by
volunteer helpers from the ranks of the
soldiers, who receive extra pay—and
meals continue to proceed with orderliness,
cleanliness and dispatch.

That generally is how you will eat if
and when your time comes to shove off
for overseas. Here is what you will eat:
The food, all things considered, is good
and by comparison with that of foreign
transports is astonishingly plentiful.
This is a menu observed at random on
one of the last days, when you might
reasonably expect a thinning down.

Breakfast: Stewed figs, sirup, boiled
eggs (the one gripe—eggs always boiled.
But even that was an all-night job and
with so many to provide for there was
no chance to cook them otherwise), fried

Simoniz Now!

**U.S. Government Urges
Motorists to Protect
the Finish On Their Cars
Four Times a Year**

MAKES ALL FINISHES LAST LONGER!

Motorists everywhere are
Simonizing their cars. They
know Simoniz is needed to pre-
serve all finishes . . . and indis-
pensable to keeping any car
beautiful through the "war
years" to come. Dust, dirt,
moisture, and ultra-violet rays
are constantly attacking the
finish. Simoniz keeps them from
dulling and destroying the lac-
quer or enamel. So, the sooner
every car is Simonized, the
longer the finish lasts. Give
your car this protection today!

THE SIMONIZ COMPANY, CHICAGO, U. S. A.

If your car is already dull, first
use the wonderful Simoniz Kleener
(Paste or Liquid) to restore the luster.

Always insist on genuine Simoniz and Simoniz Kleener
for your car. Sold by auto supply, hardware, drug,
grocery stores, as well as service stations and garages.

Simoniz your furniture,
woodwork, venetian
blinds, and linoleum.
Protects, preserves, and
keeps surface beautiful.

"It's spring. He forgot to clean out his radiator with Sani-Flush"

This year, of all years, don't risk a clogged radiator that can lay up your car. When you remove anti-freeze, clean out dangerous rust and sediment. Sani-Flush does it scientifically. Costs only a few cents.

Don't take chances on just flushing with water. Sani-Flush is thorough. Use it yourself, or ask your service station. Tests have shown Sani-Flush harmless to any engine or fittings, when used according to directions on can. It's in most bathrooms for cleaning toilets. Sold in grocery, drug, hardware and 10c stores. The Hygienic Products Co., Canton, O.

WANT A CAREER?

Here's a chance to start a profitable, lifetime career, and render real service to America's Victory Program—as representative of 50-year-established International Correspondence Schools, largest training institution in world! U. S. Industry needs trained men—I. C. S. needs up-and-coming men to handle large volume of enrolments. Advertising in mass publications (see p. 61, for example) creates proved prospects. For details, write I. C. S., Box 4088-C, Scranton, Pa.

FOOT ITCH

STOP IT QUICK!

Look between your toes. If they itch, or if the skin is red, raw, cracked or peeling, watch out—it may be Athlete's Foot! Use Dr. Scholl's SOLVEX. It quickly relieves intense itching, kills the fungi contacts, helps prevent spreading to other parts of the body. Sold everywhere.

Dr. Scholl's SOLVEX

sausages, bread, butter, jam, coffee, fresh milk, sugar. Dinner: Roast California turkey, cranberries, stewed tomatoes, potatoes, bread, butter, fresh apples, cheese, crackers, coffee, milk, sugar. Supper: Fresh orange, macaroni, Italian sauce, buttered yellow turnips, bread, butter, chocolate-covered ice cream, cookies, hot tea, milk, sugar.

Even with eating, sleeping and lifeboat drilling as the principal apparent occupations—aside, of course, from constant manning of the guns—you won't be driven to cutting paper dolls in boredom on a prolonged voyage. Here again you find evidence of the inherent health, mental and physical, of young American soldiers. Always in your assignments on foreign transports you have been struck with the lack of play spirit in the men who for days on end merely line the rails or sit apart, quiet, wistful and grinning.

Never a Dull Moment

In ability to entertain himself the Yank is a species apart. So write this down, folks at home: Your kids, out of their own resourcefulness, get something for their memory books from their days at sea. This liner never held so much unaffected interest for its millionaires as for these soldiers, many of whom probably could not have afforded to pay for a single day's trip on her.

Although you see quiz-book groups and plain "bull" sessions, cards provided the most widespread entertainment indoors at night. The players sit chiefly on the floor. If you try to make your way below, you have to step through dozens of bridge, poker and other hands. When the cards wear out, inked sugar lumps are used. Leg-pulling is the favorite outdoor game. Scores of innocents stand on deck to watch for the blue and yellow buoys that mark the equator; to try to detect the supposed acceleration in speed once it is crossed and we start downhill.

Around virtually every washbasin you find groups experimenting to see whether the water runs out with clockwise or counterclockwise spin, the latter allegedly a sure indication we are over the line. Although this is a known phenomenon of large still bodies, it is unprovable in washbasins, and when the drainage twists one way and then another in alternate trials there is much confusion and debate. Meanwhile the intricate mathematics of the international date line take an awful shellacking. So time goes.

At the outset you got a printed list of instructions and orders, of which these four are ever present and most important in their application to your everyday round, whatever transport you may go on—First: Electric razors and private radio sets cannot be used. These give off impulses that might be picked up and utilized for direction-finding by enemy subs. It is axiomatic for transports of all nations to maintain radio silence. Orders can be received by a ship's official radio staff, but transmitting sets are locked up and could only be broken loose by axes if it were necessary to send an SOS. The reasonableness of these restrictions is questioned by none; all know we are engaged in a life-and-death game with a cunning foe.

Second: You must go easy on fresh water. Naturally wartime loadings put infinitely greater strains upon a ship's tank capacities. So you must bathe, launder and shave in cold salt water—and the ship is one long groan at chinscraping time.

Third: Life preservers must be worn all hours of day and night. Only when you actually sleep can it be put off and then it's tied to your bunk. If it's possible violently to love and to hate a thing at the same time that's the only

"Ahem—Cecil, could you manage to salute now and then?"

way to describe your feelings toward the corky "Mae West."

Last: You must neither sit on the rails nor show off in the rigging. "Keep both feet on the deck" is a rule you'd better obey unless you want to swim home. For obvious reasons no transport in a convoy would dare halt to pick up anyone who fell overboard.

Traffic problems caused by thousands of men in corridors and on decks and stairways designed for only scores are met by a simple rule that reminds you of Will Rogers' plan for New York—even days, west- and eastbound; other days, north- and southbound. Perhaps you have been aboard a great ocean liner in peacetime to see friends off on a gala sailing day. Well, a transport would be such a madhouse all the time, with mess lines extending across several decks and corridors if it were not for soldierly order. So you move forward on the port side, aft on the starboard—and heaven protect your ribs if you dissent!

Daily "Abandon ship!" drills put another tax on traffic. Our general handled this so well that within a few days he reduced by more than twenty minutes the time required for all hands to simulate clearing ship.

The general goes around chuckling about an overheard explanation by one private to another:

"Listen, this practice stuff is okay but it don't fool me because if there's a real jam, the general, the ship's captain, the staff officers and the chaplain get the motorboats," the cynical private declared. "The other officers, them war correspondents and the sergeants get the lifeboats you gotta row. The corporals get the rafts. The privates first-class get oars, and us bucks get a chip apiece!"

When you sail you know you are going; that's all. But try to fool an American so long! Our first day out private making himself conspicuous wherever there was a girl as transparent as a girl's engagement ring in his notice to a book in his hand. It was an ordinary book but I had told him to put a paper cover over it and with heavy ink: "Learn Italian in Seven Easy Lessons." From the beginning, you wolves or little gangs of outspread on bunks or no one but the ship's actual knowledge of our not prevent scores of ideas on maps. You former Boy Scouts as the gauging north by use and watches.

dead ahead. It turned out that they
were expected but you can't take
chances. For a long time we dispersed
and fidgeted and sparred like boxers
moving around in a ring looking for an
opening, until the exchange of signals
proved them friends.

Third and most alarming was a ty-
phoon. Until then, little seasickness
had occurred, but as this spume-flecked
afternoon waned quickly into a terrible
night, green replaced the sun tans that
had come with quiet days outdoors in
fine weather. The storm-lashed decks
were closed to all hands after dark. By
then, the seas cresting mountainously
ridge on ridge above our heads were
illuminated by a weirdly brilliant and
widespread display of phosphorescence
that gave to the whitecaps the appear-
ance of a raging but half smothered fire.

A handful of us fought our way to the
signal bridge and huddled there, soaked
and grim, through long hours that might
have been pages torn from Joseph Con-
rad. We had the feeling next day that
we had got off lightly in such rampant
violence with only a few minor injuries
from glass and falls. You heard some-
one remark "Well, God scared us more
than the Japs could!" And you under-
stood he was not being irreverent.

Foul or fair, your trip long or short or
a mixture, you are glad to make port.
Yet however pleasant the land to look
upon, however friendly the welcome by
its people—and in Australia we were not
let down on either score—there is al-
ways something hauntingly sad about
the arrival of a troopship overseas. You
know that of the boys who stand now at
this railing, wide-eyed and eager, high
spirited, bandying crack for crack, are
some who will never make the journey
home. Even aside from the fortunes of
war, this is statistically inevitable in any
large group of travelers. It is the youth
and the freshness of these fine boys that
make especially poignant the thought
that in themselves they hold all that is
meant by the phrase heard around our
world today: "The Yanks have landed."

PRODUCT OF P. LORILLARD COMPANY

MOTHERS! FATHERS!

YOUR CHILDREN NEED THESE WORLD-FAMOUS BOOKS

Are you as parents giving your children books that they need through their school years? Are you providing the means to make your boy and girl a competent student?

Here is a completely new library of ten volumes containing the greatest of children's literature—the answer to every child's impetuous desire for knowledge and the means of attaining the success that he wishes in school.

HELPS YOUR CHILD IN SCHOOL

The New Junior Classics supplements all school work. It helps in English, rhetoric, history, geography and reading . . . by bringing to your children a first-hand knowledge of the greatest stories ever written . . . an appreciation of fine English style and a thrilling acquaintance with the great heroes and heroines of every generation. It does what only great books can do. It fires the imagination and encourages growing boys and girls to establish for themselves higher goals of achievement.

Today parents and teachers, editors and educators recognize as never before that children develop faster who are given wholesome books and are guided in their reading. The New Junior Classics fills that need. Brilliant, full-color illus-

trations appear every four to five pages, the work of 127 world-famous artists—a total of 1,027 pictures in 21 colors. The set contains 4,830 pages, 2,000,000 words, the work of 257 authors. It is printed in large modern type and each volume is in a different color of binding.

Now, during their most formative years, your children should have these books. They cannot wait. It is your opportunity to inspire them with a love for good reading that will stand them in good stead the rest of their lives.

FOR FIFTY CENTS PER WEEK

You owe it to yourself and your children to find out more about the New Junior Classics. Before you do another thing, send for the booklet that tells what this beautiful library holds for your children. Fill in and mail the coupon below. It does not obligate you in any way.

SEND FOR FREE BOOKLET

SCOTT BROWN

Inshore Patrol

Continued from page 13

a mine or two are lashed aft. Instead of being the Fortuna or the Hyacinth or the Good Cheer, the boat now is simply the YP 465—meaning a patrol vessel attached to a naval district, rather than to the fleet, and under command of the District Commandant.

The bigger boats—bigger merely relatively, because they are all small craft—have been taken over by the Navy. But scores of owners of twenty- and thirty-footers have joined the Navy for the duration, with their boats. The Navy gives them gas and oil and a rating—maybe bosun's mate—and pay, and assigns one or two seamen as crew.

So, let's go to sea and watch the Inshore Patrol at work. You perch on a high stool in a corner of the wheelhouse in the 57, while Lieut. Commander H. D. Batterton, her master, backs her out of the slip with soft-voiced orders and a few swings on the handle of the engine-room telegraph. High overhead there is the drone of bombers and you glance with some slight interest at the sheets illustrating silhouettes of U. S. Army planes and Navy planes and British planes, stuck up on a bulkhead. You compare these black shapes with those flying high in the gray windy sky. "Well," you decide, "they look like ours." A quartermaster says briefly: "PB 26s," which sounds comforting. You get to know your planes, working on the Inshore Patrol.

The 57 swings onto her course and Commander Batterton tells the engine room, down the voice tube, to put her on the cruising combination and she knifes along down Sound at fourteen knots. Everything is pretty informal, with a minimum of gold braid and a maximum of smooth, quiet efficiency.

"Two seven zero," says the skipper to the quartermaster at the wheel. The 57 swings onto her course and you learn that the Inshore Patrol has four main missions: Mine laying, mine sweeping, net laying and tending, and general patrol work. This last includes detection and destruction of enemy submarines or swift motorboats that might get near the coast or even into harbors by some combination of weather-luck and skill.

How to Find Mines

"There's a mine sweeper over there now. We'll go have a look at her. . . . Hard right." The QM swings the 57 in a tight semicircle and we come up near the dark gray sweeper. She was a fishing boat, not long ago, romantically named Il Trovatore, but now her bow bears the legend AMc 479. This means she is an auxiliary mine sweeper in the coastal service. Her name now is the Mallard—mine sweepers all being named for birds. Net tenders are named for trees. The other boats get along with only letters and numbers.

Trailing aft the Mallard is a long cable, breaking the surface, and at its nether end a small red flag zips along. Some distance behind the flag a small speedboat cuts through the swells, warning ships away.

Contact mines, very old-fashioned but deadly enough if a ship hits them, are swept up by two methods. Single AMc ships go about the job by trailing cables from their bows. The cables are fanned out and kept under water in the form of a V, point forward, by devices called paravanes. The theory is that the ship's cable catches the mine's cable and severs it, sometimes by means of a sort of pair of shears. A variation of this is for two sweepers to move abreast, with a cable between, thus clearing a

fairly wide channel. In either case the mine is brought to the surface—and a little target practice does the rest.

"You have to think of everything the enemy might do," says Commander Batterton, relighting a pipe, "and then try to prevent him from doing it. For instance, mines might have been laid in American waters last summer or fall by Japanese merchant ships. It isn't hard to fix a mine so that it remains harmless for several months and then becomes dangerous. And there are mines that don't explode when the first ship passes them; they don't explode until the second—or third or fourth—ship comes near. This little trick is to catch important ships that might have pilot boats or sweepers ahead. You'd be surprised at the ingenuity of people."

They Fish for Submarines

The 57 slides ahead of the plodding Mallard and her cable. Ensign Walter Ross—he was a reporter on the St. Louis Post-Dispatch a few weeks ago—taps out a message from the bridge-deck lamp and gets an acknowledgment. Commander Batterton tells the QM it's "hard left." Near the center of the fairway lie four specks, hardly visible against the gray water. The specks grow larger and through the glasses you may distinguish their shapes. Two of them are YNG boats—meaning Net Gate vessels. They have no power and the patrol boys say the initials mean "You're Not Going"—anywhere. The two YNGs are anchored a couple of hundred yards apart and from each, to shore, extends a line of steel floats. From these hangs the submarine net. The YNGs' duty is to haul the "gate" back and forth, opening and closing the channel.

Near by are two powered ships—the YN 35 and YN 41—meaning they're net layers and tenders. Laying and tending a heavy steel net in a channel where the tides run five and six knots is no snap. In the old days a net would stop a submarine; now, it's mainly to signal that a sub is trying to get through. Modern U-boats have various ways of getting through nets—or would have, if the nets didn't signal every object coming in contact with them. Every time a sub noses a net, it rings a bell somewhere. Then the "ashcans" go overboard from patrol ships and the thump of depth charges shakes the sea.

The 57 bustles about, watching over her busy fleet, and you realize what a complicated mechanism she is. She can talk with planes far above, submarines far below, surface ships far away. Her detectors can locate anything that moves within range of her mechanical brain—and tell within limits just where it is, and maybe what it is. She can talk by half a dozen methods.

This long rifle, with the big tube instead of a barrel, is one talking gadget. You aim it like a rifle at a signalman on another craft and finger out the message in code. A light, blinking up through the tube, can be seen practically only by the person at whom the light-gun is aimed. Very simple and efficient—and secret.

In the old war you had to have two ships to locate a U-boat. Each one listened and got a radio bearing on the sub. Then they traded bearings and drew lines on the chart from each other toward the sub. Where the lines crossed—the "fix"—was where they heaved over the ashcans. Today, one gadget about the size of a console radio does all the work, and more accurately—and

no time is lost radio

There are several boats working with from the far Aleutians and from East Cape, the Mississippi and 1 The YPs are mainly boats, often manned crews under a naval are chaser patrol sh speedsters carrying dual-purpose guns eff aircraft and surface patrol yachts, some by their owners, maybe devices and a gun or

Trial by Marriage

Continued from page 20

the trip memorable, with one having been the goat, and this good for comment for weeks or even months afterward.

Sunday mornings when the boys would sit on the porch, Duff would read a book from the library over the shoe shop, or his campaign against the dog while the people went by in their est on the way to church. Old Tinsell, who ran the boarding-house, would pass often by the window named to be seen in her work at church time, commenting about the people who passed.

Mr. Mylick, owns half of the bark on a tree, tighter than your boss man Amos Hawckon. They say one December he d his pocketbook to buy his a package of gum for Christmas. A June bug flew out'n it. That's a ter with him. Cute, ain't she? there's a high-yellow gal in the spit'n image of her. I know about that, though Mr. k as a pure case not so many k . . . Mamie, don't let them il over."

"na'am," the cook answered,

Duff said suddenly, when Tinsell returned for another rough the shades, "who's that the car?"

e lt chord of the piano died away, he minister prayed long and earned repetitiously. Finally the

sermon began, and Duff was able to concentrate on the face of the girl. She was every bit as beautiful as she had seemed at first, her hair very dark brown, her mouth and nose just right, and what he could see of her figure entirely proportional and adequate. Once he looked up to find her gaze squarely upon him. He wanted to smile or something, but his face froze; she looked away.

After the offering was taken Delia rose and sang. She was tall, and her voice was clear and pleasant. Then followed the sermon and afterward the preacher shook Duff's hand at the door; he was fiftyish, earnest, friendly. Others spoke to Duff. He waited impatiently, until finally Delia came out, smiling as she talked to a gray-haired woman in a cherry-covered hat. He watched her; her legs were good, and her walk was good. *Do come again, won't you?* someone was saying. Yes, he'd come to church next Sunday.

NOW her father joined her, and as they passed, Dr. Phillips looked at Duff and said, "Hello, Webster, didn't recognize you at first. Glad to have you with us at church. You've met my daughter, Delia."

"I don't believe so."

"Oh, yes," Delia said, looking at him squarely. "Well, you were delirious."

"I'd had some hard luck. I guess I was a pretty sorry sight," Duff mumbled. He felt himself sweating under his shirt.

"The reason the good Lord puts hard luck on us is so we can lick it," Dr. Phillips said wisely. "When you got nothing to do, boy, drop by to see us."

"Yes, come by," Delia said, smiling.

Duff opened his mouth but said nothing.

"Well?" she asked, looking at him directly. "Are you coming?"

"That'll be fine," Duff muttered. *No*, he thought uneasily, *that's something I sure better not do.*

Sunday afternoon reminded him of his home-town, and high-school days, when the boys hung around his father's drugstore and played the phonograph and stood out front watching the few passing cars that came slowly by—cars with families, and the kids wrestling on the back seat, a vacationing "ole Miss" student, with a strange girl, making his father's car go *chak-a-chak-a*, and seven laughing Negroes in a bucking, boiling old car. He could remember Art Gil-lam, The Whispering Pianist, singing, *Baby Please Don't be Angry, for I Was Only Teasing You*, remember sitting out on the back step smoking a forbidden cigarette, and watching the flies buzz around the empty ice-cream freezers in the sun. It was the same, now, here in Tafton, except the phonograph was a multicolored juke organ, and the record was of a colored girl singing . . . *I'm Gonna Change My Way of Livin', And If That Ain't Enough, I'll Change the Way I Strut My Stuff* . . .

Duff walked out to the kennels with the sheepskin coat he had bought from Alex, the mechanic, for two dollars on that night of the last poker game. As he passed Wesley's house he identified himself with a shout and went on back to the pens, where the dogs woke from their siesta to bark happily at him.

The sheepskin had got too hot walking out, but now he put it back on and went to Judas' pen. The big black-and-white pointer looked at him levelly with those yellow eyes, growling when Duff's hand touched the gate hasp.

"I'm coming in, mister," Duff said,

ME WALK! IN THE RAIN?

NO NEED to get upset, Miss, but it's a fact that when your present car gives out you'll have to walk.

So here's a tip: You can help postpone that day by letting a Sinclair Dealer prolong the life of your car. To do this job, Sinclair Dealers have developed a special Sinclair-ize service that makes cars last longer.

Just as American railroads, airlines and the U. S. Army use Sinclair lubricants to save wear on vital transportation equipment, so can Sinclair Dealers use specialized Sinclair lubricants to save wear on your car.

Ask a nearby Sinclair Dealer about this special service today. You'll find that Sinclair-ize service can save you money and worry, too.

"and if you don't kill me I'm going to keep coming in. I guess you might as well get used to it."

He opened the door. Judas' growl rose a note, and he stood up stiffly. The moment Duff stepped inside, the dog leaped at him. Duff turned sideways, thrusting his heavily padded arm quickly into the dog's open jaws. Judas' teeth closed on the inch-thick sleeve savagely. Duff shook him loose, and again let him grab a mouthful of coat. The dog hung there on the man's side like a panther, trying to bite through. Duff seized him by the back of the neck, close up behind the ears, and pulled him loose and held him, wriggling and snarling insanely, in the air.

"You'd kill me, wouldn't you?" he demanded without anger. "Yes, sir, you sure would." He propelled Judas toward the back of the kennel pen. Stepping out the door, he shut it just as the raging dog came rushing after him and struck the wire.

"Hello," said Lucie, coming into view, "what's all the racket?"

It was the first time he had ever seen her in a dress. She wore her light hair loose, and her hands were in the pocket of her tweed coat; her gray eyes watched him in amusement. "I drove out to take a look at my horse—haven't seem him since yesterday afternoon, and that's too long. I thought it was a kennel fight. I hope you didn't try to go in there with Judas."

"I just came out."

She looked at him. "In a hurry, too, I'll bet. Had you left something valuable in there, like the Kohinoor diamond or possibly somebody's mother?"

"I went in there to see if he could bite through this sheepskin coat," Duff said.

She stared at him. "Why?"

"I think maybe I can break him."

She pointed at the dog who now stood with one foot on the wire watching Duff intently, growling softly. "You're going to break that?"

"Well, maybe."

"You're going to make him point, and back, and stand shot, and hunt to the gun?"

"I hope to," he admitted.

"How?"

"I haven't got all of it figured out yet," he said.

"Oh, I see," she replied, with friendly scorn.

He shrugged out of the coat, and looked at his arm. The dog's teeth had come through in two places, scratching the skin and starting a tiny flow of blood.

"Just a little sulfathiazole and a couple of transfusions and you'll be all right," she murmured. "Look, why don't you try love and affection on Judas? That's what they do in books and things. You can win him over with kindness, and in the end he will be old dog Tray, and save your life a couple of times. I can see him now, swimming out in the whirlpool to rescue your young son, and barking to wake up the neighbors when the house catches on fire." She motioned to him. "Come on. I've got to see that horse."

AS HE followed her neat-cut figure to the barn, she said, "It's okay with me if you want to try to make something out of Judas. But we tried and gave him up as an outlaw."

They turned the gelding out into the corral, and sat on the fence and watched him run and snort, with his tail arched. Presently Lucie said, "What did you do this morning?"

"Went to church."

"No fooling."

"What's wrong with that?"

"What did you go for?"

"Well, to look at that girl," Duff admitted.

"Who?"

"Delia Phillips."

Lucie turned around a bit and faced him. "I needn't have asked what girl. Look, you're a funny guy. Tell me about you."

"There's nothing to tell."

"Say me some poetry."

"I don't know any poetry."

"Oh, no . . . Look at him; isn't he a horse, though?"

"He sure is," Duff answered.

"Does septicemia make one break out in a poetic rash? I'll have to ask Doctor Phillips about that. Delia's father."

"Oh, you know," he said in embarrassment. "Haven't you had to memorize a lot of poetry all your life, in school and places? I can't recite it, but sometimes little snatches of it pop up."

"I guess I'm nosy. But you fascinate me. The Vagabond Poet and Wild Animal Trainer. I never had to memorize anything about down, down, down to the devil, not in the school I went to."

He said nothing. The January sun glinted in the enamel of her white teeth, and came through the loose strands of her hair, making them look golden instead of just sandy-colored.

"Listen," Duff said, with an effort. "There's not much to tell, but here's what there is: My father runs a drug-store on the edge of Hattiesburg. He owes everybody in town. My mother wanted me to be somebody, but I couldn't. I worked in sawmills, drug-stores, tobacco barns, insurance offices, and a lot of other things, never very long at a time. Last month she shot herself. Not on account of me—something else I guess. I decided to leave, then. I lost my gun in Georgia when a plantation warden nearly caught me. That dog tried to kill me when I came up on him right after he'd caught a goat. That doctor fixed me up. You gave me a job and I appreciate it. That's as far as I know."

SHE said, "Do you think you'll stay here long?"

"I don't know. Mr. Hawthorne doesn't like me. He might kick me out any time. But I'd like to make good—for once."

"Maybe this is what you were meant for, huh?"

He looked toward the kennel, staying till I break that dog. "Then you'll be here quite a while," she said. "I'll tell you what you will go afield with show you a bird dog."

NINE years before, a far old Amos and said, "I've got a dog I want to sell you."

"What kind of dog?"

"He's whatever kind of dog you want. He'll hunt quail, deer, squirrel, and all that. That ain't the kind I want. I want a hound pack. Queerest dog ever heard tell of."

"Well you take him and find more birds than any dog I ever saw. Any one of these coobs. I'll give you a dog in Alabama, and he'll hunt quail, deer, squirrel, and all that. Queerest dog ever heard tell of."

"I was just goan to say that. I got all the dogs I want. You ought to at least try 'em. Well, all right, leave him to me. Amos had the dog put in the pen and forgot about him. The farmer called and wanted to know how he liked him. Amos had been down in the back yard, and he'd been able to try the dog, and some time soon. That all right. Wesley came in with his dog. 'Cap'm, where you git hir vappin' dog. He done traveled miles dis evening, fure de nex'!"

"What after, deer or fox?"

"No, sir, patridges!"

"Don't give me no stuff, I warned. 'Didn't find no bird dog. 'Ten coveys, suh. He shot 'em out, I reckon."

"Pointed 'em! Stood up and he was some kind of bird dog. a-mighty, wid his tail straight up as a willow stick. I shot a broke to fotch him, den he and nailed dem singlings c like an old brood bitch, den here again!"

Amos went out with the dog and again the dog Sam ran on a horizon and found coveys and incidentally treed two. When they came in at noon, "Now I wonder where that mer be."

"I suppose you gentlemen want to know how my model attains a speed of eight hundred miles an hour"

ESSENTIAL AS AN EMERGENCY LANTERN

Every home, every auto, should have a lantern for emergency use. Two in one—800 ft. spotlight for distance; broad floodlight for close-up from top lens. Either at the flip of a switch.

Operates 80 to 100 hours from one standard 6-volt dry battery. Unbreakable lens. Easily carried in auto trunk. Handle reverses. Powerlite is useful too for trailers, lake cottages, night fishing, camping, etc. Price \$3.35, less battery, at sport, electric or hardware stores.

Due to war demands, mail orders direct from factory cannot be filled.

PROTECT YOUR HANDS against

DIRT AND GRIME

...use PRO-TEK

Before painting or starting any dirty job, use DuPont "Pro-Tek" on your hands. A greaseless cream—doesn't make your hands sticky.

Keep your work while Pro-Tek—like an invisible glove—guards your hands against stains and dirt.

After finishing, wash your hands in running water. This dissolves the protective film and carries away grime, dirt and dirt with it. Get it today.

MADE BY DU PONT

stole this dog? Wonder if it was far enough away so's nobody'd find him with me?" He made inquiries in the neighborhood of the farmer; one man said, "That Sam dog? Shore I know him—Ben raised him. I seen that pup the day he was born. They wasn't but two in the litter and the other'n he took sick and died. Me and Ben was hunting that dog when he wasn't four months old—had to lift him over logs. I've brung him home in my old hunting sack many a night after dark. You aiming to buy him?"

"Ben wanted me to give him a try-out," Amos said carefully.

"Well, Ben's a friend o' mine, so I won't tell nothing on his dog."

"Wouldn't want you to do that," Amos said, hopefully. "If the dog's fit-fied, or something, I'll find it out."

"Oh, he's a beastly scoun'l; healthy as a buck hant. 'Tain't that," he said.

"See here, you just take him out and try him; you'll see, first off. That's all I can tell you. Ben's the best friend I got in the world, and I wouldn't do nothing to hurt no deal of his."

THE following day was Saturday, and Amos knew the farmer would be out to see about his dog. And just at noon he came, driving a brightly polished flivver and dressed in his best town clothes.

"Well," he said cheerfully, "you done give Sam all the tryout you want?"

Amos studied a moment. Then he called, "Wesley, didn't we take out that dog of Mister Ben's the other day?"

"Yas, suh," Wesley said dolefully. "You remember dat dog," he added meaningfully.

"Why, what'd he do?" asked the farmer, looking from one of them to the other. "You got to remember he ain't but little over a year old. You understand how a puppy is. A man that knows dogs like you do, he understands to make allowances for a young dog's puppy ways."

"I ain't said nothing against the dog," Amos said, searching the bottles of medicine on the shelf in the kennel house. "Oh, Wesley, git Mister Ben's dog fer him, and put him in the car."

"Look," Ben said. "You a dog trainer. I ain't. With just a little work, you could fix him right up so anybody could handle him. And you see he healthy. He's had copperas onct a month since he was born. Not a worm in him. What would you give me for him right now, cash on the barrelhead?"

"Ben, I tell you the truth. We got more dogs around here now than we got feed fer. And you know I ain't young as I used to be. Cain't spend no time working on just any kind of dog," Amos said. "Wesley, turn that back seat up. You want that dog to git the car all dirty?"

"Tell you what. I'll sell that dog to you cheap. I got a bad knee—mule kicked me last summer. Curious sorta thing, she hadn't never done nothing like that before, gentle as a cat, then of a sudden, wham, she done it. Look," he said, pulling up his trouser leg, "see that scar?"

"Where?" Amos asked, squinting down.

"Right there. Can't see it so good, now, but in rainy weather she turns plumb red."

"We been a long time without rain, ain't we?" Amos said.

He glanced toward the car, then went back to searching the shelf. "Maybe you better tie him in, Wesley, so he won't jump out."

"That's all right, he ain't goan jump out, not that puppy. Got more sense than any dog I ever seen," the farmer said. "Since old Kate kicked me, I ain't been able to do much walking. Fact is, she just about knocked me out of huntin'. Only reason I'd sell old

Sam. But I guess I'll have to let him go. Cheap too."

"What's cheap to one man," Amos said, "might be higher'n a cat's back to another. What you want for that dog?"

The farmer glanced at him, then half-way turned to the car, minutely inspecting a pine knot on the side of the house. He touched his finger to a drop of resin that stood on the knot, rubbed his thumb to it, then smelled it interestedly. "Well, I don't rightly know, to tell you the truth. He's such a pet around the house. If the wife and kids knowed I even mentioned selling old Sam, they'd just about quit me."

"I wouldn't want to buy no kids' pet dog, Ben."

The farmer rolled the turpentine off his hand. "Well, I tell you, Mister Hawthorne, they just maul him around and plague him, until I don't see how the poor dog stands it. It just ain't right for no dog to have to put up with such. The other day I told Verie, I said, 'Them young'uns is goan drive that dog crazy; I swear the first good man that offers me fifty dollars, I'll let Sam go, just to p'tect him from them young'uns!'"

Later that afternoon, Ben appeared at the F. Mitchell Horse and Mule Company barn, where the boys were sitting around with their chairs leaned back against the wall. They asked him why he looked so pert, and he cut a corner off his plug, stuck it in his mouth, closed his knife, and said:

"Well, boys, they say old Amos Hawthorne knows a whole heap about bird dogs, but me and him tied up in a trade this evenin', and I cold-rammed it to him. Lucifer, you know that combination puppy was such a stomp-down unfer a while, then kept gitting wilder and wilder, till we had to tie that ten foot of trace chain on him to keep him in sight? And we'd wear out our feet looking fer him, and him pointing a mile away somewhere? Well, that's the dog. I guess I ought not to tell it on the old man . . . I like old Amos, and I don't want to hurt his reputation none. Don't want this to go no further, mind you—" he leaned forward—"Boys, old Amos Hawthorne forked over forty cash dollars for that wild dog!"

They named the dog Ambling Sam. Amos, who had never bothered to learn to write—"That's how come I keep on living; don't never worry about no notes I've signed at the bank"—had Lucie, then in high school, write various people in an effort to trace the dog's breeding, and they finally got enough data to register him.

THE farmer had told the strict truth about Sam's being a combination dog, and that was his main trouble. There weren't many deer to bother them, but Sam never went through a creek bottom without making a couple of whipping circles for squirrel scent; and when he treed a squirrel he would sit down and wait until Amos rode up. For a long time Sam just couldn't believe that squirrels were no longer to be hunted. Amos would ride past him, ignoring him completely, while Sam danced excitedly around the tree. When Amos kept on going, Sam looked at him in perplexity. He would follow a way, anxiously, then return to the tree. Finally Sam would give up the squirrel tree and somewhat unhappily head out on the scent of his trainer. After a few of these treatments, he abandoned squirrel hunting.

Jack rabbits, though, were another matter. That summer when they got up to the chicken prairies of Saskatchewan, Sam indicated at once that these swift animals were his preferred game. Most young dogs chase jack rabbits for a distance, then give up in despair and go back to hunting prairie chickens. But not Sam.

"Dat Sam, he de only dog I ever see

BLEEDING GUMS may mean you have GINGIVITIS

Often leads to Pyorrhea with its soft shrinking gums

Even if your gums only bleed a tiny bit when you brush your teeth—get busy! Tender, bleeding gums may be the first warning signs of Gingivitis, a mild gum inflammation which may attack—

4 OUT OF 5 People

Unheeded—Gingivitis often leads to dreaded Pyorrhea, with its loosening teeth, which only your dentist can help. See him every 3 months. Then at home do this—

One Best Precaution Against Gingivitis

Massage your gums and brush your teeth twice daily with Forhan's Toothpaste. There's no better method than Forhan's and massage to help gums be firmer and to clean dingy teeth to their natural brightness.

Forhan's also helps remove acid film that so often starts tooth decay. Start using Forhan's today. Note the difference! All drug and dept. stores. Week-end size 10¢ store.

standing and knowledge. But where can you find the answer to this cry of knowledge?

HERE IS THE ANSWER

Thousands of men and women have discovered the solution to their quest in the great National Encyclopedia, which places at your finger tips a library of living, vital facts . . . literally gives you the answers to the maze of questions aroused in your mind by current events. Here is a work so modern and up-to-date that it covers all world events and political changes, so comprehensive and thorough that it surveys the entire range of human knowledge.

SYMBOL OF OUR AGE

The National Encyclopedia is a symbol of our age, fresh, alive and supremely useful. The National Encyclopedia is the ideal work for the American family, for every home with children of school age and for every man and woman who can ill afford to be satisfied with anything other than the best in reference material. Send TODAY for the full description of this superbly new Encyclopedia. This information will be sent you free and without obligation.

could make one dem jacks lay his years back and put dat other foot down," Wesley said.

That was the first year Paul had been taken to Canada. He was fourteen then, strangely capable, being quiet and even-tempered, and the animals liked his solemn singing around the barn. Then he was used as a wagon driver, and he watched old Amos and his father having their troubles with Sam and the jack rabbits.

One day they were in the village, Paul was told to get some corks, and while the Frenchman in the little store was trying to understand what the Alabama Negro meant by "jug stoppers," a wheat farmer came in cursing the chestnut mare that had brought him to town. "Pullin' all the dom time, wears your dom arms near out, she ought to dom well be on a bloody race track!" Paul took one look at the horse, and went to find Amos Hawthorne. Amos bought the mare for sixty-one dollars and a half.

NEXT day, Paul rode the little mare with the hunting caravan, holding her in by main force until Sam, swinging in front, struck his first jack rabbit of the morning; then he loosened the curb-pressure on her mouth and nudged her with his heel. The mare jumped twenty feet, then flattened out in a dead run across the sage, over gopher holes and buffalo wallows, and finally Paul headed the dog off. For weeks that went on daily.

The mare got so she would jump forward every time she saw Sam flush a jack rabbit. Sam got wise, too. After a few days of having those hoofs come thundering behind him, and then a taste of the whip, he would glance quickly back to see how much start he had on the horse before pursuing a rabbit he had flushed. Finally he perceived that it was a losing game, and after that would glance interestedly at jack rabbits but never chased them again.

They taught Ambling Sam steadiness to wing and shot, and from that time on he was known as the cleanest broken dog in major trials. At the end of the summer, he ran unplaced at Moose Jaw, but won at Pierson, Manitoba, paying Amos seven hundred dollars. From that time on Sam was a winning dog; whenever a handler arrived at a new trial, his first question was, "Is old Amos here with that Sam dog?" Sam won on prairie chicken and Huns and quail and pheasant. He won from Moose Jaw, Saskatchewan to Shuqualak, Mississippi. He won every championship—except the one old Amos wanted most, the National Championship at Grand Junction.

When the farmer, Ben, learned of the dog's exploits, he said in annoyance, "Aye dammit, if I'd a-knowed he was goan turn out to be such a dog as all that, I'd shore never let old Amos jew me down from fifty dollars!"

The first morning that Duff went out with the trainers, they put old Sam down without any ceremony, as if he were just a dog. Now Amos rode out front on his gray horse, oblivious of everything but the ten-year-old pointer far ahead. Regularly Sam would look back; old Amos would point his whip to the right, and the dog would go to the right.

This almost visible affinity between dog and handler had caused Sam to be known as a mechanical dog, or "whip-runner."

But Sam didn't depend on Amos; he knew how to hunt.

This morning they had ridden only twenty minutes when Ambling Sam, after a prodigious cast, was seen to stop far out, a tiny spot of white at that distance.

"Point, Cap'm Amos!" Wesley said.

The old man rose in a stir, leaned forward, squinting his eyes. "Right on up yonder head of us."

They galloped toward the point, and Duff, pointing his finger, shouted at Duff, "plumb illuminated with Sam, he just cold find 'er!"

Sam stood erect, with slanting up, his feet solidly planted, somewhat stretched, his head a confident grin.

As Amos swung lithely down, Lucie turned to him, perched, "Okay?"

The birds got up. Sam slightly, and his ears raised, not move forward. Amos and two cock birds dropped, whirring covey. He clucked, streaked toward the fire. When he retrieved the Amos let him pull off the it.

"Eyes gittin' bad, hell!" after he had sent the dog turned to his horse. "I can't see a gun bar'l."

Suddenly he stared at Duff, realizing for the first time that he was along. "Who told me he demanded, looking at Lucie."

"Me. What's wrong with said."

Waving his head from side to side, Amos answered, "I have no road tramp riding my horse."

"It ain't much of a horse, amiably, thinking that Amos was joking, "even for a tramp he froze, for he saw his n."

Amos took his foot out of the stirrup and walked around to the dog, pointed the dog whip at him along it, and said, alper, "Bud, you make jus you're goan be bumming road again, you git me?"

Lucie said, "He hasn't done anything."

"He ain't got to do nothin' like him. I don't like the ner acts, ner smells, ner that's all that makes a difference cause I'm still the boss here." He looked sharply at Lucie.

Lucie looked at him and said nothing.

Duff, trying desperately to make his mistake helped his standing an uncanny instinct, strating an uncanny instinct, a lost dog, and for several credible distances. And named Smoky Joe had a streaked out through the it was Duff who overtook herded the sick dog like a back to the dog wagon.

"The Squire doesn't like said afterward, "and that But he knows a dog man one, and so he'll tolerate okay."

AT LEAST once a day, Judas' pen. Formerly the pointer by throwing to one end of the pen and of food inside the door after the meat. But now the sheepskin coat and into the pen with the dog hope that Judas would welcome his entrance. at are on Duff night and day.

Duff borrowed a shoat that Wesley
was about to slaughter—"I may get him
killed for you right quick"—and rigged
up an electric harness for it, with two
wires leading outside to the battery and
coil and switch. He shoved the squeal-
ing pig into the pen with the dog, and
Judas was on him like a jaguar. In one
second Judas struck the pig and missed
a vital spot; the next second he had
leaped frantically away. Duff left the
pig for a while, but Judas made no
further attempt to kill it. When the pig,
looking for escape, came toward him,
Judas growled and jumped on top of
his house.

One afternoon not long after that,
Lucie saw Duff getting ready to feed
Judas.

"Wait, Mr. Beatty," she said, "you
forgot your sheepskin coat."

Duff opened the gate and stepped in-
side, while Lucie watched in fearful ex-
pectancy. Judas stood in the middle of
the pen and allowed Duff to put the pan
down. Duff took a step toward the dog
and caused him to retreat.

She stared at him, then at Judas, a
smile coming to her lips. "Can you also
make water come out of a rock, like
Moses did?"

"Never tried that," Duff said.

The old trainer had not ridden that
afternoon. Lucie was waiting around
front in her car when Duff got through.
Dark had almost come. The motor was
idling, and the heater sent a warm bil-
lowing of air through the car. As Duff
got in beside her, she gave him a sud-
den direct smile. Already buoyed up by
his progress with Judas, her smile gave
him a feeling of warm companionship.
He realized that this girl came nearer
to being a friend to him than anybody
he had ever known.

Abruptly, he said, "You've been
pretty nice to me."

"Sure I have," she said lightly.

He suddenly reached over and kissed
her on the cheek.

"Hey," she said. "That's sort of all
right."

This time he kissed her mouth in-
stead.

"Whoa," she said, pushing him away.
"What's happening here? Let me
think."

"No," he said urgently, "don't think."

HE KISSED her again, and presently
felt her move closer to him, almost
crowding him, and her breathing quick-
ened.

"My heavens!" she whispered, gasp-
ing. "I think I must be dying. Feel my
heart. Wait—no more thanks. Tomor-
row, maybe, or next week, I'll have re-
covered sufficiently. Listen. Tell me,
was all that gratitude? If it was, I'm
liable to be trying to do you favors all
the time."

As she started the car off, Duff,
shaken and uneasy, could say nothing.
Many words came to his mind, but none
to his lips.

(To be continued next week)

The best I.C.S. ads are written by I.C.S. Students!

FOR EXAMPLE, here's part of a long letter of appreciation from Mervin L. S., of Harrisburg, Pennsylvania:

"During an excellent secondary education and three years at the University of C., I failed repeatedly in Algebra and Geometry, and it was only by exceptionally good work in theory that I obtained passing grades in Science. I.C.S. presents its subjects in understandable style, with little lost motion and confusion, and with great interest."

Here are some excerpts from other recent letters: "I was 42 years old at the time of enrolment. The Course has paid for itself many times over." (Chas. A. M., Calumet City, Ill.) "My income when I enrolled was \$77 per month. It is now \$340 per month!" (C. E. H., Ravenna, O.)

Somewhere in the I.C.S. curricula is a course that can help you achieve greater success in your line of work. The cost is so low, the rewards so great, you can't afford not to mail this coupon for complete information! No obligation, of course. Do it today—America needs trained men in order to outproduce the enemy!

HATE MUST WAIT

THE most foolish and the falsest things now being said about this war concern us and England. Otherwise reasonable people repeat the most baseless falsehoods, and many would be shocked if they realized they were echoing sentiments that Dr. Goebbels' German propagandists first said for them.

A pleasant white-haired old lady with a son and two grandsons in American uniforms was saying, "Why should the United States have gone to war to save Singapore for the British?"

Now who do you suppose thought that one up and handed it to a nice old lady and to others not so old or nice? She and the numerous others, poor and rich, who have been saying, "Why should we fight to restore Singapore, to save India, to defend Australia for the British?" are following precisely the Axis propaganda line, although, of course, most of them do not know it.

We did not enter this war to save the British or any of their possessions. Yes, most of us preferred the British to the Germans but that's not why we went to war. We got into this war because the Japanese bombed Pearl Harbor and for no other reason. The British did not bomb Pearl Harbor.

The British did not inspire the Japanese to make a sneak attack on our ships and planes. The Japs thought that out for themselves without any British help. Maybe Hitler needed them up for the attack, and Mussolini certainly did not try to dissuade them. But you have to be pretty far over on the looney side to give the British any part of the responsibility for Pearl Harbor.

And you have to be more than a little crazy to give the British credit for the German and

the Italian declarations of war against us. Germany declared war on us immediately after Pearl Harbor, before our Congress got around to doing any declaring. So did Italy. Germany was not persuaded by the British to declare war against us. Neither was Italy.

We did not make any sneak attacks on the Japanese and we did not declare any wars before we were attacked and already in a state of war by the declarations of the Japanese, German and Italian governments. These three governments put us into the war. They decided. We did not. Neither did the British.

But the American people intend to decide when the war will end. It will end if we win, as we expect to do, when we think we have brought about a situation that promises freedom and security for us and for our children.

We are not faithless friends or treacherous comrades-at-arms and we don't plan to break faith with any of those who are fighting with us. But we are fighting our war and nobody else's.

It does not matter greatly whether we like the British or the British like us. Individually we are free to dislike whomever we please. But war is not a tea party. You don't choose your allies on the basis of congeniality or the color of their eyes or even the tint of their politics. You take your friends and your enemies where you find them and you do what you can to save yourself.

We are glad the British are with us. We are glad the Russians are with us. We are glad the Chinese are with us. We are glad the British Dominions—Canada, Australia, South Africa—are on our side. But we are not fighting to save Russia or China or Britain or anything except our freedom to live after the fashion we choose.

The old ladies and the young stupid men and the ignorant men who sometimes know better than the puppets pulled by strings in the hands of the propagandists cleverly out of sight.

Everybody has prejudices, likes and dislikes. We don't have to let them rule us. But neither do we have to let them rule with our prejudices when they try to do so. Do you remember William Thompson, who made his plea in Chicago by promising to sock the nose of England in the nose? That was of decades when the irritation between the Irish and the English was such that he thought he could get some more German votes in Chicago by being British.

It was ridiculous then and means mean and shameful. It was enough to think of your fellow citizens having such base appeals. But nothing more than the government of Chicago. Not that that's wholly unimportant.

Now, however, we are fighting for our continued existence in the great wars mankind has ever faced. We cannot afford the luxury of confusion in our own national purposes. We are not so stupid that we can insult and push away our allies and comrades. We ought to be enough and wise enough not to be caught by the enemy propaganda.

Today the enemy propaganda emphasizes historic differences between the United States. Remember that you hear someone muttering so our fighting to save the British.

Is
**INFECTIOUS
DANDRUFF**
threatening the health
of your scalp?

Start now with **LISTERINE ANTISEPTIC** and **MASSAGE!**

... troubled by any of these symptoms . . .
scalp and inflammation, telltale flakes
on your collar?

Get started right now with Listerine
Antiseptic and massage, for you may have the in-
fection of dandruff. Neglect may aggravate the
condition. I don't rely on so-called "overnight"
treatments. You can't expect to treat a stubborn in-
fection with one application.

Scientific Treatment for an Infection

Even in an infection in which germs are active,
common sense tells you that one of the best ways
to use an antiseptic with germ-killing
power is why Listerine Antiseptic and mas-
sage is specially fitted to fight infectious dandruff.
In fact, four ways to combat this condition:
1. Listerine Antiseptic gives both hair and scalp a
refreshing, antiseptic bath which kills mil-
lions of germs associated with infectious dandruff,
Pityrosporum ovale, the queer "bottle bacil-
lus" which any leading authorities recognize as a
major agent of infectious dandruff.

2. Listerine loosens and removes ugly, telltale
flakes and scales.

3. Listerine relieves itching and inflammation.

4. Listerine makes your scalp feel healthier, your

hair look cleaner.

Why fool around with make-shifts . . . why dally
with an infectious dandruff condition? Start now
with Listerine Antiseptic and massage, the *tested,*
easy, delightful home treatment which has done so
much for so many!

76% Got Improvement in Clinical Tests

Remember that Listerine, when tested clinically,
under the most exacting conditions, came through
with flying colors! The cold
figures? In a series of severe
clinical tests, 76% of the
dandruff sufferers who used
Listerine Antiseptic and mas-
sage twice a day showed com-
plete disappearance of, or
marked improvement in, the
symptoms within a month!

And from homes all over
America, enthusiastic, *unsol-
solicited* letters have been re-
ceived! Countless men and
women write in, praising
Listerine unreservedly for the
help it gave them in their
dandruff problems.

Pityrosporum ovale, the
strange "bottle bacillus"
regarded by many leading
authorities as a causative
agent of infectious dandruff.

The LISTERINE Treatment

MEN: Douse full strength Listerine Antiseptic
on the scalp morning and night. **WOMEN:** Part
the hair at various places, and apply Listerine
Antiseptic right along the part with a medicine
dropper, to avoid wetting the hair excessively.

Always follow with vigorous and persistent
massage. Continue the treatment so long as
dandruff is in evidence. And even though you're
free from dandruff, enjoy a Listerine massage
once a week to guard against infection. Listerine
is the same antiseptic that has been famous for
more than 50 years as a mouth wash and gargle.

HONESTY

shines forth from a product just as it
does from a man. You will find it in
LISTERINE TOOTH PASTE

ANY WEEK

SYMBOL of aggressive courage is the American Bald Eagle, adopted as the national emblem of the United States by the Continental Congress in 1782. The fiery specimen on this week's cover is a captive bald eagle owned by a Floridian. For more about eagles, read Eagle Scout on page 14 of this issue.

A full-color reprint of this cover will be sent you on receipt of ten cents in stamps or coin. Address Collier's Cover Editor, The Crowell-Collier Publishing Co., Springfield, Ohio.

A DARK future for Japs is forecast by a friend of ours who has just come back from witnessing a demonstration of a few new arms that the Army has tested and found perfect at the Aberdeen Proving Ground in Maryland. We gather that it was a tank demonstration—tanks with new, larger and better guns. "And noise?" went on our spy. "You ask about the noise? It was just like interviewing that superior, patriotic gentleman, Mr. Thurman Arnold."

THE fiction editor of this magazine, Kenneth Proctor Littauer, has gone to Washington, a major in the Army Air Force. Neither we nor he nor the Air Force has yet decided what his duties are to be. We know what they should be—but we have not been consulted. Moreover, we are content to let the Army decide. Major Littauer, heavy with honors perilously won as a flier in the first World War—the first flier among American airmen to strafe enemy trenches with machine-gun fire from hedge-hopping altitude—can be of inestimable value to the Army. The Navy could use his advice too. What the War and the Navy departments have needed for a long time is a good fiction editor, and the major's talents in literature are as shining as was his genius as a combat flier. We got to thinking of

this the other night when, our good ear plastered against our radio, we heard a milky voice read what it described as an Army communiqué: "The Japs have again raided Port Moresby, New Guinea, dropping twenty-six bombs on an airdrome, but no damage was inflicted and there were only slight casualties." As a fiction editor and experienced airman, Major Littauer could have edited that right cross to the public's intelligence with excellent results. Either Port Moresby has discovered something new in airdromes or the communiqué is somewhat rose-colored. Even if those twenty-six bombs were all duds, that airdrome must have been more than somewhat ruined. If any one of them exploded, havoc on a thoroughgoing scale must have ensued. We have a nice loud picture of the major sitting at his desk in these offices reading a piece of fiction in which the author dropped twenty-six bombs on an airdrome without damage to the latter. We can almost quote the major's comment but we shan't do it here because it does a magazine no good to be barred from the mails. However, as we've said, they can use a superior fiction editor to good advantage in Washington, and Major Littauer is their chance.

WE'RE informed too by a young lady that the day-nursery activities in her town have hit a snag or two. With the best of intentions she and her friends have set up a day nursery for infants left with them by mothers working in munition and other war-production factories. That part is turning out nicely, but some of the ladies decided that the physical well-being of the mothers was important too and formed a committee to do something about it. The results were not encouraging. The committee had decided that the mothers, stopping in to retrieve their young ones, should be given fifteen minutes of relaxing and compensating exercises—calisthenics which would tone up muscles not used in the factories. These the committee referred to as Stretching and Bending Routines. To the surprise of the committee, the working mothers declined—not politely—to co-operate. "What did these women say?" demanded the clinic's head woman. "Must we go into that?"

Changes of address should reach us five weeks in advance. Give both old and new addresses.

"Ask me about tires made with synthetic rubber..."

...d them on my car for months!"

continued the fire chief. "It was last year when I first got tires made with Ameripol. The Goodrich Company wanted to know if they would stand up to the test, so I put a set on the car."

"What happened?" asked the car

the point! Nothing happened," said the fire chief. "Near as I can tell, they're no different than good tires!"

At the end of the conversation turns to the rubber, you can tell

folks that it's far beyond the laboratory stage. For 15 years we have invested our time and money perfecting Ameripol.

Nearly two years ago we sold the first tires containing synthetic rubber ever sold in this country. More than half the rubber was synthetic.

Thousands of these tires were bought and road-tested by patriotic corporations and car owners who wanted to help B. F. Goodrich get America's synthetic rubber program started. Their performance was successfully proved.

If America has to declare its temporary independence of foreign rubber sources, you can probably look forward to riding on tires made with Ameripol some day.

Not next month. Very likely not next year. But some day. For many military purposes Ameripol is better than natural rubber. And military needs must come first, of course.

Remember, Silvertowns have always been high quality tires. And they always

will be, whether they're made with synthetic rubber or natural rubber!

TIRE INFORMATION HEADQUARTERS

Your B. F. Goodrich Dealer or Silvertown Store is Tire Information Headquarters for your neighborhood. Here you can get the answers to your questions about tires, or the tire situation. Even more important, you can get the advice and help of tire experts on how to get more miles from your tires. Your "B. F. Goodrich Man" is also qualified to make expert repairs, if needed.

How to make your tires last longer!

Recommended or rated air pressure at all times.

Rotate tires from wheel to wheel 100 miles to insure uniform wear, including spare.

Check tires at high speed; they wear faster than anything else.

Check your brakes—except in an emergency.

5. Have your wheel alignment, front and rear, checked regularly.
6. Don't drive too fast—for high speed heats up tires and hastens deterioration and wear.
7. Start up gently; do not spin your wheels and grind off rubber.
8. Do not bump into curb—no tire will withstand such abuse.

In war or peace

KEEP UP WITH THE VOICE

By Freling Foster

In recent years, jackfish, a species of pike found in the lakes and rivers of the northeastern part of North America, have eaten annually about nine million baby ducks, or approximately eight per cent of the total potential duck crop.—By Richard Richards, Lorain, Ohio.

The last man in the United States to be branded with a red-hot iron for a crime was Jonathan Walker, who had the initials S. S. (slave stealer) burned into the palm of his right hand at Pensacola, Territory of Florida, in 1844, for having helped seven slaves in an attempt to escape to the Bahamas. Incidentally, this episode inspired Whittier's poem The Man with the Branded Hand.—By Connie Green, Burlington, Kansas.

In larval form, a certain variety of filaria, a small, eel-like worm found in warm countries and which frequently causes elephantiasis in human beings, swarms in the victim's blood during the night and completely disappears during the day.—By Meredith Dallas, Newark, New Jersey.

According to a recent survey, nearly one half of all the 1,857 daily newspapers published in this country today sell for at least five cents a copy.—By L. M. Green, New York, New York.

Many high wire fences enclosing our war-production plants are now equipped with an electric "robot sentry," which enables one man at a loud-speaker in a central office to hear and locate noises taking place near the fence, even when it is twenty miles long. The device is particularly useful during blackouts and on dark nights when guards would have to stand almost shoulder to shoulder to protect the property adequately.

The lowest notes on the pipe organs in many European cathedrals are rarely played because it is feared that the intense vibrations might shatter the stained-glass windows.—By Mrs. M. Salvatore, Bennington, Vermont.

America's only blind amateur radio operator, a 21-year-old Leo Sado, lives in Brooklyn, New York, and operated Station W2XW. He had to "hear" his signals through a device induced by special devices both the written and the spoken word in 1941 and was a member of the Federal Communications Commission.—By James Weymouth, Massachusetts.

During bad storms, the United States light housekeeper, a milkmaid, waves a light that they sometimes damage the lighthouse 150 feet above the sea.

Not so long ago theaters would print in one day for the mission. Because of the convenience for the audience to the five first acts were in succession, then the third acts followed in quences.

Until the war put automobiles, though either in a wrecked condition, were a liability by their owners of American cities. In one recent year in total of 10,251 cars, twenty-nine a day hauled to junk yards by the department of Sanitation in New York City.

The growing of hibiscus in Egypt, the suicide news is prohibited, and the exhibition of freaks is prohibited.—By Thomas S. Burgh, Pennsylvania.

Five dollars will be paid for unusual fact accept Contributions must be a factory proof. Address: World, Collier's, 250 Park City. This column is copied from The National Weekly. Not to be reproduced without the publisher's permission.

**JUST HEARD
SOMETHING WE CAN
TALK ABOUT!"**

It's no secret that, plane for plane, American warplanes can outfly and outfight the Nazis and the Japs. That's because the engines of all American warplanes are designed for high-octane gasoline.

Everybody also knows, or should know, that only the United States has plenty of all the *three* things needed to produce large quantities of high-octane gasoline: 1. Vast resources of fine crude oils. 2. Superior

refining processes, developed by the American petroleum industry. 3. Adequate production of anti-knock fluid to increase octane ratings of military gasolines.

The makers of Ethyl brand of anti-knock fluid have geared their plants, laboratories and technical staffs to meet the oil industry's war need for anti-knock fluid. Our Army, Navy and Allies will have plenty of Ethyl for fighting fuels. And that's no secret!

ETHYL BRAND OF ANTI-KNOCK FLUID

Canadian Colonial's Thomas Allegetti, crew chief, in removal of control locks with an automatic cable-and-chain device

WING TAIL

PARK an airplane on the airport on a windy day and the ailerons, elevators and rudder will be banged up and down, right and left, doing them no good. A simple device known as a control bracket has been developed to lock these control surfaces in a neutral position. It is just two joined pieces of wood that slip onto the control surface, one on the movable part and the other on the fixed structure of the plane. Testing of the controls before departure is the pilot's responsibility and that is why you see all the movable parts waving goodbye before the ship taxis out for the take-off.

Of course, there's always the possibility, however remote, that the pilot may forget to check his controls and rise into the air with one or more surfaces locked. It has happened on at least one occasion that a control bracket was left on an aileron with the result that the plane fell off and crashed.

Best idea yet to guarantee removal of control locks if the ground crew forgets is to attach a cable or strong cord to the bracket at one end, and a heavy weight at the other. Then if the pilot, too, should forget to check his controls, the locks are automatically pulled off by the weight on the ground as the plane begins to move.

GO TO the airport and see how a cold airplane engine is warmed up. You will get a few pointers from the airplane people that will add to the life of your automobile motor. At least you'll receive an unprecedented demonstration of patience on the one hand and reverence for the power plant on the other.

The engine is turned over by the starter and bursts into a roar. Immediately it is throttled back. Depending upon the size of the engine and the degree of cold, it is allowed to idle for several minutes. Meanwhile, the pilot's eyes glance at the oil pressure, oil temperature, cylinder-head temperature or coolant temperature instruments. There are minimums which the needles must reach before the pilot would think of taking off.

And so the prop whirls on and the engine purrs for what seems an interminable period. Then comes a change in the noise level. The throttle is being opened slowly. Finally comes the all

out, and the plane thro tail, straining at the cho Slowly the throttle is to idling speed. The ma is satisfied. The first pi engine failure on the t engine—is eliminated.

Wake up Sleepy Motors

with
**CHAMPION
SPARK PLUGS**

A sluggish, sleepy motor is wasteful and inefficient, and any car with one has no rightful place in our wartime economy.

Wake up your sleepy motor—step-up gasoline mileage to the maximum by having your spark plugs tested, cleaned, and re-gapped at regular intervals.

When should spark plugs be changed? That varies, as most any spark plug will continue to function in a hit or miss, wasteful and inefficient manner almost indefinitely. But why continue wasting gas with old, worn-out, carbon encrusted spark plugs, and why put up with sluggish, inefficient performance when new Champions will rectify these troubles—which usually occur after 10,000 miles of service?

Have your spark plugs checked today. If you need new ones insist on dependable Champions, the only spark plugs with the Sillment seal which prevents harmful gas leakage common to ordinary spark plugs. Since leakage in spark plugs causes overheating, pre-ignition and rough, wasteful engine operation, it's decidedly to your advantage to insist on Champion Spark Plugs for champion performance.

YOUR CAR MAY REQUIRE A HOTTER OR COLDER TYPE THAN NORMALLY RECOMMENDED—CONSULT YOUR DEALER

"Don't look now boys, but..."

Copyright 1942—Philco Corporation

THIS impression by Rollin Kirby is the first of a series that is being posted before the workers of the Philco factories who are helping to produce the weapons of victory . . . a reminder of the glorious purpose of their labors . . . an expression of the spirit that spurs them on. "More . . . Better . . . Sooner" is their goal!

★ ★ ★

Today, Philco's soldiers of industry are devoted to the production of communications equipment, radios for tanks and airplanes, artillery fuzes and shells for the service of our armed forces . . . doing their part to give our men at the front not only the vast superiority in equipment that America's mass production experts can produce, but also *new* weapons of victory, yet unknown to the world, that America's industrial scientists can devise.

Out of this inspired and unrelenting effort comes an abiding faith in victory and the survival of the American way of life. And with it . . . *new hope for the future!* For some good comes out of all this excess of human effort devoted to the evil ways of war. Scientific progress moves on at breakneck speed. Some of our greatest scientific achievements for the enjoyment of peace . . . radio as we know it today, the modern airplane . . . have emerged from the stress of war.

Today, in the closely guarded walls of the Philco laboratories, engineers have already worked out problems of

tremendous importance to the ways of peace. Others are in the making that will cause the evil of these stormy days to live only in the history books of future generations and the good survive in the abundant joys of their daily lives.

This is Philco's hope, faith . . . and *pride* for the future.

Free Limited Offer . . . While available, a full size reproduction of the original drawing by Rollin Kirby will be furnished gladly upon request. Simply address Philco Corporation, Philadelphia, Penna., and ask for Cartoon Number 2C.

PHILCO CORPORATION

Through its national service organizations, Philco offers to its millions of owners throughout the land, at uniform and reasonable charges, the means of conserving and prolonging the use and enjoyment of Philco Products.

Doctor's Orders

By J. P. Marquand

Torn by two allegiances, he betrayed both of them—each for the other. He died with his honor intact

THERE was often an interval after dinner in Honolulu when guests began to tell amusing stories about their servants. You waited of course until Pedro and Taki had left the Scotch-and-soda and were presumably well out of ear-shot, and then you told of the time when Pedro thought a hot-water bottle was used for drinking purposes, or when Taki was sent downtown to the store to get biscuits and came back with a truck load of bricks—that was years ago and

of course Taki's language was much better now.

At such times when Frank Joselyn looked across the water at the Hawaiians with their torches and their fish spears wading on the coral reef, it was easy to believe that you were in the Orient, where one called the servants "boys."

In Honolulu, one also referred occasionally to the housemen as "boys." Joselyn, for instance, had what was termed a "fine boy," although Awaki's stiff black hair was already touched with gray. Awaki's face, round and without many lines, was extraordinarily benign for a Japanese, and his hair gave him a venerable look when he stood before one with hands carefully clasped together.

Joselyn pushed his chair away from

the breakfast table. The breeze from the veranda rustled the pages of the newspaper and blew a letter to the floor. Awaki bent forward quickly and retrieved the letter.

"Awaki," Frank Joselyn said, and took a cigarette from the box near his elbow. Awaki moved forward with a shadowlike swiftness, pulling matches from his pocket and striking one as he moved.

"Soor," Awaki said, "too much cigarette no good. Doctor, he say . . ."

But Joselyn's mind was on something

The sidewalks were crowded with the divergent features of the Orient. A spicy smell of food came from the open-sided shops

else. "A friend of mine is coming to dinner tonight, a great friend."

"Yiss, soor," Awaki said. "Lady, please?"

"No," Joselyn said. "no, no, an army officer. Captain Marsh."

"Oh," Awaki said, "from mainland yestiddy. Oh, yiss."

"An old friend," Frank Joselyn said. "We went to the military school together—West Point."

"Yiss," Awaki bobbed his head. "West Point. Oh, yiss. Captain, he stop all night? He long time stop?"

"No," Frank shook his head. "He has his own quarters."

"Up at new flying field," Awaki said, "yiss?"

Joselyn pushed himself up straighter in his wicker chair. "What the devil do you know about a new flying field?" he asked.

"So sorry," Awaki said. "All the time talk. Too much soldier. Too much war."

Awaki gave a short apologetic laugh

and trotted toward the kitchen. He was back in a moment with a pill and a glass of water.

"Medicine, please," he said, "must not forget." And he waited while Joselyn swallowed it. It seemed to Joselyn that Awaki's dark brown eyes were less impersonal as he stood there.

"So sorry sick," Awaki said. "So glad not have to go to war."

It surprised Joselyn at the time, and it still surprised him when he thought it over later.

"We'll have Martinis," he told Awaki. "Captain Marsh likes them dry."

"Yiss," Awaki answered. "Not too many, please. Doctor, he say . . ."

IT DID not matter particularly what the doctor said. Joselyn was glad that an old friend was coming to the Islands; not that he was lonely, but Joe Marsh was a very old friend. He wanted Joe to see his place. He wanted Joe to like it.

Joe Marsh said he liked it that evening. He looked hard and competent

as he stood in the doorway of the long living room where the windows opened on the lawn beside the beach. When Joselyn saw Joe Marsh's face he was aware of how much his own had changed. The active lines, the clear-cut molding were leaving it. He felt more than usual the need of a Martini while he watched the captain glance at the comfortable chairs and the magazines and the red lacquer tables in the living room. He had been pleased with his decorative results, and with the way he had combined home with the Orient and Polynesia, until his old classmate spoke.

"I like it here," Joe Marsh said. "There's only one thing that's the matter. It's soft, Frank, too damn' soft."

The trade wind was blowing, the waves were pounding on the reef with an undertone of sound that was more reassuring than ominous. Far down the beach someone was singing the song of the Islands, and the sea breeze had the sweetish salt smell of the tropics.

"It's too easy," Captain Marsh said again.

"Yes," Joselyn answered. "There was something in Joe Marsh's eye feel soft himself. "But for a bad heart."

He saw Joe Marsh change. He would have everything he owned received his sympathy.

"I didn't mean for you said. "You're looking ever did. You're doing

Joselyn knew exactly doing, because the doctor

Then Awaki came in tray and the cocktails. room in a straight line Captain Marsh, extended front of him, and bowed gentle intake of breath.

Marsh looked at him while before he drank asked, "how long have you boy?"

Joselyn told him that Awaki ever since he and that was five years.

"Awaki's very good," one of the old-time Japanese hard to get, you know born are pretty terrible."

"Where did he come from say?" the captain asked

"Outside of Tokyo swered. "He came with mother when he was was brought up on a plantation. He's worked for all the know, I think he rather

Joe Marsh's mouth loosened when he smiled. "Don't he said. "Any good service think he likes you."

"No," Joselyn answered. "quite a friend of mine. I more money, but he says along with me."

LATER in the evening Joselyn was looking at the lanai looking at the no place like the Islands never too cold. It was air-conditioned room at night. The breeze slat coconut palm outside high up in the tree there ing sound.

"Rats," Frank said, with captain look up. "You don't you?" It occurred was beginning to be garr informative, like an old Islands. The name for him He was a Kaamiina and of the Intelligence was a Malahini. If Joselyn drink he believed that this difference to the captain.

"You see, about the "the story is that they bad—rat holes everywhere one imported the Inc Well, they drove the rats and now we have them and rats."

"Yes," the captain's him through the darkness Indian animal in to kill the rats go into the trees nese to work on the plan the Hawaiians didn't want you educate the Chinese don't want to do field work in Japanese. And you Japs, and they don't war Japs, they've got quite here, haven't they?"

(Continued on p. 28)

Then Joselyn saw that Awaki was holding the automatic. "Soor," Awaki said, "stop please. Doctor, he says

FLYING HELL

By Jim Marshall

Those famed Stukas turn out to be pretty mild when compared with America's latest dive bomber—the new Vultee Vengeance

been wondering about the much-advertised German Stukas and worrying if we've anything about them, stop. We are turning out something better than any Stuka ever—much, much better than the Japs may have. Just how our death-sower is than we can't tell you. But you'd know.

you this much, though, the Vultee Vengeance that flies from production lines. It flies faster, carries more bombs and can defend itself better than any similar ship we have—or even have as our intelligence serv-

we're going to put you in the cockpit of a new Vengeance. You bomb any enemy ship, as you prefer, but you have to understand a few things. You get a lot of movie-implemented in your head.

terror isn't an "answer" because it is not the mission. It's to battle another. It's a hit-and-run diver. Its job is to get its target, do its work and get back to its base. Fleets of bombers don't fight one another, at least not up to the fighter squadrons.

ship, as you'll discover. You fit yourself down into its narrow, cramped cockpit—and fight if necessary—and strip the enemy fighters that are in your way. You know, dive bombing is an old idea but unfortunately it was

not until the Germans and then the British demonstrated what could be done by making a plane into a sort of flying howitzer that we started to see what we could do about it. It didn't take us long to come out atop the heap.

But now, since you're itching to dive down on that Jap cruiser and let go your bombs, we'll go out and find Frank Davis. Frank is test pilot for the experimental section of Vultee Aircraft. He's a Caltech boy, an ex-Marine dive bomber pilot and what he doesn't know about the Vengeance is practically nothing. The ship is out on the concrete apron, in drab working paint, not yet camouflaged. You notice that its wings seem to be bent midway between the body and their outer tips.

If you want to see how the bomb-release gadgets work, crawl under the lean belly with Frank. In the cockpit a mechanic presses a button and the long folding doors of the bomb bay swing open. Up above you are the wicked-looking bombs—but don't worry; they're not "armed." You could drop them on the concrete and they wouldn't go off. Well, probably not. On each bomb you see a little windmill. When you "arm" the bomb, you release this windmill by twiddling another gadget in the cockpit. As the bomb drops, the mill spins. After so many revolutions the bomb becomes live. When its nose hits anything—zowie!

But until the spinner has run up its destined number of revolutions nothing can happen. The ship can land fully loaded in safety. If it doesn't find its target it doesn't have to waste its bombs.

You can climb in now. Let yourself down gently on the folded chute that

pads the metal seat. In front and on each side of you are levers and knobs and buttons and indicators and dials. As pilot, you will have to watch all the dials, run the ship, spot the target, operate some of the guns and finally dive down and release the bombs at the right moment. Frank—he's your gunner on this trip—is back in the rear cockpit. He handles the radiophone by which you talk to other bombers and your base. He does the navigation, telling you where you are and what course you're on, through the interphone. Also, he handles the after guns and spits hell at the target and its defenders after you've let go your bombs and pulled out of the dive.

Now the Cyclone is roaring out on the nose and into the air. Frank chats through the interphone as the country slides by underneath. You zip over the beach and head out to sea, looking for that Jap cruiser.

You see (says Frank) a bomber is a sort of flying cannon and you have to aim it not only to make your bombs hit but to make your fixed guns, in the forward edge of the wing, effective. At some of these movie speeds you hear about, if the pilot took a deep breath he'd miss every time.

There are brakes on the wings to slow down the ship in a dive, which often is slower than level flight. Of course, it can't be too slow, or your enemy's gunners would get you. It has to be a compromise—like everything else about a plane: slowness for accuracy, speed for safety.

No crash helmet. No dive belt. No death-defying dips at ten miles a minute. But just as things seem humdrum, you look down in the angle between

America's answer to the Axis: the Vultee Vengeance. This dive bomber carries bigger bomb loads farther and faster than any other ship in the world, including, by actual test, Germany's much-vaunted Stuka

your wing and the body of the plane—and far below is the tiny outline of a ship, hardly visible against the gray sea. Now, if you'll imagine that's a Jap cruiser and you're an American bomber pilot on a Vengeance, here's what you do:

First, you maneuver your plane to get the sun behind you, so the Japs below will have to look into the light-blaze to see you. Then, if you can, you get into position over the target the long way—that is, you try to get either ahead or astern of the ship. When you're set, you open the bomb doors. As these open you see between your feet a little window. In front of you, attached to the windshield, is a small square of heavy glass. As you maneuver the plane, you see the target in a reflection on this glass. You keep the target in the sight, if you can.

Then you figure out what sort and how many bombs you'll use. If it's a battleship you let everything go. This time you figure two big high-explosive babies may be sufficient. So you press two small "selectors." Then you "arm" the bombs, by another button. Now you're all set.

You get over the target, shove the plane's nose down and watch the sight. You put on the brakes to steady the ship and head almost straight down for the

(Continued on page 65)

EAGLE SCOUT

By Dudley Haddock

Charles Broley's hobby—capturing and banding bald eagles—has him scarred from head to foot. It's a worthwhile hobby, however, for now we are learning plenty about Uncle Sam's trade mark

BECAUSE he tackles buzz saws with his bare hands as a hobby, Charles L. Broley, a 63-year-old retired Canadian banker, has supplied Uncle Sam with more information about his trade mark during the last four years than had been learned since its adoption by the Continental Congress in 1782. In lieu of golf and fishing he bands bald eagles during his winter visits to Florida.

Until Broley became interested, in 1938, only 58 of the birds had been banded in North America. Knowledge of its habits was limited. It was believed, for one thing, the Florida species was non-migratory. Now it is known to be a long-distance traveler, for two with

Broley bands have been found in Canada, one on Prince Edward Island, 1,650 miles north of the nest it left only three weeks previously. Of the dozen Broley birds reported thus far, all were at points along the Atlantic Coast, indicating they remain near salt water while on tour in order to catch fish, their principal food.

It also has been learned they possess almost human intelligence—the crow, Broley asserts, is an ignoramus by comparison. As an example of eagle smartness: This winter a protracted cold blast from the north swept Florida. After several days of it the apparently disgusted birds got busy and built wind-breaks of Spanish moss upon the north side of their nests.

Until recently much of the life story of the species was a closed book. Observation of the nests and banding of the eaglets is so strenuous and hazardous few attempt it. One must be an engineer, acrobat and strong man to do so, for these nests are in the tops of the tallest pines and cypresses. Open a great umbrella, turn it upside down and attempt to climb into it from the tip, without wings, and it may be realized what one is up against in gaining the top of a nest, even after the tree has been scaled.

The first branch of the nesting tree usually is forty or fifty feet above the ground. Broley's device for raising his rope ladder is a broomstick with a tablespoon fastened at one end. An old lacrosse player, he places in the spoon a six-ounce lead weight attached to a stout fishing line, hurls it over a limb and, by using successively heavier lines, raises the ladder against the trunk. He finally reaches the nest by means of a rope, cast from branch to branch, which he climbs hand over hand.

The job has just begun when the nest is attained because it is like sharing the top of a small table with a pair of bobcats. An eaglet five or six weeks old, the best banding age, has a wingspread of more than six feet and is nearly as heavy and powerful as an adult bird. Broley is scarred from head to foot as the result of many battles. On occasion he has had to resort to a pair of pliers to pry out talons driven deeply into his arms and hands. Arguments always are with the youngsters: the old birds circle at a distance or perch in a near-by tree and express their indignation by loud screams.

The Canadian devised his own method of banding eaglets. The nests are flat across the top, hence there is a

This is an adult Eagle—a living emblem of the skies, the United States

level area upon which grasps the tip of the left hand, and the right to escape, backs away downward and forward as a shield against beak, he slips his right and grasps the left leg, his knee upon the wing keep it extended and hand, the band is applied.

The female eaglet, and far stronger than the perfect hellion. A bunch of peramental as an open so vicious she not infrequently eats her brother when scarce or when they starve or other tidbit. Of more handled during the seasons, Broley has noted of the feminine gender down, drag-out fight.

(Continued on

agle nest in North America is this one in a big pine in a St. g, Florida, residential district. It's 22 feet high, 12 feet wide, e or nest in which Mr. Broley (in tree) has ever found three This great nest has been used by many generations of eagles

6-year-old Charles L. Broley is an ex-banker whose hazardous finding and banding eaglets to aid U. S. Wild Life Service study Eagle in his arms came from tree he is ascending at right

With weights and rope, Mr. Broley slings a rope ladder over the lowest limb for first stage of climb to the nest above. Rest of trip is hand-over-hand on ropes. Job is doubly dangerous because eaglets are hellcats

The Long Stretch

By George Creel

Because Uncle Sam's rubber reserves must supply all the non-Axis world, you'll get even less rubber from now on. In fact, you'll be lucky to keep what little you've got now. Here's what you can expect

JUST what is the outlook for the country's rubber users? Meaning almost the whole 130,000,000 of us, for nipples and perambulator wheels bring babies into the count. When tires wear thin, what will be the chances for re-treading and recapping? More important, what are the prospects for new tires? And how about tires for your bicycle, assuming that you have one or are eligible to get one under the new rules? How about taxis? Will they be forced off the streets? What about rubber heels, overshoes, boots, coats, hats, bath mats, gloves for dishwashing, garden hose, golf balls, tennis balls and the thousand and one other things that are as much a part of everyday life as the kitchen stove? Also rubber for medical and surgical use? And for the farm? Com-

ing right down to it, is there a real rubber shortage, or is it some more of the hysteria that has gripped Washington ever since Pearl Harbor?

Not one of these questions can be answered snappily or even cheerfully. No doubt a certain amount of hysteria does exaggerate and complicate the rubber situation. Nevertheless, there is a shortage. What's worse, not even the most farseeing expert can tell exactly how much of one or how long it will last. Everything depends upon a lot of things that are still up in the air: America's own essential needs, for example, and the essential needs of some thirty other anti-Axis nations; the amount of natural rubber we can get from sources still available; the progress of our synthetic rubber program, and the extent to which we can cut out rubber waste.

After going over every fact and figure in the case, the guess can be hazarded that rubber users will get an "all-clear" signal in 1944. There is better than an even chance that drastic restrictions will be materially relaxed in 1943, but for the next twelve months, at least, the great majority of people must get ready to grin and bear it. And grinning, it may be added, can be made a whole lot easier if all of us get rid of the angers and irritations bred by wild rumors and a good many downright lies.

First and foremost, the job of build-

ing up a rubber stock pile for the United States, one large enough for any emergency, was neither botched nor boomed—unless, of course, you want to join the army of hindsighters and claim that Pearl Harbor, Singapore and Java should have been foreseen. Fortunately, the records show that no warning voice was lifted prior to the fateful day of December 7th.

When Congress, in 1939, gave Henry Morgenthau some \$70,000,000 for the purchase of "critical and strategic materials," rubber received no mention, and the money was spent for quinine, tin, mica, chrome, tungsten, etc. Why not? Even the Army and the Navy held firmly to the conviction that the Far East could always be depended upon for a cheap and inexhaustible rubber supply. The possibility that Malaya and the Netherlands East Indies could be occupied by an invading force was too farfetched for serious consideration.

Rubber did not come into the picture until after May 28, 1940, when President Roosevelt declared that the United States must and would be the "great Arsenal of Democracy." On June 25th, an aroused Congress authorized Jesse Jones, head of the Federal Loan Agency, to accumulate stock piles of "critical and strategic materials," and on June 28th, the President put rubber on the list.

Within an hour a rubber company was in operation. Mr. Jones was sitting from representatives of the International Rubber Regulation Committee, the British-Dutch controlling 97 per cent of the supply.

There is a fairly generally fostered in certain circles, that the ice-ey of his reputation as a delayed negotiator, "horse trading." On record shows that Jones speed that must have off the bat, was for every pound of rubber requirements and at the he could get at the 1 tons, due to the fact that was operating at only capacity. Learning this of record—Mr. Jones heat. Under his steady production upped to 85 per cent at the end of the year total of 430,000 tons a 000,000. More than the industry had increased it 54,000 tons over 1939. by Mr. Jones lifted the duction to 100 per cent (Continued on page 45)

A ground crew putting new tires on one of the U. S. Army's B-25 bombers. One of the principal reasons that civilians will have to go short on rubber is to supply tires for this plane and thousands like it

rling friendship

nines after Mary Penrose
ceived Susan Glover's post-
with its sad and surprising
wa counting out her money
y looked bedroom on the top
e great Castle Hotel. Having
e envelope from within
of one coat, she arranged
asse in neat piles on her bu-
st, the six green-backed pound
ne to clean; next, the eight
s, dog-eared and brown;
g of two
alf crowns, the four two-
ce the five bob, the seven
the eight pennies, the two
all, eleven pounds, two
nce-halfpenny.

two
pre-
nted her savings from
from Easter to Lammas
ad when one considered
pent four and nine for a
had sent six shillings ev-

ery week to her mother in St. Ives, and
had paid a shoe shop one shilling to take
the squeak from her shoes, since the
manageress had said it lowered the tone
of the hotel.

Still, she must not be rash. There
were but five more months to Christ-
mas, when, the season slackening, she
was sure to be laid off; and in those five
months she could hardly hope to do bet-
ter than in the same number preceding.
There were, unfortunately, clothes to
be bought, a new coat and dress, shoes
guaranteed to be squeakless. More-
over, now that Susan's postcard had so
summarily changed the face of things,
she must make allowance for the three
winter months during which she must
keep herself.

She drew the card from her apron
pocket with her right hand while with
the fingers of her left she encircled first
the shillings and then the half crowns.

"Dear Mary:

"I write to say that Jared was
drowned today. The burying is Friday.
If you could come for it, it would be
good.

SUSAN"

To go to the village just north of
Land's End, in which Jared had lived,
and in the racing waters beyond which,
so the postcard said, he had died, would
cost no less than two pounds even
though she could share Susan's bed at
the Red Lion and pay nothing for her
food. She could doubtless travel by
charabanc. Now that tourists clam-
ored to see the Cornish coast as quickly
and as easily as possible, such great
cars ran daily from Tintagel to the ex-
treme southwestern point.

EXPENSIVE as was the journey and
out of the question as it would be
under any other circumstances, it was
every moment borne in upon Mary that
she must make it. Susan Glover was
her best friend. Not only had they been
girls together in St. Ives, but for six
years they had served in neighboring
public houses in the Land's End village.
And as for Jared Treknow, Mary Pen-
rose had promised to marry him at the
beginning of the new year.

Once she had decided to attend the
burying, she went to obtain permission
from the manageress. It was granted

Dreaming, Mary could live in
another age. She saw Jared and
Susan there, embracing in the
wide spring fields of Camelot

not too grudgingly and yet, on principle,
not too willingly. Mary was a steady
and a courteous waitress, and one did
not run the risk of spoiling her by fa-
vors.

"I suppose as a matter of fact it's not
what one would call a pleasure trip,"
said the manageress. She was a large,
florid woman with small, ill-adjusted
steel spectacles over nearsighted eyes.

"No, miss."

"You say a relative has died?" the
manageress asked.

"Yes, miss."

"Near of kin? I mean to say, what
kind of relative?"

Mary winced a bit under the blinking
stare of the manageress. She had not
meant to give even the least particular
of Susan's scanty information. But there
was no help for it. "One, miss, that I

Bombs Away!

By Lynn Farnol

MAJOR, U. S. ARMY AIR CORPS

Deep into the Atlantic Ocean wastes the Bomber Command probes with deadly fingers, bringing sudden and violent death to Germany's submarines and new life and hope to America's ships and seamen

THAT'S it!"

A final roar of the motors, a sputter and then silence.

One by one, we scamper down out of the ship, blear-eyed from watching too long, stiff from tense, huddled positions, with the funny feeling of letting go of a lot of excitement a little too quickly.

The ground crew takes over. Trucks and trailers appear out of the darkness. Through the biting winter wind, we find our way to the "Recon" car that takes us to the orderly room of the hangar.

Six of us with our land legs back strut into the club room of the squadron. Everyone stops, looks up from what he's doing. A friendly welcome, unspoken. The squadron leader waits and then asks, "How many?"

The pilot smiles. He's allowed to do the talking. He's the boss. He holds up four fingers and says "Salvo!"

And so ends a routine patrol mission of the Army Air Forces out over the Atlantic sea wastes, searching for the Nazi undersea wolves, a search in which life hangs in the balance for the hunter and the hunted both.

Four and a half hours earlier, pilot, copilot, navigator and bombardier and squadron commander and the intelligence officer of the First Air Force had stood around a folded hydrographic map. This was a "brief." Fingers traced lines out to the Atlantic and back—not aimless lines, but magic routes to strange rendezvous. Understanding, men tugged and pulled at the winter flying togs into which they were stuffed like sausages. Out to the waiting ship, its idling motors stirring up swirls of sandy snow. From the other side, the Atlantic sent a frosty blast as we waited for "Buzz," the bombardier, to get his head down out of the bomb bay, loaded with death. Buzz wouldn't be hurried, though. His up-raised hand, a casual kind of a salute, was the signal. The eggs were in their nest, ready to hatch.

Lieutenants "Mac" and "Bob," his copilot and understudy, were going through their check-off. The list of things that had to be done before the plane took off was in Bob's hands. Trim tabs, "set for take-off." Battery switches, "on." Propellers, "full low pitch." Their eyes looked to their dials, to the landing gear, to the wings, a hand went up to touch a lever, or point loosely to a dial, as each item on the list was indicated. They have no need of talk. Eyes and instinct. The hands of one obey the glance and impulse of the other.

Curious the relationship of a pilot and copilot; teacher and pupil. The kid, just up from Kelly. Mac, who

never says much. All the things they don't teach you in school. War. The realization that their destinies are pretty well tied up, only they don't talk about it.

Then, at the head of the long runways, the motors give an angry murmur, and off we go, down the runway, up, imperceptibly, inching our way over the church steeples and the tree tops.

There's something different about a bomber. By comparison, a commercial airliner is like taking an elevator. Just that impersonal. With a bomber, you don't fly airtracks. Flying isn't just buttons and levers. There is a tangible response to pressure, not like a bicycle, maybe, but you know that if you do this, something quick, direct and immediate happens. It's trigger-quick. Especially over water, with that horizon that you see now, and now don't.

Here we come to the jagged line of surf. We've settled down now. The smooth breathing of the motors, the transparent silver glints in the propellers' swirls. Each man in his place. Gunners trying out their safety catches, just to make sure. "Deke," the navigator, reaching out for his computer and his maps. Buzz, the bombardier, is already at his vigil, like a terrier, pointing. Six pair of eyes, watching, as we head out to sea.

Ocean, Ocean, Everywhere

We pass over a rusty old boiler, half protruding from the choppy water. The tail gunner sights, presses the trigger and drops twenty rounds dead in the center, just for luck.

Wondering, as we shoot out over the water, quickly out of sight. You wonder. Some of these trips are eleven hours or more. No landmarks. Just the pattern of the waves.

Wondering about the Bomber Command that now seems so important. Three jobs we have: to fly the ship, to get there and to hit something. The boys were pretty good at bombing in the World War. At flying, we've been pretty good. Navigation has sort of pulled the whole thing together. Colonel Williams telling us about the old days when they were first teaching air navigation at Rockwell Field, near San Diego, in 1933, with Martin B-10's. The old days when the late Major General (then Major) Herbert Dargue was flying out from his 2d Wing Headquarters at Langley Field to demonstrate some bomb sharpshooting on craft out over the Atlantic. The new Bombardment Command? Hell, they were "running sweeps"—flying offshore patrols—ten years ago, and doing it well.

Wondering about the English Coastal Command. Last August, they caught a German submarine and took it captive to land. The odds are against us, of finding or hitting a submarine—looking for a needle in a haystack—but what sport when you find one! The boys say that the English never really got very many by air.

The subs hate the air patrols, though. It is a form of attack against which they

(Continued on page 64)

A torpedoed tanker goes down beneath a spectacular pillar of flame and smoke. Preventing such disasters as this is the task of the U. S. Army Bomber Command

Pilot and copilot are the nerve center of a bomber on patrol. Close personal relationship makes bomber crews a cohesive unit with high degree of co-operation

Aboard a patrol bomber, the radio operator keeps close contact with other crew members and listens for signals from ships or shore

Bombardier's station is in the plane's plastic nose. Here he indulges in a few practice bursts on his .30-cal. machine gun—just in case

The navigator's job is computing position and reporting to the pilot as the bomber makes its charted series of great overwater sweeps

There's Someone for You

Two ugly ducklings magically turn into swans before each other's astonished eyes

TULSA sat there stiffly because she had to reserve the table until the Danielses came back from the shoe store down the street. Tables were precious at the Green Spot on Saturday night.

Tulsa spread her library book flat open in front of her, to show she had something to do, and one thin hand clung to the glass of beer that proved she was a customer when she knew in her heart she was an outsider from gaiety. And yet, all the time, she was

waiting to see if Everett Smith—it was a revelation of character that even the Army hadn't given Everett a nickname—would turn up at the Green Spot before the evening went by.

"He's so different, maybe not," Tulsa thought. Then she thought, a little sadly, "But even though he is so well-informed, he probably wants a good time like everybody else. A fellow like Everett would naturally have a date."

For on Saturday nights there was not a sun-dried old grandmother who did not have a friend she was eager to talk the week over with, there was no girl without a dance partner now there was a near-by rifle range. Even a girl like Eileen Fornoy could have a half dozen soldiers.

Eileen looked young from a distance, but close to, she was as old as remorse,

with a hard little face under the fat baby curls and the bright red beanie. She had on a lot of make-up but it couldn't hide the calculating look in her eyes or the mean set to her own mouth under the lipsticked one. Tulsa could remember that mouth laughing on a night when she, Tulsa, had stood on a rooming-house porch, crying tears that felt like hot pitch on her hands that clung to the railing.

TULSA looked away and watched Saturday night. Victory was the only town for thirty miles of Mojave Desert in every direction and its Green Spot was the very heart of society. On Saturday nights everybody was there—ranchers and their families, workers from the cement plant and the railroad yards, cowhands, soldiers, the sheriff and dude

ranchers like the young couple together in a dream.

"She's beautiful," Tulsa told her. "That's why he loves her. He needn't be ashamed to let her see his thoughts, and at the same time, even if Everett he won't care that you was Tuesday afternoon with nobody around."

There she was, sending for the Danielses with the truck waiting out in the truck beat down on the little office building, and outside the petual dust rose thickly the tress was slow and when Tulsa read a book.

Everett Smith reddened. (Continued on p. 71)

"You own a ranch?" Tulsa asked. "Why, yes," Everett said. "You know how many trees I have on it?"

BELLE on Wheels

By Bill Davidson

year-old Gloria
catapulted to
fame by
Rooney. He
her down in a
one look at her
gams, and what
after is history

ing a hue and cry about the amateur roller-skating bum (a cousin of the amateur tennis bum)—the game has definitely arrived.

But that's not all.

There is Gloria Nord.

Miss Nord is a fetching blond creature who is the star of the above-mentioned roller-skating show. She is, as Samuel J. Friedman, publicist, puts it, Sonja Henie without ice. She is, as Mr. Friedman further puts it, a belle on wheels.

Recently, when the skating show opened in Baltimore, nineteen-year-old Gloria turned in a nervous performance. Jim Morton, roller-skating expert of the New York Journal-American, watched, and the experience was admittedly harrowing. He sat next to a large stranger, tentatively identified as a Mr. Moriarty. Gloria made her spotlighted entrance before the hushed audience, looking delectable in a cute Little Bo Peep costume. Behind her trailed an oversized toy sheep, mounted on roller skates. Mr. Morton tch-tched at this violation of the pure skating art. Mr. Moriarty rubbed his hands together and chortled.

Gloria swirled and danced through the opening chorus of her number. Then she made a misstep and tripped over the sheep. Down she went on her gingham-bedecked *derrière*.

Mr. Morton winced. "No *éclat*," said Mr. Morton.

Mr. Moriarty grinned. "What a pair of gams!" said Mr. Moriarty.

A few minutes later Gloria attempted a difficult Mohawk turn and lost her balance—regaining it only after much unscheduled writhing of the torso.

Mr. Morton covered his eyes with his hands. "What horrible concentricity!" said Mr. Morton.

Mr. Moriarty moistened his lips with his tongue. "What a hunk of woman!" said Mr. Moriarty.

In the next act Gloria did a Cinderella number with Ted Sokol. At the stroke of midnight Sokol was supposed to remove one of Cinderella's skates. The skate stuck.

Mr. Morton buried his head in his arms. "Lordy, lordy, lordy!" said Mr. Morton.

Mr. Moriarty leaned forward on the edge of his seat. "Hot stuff," said Mr. Moriarty.

When the act was over, Mr. Morton, his critical mind made up, rose to go. Tremendous applause thundered through the arena. Mr. Morton looked around at the cheering audience uncomprehendingly. Then slowly, reluctantly, he sat down and his eyes wandered back to the floor where Gloria was beginning

The grace of the ballet, combined with the speed of wheeled motion, is embodied in the skating of Gloria Nord, pictured here in one of her roller routines

an encore. A long, low whistle escaped from Mr. Morton's lips. He turned to Mr. Moriarty for the first time.

"What a pair of gams!" said Mr. Morton.

The Baltimore episode is not typical of a Nord performance. Actually, Gloria is one of the finest figure skaters on wheels. This is a fact worthy of note because, comparatively speaking, she is little more than a novice. In the same show with Gloria are performers who were once numbered among roller skating's more renowned "bums." At the slightest provocation, each of them will open a trunk and show you hundreds of medals, ranging from national championships down. In Gloria's trophy case there is but one solitary insignificant medal. She was whisked into the ranks of the professionals after winning just one title as an amateur—the 1941 Southern California Waltz Championship. This is a feat comparable to Bing

MEDICAL MEN. Ready for all emergencies are members of the Medical Corps who normally guard the Army's health and whose work—before, during and after actual combat—is unceasing. To show Collier's readers how medics take care of and comfort our fighting men in action, personnel of a detachment here demonstrates treatment of a casualty. In this picture Pvt. John Doe, hit in the leg by a machine-gun slug, has been reached by an aid man from a medical detachment assigned to Doe's company. Aid man determines the nature of the injury, gives first aid and fills in an Emergency Medical Tag (reproduced below, half size). Diagnosis: Wounded in Action, Doe has Gun Shot Wound and a Fracture Compound Complete

CAMP BARKELEY, Abilene, Texas. Trainees at the Medical Replacement Training Center are learning how medical units function, with the aid of a miniature battleground recently knocked together in the camp's woodworking shop. The battle site shows the medical setup from the front lines all the way back (a theoretical six miles) through the clearing station, and takes in a small town spotted three miles from the front. The whole thing is built to scale, with an 18-inch church steeple as one of the yardsticks. Tents have been made from salvaged canvas, more than a hundred

small trees dot the landscape and the layout is complete right down to telephone poles.

The miniature battleground is expected by the 53d Medical Training Battalion's adjutant, Lt. F. W. Park, to put the lesson across with more of a wallop than would maps, drawings, or lectures; with it the trainee can get a mental snapshot of what his outfit will be doing when the fireworks get going, and can see how his work fits into the general picture. Principal menace to the miniature town is Old Bill, the MRTC's goat, which has tried to nibble a few trees off the mountains and was last reported

to be hungrily eying the bower's Rooming House in honor of Brig. Gen. Ro

MIAMI BEACH, Fla. With snazzy barracks and a golf club, administration building, training school for Air Corps officers is operating full resort. Where classes are under the palm trees and a mess hall, 500 Air Corps officers and noncoms are learning to serve the ground command of the flying command. Corps wings may be.

prop wash of a model plane when, ten weeks ago, Commandant Lt. Col. James S. Stowell announced to the press that six hotels and apartment houses had been leased for the duration and that classes would begin within four days. Hotel guests were given just 12 hours notice to check out, and Miami Beach's largest restaurant became the mess hall almost before the bus boys could clear the tables.

The Officer Candidate School will have a revolving membership of some 4,000 with an administrative force of 500 officers and men. Candidates come from all over the country. In fact, men

who, for one reason or another, fail to qualify as flying officers, have suddenly made Miami Beach a military mecca. Wouldn't you?

CAMP BLANDING, Starke, Fla. Pvt. John O. Harrop, of the Evacuation Hospital, will probably hesitate before he again identifies himself as a hospital attaché while off duty. Seems he set sail for a heavy date in Jacksonville the other night and happened upon an auto accident in which a couple of soldiers had been hurt. An officer asked if there was a doctor in the crowd and Harrop, with a lot of first-aid experi-

ence in his dome, stepped forward. Next thing he knew he was larruping back to the Blanding hospital with the victims. Hours later he finally reached Jacksonville to find his gal had given up and gone out with another guy.

AND Pvt. Carl Hutchins likewise suffered from innocent-bystander trouble. Some time ago some pixie in his outfit wrote an Indianapolis paper to the effect that Hutchins was lonesome and would appreciate a letter or two. First return mail yielded 432 letters, three boxes of candy, a raft of cookies

A SHORT STORY
COMPLETE ON THIS PAGE

Whatcha Know, Joe?

By Trevor Bardette

ILLUSTRATED BY HARRY MORSE MEYERS

ME, I like do som'theeng for the General," insisted Joe impassively.

"Joe" is short with us for Filipino, and this one didn't appear much different from the thousands of others on the Peninsula, except for the suit of begrimed, mud-spattered store "whites" that were wrinkled and not quite dry after his twenty-two-mile row across Manila Bay to Balanga in a stolen dinghy.

"But," said the major, giving me the office with a level look over Joe's head—we'd been through this routine with infiltrations before—"how do we know you're not a spy?"

"Yes, Joe," I butted in, scenting a good feature story for my next turn over the short-wave, "how do we know you're not working for Homma, Aguineldo or The Vibora?"

Joe just turned his head for a minute and looked at me. Then he started peeling off his coat. Not belligerently, but carefully . . . shrugging out of it. Not a muscle of his stolid face moved, but it didn't need to. I had an idea what was coming. His shirt was harder to get out of . . . even with our help. It stuck in a dozen places front and back. I whistled softly. We could hear the big rifles at Ft. Mills blasting away at the enemy concentrations near Cavite.

The major got up from his banyan-root seat behind the little deal table. "Come on, Joe!" It was a respectful order. "The hospital tent is over here."

We threaded our way through the screen of banyan roots that camouflaged the H.Q. from dive bombers. Joe followed the major. I followed Joe. We passed a foxhole. Even by walking carefully we still kicked up a lot of dust.

"What did they want to know, Joe?" asked the major suddenly, looking up as we heard the familiar roar of a cruising reconnaissance plane. I followed his eyes. It wasn't our P-40.

"They like to know where gold is," said Joe.

The roar above dove into a low scream.

"When they open bank vault . . ."

The major took one arm; I grabbed the other. We literally lifted Joe off his feet as we leaped into a foxhole dug beneath a rocky outcropping. We unscrambled ourselves on the bedding of leaves as Joe went on: "They do not find gold, bank notes, not even bonds, but . . ."

His voice was drowned in the crackle of the machine gun and the roar of the plane. The sharp voices of our antiaircraft guns started talking.

" . . . they find me. They know I am bank teller. 'I do not know where is gold,' I say. They do not believe me. Officer lieutenant arrive then. He say, 'Dear Filipino brother, you not in bank now, you in nice Nippon headquarters. But it is very, very hot. Please to take off pants and make body comfortable?' Little soldiers help me take off pants."

"I do not feel funny, but they laugh very much. Officer lieutenant say to soldiers, 'It is not nice to laugh at good Filipino brother without honorable pants. So please will Filipino brother take off coat and shirt, so not be funny.' Little soldiers help me take off coat and shirt quick."

We were climbing out of the foxhole now. We didn't offer to help Joe. We knew by this time that he could help himself.

"Officer say tell us where is gold," Joe went on. "He say Nippon need gold to buy nice things for dear good Filipino brothers. He do not say Nippon need gold to buy more nice airplanes to bomb General MacArthur and dear good Filipino soldiers."

"I say, 'Do not know where is gold.'"

"Officer lieutenant along with little blood-brother soldiers and me. We pass along very narrow twisting path. The ground is not solid in many places. The officer lieutenant walk beside me when he can, but most of the time he make me walk in front

"Finally he say, 'I go now. I leave Nippon brothers. You think very hard you remember.'"

"When he is gone, little soldier in his hand is twenty-five-caliber bayonet. He holds bayonet close as he whisper in my ear, 'We nice now. You tell me where is gold, Joe?'"

"I say, 'I do not know where is gold a long time I hear my heart beat like careless soldier. When he step beside and I am glad the bayonet is sharing the flesh of my arm and do not hurt me.'"

"So sorry, excuse please!" he says. Then he put finger in blood from wound to his forehead, leaving small mark. He whisper, 'we blood brothers not tell me where is gold, yes?'"

"I do not know where is gold," I say.

"Then other little soldiers like brothers too. They draw strange bayonets on my back and chest and their foreheads with the blood. I am good. But the officer lieutenant disgrace myself."

"He shout, 'What is such foolishness?'"

"Please, Officer Lieutenant," I say. "I am blood brother now. But even must make living too. For ten thousand gold, I take you where is bury treasure, gold, paper and bonds."

"They say—oh, yes, they make ten thousand dollars gold and also dent of bank. They are very happy. 'Dear good Filipino brother.' Now you buy many nice things for dear brothers. They still do not say, 'Nippon buy planes.' They give me back my money."

The major pushed aside the tent flap as Joe appeared in the opening. "Attention, sir."

THE colonel, Medical Corps, was in his sleeves, filling small vials from a bag containing a kind of medicine. He walked slowly around Joe. He saw Homma has held another session. "Please."

"With your permission, sir," said the major, turning to Joe as the colonel began to leave. "Joe, they gave you back your money."

"The gold," continued Joe, "is buried in a place. We do not go to that place very long way. It is place that I almost die there once. It is place I hunt when I am boy. There are soldiers. The officer lieutenant . . . ugh."

The colonel had bent over him and swabbed a colorless solution. "Lieutenant, Joe," said the colonel, "and grip on it."

"Officer lieutenant along with blood-brother soldiers and me," Joe resumed, "we pass along very narrow twisting path. The ground is not solid in many places. The officer lieutenant walk beside me when he can, but most of the time he make me walk in front because, when we reach the place I almost die, I do not make the path straight on as if the path is solid ground. . . . If, of a sudden, they would throw heavy weapons and equipment to save themselves. But without weapons they are afraid. Then it is too late. Quick, obstinate. The more they struggle to get them down . . . ugh!"

"I do not struggle. I lie quiet and wait. Maybe it will be kind to me again. The grove roots not far away . . . ugh!"

"This is going to hurt, Joe," said the major, "but pretty soon you'll be a new man. You're here, what do you want to do?"

Joe said, "Me . . . ughhh! . . . som'theeng for the General!"

May we act as your guide . . . for a minute or two?

US: If you don't mind, sir, we'd like to make a suggestion . . .

MAN: About a pool where there's another 16-inch rainbow hiding?

US: No—though our suggestion will certainly add to the enjoyment of your fishing trip. But first we'd like to ask: Have you tasted *today's* Four Roses?

MAN: Why, no. That's something I've intended to do, but haven't, yet.

US: Then we wish you'd come over to our camp and join us in a Four Roses Old-Fashioned. Because, unless you've tasted today's Four Roses, you can't possibly know what wonderful things have happened to this glorious whiskey! Here, in our humble opinion, is the greatest whiskey we, or anyone else, ever bottled!

MAN: Hmm! You wouldn't be just the least bit prejudiced, would you?

US: Oh yes, we *admit* we're prejudiced . . . in favor of Four Roses. What's more, we'll bet our bottom dollar that *you* will be, too—once you savor the mellow-rich magnificence of today's Four Roses. Just you wait till you taste it!

MAN: All I can say is that if today's Four Roses lives up to your promise, it will be *my* whiskey from now on, wherever I happen to be!

Four Roses is a blend of straight whiskies—90 proof. The straight whiskies in Four Roses are 5 years or more old. Frankfort Distilleries, Inc., Louisville & Baltimore.

NEVER TASTED SUCH WHISKEY AS TODAY'S **FOUR ROSES!**

LUCKY STRIKE MEANS FINE TOBACCO!

One in a series of notable paintings of the tobacco country by America's foremost artists

A "stick" of tobacco ready for the market. Painted from life on a Carolina farm by James Hapin

WE PAID 40%* MORE IN LAKE CITY, S. C., TO BRING YOU MILDER, BETTER-TASTING TOBACCO!

MILLIONS of smokers like yourself know that a cigarette is only as good as the tobacco that's in it . . . and not one whit better.

That's why the makers of Luckies pay the price to get the milder, better-tasting leaf, all over the tobacco country.

Just as an example:—At the tobacco auctions in Lake City, S. C., this season, we paid 40% above the average market price. Yes, 40% more, so you could enjoy milder, better-tasting leaf in your Lucky Strike.

This was in no way unusual. We paid well above the average market price in every one of 119 markets last season. And the *best* we buy goes into Luckies.

To independent tobacco experts, Lucky Strike means fine tobacco. With these men who know tobacco best—auctioneers, buyers and warehousemen—it's Luckies 2 to 1.

In a cigarette, it's the tobacco that counts. Remember that . . . and next time you buy—act on it . . . ask for Luckies!

*Based on average market price, U. S. Department of Agriculture.

WITH MEN WHO KNOW TOBACCO BEST—IT'S LUCKIES 2 TO 1

AHEAD, a rabbit ran out of the brush
along the ditch and into the glare
of the headlights, then bounced
down the road and crossed over. Lucie
and Duff approached Bill's Tavern, Taf-
ton's lone jook, a cheap frame structure
with a bright blue neon border around
the eaves, and a red sign EAT: a place
of many humors where sometimes sev-
eral couples from town would come and
play noisily; where an old man with a
wet, slack mouth watched the whirling
cherries and lemons and plums as his
nickels clinked into the slot machine;
where once in a while late some Sat-
urday night there would be trouble,
with an ice pick or a bottle or even a
gun coming into view; where girls
hopped cars or served tables or danced
with whoever asked them, simple girls
with a matter-of-fact worldly wisdom
brought on perhaps by an unfortunate
early marriage and a child farmed out
with a relative.

Bill's Tavern was like a business, or
a government, or a legislature, or a
world—whether it was good or bad de-
pended on who dominated it at the time.

"How about a beer?" Duff said,
finally.

She turned the car in and blew the
horn. "Let's don't be too long. Teague
McGinnis is coming over tonight."

"Maybe we better go, then."

"Oh, no," she said, pinching his leg.
He said, fascinated, "You're a sort of
fresh girl."

"Refreshing, you mean."

The waitress came out, an almost
pretty girl in cheap slacks. Inside, the
jook organ began playing and the notes
of Tuxedo Junction emanated from the
loud-speaker under the neon eaves and
spread over the calm Alabama coun-
tryside.

"Some day," Lucie said thoughtfully,
when the girl had gone, "I'm going to
find out what's behind that mask you
use for a face."

"You won't find much, I'm afraid,"
he said.

She smiled at him in that sudden
honest way of hers, and said, "Maybe
I will."

The girl brought the beer and hooked
the tray on the car, and left doing a little
sliding dance step, snapping her fingers
to the music. Bill's Tavern was almost
deserted at this early hour.

"What I like about you," Lucie said,
"is your superior brand of conversation.
Duff, listen. Are you coming to see me
or anything?"

"I don't guess I ought to."

"Sure you ought to. I'll have to think
of something, because the squire would
bust a gusset if you came to the house.
He's not crazy about you."

"I don't want to cause trouble."

"Duff," she said seriously, "I want to
see you. Honest. I'll fix it. You wait
and see."

LUCIE proved to be expert at duplic-
ity. She told Amos that she was going
to a show, or to play bridge. Sometimes
Duff simply came to the house after
nine, which was Amos' invariable going-
to-bed time. This night they drove to
the bluff that overlooked the amber
river. The night belonged more to May
than January; across the river a light
showed dimly in a farmer's house, and
she speculated that they must have a
sick baby, because no farmer would be
up at that hour of his own volition. Her
forehead was against the side of his
neck, and her hand was under his coat
against his shoulder in her friendly in-
timacy that he found so fascinating.

"We could go down to the bank.
There's pine straw to sit on, and it's not
cold," Duff said.

Doctor's Orders

Continued from page 12

His voice trailed off until it was lost in the sound of the waves on the coral reef.

"That's why you're here, I suppose?" Frank asked.

"Yes." Now the captain's voice was thoughtful. It was clear that he was deciding just how much he ought to say. "You know I did pretty well at language school."

Joselyn placed the tips of his fingers carefully together. It was so dark that he did not need to conceal the pain his thoughts gave him.

"You think it's coming, Joe?" he asked. There was a second's silence.

"Never mind," Joselyn said hastily. "I shouldn't have asked. It's funny to think that I'll be out of the show."

The kitchen door closed noisily and they heard Awaki's steps padding across the matting of the living room.

"Soor," Awaki said, "too long sit up. Too late, so sorry. Doctor, he say . . ."

"Now you see," Frank said as they walked across the lawn. A military car with a chauffeur was standing in the driveway. "There isn't any need for him to take care of me like that." He did not mean to be egotistical or complacent; he knew Awaki liked him.

"It's too soft," Joe Marsh had said.

Captain Joselyn, Field Artillery, United States Army, retired, had felt exactly that way before he thoroughly understood that his heart would never permit him to be wholly active again. When he was sent to the Islands to recover from pneumonia and had first rented the bungalow at Kahala, he had an army man's impatience of many of the Island dwellers' easy ways. He had been very careful not to use the word "pau" or "haole." He had the intolerance of a practical man toward legends of the vanishing Hawaiian race.

At first he had tried to appear unconcerned when people asked after his health. He explained that it would only be a few months at most before he recovered from over-strain, but of course his condition had been always on his mind. There was always that fear of permanent disability, although he would have been ashamed to have admitted it aloud. It was a sort of fear that turned his thoughts inward, so that he was oblivious to most details around him.

Awaki had come with the bungalow, but because of Joselyn's concentration on himself, it had been a long while before he had ever thought of Awaki as a person.

One morning some months after he was established there Joselyn noticed that the Japanese houseman was standing beside the breakfast table longer than was necessary.

"Excuse, soor," Awaki said, "very much need to go away this afternoon, please. Not Sunday, please."

The loud toneless quality of Awaki's voice made his meaning difficult to follow.

"What?" Joselyn asked. "What's that?"

Awaki rubbed his hands together, and burst into a titter of cheerful laughter.

"Must go today," he said. "My wife—I think she die tonight."

Joselyn had never heard death mentioned before on the heels of laughter. It was the first piece of ugliness he had experienced on the Islands.

"What's that?" he asked. "What's that you said?"

Awaki burst out again into that vicarious mirth.

"My wife," he repeated. "I think she die tonight." And he stood there, po-

lately grinning, waiting for J

swer.

It always pleased Joselyn understood the meaning mirth. Joselyn could never prompted him, for he was a servant person, but suddenly Awaki behaved according to code of manners. He understood it would have been an impossible thing for Awaki to have shown grief, depth of his woe should be an inverse ratio to his laughter.

"I'm sorry," he said.

"Oh, no," Awaki's teeth yellowish happy grin. "Oh sorry."

It had never occurred to Joselyn that Awaki might have a wife of far as he had known, Awaki had been his small quarters bungalow.

"Where do you live?" he asked.

"Please," Awaki said, "understand."

Joselyn spoke more slowly not here," he asked, "where?"

"Ewa side Nuaanu," Joselyn said.

"Along by Vineyard Street, please," Joselyn said.

"You get the car," Joselyn said.

There were queer wrinkles on Joselyn's forehead. "Soor," he said, "stand."

"You heard me," Joselyn said.

drive you there. If she's sick to go right now."

"Soor," Awaki said, "not."

It gave Joselyn a feeling crudely overstepped some thereby had destroyed so proportionate value.

"Not proper?" he said.

fool. Go out and get the car."

He drove the car himself, a roadster he had brought with him from the mainland, past Black past the irregular crater of the Head. The trade wind was blowing and the day was very clear.

the neat bungalows, which Joselyn had seen in the California coast, the coconut palms, and for darkness of the mountains in the distance.

IT WAS only after they had reached the palace of the old Hawaiian king that Joselyn had turned from King Street that Honolulu began to show its self-conscious neatness. Nuaanu flowed between stone walls, rickety houses on either side, sidewalks were crowded with the most divergent features of the Orient, the smell of strange foods can be open-sided shops.

"Not proper," Awaki had said.

Joselyn understood him for Joselyn had also grown conscious of his own race and yet he was happier than he had been in a long while. Awaki's face was one of those wooden tenebrous balconies and outside staircases the wash hung on lines above plants and where the voices rose above the scamper of bare feet.

"Many people here," Joselyn said.

"Along of each other, every day," Joselyn said.

He could never explain it in Awaki's manner after that it was respectful, but somehow different. If he had not taken it if he had not asked Awaki family, he was sure that a never have brought his sister help when he had guests to see was a rather old lady, a little with black irregular teeth in kimono and, the obi around her waist.

"Many people here," Joselyn said.

"Along of each other, every day," Joselyn said.

He could never explain it in Awaki's manner after that it was respectful, but somehow different. If he had not taken it if he had not asked Awaki family, he was sure that a never have brought his sister help when he had guests to see was a rather old lady, a little with black irregular teeth in kimono and, the obi around her waist.

Awaki's face was one of those wooden tenebrous balconies and outside staircases the wash hung on lines above plants and where the voices rose above the scamper of bare feet.

"Many people here," Joselyn said.

"Along of each other, every day," Joselyn said.

He could never explain it in Awaki's manner after that it was respectful, but somehow different. If he had not taken it if he had not asked Awaki family, he was sure that a never have brought his sister help when he had guests to see was a rather old lady, a little with black irregular teeth in kimono and, the obi around her waist.

above them was the familiar hum of
combat planes. It was getting on to-
ward time to buy presents to put on the
Christmas boat for home and soon there
would be Christmas trees on the Hono-
lulu streets. Yet in spite of the Christ-
mas season, it was like an afternoon in
June, as he remembered June at home.
There he was, dressed in whites and Joe
Marsh was in the khaki of the tropics.
There he was, sitting outdoors on his
veranda, offering Joe Marsh a Scotch
and soda.

"What's that you asked me?" Joselyn
said.

Joe Marsh linked his fingers together
around his knee. "I asked you if you
had a gun," he answered.

"Yes," Joselyn said, "an automatic in
my upper bureau drawer."

He did not mean to sound supercil-
ious; after all, it was the Army's busi-
ness always to be expecting trouble that
never came.

"That's good," Joe said. "Maybe
you'll need it before you're through."

Neither of them spoke for a while,
and Joe Marsh stood up and began
walking slowly up and down the ver-
anda.

"I suppose you know something I
don't," Joselyn said, "something you
can't tell me."

"You all just sit here," Joe Marsh an-
swered. "I don't like the way things
look. Let's let it go at that." He picked
up his hat saying, "I've got to be going
now. What are you doing on Saturday
night?"

Joselyn thought for a moment. He
was doing something on Saturday night.

"There's a poker game at my quar-
ters," Joe Marsh said. "You'd better
come along."

Joselyn thought again. Sometimes it
was strange to think that he must al-
ways consider his health.

"You'll sit up too late," he said, "and
it's a long ride back."

"Then spend the night," Joe Marsh
told him. "I've got a bungalow of my
own."

Even if it had gone on longer it would
have been one of those conversations
which did not mean much at the time.

IN a way his life was narrow but in an-
other way he had never been so com-
pletely master of his own life and of the
time which moved by him with the
trade wind and the sun. When he
thought of going to play poker with Joe
Marsh he could remember how the idea
would have struck him years ago. Now
he was as removed from times like
those as though he were a disembodied
spirit.

He thought of it as he was getting
into a fresh white suit. He could see his
face in the mirror above his bureau,
placid and contented with no new lines
on it. It was only a matter, the doctor
said, of no undue strain, and he would
live as long as anybody . . . no strain, no
worry, no sudden emotional excitement.
Two cigarettes a day and perhaps one
drink, no more. It was odd how com-
pletely he had become used to it. As he
stood there arranging his necktie, an-
other thought struck him, but again it
was purely academic curiosity like ob-
serving the sea bottom through glass.
He reached behind his handkerchiefs
and some packs of old letters to the
farther right-hand corner of his upper
bureau drawer and pulled out the side-
arm which he had worn in the service.
He did not do so with the slightest in-
tention of being dramatic, but simply
because he remembered his friend's
question. The pistol was the conven-
tional forty-five automatic, well bal-
anced, but rather heavy.

He had not handled the thing in years
but it fitted easily into his hand and the
magazine was filled. He could not re-

had ever left it loaded. Necessary was to throw a chamber. He leveled the weapon at him and he no longer had a marksmen; and he had not once. He put the auto back and closed the door. He might have done with it did not belong to him.

his white linen coat and let into his inside pocket. When he could hear the clatter of the kitchen door. Awaki was in his white shirt sleeves rolled up to his brown arms.

he said, "no dinner. I'm going." Awaki said, "no dinner. Please, soor, so I tell if you can't stand here talking. Go out and get the car."

Marsh's quarters," Joselyn said. He folded the palms of his hands and folded them together.

"oh, yiss. You want I stop. No too long time stop, soor," he said.

"Light," he said, "you go when I want you to pack your things. Awaki—pajamas, clean socks, shoes, still folded but the smile of his was gone. Joselyn had the idea of a puzzle. He thought he spoke too fast and he repeated his directions again when Awaki spoke.

"Awaki asked and his little thinner, "what for the bag?"

there was nothing wrong

about the question, it disconcerted Joselyn slightly because it was contrary to routine and convention.

"The captain asked me to spend the night," he said. "No breakfast here in the morning. It's a long way for me to drive back at night, Awaki."

Awaki bobbed his head and his lips creased again into his broadest smile. "Oh, yiss," he said; "doctor he say too long to drive. Soor, please, I drive you back tonight. So very glad."

"Thanks," Joselyn said; "you don't have to. Captain Marsh expects me."

There was another of those silences that were too long. Awaki was frowning almost stupidly.

"I said," Joselyn told him patiently, "I'm staying there at the flying field tonight."

Awaki did not move, but all the wrinkles in his face deepened.

"More better you stay here, soor," he said. "Too much out too late this week. I get nice dinner. You go sleep early. Too much out too late this week. Doctor, he say . . ."

"All right," Joselyn said. That stupidity of Awaki's was exasperating. "Never mind what the doctor says, I can't stand here talking. Go out and get the car."

"Soor," Awaki's voice was thin and almost pleading, "please more better you stay here tonight."

Joselyn was puzzled. The situation was entirely new.

"Look here," he said, "what's the matter with you, Awaki? I've stopped out there before."

Awaki drew a deep breath through his teeth. "Please," he said and there was a strange sibilant hiss in his voice, "please, you so good to me, soor, so very kind. Along with you a long time I stop; please soor, more better that you stay here. So long drive, soor, and doctor he say . . ." Awaki cleared his throat in a noisy vulgar manner. "More better that you stay."

There was something different in the room. There was something very curious and tense in Awaki's speech. It gave Joselyn's voice an edge of authority which he had almost forgotten.

Stop pestering them, Alfred. They've already told you they don't know how to go up a rope and disappear in the air"

HUMPHREYS

"That will do, Awaki," he said. "Go out and get the car!"

"Yiss," Awaki said. "Yiss, soor!" And then the kitchen door closed carefully behind him.

Joselyn sat down heavily on one of the wicker chairs. "Now what the devil was all that about?" he said.

There was no answer except the gentle rumbling of the surf outside and the dry rustling of the palm fronds by the window. He wondered if there was anything in his appearance that made Awaki think that he was looking drawn and tired. Sometimes Awaki was very quick that way.

It was growing darker every minute, so dark it was nearly time to turn on the lights. He kept waiting for the sound of the car outside but there was no sound.

Then he heard the kitchen door open. It was Awaki still in his apron.

"Soor," Awaki said, "so sorry."

Joselyn pushed himself out of his chair so quickly that it hurt him and he caught his breath.

"What the devil are you so sorry about, and where is the car?"

"So sorry, soor," Awaki said, "two tires flat! No can fix. So sorry."

"Two tires?" Joselyn repeated. He sank back in his chair. After all it did not matter—it was easier not to face the complication. He could call the garage in the morning. It did not matter whether he went out that night or not.

"Well," he said, "never mind it then. Get dinner. I'll stay here."

It was dusk by then so he could not see Awaki's face but he heard the polite hiss of Awaki's indrawn breath.

"Better you stay here," Awaki said. "You stop in chair. I telephone so sorry. I get you one nice drink and one nice dinner and then more better you go to bed. Doctor, he say . . ."

JOSelyn had grown to love the mornings on the Islands. The compensation for being an invalid was the interest you took in all that you did not notice when you were well. The curtain of the night lifted so suddenly on the Islands. The light increased in a way that was almost theatrical. First Koko Head was a gigantic sleeping shadow. Then the sky around it took on the softest pastel hues of pink and blue and streams of soft color swept over the ocean. All sorts of rainbow tints which you only saw at dawn grew brighter and then slowly faded with the rising sun.

It was Sunday morning and Sunday was a happy time. Friends he knew who worked in the city would be with their children on the beach in the morning. And the beach boys would be out at the farthest line of breakers at Waikiki. He opened his eyes with the first light and lay there as he often did thinking of the picture of the sunrise and watching the light change on the hibiscus bush outside his window. The sounds outside were all familiar: the call of a bird, the droning of a plane.

As the light grew brighter, he heard the door open in the little house where Awaki had his quarters. Joselyn did not look at the time, because the closing of the door outside told him that the hour was exactly quarter after seven. Next he heard the outside door to the kitchen open. In a minute Awaki would be putting the kettle on the stove.

Joselyn raised himself slightly in bed, arranged his pillow more comfortably and leaned back. A shaft of sunlight was already coming through the window, falling on his Nanking silk dressing gown, which Awaki had folded on the chair by the bureau. He leaned back and closed his eyes, still listening for Awaki.

At exactly a quarter before eight Awaki would open the bedroom door. Joselyn had slept very well, and he felt

The Man from Cairo, Egypt

I met a man the other day

Who purchases supplies
For a firm in Cairo, Egypt—

And he made me realize
That smokers, too, from

distant lands
Appreciate the best—
For I spied a tin of Edgeworth
In the pocket of his vest.

"Ah ha!" I said, "I recognize
An old familiar friend,"

"Edgeworth? Yes," he answered
"It has been my favorite blend

For many years . . . You know
That we, in far-off Cairo, too,
Have learned to love the fragrance
From that famous tin of blue."

What is it about Edgeworth, America's finest pipe tobacco, that has made this mild, aromatic blend so popular all over the world? In London . . . in Canada, Australia, New Zealand and many other countries, Edgeworth is the leading imported pipe tobacco.

Enjoy a generous sample of Edgeworth Pipe Tobacco at our expense. Write Larus & Brother Company, 205 22nd Street, Richmond, Virginia.

much better. When the door opened he looked, as he always did, at his traveling clock on his bedside table. It was exactly a quarter before eight. Awaki was in his white coat holding the tray with the coffee cup and the glass of water.

"Good morning, soor," Awaki said. "You sleep well. You look much better," and he handed Joselyn his medicine.

"I get you a nice breakfast," Awaki said, "very nice." Awaki fixed the pillows behind Joselyn's head.

"Thanks," Joselyn said, and handed him the empty coffee cup. "I'll get up. I'll have it in the living room."

THEN Awaki's dullness reminded him of the night before. Awaki stood staring beyond him out of the window, his face a little strained and intent. He did not seem to have heard. He seemed to be listening for something.

"I said I'll have breakfast in the living room," Joselyn repeated.

His voice made Awaki start and smile.

"Yiss, soor," Awaki said. "I get you nice breakfast."

Then he stepped backward with the tray the way he always did and closed the door.

It could not have been more than a few minutes later when Joselyn heard the sound of firing. At the first report he remembered it was Sunday and there should be no military exercises on Sunday. Then the firing was louder. It rose to a quick crescendo from the direction of Pearl Harbor and Fort Shafter. He knew the sound, though he had never heard it in such intensity. The anti-aircraft guns were opening up.

He was out of bed in a moment. He had not moved so fast in a long time. He was in his dressing gown running to his bedroom window. His room faced toward Ewa, as they said in the Islands, in the direction of Pearl Harbor and the military post. As he stood there, though trees and roofs and Diamond Head cut off his view, he could see black smoke in the direction of the naval base. Then he heard the sound of planes. The air was full of planes. He stood for an instant in blank incredulity, before he knew there was no make-believe about it. He had read of such things. He had considered them in military problems. It was an air attack.

"So," he said, "the Japs!"

He had been a soldier, so he knew exactly what was happening. They were knocking out the flying fields. They were over the Naval Base. Then he thought of something else. He would have been out there—in the middle of it if his car had been in shape. Then he remembered Awaki's words. He had heard them last night and they rang through his mind with the slap of gunfire and the distant thud of the bombing.

"More better you not go."

There had been a time when Joselyn could think and act quickly; and now with the firing it all came back. He opened his bureau drawer. His hand was perfectly steady. He threw a shell into the chamber of his automatic and holding it at his side he stepped out of his bedroom down the little hallway to the living room. He could still recall Awaki's voice:

"More better you not go."

His heart was beating so fast that he was shaken with his own heartbeats. His body felt clammy with perspiration but his mind was perfectly clear.

"Awaki," he called. "Awaki!"

The kitchen door opened. He saw Awaki in his white coat. When he leveled his automatic at him he saw Awaki's expression change. The man looked old with his graying hair. But he did not look startled. Instead, he

looked a little sad. It seemed unnecessary to say anything. Awaki knew that Awaki understood. "Awaki," he said again dizzily. He sat down in one of the chairs.

"Yiss, soor," Awaki said. "So that's why you didn't stay out there?" Joselyn said. "Was coming, did you?"

He did not speak again. He felt dizzy and shook clear it. It was true what you never knew anything Japanese.

"Yiss, soor," Awaki said steadily. "I tell you, more stay here."

"It was kind of you, Awaki," Joselyn said. "I'm sorry."

"Yiss, soor," Awaki said. "Sit down in that chair," "sit down!"

Awaki did not move. "What he asked."

"Sit down!" Joselyn said. "Seems a little mean, Awaki is over, we go to the police how you knew."

Awaki sat down carefully of a straight-backed chair. He began to speak again and the noise in his ears that had been with the noise outside. The growing blurred and he felt himself and angry. He was ill.

"Soor—" Awaki began, heard his own voice, but it was like his voice.

"Awaki," he said, "sit down!"

Joselyn had been taken twice before. It was over you had the right medicine.

WHEN he opened his eyes in the chair and Awaki over him.

"Soor," Awaki said. "Please. Doctor, he say."

Joselyn took the glass of water and swallowed quickly. He sat still for a while with his sight was better. Even the room was coming back. A handkerchief across his face.

"You better now?" "More better now?"

Joselyn pulled himself together. "Yes," he said, "more and then he saw that Awaki the automatic."

"Here," Joselyn began, stand up, but Awaki did not.

"Soor," Awaki said, "please. Doctor, he say."

Awaki's voice broke through. He had been aware of it stopped and cleared his throat.

"You good to me, soor."

"So sorry. No need you need call police. What I do."

Now my people late more face now. So much You feel better now? More

Joselyn pushed himself chair and placed his feet.

"I'm better," he began. But what he was going to do a out of Joselyn's reach.

"Please," he said, "more stay still. No need for the see now," he looked at the holding and then he laughed.

He had thought of something funny, "you see now more myself, more better in the goodbye." And he stepped

he always did and swung kitchen door.

"Awaki," Joselyn called. no time to tell Awaki no heard the shot before

again.

61, too, by news from
Yk. The proper spirit

has captured that lovely town. Not long
ago the Defense Council broadcast a
request for volunteers to do a spot of
pick-and-shovel work—unromantic toil
undramatically described. Only three
men volunteered and, for the moment,
the council was understandably down-
cast. But a bright mind came to the
rescue. He changed the words of the
call slightly, requesting volunteers for
"demolition crews." Almost instantly
eighty brawny Pelhamites (and not all
men either) responded, prepared to de-
molish things—any things—including
Pelham if necessary.

SIMILARLY we've just received a re-
port from a young Army major whose
job it is to help defend a most important
sector of our Pacific Coast. For weeks
after being thus assigned, he and his
men referred to their unit as the So-
and-So Ghost Artillery, the easily un-
derstood reason being that they had no
guns, or none worth mentioning, let
alone firing. But presently they got the
guns and very potent guns they seem to
be, too. But the name survives, the
reason now being that the new guns
are so mobile and their haulage so swift
that—oh, well, you finish it!

PERHAPS it's only natural that a dis-
regard for human life should be notice-
able in civilians these days. A lady
advises us that her child—a daughter,
aged eight—became messed up in a gory
fight with a neighbor's daughter, aged
six. "She's a selfish little devil," our in-
formant's child explained with righteous
bitterness. "She wants to kill the em-
peror of Japan although I have already
let her cut Hitler's throat."

BLESS their hearts. . .

W. D.

Side-Winder

By Stanley Frank

"It ain't the arm that goes to the shoulder. Me, I use three-quarter motion." Higbe, Dodger work horse, why he hasn't thrown his arm into a pitcher

Walter Kirby Higbe, work horse of the Brooklyn Dodgers, has appeared in more ball games in the past two seasons than any other pitcher in

years ago. That wasn't the arm that goes to the shoulder. Most arm fellows are overhanding a lot of shoulder in a sidearm, three-quarter motion. Another thing: Most fellows have arms with too much range. I let a trainer touch my arm after I pitch. She always comes strong."

Pitchers are a funny bunch as they gain the esteem of the fans and a balance in the clubhouse suddenly regard their properties which must be protected. Not our man Higbe, the turned up at the Dodge this spring just as eager as ever—if not more so. Although a week after his colleague he was the first Brooklyn pitcher to throw nine full innings in an

He's Got Dizzy

Leo Durocher, Brooklyn Dodger, was one of the sweaty, brawny fellows during Dizzy Dean's days, says his man Higbe, "Dizzy's for spirit and stuff."

"When the jam is on a pitcher to stop a rallying up at you instead of at his shoes, like too," Durocher reveals. "Dizzy's always restless on the going to the bull pen ten minutes before he was ready."

Like Dizzy, Higbe has confidence in himself. When the Dodgers at training camp blandly announced he was going to be a star in the games. He continued to all that he was a cinch for the team was wandering of the country on its own. The season opened, and ately lost his first two the Giants by scores of 1-0 and 1-0. He gave no earned runs and the anvil chorus began to grow. Higbe went into himself and came out of how he knew what the always had worn number 13, he explained the Dodgers had broken his (Continued on p. 48)

WALTER KIRBY HIGBE is crazy. He is crazy to pitch and crazy because he wants to pitch every day in flagrant violation of the union rules which admonish the brothers against abusing the meal ticket—or arm—more than twice a week. The Philadelphia and Brooklyn managements have co-operated so enthusiastically in satisfying his wacky whim for work that Higbe has appeared in more ball games in the last two seasons than any other pitcher in America.

Not since Dizzy Dean began to flout all natural laws governing wear and tear on the human arm ten years ago has there been a pitcher with Higbe's ardent yen for throwing baseballs. When the fellow isn't demanding to start

games, he is relieving faltering colleagues and feeling pretty morose because he didn't start in the first place. In helping the amazing Brooklyn Bums to win the pennant last year Higbe participated in more games than any other major-league pitcher (48), topped the National League in victories (22) and, of course, led in bases on balls. He always does; his control has been the most spectacularly erratic in the league since he entered it in 1939. He is wild about pitching—and even wilder when he does pitch.

Old guys' tales warning brash youth of the disaster which will overtake silly citizens who lay down their arms and careers for the soulless baseball corporations fall on tin ears when addressed

to Higbe. In the last decade, virtually every work horse has lost his effectiveness temporarily—or his job permanently—as a result of punching his meal ticket full of holes prematurely. Those who have been befouled by the sore-arm epizootic include such eminent craftsmen as the Dean boys, Hubbell, Grove, Ruffing, Gomez, Lyons, Mungo, Rowe, Schumacher and Vander Meer. But Higbe feels he can outlast the sun, the moon, the stars and the earth, and he may be right at that.

"Ain't never had a sore arm and ain't never felt tired in my life," he says negligently. "The only bad thing that's happened to me while pitchin' is that I've had my brains knocked out and I got a catch in my back at Moline five

WE'LL
Keep 'em rolling
TO HELP "KEEP 'EM FLYING"

Materials—and still more materials—for planes, tanks, guns must be delivered to a multitude of industrial plants. Troops must be transported to military camps.

It's an important job the railroads are doing today and Union Pacific is proud to do its share. A fleet of gigantic locomotives—largest ever built—haul vast quantities of vital war materials and completed armament over the Strategic Middle Route, planned by Abraham Lincoln to connect the East with the West. All of our facilities plus thousands of experienced Union Pacific employees are on the job for Uncle Sam day and night. We're keeping 'em rolling to "keep 'em flying."

The Progressive
UNION PACIFIC RAILROAD
The Strategic Middle Route

Although unable to fly, an eaglet may leap from its invaded nest. Because of its great wings it lands safely upon the ground but it cannot take to the air again. It must be returned to the nest. The first time Broley encountered this situation he made his way up the tree with one hand while holding the bird with the other. Once was enough, for he received an unmerciful beating. Now he wraps the bird tightly in a wide strip of heavy canvas and slings it over his back, leaving both hands free for climbing.

Millions of Americans have never seen the national bird outside the picture books for, although it is observed occasionally in every state and in Canada, it is found in large numbers only in Alaska and Florida, the extremes of the continent. One of the greatest concentrations of eagles is on the peninsula between Charlotte Harbor and the Gulf of Mexico a few miles north of Boca Grande. Here, on more than 40,000 acres of pine and cypress barred to hunters, are hundreds of the birds and their nests.

It is costly to slay one of the birds. Congress increased the penalty two years ago and to kill or have a bald eagle in captivity without a federal permit now involves a fine of up to \$500 or imprisonment for as much as six months, or both. The offender, incidentally, goes to trial before a federal judge and not a justice of the peace.

Nest Building Sideshow

In building their nursery, which they will use indefinitely, Mr. and Mrs. Eagle are engineers as well as architects. A tall tree, with a suitable crotch of great branches, is selected and, in accordance with eagle custom, it must not be within one mile of another nest. The building material is dead but sound sticks and, although there is nothing to bind them, they are fitted so precisely that a man may stand upon the nest without fear of its collapse. In gathering them the eagle frequently puts on a veritable air circus. The bird sails at a dead branch at top speed, grasps it with its talons as it passes and, through sheer momentum, breaks it off. Again, it will hover directly above the branch, fold its wings and drop, talons first, its weight severing it.

The nesting tree may be anywhere. One in use many years is in a populous residential district of Sarasota, while another is in the center of the fairway of a golf course at St. Petersburg. The men at MacDill Field, the Army's great air base at Tampa, are proud of the nest on the reservation which, this season, held a pair of hefty eaglets who probably felt they could lick the living daylights out of any one of the B-24s or P-40s which skimmed just above them.

Although the average nest is five feet in depth and six feet across the top, larger ones are not uncommon. The birds add new material each year, increasing the height from a few inches to as much as one foot. A nest in a great pine in a residential district of St. Petersburg, within a block of the heaviest stream of motor traffic in the city, is believed to be the largest in North America. An inverted cone, it is twenty-two feet high and twelve feet across the top. Its age is unknown but there is record of its having been in use fifty years ago.

Until this winter Broley had never found more than two eaglets in a Florida family, although three are observed

now and then in Canada. It was a great nest at St. Petersburg, the triplets.

The little fellows are given from choice or because they literally stuff them to overflowing.

In one nest this winter supply of nineteen large like so much cordwood, although it was apparent that the eagles were already ready to fly away the year at least one pound more than the average adult weight or thirteen pounds.

Born to Fly

Unlike other birds, the eagle is commissioned as a full-fledged first time it leaves the nest, flitting from limb to limb while learning to fly. It is a spectator to assume the part of a bugger or practicing tumbler. Stretching to its full height, it spends long hours flapping its wings to strengthen them. Soon it is itself a few feet directly above and thereafter, for two or three days before its departure, it performs. Apparently it is its rudder and other controls that give it the stiff breeze, the youngsters gun and bounce about like balls.

For about two weeks after the air the eaglet returns to be fed. Then the old bird thinking it time that it itself, simply drive it away and a youngster return the following day and attempt to keep in the nest in hatched, war is declared and after a battle or two selects a tree and builds its own.

Broley became addicted by request. Prior to his 1938 after twenty years of the Winnipeg branch of Montreal, he had attained as one of the continent's authorities on ducks, geese. Upon learning he intended to spend the winter in Florida, official Audubon Society and Wild Life Service requested the Department of the Interior to band a few bald eagles, beginning. His work proved to be of such value that he was requested the Canadian which restricts the movements during wartime, to return and continue it.

But because Broley is an eagle, others should not be expected to do so. An amateur enters the ring with James, mixing with the birds is a serious business.

Each eagle banded by Washington. The printed space for date, location, condition of the bird after the band, among other files of the Department is one dealing with a bird banded by Broley near Escambia not so long ago after it bears this notation: "CONDITION OF BIRD—better than my own."

THE END

aid anything about her?" He
elia hadn't been mentioned.

"You went to church just to see her,
didn't you? But let me tell you about
me. I'm full of pep, just bubbly as I
can be. That's what you like about me,
because I keep you from having the
mulligrubs so much. And I'm not bad
to look at. My face is sort of plain but,
anyway, it's not dished-in or anything
and when you get more in love with me
you may even think it's pretty. And my
figure is, well, I think it's doggone good.
Or isn't it?"

"It's okay."
"Just okay, huh? You're crazy."
"What else about you?" he asked in-
terestedly.

"Well, I can sit a running buck on a
cold-jawed horse, and worm a dog, and
lots of things Delia can't do. Cook and
everything."

"You must be quite a gal," he said,
smiling in the dark.

"Sure I am. Duff, listen. Think what
it'll be like, raising the puppies and
breaking the dogs and campaigning the
circuit. Summers we'll be on the lone
prairie, with the coyotes howling just
like in the song, and the wind blowing
fit to lift the mortgage off the house.
And the grasshoppers eating everything
green—Jake Bishop said they even ate
a green tire cover off his car one time.
Oh, we'll do fine. Maybe you'll even
break Judas and win with him and
that'll give us a reputation, and I'll sort
of flirt with the owners and get them to
send their dogs to us and—"

"That'll give us a reputation, too."
"Oh, you know, just sort of tease
them. I know how to do it," she said.
"Stop laughing. I'm not kidding."

"I know it."
"Honey, look. I love you and you
love me. I don't know about that ivory
table and stuff, but it'll be fine whether
you can arrange for the ivory table or
not. Don't you see how fine it'll be?
Huh? Don't you?"

"It sounds fine," he admitted.
"What's wrong with it?"
Duff said slowly, "I'm no bargain,
Lucie. And Amos Hawthorne will find
plenty wrong with it."

"Well, I'll tell you about him. The
squire was born with a quota of three
changes of mind per lifetime. He
changed his mind once when he was
forty-three, once eight years later, and
the final time when he was sixty-nine.
He's used them all up. He wouldn't be-
lieve in you if you were the Apostle
Paul. But look, he doesn't have to. I'm
the one. And I do. You've changed
since you came, even. Don't you feel
different?"

"I feel all right," he said.
"Well, tell me you love me again."
"I do, all right."
"Do what?"
"What you said."
"Well, my conscience, say it!" she
said, punching him.

"LUCIE, I love you," he said warmly,
kissing her. "But what are we go-
ing to do about it?"

She repeated, "'Silver dishes for thy
meat, as precious as the gods do eat,
shall on an ivory table be, prepared each
day for thee and me.' Yes, sir, that'll
be okay. I guess the precious meat part
means some of that fifty-cent-a-pound
steak Mr. Merrick had last week," she
said. "Duff, I tried to tell you about the
squire. We'll have to wait."

"Wait? Do you want to wait?"
"We can't run away and leave him.
It's hard hiking these days for the
squire. The owners just can't believe
he's the man he used to be. They send
their dogs to young men like Teague

"WE LIVE BRIGHT...!"

"No fooling about bright, clean teeth in the picture business... it's just part of the game that every star has to know," says Mr. Brent. No wonder many stars speak so appreciatively of Calox... a tooth powder with *two ways* to whiteness.

"No excuses allowed smokers, either." In any walk of life, teeth discolored by smoking are inexcusable... Smokers, keep your teeth fresh and attractively clean-looking with the help of Calox Tooth Powder.

Take your choice! Some folks shake Calox Powder into the hand, then pick it up with a slightly moist brush. Others shake Calox directly on the brush. Either way is fine—just so the powder's Calox, for brilliant, shining results.

Two ways to WHITENESS

*your dentist follows both!
so can you—with Calox*

Notice your dentist's technique when he gives you a dental cleaning. First, he thoroughly cleans your teeth. Then, and only then, does he polish them.

In your home care why be satisfied with less than BOTH cleaning and polishing, when you can get Calox?

Calox gives you not one or two, but five special ingredients for cleaning and

brightening. With every stroke of the brush, Calox helps detach food particles, removes deposits, cleans off surface stains. Your mouth is stimulated, refreshed. And with every stroke Calox polishes, too, making your teeth shine with their own clear, white, natural lustre.

In Hollywood, many a star trusts to Calox-care. Try Calox for your smile! McKesson & Robbins, Bridgeport, Conn.

SHAVING CREAM
Product of Bristol-Myers

McGinnis or Jack Harper or Earl Crangle. Of course, as long as we've got Ambling Sam we'll get some fifty dollars stud fees, but Sam can't be campaigned much," she told him. "The only thing about the squire, I think maybe his eyes aren't any too good any more. He's too tight to go to an eye doctor, but I caught him trying on glasses in the dime store last week. I'm some help to him, I guess, but I can't really handle a hard-headed young field-trial dog. I haven't got a voice for making dogs come to me. But men, now..."

"Hell, I'm nobody to talk of marrying you, broke as I am," he said morosely.

"A belt of straw shouldn't cost much. Look, the baby's awake again. Probably got earache, poor thing. I bet I could fix him up. Don't you bet I could?"

"Sure," he said. "Come here."

ALTHOUGH since the lessons of the electric coat Judas no longer made unprovoked attacks, Duff became convinced that the day would never come when a man could lay a hand on the dog without being bitten. A light leather muzzle seemed the answer to this, but the dog then spent his time fighting the muzzle instead of hunting. Finally Duff left him in his kennel muzzled. After two days of clawing and rubbing, Judas resigned himself to wearing it.

"I think I'll take him out tomorrow," Duff said on Saturday night.

"And lose him?" Lucie said.

"Well, I'm going to let him pull a drag."

"I don't know who's the more bull-headed, that dog or you."

"Maybe that's what this contest is about."

"You know," she said, "that bullheadedness is something you've acquired since you came. Maybe determination is a better word, huh? I guess that's what makes a good dog man. The squire's like that. And Teague, too, some."

"What's he got to do with this?" he asked curiously.

"Nothing."

"What's he to you, anyway, Lucie?"

"Now stop it," she said. She picked up his hand in that little way of hers, and kissed it quickly. "Please stop it, Duff. I love you."

"There wouldn't be anything boring about life with you, I can see that." He smiled, in spite of himself. And it was this that frequently worried him. There were moments—an increasing number of them—when he wondered if, instead of being honestly in love with Lucie, he were not simply fascinated by her light impudence and overwhelmed with gratitude for her generous friendliness.

"Hot ziggety, that's some recommendation," she was saying. "Recipe for a full life: A boss like the squire, a dog like Judas, and a girl like me. Happy days."

THE next morning, Sunday, when Duff and Lucie got to the kennel, John Wesley waited for them with three horses saddled.

With an eight-foot chain dragging behind, the muzzled Judas was released. He spurted away in great plunging leaps, the heavy chain jumping and dancing behind him.

"Take the right and I'll take the left," Duff said to Wesley. "Lucie, follow the course."

Now Judas was swinging out to the left, followed by a small dust cloud. Afield he seemed to lose his sullenness, and ran with a snap and sparkle that gave him almost an air of gaiety. His tail whipped merrily, a sign that he was bird hunting and not just running. Apparently hardly burdened by the trace chain, he skirted a sedge field, then

crossed a weed area on a long diagonal that ended in a Lespedeza patch in a scrub-pine woods. He made two quick whips through this, then came out into the field again, still digging. He was away on a busy, industrious race; but it was his own race. Not once did he look back to keep the riders in view. He was not concerned with the direction of the course—he laid his own course.

But Duff had his horse in a lope, and stayed a couple of hundred yards behind Judas. After fifteen minutes, Judas' pace had not slackened.

"Is he going to pull that chain like that all day?" he mused incredulously.

At ten o'clock Judas was still going, hunting wisely, but with a country-wide abandon, running completely wild as far as his handlers were concerned.

"Dat's what I'm feared of," Wesley panted once when they lost him temporarily, "is you won't never break him of dat wild-hog go-yonder bescattlin'."

"But if I ever do," Duff replied, "I'll have one almighty stem-winder!"

Now Judas appeared up ahead, whipping in a shortening circle, hot on bird scent. Suddenly he stopped, a picture in suspended motion as he hung there with his body stiff and slightly forward, his head lowered in the exact position it had been when the scent got strong, his ramrod tail pointing at the pinetops.

"Whoa, now!" Duff yelled, and drawing closer, slid from his saddle and walked rapidly but unobtrusively toward the pointing dog.

Judas still had not moved, except to open his mouth and close it again, as if to swallow some of the hot scent that welled up to him. When Duff got within fifty feet, the dog took one step, then froze again.

Judas' tail tip quivered slightly. Then, like a projectile, he catapulted forward, and the covey erupted around him as he tried to get his muzzled jaws on a flying quail. The covey streaked away, with Judas in futile pursuit.

"There'll come a day," Duff said, unruffled, "when you'll stand there and watch them bust loose all around you, and hear me shoot, and you'll know better than to move until I say move."

Presently the burden of the chain began to show in Judas' range. He became limited, and instead of casting in long diagonals cut more sharply across the front, and once they saw him check back after hearing Lucie's clear call. He found five coveys, also flushed and attacked a farmer's guinea flock, a hog, and a milk cow, but since he was muzzled the principal damage was to the cow's nervous system.

Next time they ran him, he again pulled the chain for what seemed an incredible time, before shortening his distance; and then again he seemed to begin showing a slight regard for the direction of his handlers. On the third Sunday, Duff waited until the chain had tired the dog down, then he spurred his horse and caught him.

When Wesley and Lucie came up, he said, "I believe we can try him without the chain now. But if I'm wrong it's going to take some hard riding to keep from losing him. So get ready."

With Judas growling and trying to get his muzzled jaws on him, Duff unfastened the chain, and Judas made a line for a distant oak scrub. They rode on, waiting for him to cut through the scrub and come out ahead. But Judas didn't come out ahead. He bolted.

At night they gave up their search and went back to the kennel.

"I guess we'll have to tell the squire," Lucie said. "That's going to be bad."

Old Amos' eyes glinted when Duff told him. "You mean you been working them horses every Sunday when they due to be a-resting, runnin' that pea-headed, fitified, no-count Judas dog?"

"I thought to break him," Duff said,

slowly seeing his idea for old man's friendship collar.

"Before God," Amos said, whistling, "I hope I drop let a road tramp into me again! You listen to me: I know a little something bird dogs? Hah? That broke, er I'd a done it long ago now, it's shore gone now, and leave them horse work days!"

These weeks the whole kennel was direreading Ambling Sam for championship. This, careful conditioning. A fore the trek to Grand Junction an ancient car stopped a young man in overalls and approached them where the front steps of Wesley's "Mister Hawthorne," farmer said, "have you los

AMOS looked past him at the dog Judas, tied by a wire around a window post.

"No," Amos snapped,

"He's got your name on 'Must be a collar I give ain't lost no dog."

"If you'll bring the dog to the farmer, 'we'll be gi reward. That's our dog. ing." She went around t called Duff. "Here's yo boy come home," she said.

"I ain't paying out not a per cent for that dog," Amos said. "Take him on a bud. You can have him a reward."

"Him?" the farmer asked. "Want no dog like that, M He's a mean un. That dog body. I ain't particular ab ward, just a little some trouble he put me to, gitt Figured I was doing you a "Not nair penny," said him on home and shoot a mind to."

"How'd you catch him?" the farmer, as soon as he g

"He came galloping after turkeys, and I sicked my him. Durned if I didn't h him off my dog, and hir seen he belonged here, a he was one of Mr. Hawth ble bird dogs."

"I ain't paying one per Amos said.

"You live around here: curiously.

"I live thirty miles below were a long way from hon I figured he must a-jump or some such. Don't guess such powerful rambler as

Duff said to Amos: "Litter take that dog back... going to have him broke."

"Hah!" snorted Amos broke will be me, from p wards, and hog money an and turkey money for ther has the unlucky fortune to way."

"I'm going to break him

"Well, why don't you pay You pay for him, and you If he's such an all-fired pting him fer five dollars some bargain," Amos said

"To a man working for lars is a pile of money, b From now on, he's my dog Amos' old mouth split in ing stubs of teeth like sna "I ain't goin' to forget h You can keep him in that l dollar a week and you fur But he ain't to be run or

Song of the Admiral's Daughter

The Admiral's daughter was pretty,
As gorgeous a trick as you'd meet
In country or village or city,
And she was the toast of the fleet.
Her father was proud as a peacock
Of Jennie, his ravishing child—
Though stern as could be in affairs of the sea,
With her the old Spartan was mild.

Sing heigh, sing ho! The navy all thought 'er
Each of a package, the Admiral's daughter.

2. "Now listen to me," said her father,
"My nearest and dearest of chicks,
'Twill save you a whole lot of bother
To copy my personal tricks.
If ever in trouble just swallow
A vigorous dose on the spot.
An old-fashioned purge is the short cut I urge,
I've used it since I was a tot."

Sing heigh, sing ho! The Admiral's daughter
Was cold to the lesson his nibs would have taught 'er.

But Jennie, that fair up-to-dater,
Was tactful, and smart as a whip.
She missed her determined old pater,
And said, "Now I'll give you a tip.
First get at the cause of your trouble,
For find and correct it you should.
And have a treat for my hero to eat
That's ever so crispy and good."

Sing heigh, sing ho! "I think that you oughter
Try ALL-BRAN each morn," said the Admiral's daughter.

4. "My program is pleasant. Please try it.
I'm sure if your trouble is due
To shortage of 'bulk' in your diet,
The remedy, Father, for you
Is KELLOGG'S ALL-BRAN for your breakfast—
You'll find it effective, I know."
He tasted a dish, and said, "Jennie, I wish
You'd told me of this long ago."

Sing heigh, sing ho! "Drink plenty of water,
And eat it each day," sang the Admiral's daughter.

hunting leases, ner from none of my horses. And if he gits loose and kills some farmer's calf, remember he's your dog, not mine. You'll learn not to be so crazy about him." Then he added suddenly, "First thing you do is take off that damn' collar with my name on it!"

Anybody who had a connection with Ambling Sam, Tafton's national figure, amounted to a near celebrity, so Duff Webster's social standing never was in question. He had always avoided bridge parties, the town society's main diversion, but Mrs. Ott's invitation caught him unawares. So he went, thinking that, after all, it might not be so bad. This judgment was confirmed when he drew his tasseled tally card from the ornate silver platter to discover that he was Table 1, Couple 2, and Delia Phillips was his partner.

"Hello," she said, her brown, direct eyes smiling in a friendly way.

He murmured a greeting, annoyed by the ringing in his ears that came when he looked at her at this point-blank range. Most of the players were older and married, which gave him a warm feeling of comradeship for his bridge partner. She seemed to share this feeling, for between hands her manner was almost as if they were alone in the room.

BUT during the play she did not smile; she played with a close earnestness, almost like a cat stalking a quail brood, and he understood that she would not like to lose, no matter how social the game. The first two or three hands Duff could hardly make his eyes stay on the cards, so conscious was he of the presence across the table, and his bidding was half inaudible, not according to Culbertson, and once or twice out of turn. Luckily the first hands were dominated by the opponents, so that Duff's job consisted mostly in following suit. During the dealing of the fourth hand—their opponents had made one game—Duff suddenly remembered that partners at head table don't change, which meant that he could keep Delia for a partner as long as they could remain at head table. Now he forced his cards into focus, saw that they included six hearts with A, K, and J, and satisfactory support. Delia responded to his bidding and gave him a good dummy, and after finessing the queen, losing two spade tricks, he made five and game.

"That was nice," Delia said, looking at him.

From then on he played seriously, and by drawing good cards and being lucky on certain wild finesses and having the really skillful help of Delia, they remained at head table the whole evening. While refreshments were being served, he heard himself saying casually, "If I had a car I'd offer to take you home."

"I live right across the street," she said. "You can walk over with me if you like."

He would not have believed that the prospect of escorting any girl across the street could have put his nerves into a numb tremor. But there was no denying her appeal. Her hair was dark, only slightly darker than her eyes; her lips instead of being thin, were full, with only a small amount of pale lipstick, the effect being one of positive, lasting beauty. But her principal attractiveness acted on senses other than the eye; a powerful animal magnetism that pulled at him as if with silk-covered steel cables.

"I've wondered," she was saying, "why you hadn't come to see me. You said you would, I seem to remember."

"Well . . ."

"Oh, well. Maybe I didn't make such an impression on you. You're here now, anyway."

"I've been pretty busy."

Delia said wisely, "I've been busy with."

"I mean busy training trials?"

They sat in Delia's living room. "What's it like, training?"

"You start in Canada, from one place to another, national championship at C that's all. We go to Gran fore long."

"I've always wanted to can't do it on what a makes. I remember teacher used to get Luc tell the class about some she'd been, romantic-sc like Saskatchewan and V was so envious I could."

Duff said, "You would of the places were so hot."

"Some day, though," I going to see them. May me, some time."

"Me?" Duff said in ast "Maybe," she said, her in amusement.

Duff said, for lack of "Perhaps Amos will his place. He doesn't think I"

"Why don't you ask Duff Webster to
go with you? I know he likes to fish, be-
cause I heard him talking to one of the
boys tonight, and asking if there were
any bass around here."

"Where did he get that idea?"

"He's new around here, and all. He
doesn't know where to go or anything.
It'd be a nice thing for you to do, don't
you think?"

"Well, sure, I'd be glad to take him.
I'll call him tomorrow morning."

"Don't tell him I had anything to do
with it. He might resent it."

Next afternoon when Dr. Phillips
came home for his fishing tackle, he
found Delia in slacks, with her hair done
up in a bright red ribbon. She told him
that she had decided to ride out to the
pond with them, and while they were
fishing she would look for moss and
holly. Duff, too, seemed surprised when
he came out of the boardinghouse to
find her in the car. She explained that
she didn't fish, and that he needn't start
worrying about having a dumb woman
along, because she wouldn't bother them
at all.

Dr. Phillips had brought an extra rod
for Duff. They went in two boats, and in
opposite directions. As he fished, Duff's
Negro boatman gave him an account in
detail of his family, of his son who was
farming in Georgia, and another son
who was a waiter in Selma, and of the
daughter who had left home eight years
before and never been heard of since.
But Duff was inattentive, thinking as he
was, not of fishing, but of Delia on the
shore.

Duff fished for an hour and a half
without a strike, and he said, "We might
as well go in, Michael. They're not do-
ing anything."

"Let's don't go in yet, boss. Dey be-
longs to go at it jest before dark. Dr.
Phillips, he catches most his fish atter de
sun done gone down."

But Duff told him to paddle on back
to the landing anyway. There he found
Delia, having gathered her leaves, wait-
ing in the car.

"Not quitting, are you?" she asked.

"They're not doing anything," he said.

"I'm glad you came out. I was be-
ginning to get lonesome," she said.
"Did you think of me last night, after
you left, Duff?"

"Yes, I sure did," he said vehemently.

"I thought of you, Duff," she said
softly. "Aren't you going to kiss me?"

"Your father might come in and see
us."

"Kiss me," she chided, "and hush."

Later, when her father did come out,
with four bass, she said to Duff, "When
we get home, you might as well stop by
the house and have some supper with
us. That is, if you don't mind cold
chicken."

NOW by day Duff drove himself tire-
lessly, trying to rid his brain of the
thought of Delia. But she followed him
as he rode through the Alabama coun-
tryside, and no matter how hard he re-
sisted he was always remembering the
hot burn of her mouth and the cool
smoothness of her skin. He avoided
Lucie these days, out of pure guilt. But
because everybody was so intent on

HERE'S A SIMPLE AID TO *Clear-Eyed* MORNING SPARKLE

DO THIS...before you go to bed Tonight

DO YOU wake up feeling really fresh
and radiant in the morning? Or are
you frequently listless and logy—tired
and dull-eyed?

If you haven't been waking clear-eyed
and buoyant, you should know this. To-
day, science is reporting startling discov-
eries about food. About new-found,
almost-magic food elements—with power
to revitalize millions of the tired and nerv-
ous and build them up for clear-eyed
mornings and vigorous days.

As you may have read in recent maga-
zines, these new-found food elements are
so important that governments through-
out the world are changing national diets
to include more of them. Warring nations
feed them to their armies, to build up
physical stamina and sound nerves. Deny
them to captive peoples, to sap resist-
ance and undermine morale.

Already our own government is seek-
ing ways to supply more of these ele-
ments. For government studies show that
2 out of every 3 Americans aren't sure of
getting enough of these vital food-factors
to be at their best.

What To Do

In light of these new discoveries, thou-
sands are taking a cup of new, improved
Ovaltine night and morning. For Oval-
tine is a scientific food-concentrate de-
signed to do two important things.

First: Taken warm at bedtime, Oval-
tine fosters sound sleep—without drugs.

Second: To build vitality while you
sleep, Ovaltine supplies a wider variety
and wealth of valuable food elements
than any single natural food. More than
merely a "vitamin carrier," it provides
not just two—or four—or six—but eleven
important food elements, including vita-
mins and minerals frequently deficient in
ordinary foods. It supplies significant
amounts of Vitamins A, B₁, D and G,
protecting minerals, complete proteins.

So—for clear-eyed morning freshness
and more vital, buoyant days—turn to
the new, improved Ovaltine, starting to-
night. See if you don't begin to look and
feel far more "alive" and sparkling—
with new zest for life. Get a tin today!

THE PROTECTING FOOD-DRINK

Empty Glass

CHUCKLE JOHNSON

Ambling Sam's preparation for the National Championship she didn't seem to notice it.

Some nights Duff forced himself to go to a show, or to the poolroom, in order not to be drawn to Delia's house. Then, next day, a call for him would come to the boardinghouse, and it would be Delia. Why hadn't he come around last night? And he would be angered by the eagerness with which he heard her voice.

"I must be losing my power," Delia would say lightly.

"I wish you were," he would answer fervently.

"Ah, now, Duff. How could you stay away last night, when you know I wanted to see you?"

"Well, I had some things to do, and all . . ." he answered. And then he would hear himself say, "What about tonight?"

"Not tonight—now. Come now," she answered.

And he would go.

The night before they were to leave for Grand Junction, Duff finally steeled himself to say the things to Delia that he knew he should have said long ago. When he got ready to go home that night he stood up and said:

"Delia, this is our last night together. I'm not coming back."

She smiled languidly up at him. "Ah, you're joking, Duff."

"No. I'm not joking. Listen, and try to believe me and understand me. I'm supposed to be in love with somebody else—you know who—and I'm supposed to be engaged to her—"

"But you're in love with me!"

"Who said so?"

"Nobody said so."

"Well, you're too rich for my blood, I know that. I can't keep coming to see you and kissing you and thinking about you all day, when I'm supposed to be thinking of somebody else. It isn't fair, Delia. I don't know how I'm going to manage to stay away from you, but I'm going to do it."

Dr. Phillips came in immediately afterward, and he found Delia seated on the footstool in front of the fire, staring thoughtfully at the smoke from her cigarette.

"I passed Webster going out. He's leaving earlier than usual."

"Yes, he's gone," she said slowly.

Her tone arrested him. "For good?"

She smiled thoughtfully. "Oh, no. Just for a while."

GRAND JUNCTION is a quiet village whose only pretension to anything grand is the fact that it is the best-known field-trial center in the world. For about three hundred and fifty days a year, the village is almost dormant; then field-trial week approaches and the municipal pulse steps up. The housewives put their spare room in shape to take care of the visitors, and begin collecting groceries for lunches to be prepared, and the men start arranging for horses from surrounding farmers.

The druggist, whose store is used as a clubroom during the trial, looks to his stock of soft-drink syrup and orange juice, and arranges his floor space to allow for the prolonged bull sessions. On days when the weather is too rough for dog-running, men in boots occupy all the tables, the fountain stools, the counters, and most of the standing space, and it is an achievement to walk in and buy a roll of gauze and come out within a half-hour.

The drawings were held Sunday night at the hotel in an atmosphere of tobacco smoke and bird-dog conversation. Duff came late, entering in the silence that accompanies the announcement of the pairings. Lucie gave him a wink; she was sitting between Teague McGinnis and Ralph Skown, the young sportsman

owner of Hotfoot, and Duff did not wink back.

"In the first brace, Maybelle Maze with Rider's Willie," the secretary called, as he drew from the hat containing the names of thirty-six dogs, twenty-nine pointers and seven setters, all of whom had necessarily won a recognized trial previously. "Second brace, Medalion with . . . Hotfoot. Third brace . . ." Ambling Sam was called for the sixth brace, with a bold young pointer called Ticonderoga. That meant the afternoon of the third day of running.

After the drawings, the handlers and owners and wives and reporters resumed their talk. The handlers began drifting off first, to be sure their dogs were well quartered for the night. Since the running would take more than a week, a good many of the dog men in the lower heats got ready to go back home, to return later.

Lucie was a center of considerable in-

terest, and Duff had a hard time saying to her privately, "Let's blow."

terest, and Duff had a hard time saying to her privately, "Let's blow."

"Gee, honey," she said, "I haven't had so many men to play with in a coon's age. I think I'll stay and give my eyelashes a little exercise."

Outside, a thin filtering of snow had begun, falling in tiny whispers past the bare limbs of the trees as Duff walked, feeling the chill of it against his face, seeing it sift down past the corner street lights, stepping upon the thin cushion of it on the sidewalk concrete. He wondered if his dog Judas was well bedded and warm, back in Tafton. In front of the house where he was boarding, he paused at the gate, then went on past, his coat turned up, walking slowly, aimlessly. He kept wondering where Lucie was, and whom she was with. He hadn't thought he would mind her being out with someone else, but he did. The feeling that held him was not of anger, but of lonesomeness.

The worst part of it was that her going out with somebody else was tacit permission for him to do the same. She had removed one of his principal weapons for resisting Delia's silken pull.

Once summoned, the image of Delia persisted. He remembered the afternoon in the car, when he had held her chin in his hands, and he could still recall the perfumed smoothness of her skin. For a few steps he even imagined

King, in his mackinaw and rubber boots; and Nash Buckingham, who wrote "The Shootin'est Gennelmun."

The handlers held their eager dogs. Mr. Ames looked at his watch. Time, 8:47.

"Ready, gentlemen?" Dr. King asked.

"Okay," the handlers said.

"All right, let 'em go."

The men unsnapped the leads, and the two dogs bolted away like whippets. For two hundred yards they stayed locked in a dog race, then Rider's Willie swung off through the soggy cornfield and began bird hunting. Maybelle Maze made a turn off somewhat to the right, too, and disappeared over the rise.

The application of neither dog, said the Field report later, was impressive. When the turn into the low country was made, Willie made several tentative points in open, stabbing forward, then dashed on with game being seen. A bevy, the first of the day, was observed on the ground at honeysuckle thicket. When the second road was crossed, Willie searched more diligently; he subsequently proved a hard-running dog with a penchant for finding game. He had an unproductive point in edge of cotton field at a fringe of bleached grass near plum thickets, starch if not stylish on this, but thereafter he piled up an impressive bird score albeit the bird work was not inspirational in quality. . . .

Willie frequently contacted beavies were cleanly handled a plethora of style; two sent stops to flush, and pointed, then roared and paused to wing. . . .

Maybelle Maze and finished the three hours weary; neither had run a championship race. But pleased with the somber first brace had proved were there.

One of the handlers looked and said to Teague McGinnis that snow, and you could have a better afternoon."

The judges and three had lunch in the magnificent house. Everybody else ate in a rustic style; after lunch there were few strangers.

At 12:57, Teague McGinnis held under Hotfoot's lion, the other dog, who eagerly on his hind legs, grasped.

"Now, boys," said a ringleader, "if you want to see a dog, you just watch them go. . . ."

TEAGUE MCGINNIS from the great open space born in the marshes of the edge of the Cajun country was a rice farmer, and where were making their killing money on good saddle horses and foxhounds. After rice failed, just another way to lose McGinnis lost their stake; he found oil on the land. He moved to Houston, and built a hundred-thousand-dollar house in the country, full of intricate controlled by push buttons; his wife imperturbably lolled with her hat on his head and nothing on her back.

Six high-class dogs had second floor, dogs young and various amateur trials at try. He and one of the dogs won second. But Mr. McGinnis less with his marble staircase indirect lighting and his oil and he began speculating and that was the end of it ended up back in the north.

Teague didn't mind being either, except that it interested bird dogs. So he became a trainer and handler. The difference, he found, between amateur trial and an open hard-working professional starve by the performance. For a long time he himself category of starving professional by the aid of shooting him for training at two months. The dogs he had amateur trials found he formed well, but they had extra degree of fire it took company.

One day a letter came from Skown, of Houston, who was shooting dogs for training.

"Dear Mr. McGinnis:

"Today I shipped you a Kentucky Babe puppy. It's a good dog and might make you a good one. You might worm him and temper shots. Let him run and he pleases before shutting. I haven't named him; I'll name him when he comes."

"Sincerely,

"RALPH SKOWN"

The puppy was only five months when he arrived. The use on being shipped away from home transported by a noisy, veeyance, among strange

smells, emerges from his dog crate unhappily cringing before unknown feet and wetting the ground nervously. But this puppy came out in one exuberant leap, made a couple of joyous circles around the yard, then attacked Teague's Negro's trouser cuff ferociously, pulling and growling. The Negro, Hansel, lifted his leg and the puppy held on until all his feet were off the ground. Next he jumped halfway up toward Teague's face, in an effort to lick it, then started his mad circling again.

"He goin' so fast," Hansel laughed, "he goan burn his feets up!" After that the dog's name was Hotfoot.

When Hotfoot's puppy days were over, and it was time for him to steady down and quit chasing anything that ran before him, he broke easily. He had two wins as a derby, one on chickens and one on quail. As the dog's reputation grew, McGinnis' fortunes rose, and by the time Hotfoot was an all-age dog, the Texan's kennels held all the shooting dogs he could train, and two or three first-class field-trial dogs. When he moved to Alabama, Hotfoot ran better than ever.

RUNNING in his first National Championship, Hotfoot found six coveys, five of which he handled cleanly, pointing positively and loftily. The American Field later reported: *He ran with sparkle, as if he were having the time of his life, and in the opinion of many would have sewed up the stake if he had negotiated the treacherous Hell's Forest with more ease. Even so, it was generally granted that the pace he set was a fast one. Several of the other handlers had to voice discouragement at their chances, though, of course, not openly. . . . Medallion having been out of judgment for thirty minutes, Hotfoot's race toward the last was against the snow. He lost this race, but turned it to victory when in the last eight minutes he meritoriously pointed a huddled bevy in a sumac thicket, with the big flakes now falling in almost blinding profusion. That point was something to remember. . . .*

Next morning the Tennessee countryside was white-covered. Shortly after eight o'clock, the call came from the Ames house to Frank Swift's drugstore, "There will be no running today. . . ."

Now was the time to talk about old races and duck shooting and night fox hunting and guns and walking horses. Some of the men got up a dime poker game. But most of them, during the day, stayed around the drugstore. Bill Brown, of the Field, Dean Coridan, himself a prominent field-trial judge, and Nash and Hugh Buckingham, and Frank Vestal; and the owners, and the dog men—Harris, Beven, Wilson, Redman, Payton, Smith, Prickett, Farrior, Kirk, Gates, Humphreys, English, Morton, the Crangles, Crawford, Frazier, and all the rest of them.

Outside the snow fell intermittently; and inside they recalled the time Jim Avent was disqualified for running at a derby a dog with worn teeth, and the bill the late Al Hochwalt got from the Negro taxi driver who carried him to the trial grounds which itemized: "Three comes and three goes at four bits a went—\$3.00."

"A dog I won't never forget," said Amos Hawthorne, "was old Joe Cumming, an Antonio setter. You talk about your dogs with sand in their craw, well, this setter was one of 'em. Guts? Aye, damn, he had a full belly of 'em. I mind that championship he run in, 'be-time recent, anyhow. Him and another lieve it was 1899 or thereabouts, not no dog, I fergit his name, was the hot shots, and in the first heat it was just gee and haw between 'em, both of 'em running and finding and not a bobble. That night some says Joe won, and some says this

other dog—Dave Earl hi But the judges, as usual, w it's so and the was c shot of it was that both de back for the next day.

The Long Stretch

Continued from page 16

he contracted for 1,200,000 tons of synthetic rubber in 1942. Doubt that every pound shipped. Albert L. Viles, the Rubber Manufacturers Association's American who sat in on a meeting of the International Rubber Regulation Committee, testified to the confidence of the Dutch. If Japan did not interrupt, no doubt there would be a supply of rubber. The Japanese were being wiped off by only an interruption. A week or maybe two at longer.

Mr. Knox, Secretary of the War Relocation Authority, no opportunity to declare his opinion, our own confidence less supreme. Of course all of the rubber for which had contracted! The 430,000 tons in 1941, and the 1,200,000 tons delivered in 1942. Rubber shot up to a new high of a year without a word of any government agency. It was actually heavy annual crop rubber. Throughout 1939 and 1940 we sold some 125,000 tons to other nations and, of this, 60,000 tons went to the United States. This is how much we feared the potential enemies.

ing its recommendation, was careful to say that the facilities for making synthetic rubber should be constructed only if it was believed that our supply of natural rubber would be cut off. Such a belief was held by no one at the time, not even the most agitated admiral or general.

A pretty tangle, and in October the council turned it over to Jesse Jones for investigation and study. A common-sense procedure that did not stir a single voice of protest. After several months of hard work, Mr. Jones and his experts reported a fair amount of success. They had succeeded in straightening out the messed-up patent situation, and the Goodrich people were proudly exhibiting some tires that came within 85 per cent of meeting War Department specification.

On May 8, 1941, therefore, Mr. Jones went up to the Capitol, and laid the whole matter before Congress.

The stenographic record shows a complete presentation of every fact in the case. Synthetic rubber, he explained, was not entirely satisfactory, and development would cost a good many millions. Moreover, it might well prove a waste of money, for there was no indication that America would ever be cut off from the Far East supply. All the same, it looked like good policy to have an ace in the hole. The consensus, both in the Senate and House, was that at least one, if not more, experimental plants with a limited capacity, should be financed by the Reconstruction Finance Corporation. On May 15th, Mr. Jones, through the Defense Plant Corporation, authorized the construction and equipment of synthetic rubber plants having a rated capacity of 10,000 tons per year. In July, 1941, the agreements were amended to provide for the increase in the production capacity of these plants to 40,000 tons. Due to co-operative effort of the companies, the actual production capacity was 60,000 tons per year. These plants, with existing facilities and new plants owned and being built by industry, brought the total capacity to approximately 100,000 tons, the amount recommended by the council.

Then—Pearl Harbor!

This, then, was the rubber picture in November, 1941. With 430,000 tons of natural rubber, either delivered or on the way, 1,200,000 tons bought for delivery in 1942, and the synthetic program booming ahead, America sat on top of the world. Both the President and Mr. Jones looked to have the right to exchange congratulations. Neither from the Army nor the Navy came a hint of dissatisfaction with what had been done or a suggestion as to what more might be done. There was no reproving word from either Congress or the press.

Then Pearl Harbor! Not even this debacle, however, had power to shake the confidence of the British and the Dutch. With "impregnable" Singapore on guard, the rubber-producing countries of the Far East stood secure against assault. Why the excitement? Nothing was more certain than that every pound of America's purchases would be delivered safely and on time. That was a general feeling then, and it is to the everlasting credit of the President and Jesse Jones that they refused to be soothed.

On January 12th, a government investment of \$400,000,000 increased the synthetic rubber program to an annual capacity of 400,000 tons, and well before

Mobil SPECIALTIES

Help Make Your Car Last

1. "LIKE NEW" with MOBILGLOSS

You get two jobs done at once with Mobilgloss. It's double acting—cleans and polishes in one operation. First, it dissolves grease and grime, removes traffic film. Then it brings back the original color and lustre of the finish—leaves a beautiful long-lasting polish. Quick and easy to use; keeps your car looking young.

2. PRESERVE with MOBILWAX

Whenever an enduring wax finish is desired, use Mobilwax. This is a special blend of tough waxes emulsified in easy-to-apply cream form. Comes in a handy tube. It goes on easily, spreads evenly, and rubs up with little effort into a brilliant gloss... guards the finish for months. Makes it easier to keep your car clean.

Keep Your Cooling System "Sweet" with MOBIL HYDROTONE

A recommendation of Automotive engineers. Added to the radiator water, Mobil Hydrotone neutralizes corrosive action and treats the metal surfaces so that rust and corrosion are forestalled. This avoids leaking and clogging, and their consequent hazards to the engine.

Keep Your Upper Cylinders Lubricated

MOBIL UPPERLUBE

With its special ingredient, it reaches the engine cylinders as a vapor with the gasoline, producing an adsorbed film on the metal surfaces. It guards against scuffing and undue wear by providing lubrication during periods when the regular oil supply may be inadequate.

the fall of Singapore, another \$200,000,000 was tossed into the pot, upping potential capacity to 700,000 tons a year. Under a patent-pooling arrangement, four companies began producing buna rubber for tires and tubes; Standard Oil of Louisiana started turning out butyl, adequate for barrage balloons, insulation and various mechanical goods; and the du Pont plant, taken over by the government and enlarged, produced neoprene.

Now in staggering succession came the capture of Manila and the successful invasion of Malaya and the East Indies, ending all hope that Jesse Jones' 1,200,000 tons of rubber would be delivered in 1942. At that, no cause for worry raised an ugly head, for as of March 15th, America's 1942 rubber supply figured up as follows: Held by Rubber Reserve Company, 325,000 tons; afloat, but certain of safe delivery, 105,000 tons; in hands of the industry, 170,000 tons; obtained from England in exchange for cotton, 90,000 tons; reclaimed rubber, 48,000 tons. Add 40,000 tons of synthetic rubber that will be produced this year and some 60,000 tons from Latin-American countries and the total is 838,000 tons. Experts estimate domestic consumption for 1942 at 547,000 tons. Deducting this amount from 838,000 tons, leaves a surplus of 291,000 tons.

Then why restrictions? For the simple reason that it is no longer a question of meeting only our own rubber needs. Almost overnight, America is called on to supply the rubber demands of every other member of the United Nations group with the exception of Brazil and possibly Mexico. From the greatest rubber importing country in the world we must now become the greatest rubber exporting country in the world. Russia, China, the Dutch, Australia, Africa, Burma, Canada, and most of South America all look to us for rubber. So does England, for out of their faith in the impregnability of Singapore, the British bought rubber from day to day, laying in no stock pile whatsoever.

Planning an Effective Campaign

Now then to answer that opening question about the outlook for civilian rubber users. Draw close and listen carefully: After the needs of the fighting forces, defense workers, auxiliary firemen and policemen, doctors and nurses, as well as the pressing demands of every other anti-Axis nation have been met, mighty little rubber is going to be left for ordinary folks. Anyone who doesn't drive slowly, turning corners on all four wheels and avoiding sudden stops, is a good deal of a fool, for when tires give out, there will be no replacements; perhaps some recapping if the situation improves, but retreading is doubtful. Very doubtful. "Black markets" are springing up in every hole and corner, to be sure, but don't count on them.

The black market problem will soon disappear because the Defense Supplies Corporation is going to round up all the tires now in retail dealers' hands.

They amount to somewhere between eight and nine million tires, and the government will pay the dealers their cost plus ten per cent, allowing a few tires to remain on hand to satisfy the current needs of the local tire-rationing boards.

After the dealers' stock is completely exhausted, the rationing boards will make demands on this government pool, which will be stored in jobbers' and manufacturers' warehouses.

The dealers' contribution to this huge tire pool will be about six and a half million tires, and before the rationing starts the DSC will make a careful survey in the interests of conservation and

make sure that the oldest tires are used first.

A ban on new tires, on retreading and maybe recapping is not the end by any means. Even now a survey of essential transportation is under way, and out of it may come an order "immobilizing" a half or even two thirds of the 27,500,000 passenger cars and 5,000,000 trucks careering so gaily over streets and highways. That's Washingtonese for putting them out of active use and jacking them up to be held as a tire reserve. Moreover, there's a chance that the cars themselves may be commandeered if needs grow more acute.

Restrictions instead of easing up are likely to press heavier and heavier. Even scrap rubber is going to be guarded no less vigilantly than the pure article, for the War Production Board counts confidently on 350,000 tons a year from the country's junk piles. Bicycle tires will be made out of reclaimed rubber. Almost everything else that has been

tolerated in a crossroads garage: A full 53 per cent of tires surveyed found to be underinflated, some being 50 per cent below recommended pressure; 37 per cent improperly mounted; a tire guaranteed for 30,000 miles thrown away after 12,000 miles; in one scrap pile of 636 tires, 231 found suitable for reissue; no standardized procedure for selecting, testing and training drivers; no uniform plan for inspections, correct inflation and proper mounting; no training schools for instruction in storage, care and maintenance of tires, tubes and tire accessories; no organized system of base repair shops and a lack of mobile shops.

Here's another instance of waste: The Farm Security Administration has no connection whatsoever with housing, yet last June this agency began buying trailers to serve as homes for defense workers. All in all, close to three thousand were bought, and parked in some fifty government camps with the tires

fairly certain that restricted off materially. A but based on these figures sources: 291,000 tons car 1942 plus 250,000 tons of ber plus 50,000 tons from can countries plus 350,000 tons of reclaimed rubber, all add up to 1,000 tons.

Certainly 1944 should be asked of civilians but by then synthetic rubber have reached a peak of 70 for 1945 and 1946, those bring an abundance such never known.

Collier's told you last article called Bringing F about the vast development search program that is un forever America's dependence Far East as a source of

Take Brazil: Not only entered into a contract with government to buy a plus for the next five years set up a fund of \$5,000,000 in expanding the production in the Amazon region roaring years before the Hevea Braziliensis seeds ber production was less than a year, but roads, sanitation proved production technique double and treble this amount

America's Best

A better prospect is offered by Central America where the Bureau of Planting planted more than 11,000 Hevea Braziliensis in cooperation with the various governments of the industry.

Best prospect of all, however, is the rabbit brush that grows eight or nine Western states. Figure that there is enough to produce 40,000 tons a year, though low rubber content of 2 per cent make the cost prohibitive cheap method of extraction found.

Then there are two varieties of milkweed with a rubber running from 6 to 8 per cent. The Colorado rubber weed is white. The Madagascar growing in the United States to the frost line, has less than 2 per cent of rubber, but the quality good. The scientists have covered some inexpensive processing the rubber out of these plants.

This research and experimentation is interesting and may prove but in the last analysis, synthetic is America's best bet. The genius of the industry, as government experts, has already beyond the Germans, and results are in the offing. Rubber figures in the manufacture of 32,000 articles in everyday discoveries in synthetic rubber and lowered production plantings of Hevea Braziliensis, Central America and Africa also hold promise of abundant supply. What than an enlarged rubber industry bled and even trebled in lift rubber articles from 32 or even a 100,000? Anyways comes, the Western Hemisphere to be self-sufficient in the matter of rubber.

Considering everything gloomy picture after all. Restrictions for the next two wringing many a groan from who have lost the use of a brighter outlook for 1943 use in 1944, and a burst of 1945 and 1946!

THE END

"Say, I'm six payments behind on that piano I bought from you! Aren't you going to do anything?"

produced from scrap will be prohibited—tires for lawn mowers, baby buggies and farm implements, bath caps, golf bags, household articles, wearing apparel and things like that.

It's a black picture shot through here and there with gleams of light. Some pretty tough men are handling rubber allocations for the War Production Board and nothing is more certain than that no demand will be met until it has been gone over with a cold, hard eye. Every nation will be required to prove its need and justify it in all particulars. So will the Army and Navy and every agency concerned in any degree with the war effort. Not long since, the Office of Civilian Defense excitedly slammed in an order for 60,000,000 gas masks enough to take care of every coast state—Atlantic, Pacific and Gulf—and also to provide for people in the mountains, desert and prairies. But will OCD get them? Not a chance! Only 5,000,000 at the most!

Judging from surveys made already, an end to the waste of rubber by the government itself would almost take care of the rubber shortage. The Army is a chief offender, for a recent report revealed conditions that would not be

still on. And even weeks after Pearl Harbor, most of them were still on. According to one embittered WPB man, if the gospel of essential use was applied to every federal agency, rubber restrictions could be cut to a minimum. But—and it's a cheering "but"—these abuses are going to be corrected. Already orders have been given that will make division and company commanders take the same care of tires and tubes as of guns.

Another important item in connection with rubber is some decision as to the theater of operations. Where is the war going to be fought this year? In Australia, in Africa, on the Russian front, in Asia, in the British Isles or in the United States? Hitler and Hirohito have something to say about it, of course, but so do the United Nations. Obviously enough, the field of war and the character of the fighting have a decisive bearing on rubber needs.

Even with the maximum in rubber-saving, however, 1942 is going to be a tough year for every automobile owner who can't prove essential use. Jittery Washington means to take no chances. In 1943, given an end to waste and some intelligent ascertainment of needs, it is

A Short Course in Driving Longer

This is you, learning how to drive—thousands of miles longer than you expected to! (Aren't we all?)

The first thing to learn is to dodge—WEAR. WEAR is a slow worker—but it can stop a car fast.

This is your teacher—a bright, fast-footed Veedol dealer. He'll teach you how to dodge engine-and-chassis WEAR the expert Veedol way.

LESSON No. 1 is—treat your engine to fresh, clean, summer-grade Veedol Motor Oil. Why? Because it's 100% Pennsylvania oil at its finest! Made from the world's toughest, most wear-resistant crude! It makes your engine run *longer*—and *better*.

VEEDOL
Safety Check
LUBRICATION

LESSON No. 2 is—pamper the chassis with Veedol *Safety-Check* Lubrication. It's scientific, thorough, blessed by your car maker. Your expert Veedol dealer gets *all* the wear spots, with the *right* lubricants. He *Safety-Checks* your tires, too—and tells you how to make 'em last.

You're graduated with a degree of M. C. D. (Master of Carefree Driving). But be sure to enroll today. See your Veedol dealer now—and for a brush-up course every 1000 miles!

him change to number fifteen. He went back to the hoodoo identification and won ten of his next dozen games.

Any other resemblance between the firebrands is purely coincidental, however. Higbe is not, and probably never will be, the pitcher Dizzy was. He is not quite as smart in a baseball sense or as resourceful; his leaping fast ball does not explode in the batter's startled face as did Dizzy's Sunday pitch when the heat was on and stern measures were needed to cool off the opposition. Higbe is not particularly big for a pitcher, especially a work-horse pitcher. He is an inch under six feet and weighs 180 pounds.

But in their attitude toward their profession, both are brothers of the same lodge, and for that reason alone, Higbe will continue to be a big winner and a jewel of great price in the diamond trade. Brooklyn had to give up \$100,000 in cash and three players to get him from the Phillies after the close of the 1940 season, and Mr. Leland Stanford MacPhail has no cause whatever to regret the deal. The \$100,000 insured a million-dollar pennant.

A Civic Catastrophe

Higbe's devotion to duty and the Dodgers was demonstrated in convincing fashion last July when the Bums went into their most harrowing swoon of the season and probably would have collapsed with a dull thud, only for our hero. On July 20th, a Sunday, public morale in Brooklyn was so low that three witches riding broomsticks and wearing Giant uniforms could have taken the borough without a struggle. It was bad enough that the Bums, dividing a double-header with the Pirates while the Cardinals were licking the Braves twice, had their lead cut to a game and a half before going west for the third trip of the year. Infinitely worse was the ghastly news that Higbe, the symbol of strength, the strong-arm boy, had been rushed to the hospital. The stricken gladiator had an unruly appendix and might be out for the season.

Learned soothsayers probed the patient and presently announced that Koiby undubitably would live, might even be able to pitch in a week if he took things easy. Civic jubilation was extensive; religion enjoyed a revival in the City of Churches. The following day, Monday, the team entrained for the West, and Higbe turned up with a fat cigar in his kisser. He played gin rummy with Billy Herman for nine consecutive hours.

The trip opened in Cincinnati on Tuesday, and Higbe, mindful of his delicate condition, sat quietly in the lobby of the Netherland Plaza Hotel for twenty minutes, a new world indoor record for himself. He then went out to the ball park and proceeded to go nuts, in company with the Brooklyn entourage, when the Bums blew a four-run lead in the ninth and lost to the Reds, 5-4.

Determined to do something about the slump, Higbe on Wednesday night disregarded the doctors' orders, as well as the shoddy support of his jittery comrades, and held the Reds to one earned run in seven innings. Brooklyn won the game in the ninth, 5-4, and inflicted the first defeat of the season upon Elmer Riddle, who had racked up eleven straight for the Reds.

There was no game Thursday, but the Bums had a double-header with the Pirates on Friday. Higbe relieved in the first game. On Saturday, he re-

lieved Luke Hamlin, who was doing a splendid job of blowing a 3-0 lead in the eighth. Higbe fanned Elbie Fletcher to end the inning. He fanned pinchhitters Spud Davis and Rip Collins to end the game with two big, potential runs aboard. Brooklyn won, 3-2.

Sunday brought another Dodger-Pirate double-header. The second game also brought Higbe upon the scene in a relief role. No game Monday. On Tuesday, Higbe started against the Cardinals and had a nice 6-1 lead going into the sixth when he suddenly was overtaken by a wild streak the like of which only he and strabismic southpaw rookies are capable. That one wound up in a 7-all, 12-inning tie. On Saturday, he started against the Cubs, and the Brooklyn won.

On five successive playing days, Higbe pitched at a time he was supposed to be applying ice packs and things to his angry appendix. Thirteen games were played on the trip. Of the six which Brooklyn won, Higbe started two and saved another.

Restless craving for action characterizes Higbe on and off the field. During the season he doesn't average more than three hours of sleep a night; he is wound up so tightly inside that he finds it impossible to relax. The energetic pitcher is the most indefatigable gin-rummy addict east of Hollywood. More than once he has sat up all night and played the spots off a deck of cards with a groggy house dick.

He will play any game with anyone for money, marbles or fun to satisfy his insatiable appetite for action. Last spring, when the Dodgers trained at Havana, Higbe commuted between the ball park and the Casino and once, on an off day, he dug in at a roulette table before noon and didn't leave until the joint closed.

When the team shifted its base to Florida at Safety Harbor, Higbe took complete charge of the lone quarter slot machine in the hotel. He refused to let

anybody else play the thing. He frequently had his wife hold the machine for him. He was called away to practice, a fast guy with a big arm. He tried to tell the fellow he was the percentages and begged him to throw his arm out, pulling Higbe compromised by pulling into the one-armed bandit hand.

After watching the marriage between the man and the credulous onlookers were common. Higbe never will suffer a so-called bandit's iron arm development, but Higbe's business showed no strain at all. His machine with quarters during the team was at Safety Harbor and conservative estimate losses at no less than one dollar a day. The only game which does not appeal to him is horse racing.

You Can't Fool a Major

Higbe's entirely innocent ing has given rise to many persons in the dugouts. Last season he made a supposedly secret psychiatrist in Cincinnati, grapevine was intrigued by the effect that the guy really had on his top. The Brooklyn club's eccentric ace to a psychiatrist on other purpose than to let him sleep. It wasn't. Higbe will tell you Higbe is as fond of getting base as he is of getting base.

"It's a lie!" Durocher said. "The screwball is up all night, hard liquor, positively no later, one way or another, but out which men drink and how had a couple on our club but Higbe wasn't one of them. I doubt that Higbe had even a glass of beer once. I doubt that Higbe had even a glass of whisky last year."

It didn't take Higbe long to discover that.

BUTCH

walks and wild pitches, but he was coming along. Promoted to Birmingham in '38, Higbe earned his spot with the Cubs by winning 15 games for a sixth-place club.

The first time the Dodgers saw Higbe in a Chicago uniform they saw entirely too much of him. That was on May 17, 1939, the date of the screwiest game the Dodgers ever played—and the Dodgers have figured in most of the squirrel-cage contests on record. At the end of nine innings, the athletes were locked in a 9-all tie. Ten innings and a lifetime later the score still was 9-9. The Dodgers battered old Earl Whitehill for 15 hits in the first twelve rounds, but Higbe thereafter stopped them colder than the thermometer, which was in the low thirties. He gave the Dodgers one hit in seven innings.

Durocher Didn't Forget

Displaying the sagacity for which they are celebrated, the Cubs twelve days later traded Higbe, Joe Marty, Ray Harrell and the ubiquitous Joe Cash to Philadelphia for Claude Passeau. The latter, working for a first-division club, won 15 games, only three more than Higbe scored for the dreadful Phillies. In 1940, it became obvious that Higbe was not destined to waste his sweetness on the desert air of Philadelphia for long. He won 14 games for the humpty-dumpties and led the league in strikeouts—and bases on balls! The Dodgers, remembering the rookie who had kept them on a hook in the Chicago icebox, investigated further when Higbe defeated the hated Giants five times with two-, three-, four-, five- and seven-hit performances.

MacPhail, determined to buy the pennant for Brooklyn, went into consultation with Durocher after the season and asked his manager to name in order the men he needed to win in 1941.

"Higbe, Mickey Owen, Billy Herman and an outfielder who can hit .780," Durocher snapped. MacPhail bought in order all the players but the outfielder, and you will please note that Higbe's name led all the rest. That's how it turned out at the end of the year when he won 22 games and lost 9.

That he lost more than two or three games was strictly his own fault—the old fault, lack of control. Nobody knows when these fits of wildness are due. He can go along pitching an elegant game—in sixteen of his victories last year he gave the opposition two runs or less—and then it happens out of nowhere. His control goes off the beam; first it gets bad, then it gets worse, and finally the customers sitting in the upper tier behind the plate are fleeing for the bomb shelters. His trouble is not emotional; for a citizen of his volatile temperament, Higbe is a surprisingly calm, dead fish on the mound. He simply cannot throw the ball up an alley when he is seized by a spasm.

"There's only one thing to do when he gets like that," Durocher admits. "You gotta get him out or they'll knock him out. If he ever learns control, he'll be the Feller of the National League."

Higbe doesn't want to be difficult about this, but he doubts he ever will see that happy day.

"You can't change an ole hound dawg," he says casually. "Besides, I might get belted if I had better control. Them bums at the plate would take toe holds on my stuff if they knew the ball was comin' over. Shucks, I got to leave my mark on this game somehow. Looks like the only way I can do it is with bases on balls. Give me ten years in this league and I'll bust every record in the book."

And, incidentally, win a hatful of ball games too!

THE END

Stripped for ACTION!

TODAY AiResearch is ready to assure our flying men passenger comfort...comfort the equal of that already perfected for our future commercial transports.

From the beginning, we have had the privilege to pioneer in the development of cabin pressure control systems in American commercial aircraft, which fly higher than any in the world.

The ability to maintain a cabin condition equal to 8000 feet in a plane flying at 35,000 feet or over, eliminates the use of clumsy, heated flying suits and oxygen, except as emergency equipment.

AiResearch cabin pressure control will permit our fighting pilots to "strip for action" in the higher altitudes where the man on top wins.

TO THE END THAT AMERICAN AIRCRAFT WILL FLY EVER HIGHER, FASTER AND FARTHER

CULOTTES FOR ACTION

BY MARY LEWIS

UP TO now, if someone called you "culottic," that was merely a highbrow way of saying you were respectable. "Sans-culottic" meant the opposite. It all started back in the French Revolution, when respectable people wore culottes—pants—and the rest didn't.

Nowadays, more and more American girls are becoming more and more culottic every day—although the meaning of the word has been changed. A culotte now is a divided skirt, and a divided skirt is about the neatest thing a girl can wear riding a bicycle.

Until the war started, eighty-five bicycles out of every hundred were made for children. Now the grown-up models are the only ones made.

Even with rationing of new wheels, there probably will be some bicycles—including used ones—available for civilians after the necessary number has been assigned to war workers. The model for women—without the top frame bar—is far ahead of the male model, although girls in shorts or slacks ride either.

Thousands of girls nowadays are doing the marketing, going to first-aid classes, garden-club meetings and their war jobs on two wheels instead of four. The old tandem, even, is back—when you can find one—with youthful romance proceeding fore and aft from saddles instead of side by side on an upholstered auto seat.

Well, fashions usually more or less express the times in which they appear. The bicycle boom means culottes in a big way. They seem the best answer to what-to-while-pedaling. Regulation slacks need ankle clips to keep them from tearing in the sprockets. Shorts demand good legs. Skirts are standard; skirts are feminine. But they can blow up in a wind if they're full; ride up if they're tight.

The culotte has the grace and attractiveness of a skirt; the convenience and practicality of pants. It can be worn anywhere, all day. It may be of any one of a score of fabrics or colors. It can be paired with blouses or sweaters, or be the lower half of a jumper dress.

It's the answer to the girl who wants to keep 'em wheeling! ★★★

Right: Reporting for duty in a defense plant. Her culotte skirt is cotton covert with saddle leather belt. Red flannel waistcoat for warmth and dash, and short navy blue wool reefer jacket

Cuties can travel everywhere. The young lady above wears a rain jumper culotte to market, with a gay plaid gingham shirt. Her next job will be anchoring the box to her bicycle carrier

Right, above: Vacation bound, but time out for a breather. The cowgirlskirt, shirt and kerchief are of sturdy cotton gabardine. Her purse hinges onto her belt. Saddle bags on the bicycle serve for luggage

Right: Off for a date, starting point, US Club in New York. Box-pieced culotte is movie star favorite. This one is turquoise rayon, matched with cotton knit pullover and cardigan sweater

Crosby coming up with a Kentucky Derby winner. The only difference is that no one is wringing Bing's hand and saying, "Congratulations, Colonel," whereas Gloria is actually the star of roller skating's biggest show.

Gloria's roller skating is literally an art. She combines the grace of the ballet with the speed of wheeled motion. Like Sonja Henie, she has endowed the spinning, whirling and flying of ordinary figure skating with a definite terpsichorean tinge. In a dazzling ten minutes in the Roller Follies, for instance, she re-enacts the story of Cinderella. It is a very adequate job, complete with scenery and fancy lighting, one chariot, six horses, two thrones, one rag costume, one fancy ball costume, one chorus, one Prince Charming.

The Bewildering Nordskogs

Gloria was born and raised in Hollywood, and acquired all the peculiarities attendant to such an abnormal upbringing. Fortunately she comes from solid Norwegian stock which has a tendency to keep its feet on the ground regardless of environment. Her father Andre Nordskog was a concert singer who specialized in Ave Maria in churches, and as Nanki-Poo in Pacific Coast versions of The Mikado. Her three older sisters became, respectively and in rapid succession, a night-club singer, a leader of an all-girl orchestra, and a designer of artificial flowers for movie productions. Then, in just as rapid succession, all three got married. This was quite a bewildering parade for little Gloria who was just about five years old at the time and very impressionable. On one occasion she severely shocked her mother when, in answer to a perfectly normal query about what she was going to be when she grew up, she said, "A geisha girl."

At the age of seven, Gloria reached a crisis in her life. Mr. Nordskog had settled down to teaching voice and he seized upon Gloria as one of his future concert stars. Soon he had her singing such arias as Twinkle, Twinkle, Little Star, in sweet, clear childish tones. Mrs. Nordskog however had other ideas. She wanted her Gloria to go into pictures or at least on the stage. The controversy raged for several months with the inevitable result in altercations of this sort: Mrs. Nordskog won.

So Gloria learned how to dance and be cute. By the time she was nine she was playing minor blond roles in the Our Gang comedies of blessed memory. By the time she was eleven she was a full-fledged dancer on the California vaudeville and night-club circuits.

At the same time she attended Miss Long's Professional School in Hollywood. This is an interesting institution in which distinguished Hollywood brats are reluctantly exposed to learning for a minimum number of hours per day. It was here that Gloria first learned the intricacies of roller skating. Her instructors were those four lovable youngsters, transplanted from the streets of New York and known affectionately as the Dead End Kids. They taught her everything, from the best method of eluding a cop while on skates to the execution of a pirouette around a sewer plate.

This clandestine activity came to light one day when Miss Updike, a long-suffering teacher of English grammar, sent Gloria into a study room to learn the declension of the relative pronoun. A few minutes later a horrible noise sent Miss Updike scrambling to the nearest

window. There a sho her eyes. The Dead Gloria, were playing rol middle of Hollywood B was spinning like mad t of the Dead End Kid: hockey stick around th them in passage. The were retaliating by thro one another and hook under Gloria's skates.

In the former, which is a little soda
 fountain replete with all manner of won-
 drous pinball machines, she spends
 hours with Hollywood's younger set,
 wasting her nickels and watching the
 little lights flash. In the latter, she en-
 gages in what is probably the most illus-
 trious jam session in the world. This
 consists of Jackie Cooper on the drums,
 Mickey Rooney at the piano, Judy Gar-
 land on the guitar, Bonita Granville on
 the trumpet, and Gloria on the clarinet.
 This is a holdover from Gloria's early
 musical training and gives her father
 some solace to know that his efforts
 were not completely for naught.

Gloria is most crazy, however, about
 skating. Between shows she spends
 hours on the arena floor, practicing her
 intricate dance steps. She also spends
 hours running up and down stairs, for
 what reason, nobody knows. When she
 has an evening off, she'll go skating at
 the nearest rink, usually with Gordon
 Finigan, another youngster in the show.
 She constantly hangs around the old-
 time vaudeville stars in the show and
 exchanges her knowledge of the skating
 art for such tidbits as the juggling of
 Indian clubs and the manipulation of a
 trampoline.

There is no doubt in anyone's mind
 that her roller-skating wizardry will
 send her back to Hollywood with star
 status.

Two of the vaudevillians were dis-
 cussing this possibility the other day. "I
 can see her now," said Lucille Page,
 acrobat, "helping Don Ameche invent a
 new type of roller skate which will en-
 able our soldiers to skim across Europe
 and throw hand grenades at Berlin."

"Yes," said Bobby May, juggler.
 "And then she'll probably get ship-
 wrecked with John Payne and open a
 roller-skating rink for the dear natives
 of Tahiti."

Heaven forbid!

There was an outraged shout from the porter as I pulled Megan up from the floor where my impetuous action had landed her. "What on earth did you do that for?" she demanded breathlessly

Moving Finger

By Agatha Christie

ILLUSTRATED BY MARIO COOPER

The Story Thus Far:

INJURED in a plane crash, Jerry Burton, a young Londoner, goes to the provincial town of Lymstock. There, with his sister, Joanna, beside him, he hopes to regain strength.

Among those whom the newcomers meet are: Richard Symmington, a lawyer, and his wife; Owen Griffith, a physician, and his sister, Aimée; the vicar—the Rev. Dane Calthrop—and his wife; Mr. Pye, a well-to-do dilettante; Miss Emily Barton (who owns the house, "Little Furze," the Burtons occupy); Megan Hunter, Symmington's stepdaughter (a girl whose strange personality is not understood by those around her); and Elsie Holland, the Symmingtons' nursery governess.

Shortly after he and his sister are settled in Little Furze, Burton receives a foul anony-

mous letter. Worried, for a time, he presently learns that a number of other persons have received somewhat similar missives.

Mrs. Symmington commits suicide. Investigation reveals that, shortly before her death, a poison-pen letter had reached her! Then, while the community is still recovering from the shock, the Symmingtons' maid—Agnes Wodell—is murdered!

Two capable officials—Superintendent Nash and Inspector Graves—go to work on the case. And Superintendent Nash suspects that the maid was aware of the letter writer's identity; that the author knew it, and to protect himself, did away with her.

Quite by chance, Burton finds an old book at Little Furze—a book from which a number of pages have been neatly removed. One glance at the printed contents of the book is

enough to convince him that the letter writer had made use of it in pasting together his foul communications!

Following an interesting talk with Miss Jane Marple (an amiable, elderly lady who is visiting the Dane Calthrops), Burton has a curious adventure. Near the Woman's Institute, at night, he follows a mysterious figure into the building. There, he comes face to face with Superintendent Nash, who has been awaiting the arrival of the letter writer—drawn to the Women's Institute by the typewriter which has invariably been used in addressing the letters.

The mysterious person disappears, and Burton goes to his car. Megan Hunter is beside it—she says that she has been taking a walk! Burton drives her to her home. He finds Symmington seriously worried by the girl's absence.

VII

ON THE following day I went looking back on the only explanation I was due for my

Marcus Kent. . . . I went up by the train to my intense surprise to stay behind. As a rule he was to come and we usually stayed a couple of days.

This time, however, I turned the same day by the train but even so I was astonished. She merely said enigmatically she'd got plenty to do, hours in a nasty stuffy train on a lovely day in the country?

That, of course, was sounded very unlike Joanna.

She said she didn't want to drive it to the station it parked there against the wall.

The station of Lymstock for some obscure reason was for way companies only, quite from Lymstock itself. On the road I overtook Megan along in an aimless manner.

"Hullo, what are you doing?"

"Just out for a walk." "But not what is called a walk, I gather. You were like a dispirited crab."

"Well, I wasn't going ticular."

"Then you'd better come off at the station." I opened the car and Megan jumped in.

"Where are you going?" "London. To see my doctor."

"Your back's not working?" "No, it's practically all right."

I'm expecting him to be about it."

Megan nodded.

WE DREW up at the station, got out of the car and went in to buy a ticket at the booking office. There were very few people on the platform as I knew.

"You wouldn't like a penny, would you?" said a man. I'd get a bit of chocolate machine."

"Here you are, baby," said a woman. "Here the coin in question wouldn't like some clear throat pastilles as well?"

"I like chocolate best without suspecting sarcasm."

She went off to the chocolate machine and I looked after her with mounting irritation.

She was wearing a trod and coarse unattractive a particularly shapeless skirt. I don't know why have infuriated me, but I said angrily as she came do you wear those things?"

Megan looked down and said, "What's the matter?"

"Everything's the matter. They're loathsome. An pullover resembling a bage?"

"It's all right, isn't it? years."

"So I should imagine you—"

At this minute the train interrupted my angry

"I couldn't look nice, does it matter?"

"Cut it!" I said. "I'd turned out properly. I'd

GENERAL ARNOLD made them a "must"—Martin made the "must" a reality—and developed America's first power-operated gun turrets in 1937. New power-operated turrets help explain the deadly accuracy of heavy guns on Martin Bombers—and Martin is supplying thousands of these turrets for other American military aircraft.

In Action AGAINST THE AXIS!

HERE'S a bomber that can *fight*! An entirely new type of bomber—created "from scratch" by Martin—out of U. S. Army observation of air tactics in the war zones. In size, this Martin B-26 is a medium bomber. But it packs a bigger bombload than many heavy bombers. Is faster than many pursuit ships—and can outfight any of them. Carries more guns and heavier guns—to spray shot

and shell in all directions. Flies into action with such potent fighting equipment as Martin power-operated gun turrets, Martin bullet-proof fuel tanks, and heavy armor to protect its fighting crew.

America's war planes, like America's valiant airmen, *have what it takes* . . . to bear aloft the torch of Liberty, through to Victory!

The Glenn L. Martin Company, U. S. A.

Idle Dream is the prophecy that postwar airliners 100 tons and more, carrying 100 passengers in luxurious comfort, will serve supper in New York, breakfast in Los Angeles, and lunch in London, 4,000 air miles away. War-born technical advances, as man's rising air consciousness, must inevitably create a new era for aviation—a new era for the world.

IT MADE A *City* FAMOUS

Mention Milwaukee anywhere in the world and people say, "That's where they make Schlitz, the beer that made Milwaukee famous." To earn a reputation for having made a city famous is an achievement of which any product may be proud. Almost a century ago people began telling each other about the fine beer produced by SCHLITZ

in Milwaukee. As the fame of this great brew spread, so the name of its home town—Milwaukee became synonymous with Schlitz. Today, that same fine quality has earned further honors. Everywhere Schlitz is referred to as *America's distinguished beer*. Discover the reason for yourself just taste this marvelous beer and you'll never want to go back to a bitter beer—you'll always demand SCHLITZ.

Copyright 1942,
Jos. Schlitz Brewing Co.,
Milwaukee, Wisconsin

Just THE KISS OF THE HOPS

You don't have to drink a bitter beer. Schlitz methods of brewing control capture *only* the delicate flavor of the hops, not their harsh bitterness. That's one reason for that famous flavor found only in Schlitz. Taste Schlitz and you'll never want to go back to a bitter beer.

human. Don't worry, leave it all to me."

"Right," I said. "I'll come back and fetch her about six."

MARCUS KENT was pleased with me. He told me that I surpassed his wildest expectations.

"You must have the constitution of an elephant," he said, "to make a comeback like this. Oh, well, wonderful what country air and no late hours or excitement will do for a man if he can only stick it."

"I grant you your first two," I said. "But don't think that the country is free from excitement. We've had a good deal in my part."

"What sort of excitement?"

"Murder," I said.

Marcus Kent pursed up his mouth and whistled. "Some bucolic love tragedy? Farm lad kills his lass?"

"Not at all. A crafty, determined lunatic killer."

"I haven't read anything about it. When did they lay him by the heels?"

"They haven't, and it's a she!"

"Whew! I'm not sure that Lymstock's quite the right place for you, old boy."

I said firmly, "Yes, it is. And you're not going to get me out of it."

Marcus Kent has a romantic mind. He said, "So that's it! Found a blonde?"

"Not at all," I said, with a guilty thought of Elsie Holland. "It's merely that the psychology of crime interests me a good deal."

"Oh, all right. It certainly hasn't done you any harm so far, but just make sure that your lunatic killer doesn't obliterate you."

"No fear of that," I said.

"What about dining with me this eve-

ning? You can tell me all about your revolting murder."

"Sorry. I'm booked."

"Date with a lady—eh? Yes, you're definitely on the mend."

"I suppose you could call it that," I said, rather tickled at the idea of Megan in the role.

I was at Mirotin's at six o'clock when the establishment was officially closing. Mary Grey came to meet me at the top of the stairs outside the showroom. She had a finger to her lips.

"You're going to have a shock! If I say it myself, I've put in a good bit of work."

I WENT on into the big showroom. Megan was standing looking at herself in a long mirror. I give you my word I hardly recognized her! For the minute it took my breath away. Tall and slim as a willow with delicate ankles and feet shown off by sheer silk stockings and well-cut shoes. Yes, lovely feet and hands, small bones—quality and distinction in every line of her. Her hair had been trimmed and shaped to her head and it was glowing like a glossy chestnut. They'd had the sense to leave her face alone. She was not made up, or if she was it was so slight and delicate that it did not show. Her mouth needed no lipstick.

Moreover there was about her something that I had never seen before, a new innocent pride in the arch of her neck. She looked at me gravely with a small, shy smile.

"I do look—rather nice, don't I?" said Megan.

"Nice?" I said. "Nice isn't the word!

Come on out to dinner and if every second man doesn't turn around to look at

you I'll be surprised. You'll knock all the other girls into a cocked hat."

Megan was not beautiful, but she was unusual and striking looking. She had personality. She walked into the restaurant ahead of me and as the headwaiter hurried toward us, I felt the thrill of idiotic pride that a man feels when he has got something out of the ordinary with him.

We had cocktails first and lingered over them. Then we dined. And later we danced. Megan was keen to dance and I didn't want to disappoint her, but for some reason or other I hadn't thought she would dance well. But she did. She was light as a feather.

"Gosh!" I said. "You can dance!"

She seemed a little surprised.

"Well, of course I can. We had dancing class every week at school."

"It takes more than dancing class to make a dancer," I said.

We went back to our table.

"Isn't this food lovely?" said Megan. "And everything!"

She heaved a delighted sigh.

"Exactly my sentiments," I said.

IT WAS a delirious evening. I was still mad. Megan brought me down to earth when she said doubtfully, "Oughtn't we to be going home?"

My jaw dropped. Yes, definitely I was mad. I had forgotten everything! I was in a world divorced from reality, existing in it with the creature I had created.

"Good Lord!" I said.

I realized that the last train had gone.

"Stay there," I said. "I'm going to telephone."

I rang up the Llewellyn Hire people and ordered their biggest and fastest car to come around as soon as possible.

I came back to Megan.

"The last train has gone," I said. "So we're going home by car."

"Are we? What fun!"

What a nice child she was, I thought. So pleased with everything, so unquestioning, accepting all my suggestions without fuss or bother.

The car came, and it was large and fast, but all the same it was very very late when we came into Lymstock.

Suddenly conscience-stricken, I said, "They'll have been sending out search parties for you!"

But Megan seemed in an equable mood. "Oh, I don't think so," she said vaguely. "I often go out and don't come home for lunch."

"Yes, my dear child, but you've been out for tea and dinner too."

However, Megan's lucky star was in the ascendant. The house was dark and silent. On Megan's advice, we went around to the back and threw stones at Rose's window.

In due course Rose looked out and with many suppressed exclamations and palpitations came down to let us in.

"Well now, and I saying you were asleep in your bed. The master and Miss Holland—" (slight sniff after Miss Holland's name)—"had early supper and went for a drive. I said I'd keep an eye to the boys. I thought I heard you come in when I was up in the nursery trying to quiet Colin, who was playing up, but you weren't about when I came down so I thought you'd gone up to bed. And that's what I said when the master came in and asked for you."

I cut short the conversation by remarking that that was where Megan had better go now.

"Good night," said Megan, "and thank you awfully. It's been the loveliest day I've ever had."

I drove home slightly lightheaded still, and tipped the chauffeur handsomely, offering him a bed if he liked. But he preferred to drive back through the night.

The hall door had opened during our colloquy and as he drove away it was

fish shop again and rejoined us. She was holding a large red lobster.

"Have you ever seen anything so unlike Mr. Pye?" she said. "Very virile and handsome, isn't it?"

I WAS a little nervous of meeting Joanna but I found when I got home that I needn't have worried. She was out and she did not return for lunch. This aggrieved Partridge a good deal, who said sourly as she proffered two loin chops in an entrée dish:

"Miss Burton said specially as she was going to be in."

I ate both chops in an attempt to atone for Joanna's lapse. All the same, I wondered where my sister was. She had taken to being very mysterious about her doings of late.

It was half past three when Joanna burst into the drawing room. I had heard a car stop outside and I half expected to see Griffith, but the car drove on and Joanna came in alone.

Her face was very red and she seemed upset. I perceived that something had happened.

"What's the matter?" I asked.

Joanna opened her mouth, closed it again, sighed, plumped herself down in a chair and stared in front of her.

She said, "I've had the most awful day."

"What's happened?"

"I've done the most incredible things. It was awful—"

"But what—"

"I just started out for a walk, an ordinary walk—I went up over the hill and on to the moor. I walked miles—I felt like it. Then I dropped down into a hollow. There's a farm there—a God-forsaken lonely sort of spot. I was thirsty and I wondered if they had any milk or something. So I wandered into the farmyard and then the door opened and Owen came out."

"Yes?"

"He thought I might be the district nurse. There was a woman in there having a baby. He was expecting the nurse and he'd sent word to her to get hold of another doctor. It—things were going wrong."

"Yes?"

"So he said—to me. 'Come on, you'll do—better than nobody.' I said I couldn't, and he said what did I mean? I said I'd never done anything like that, that I didn't know anything—"

"He asked me what the devil that mattered. And then he was awful. He turned on me. He said, 'You're a woman, aren't you? I suppose you can do your darnedest to help another woman?' And he went on at me—said I'd talked as though I was interested in doctoring and had said I wished I were a nurse. 'All pretty talk, I suppose! You didn't mean anything real by it, but this is real and you're going to behave like a decent human being and not a useless ornamental nitwit!'"

"I've done the most incredible things, Jerry. Held instruments and boiled them and handed things. I'm so tired I can hardly stand up. It was dreadful. But he saved her—and the baby. It was born alive. He didn't think at one time that he could save it. Oh, dear!"

Joanna covered her face with her hands.

I contemplated her with a certain amount of pleasure and mentally took my hat off to Owen Griffith. He'd brought Joanna slap up against reality for once.

I said, "There's a letter for you in the hall. From Paul, I think."

"Eh?" She paused for a minute and then said, "I'd no idea, Jerry, what doctors had to do. The nerve they've got to have!"

I went out into the hall and brought Joanna her letter. She opened it,

glanced vaguely at its contents and it drop.

"He was—really—rather wonderful. The way he fought—wouldn't be beaten! He was really horrible to me—but he was wonderful."

I observed Paul's discomfiture with some pleasure. Finally he was cured of Paul.

THINGS never come as expected.

I was full of Joanna's affairs and was quite tired the next morning when Ne over the telephone:

"We've got her, Mr. I was so startled I nearly receiver."

"You mean the—"

He interrupted: "Car heard where you are?"

"No, I don't think haps—"

It seemed to me that to the kitchen had swum open.

"Perhaps you'd care to the station?"

"I will. Right away."

I was at the police station no time. In an inner Sergeant Parkins were

She nodded. She was sobbing now. Symmington went out of the room. In the doorway he collided with Owen Griffith.

"What's this?" said Owen violently. "My sister—"

"I'm sorry, Dr. Griffith. Very sorry. But we have no alternative."

"You think she—was responsible for those letters?"

"I'm afraid there is no doubt of it, sir," said Nash. He turned to Aimée: "You must come with us now, please, Miss Griffith—you shall have every facility for seeing a solicitor, you know."

Owen cried, "Aimée!"

She brushed past him without looking at him.

She said, "Don't talk to me. Don't say anything. And for heaven's sake don't look at me!"

THEY went out. Owen stood like a man in a dream.

I waited a bit, then I came up to him.

"If there's anything I can do, Griffith, tell me."

He said like a man in a dream, "Aimée? I don't believe it."

"It may be a mistake," I suggested feebly.

He said slowly, "She wouldn't take it like that if it were. But I would never have believed it. I can't believe it."

He sank down on a chair. I made myself useful by finding a stiff drink and bringing it to him. He swallowed it down and it seemed to do him good.

He said, "I couldn't take it in at first. I'm all right now. Thanks, Burton, but there's nothing you can do. Nothing anyone can do."

The door opened and Joanna came in. She was very white.

She came over to Owen and looked at me.

She said, "Get out, Jerry. This is my business."

As I went out of the door, I saw her kneel down by his chair.

(To be concluded next week)

The Burlington Serves You Everywhere West

This summer, more than ever before, you can profit by the suggestions and advice of experienced travel counselors in planning your trips. And at the same time, you'll be helping us serve the nation as it must be served.

Burlington's number one job is meeting America's war assignments, thoroughly and quickly. Nothing must delay the movement of vital men and materials. Nothing will.

We anticipate no difficulty in

serving Uncle Sam to the limit and, at the same time, having adequate facilities to serve civilian travelers—providing we all plan together.

Burlington passenger offices in principal cities throughout the country are qualified and ready to help you plan and time any trip for maximum enjoyment to yourself and in complete tune with the country's war time needs.

Mail the coupon today—or consult your local Burlington passenger representative.

BACKACHE, LEG PAINS MAY BE DANGER SIGN

Of Tired Kidneys

If backache and leg pains are making you miserable, don't just complain and do nothing about them. Nature may be warning you that your kidneys need attention.

The kidneys are Nature's chief way of taking excess acids and poisonous waste out of the blood. They help most people pass about 3 pints a day.

If the 15 miles of kidney tubes and filters don't work well, poisonous waste matter stays in the blood. These poisons may start nagging backaches, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness.

Don't wait! Ask your druggist for Donn's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 miles of kidney tubes flush out poisonous waste from the blood. Get Donn's Pills.

and a load of stationery. "The candy, cookies and so on—yes," says Hutchins. "because it's divvied up with the boys in my company. But the letters—no. I get plenty of them from my wife."

JACKSONVILLE NAVAL AIR STATION. Blow Out the Rising Sun is the battle cry of the Fellows of the Bellows, an organization that could—and should—be installed everywhere War Stamps are sold. When a Fellow of the Bellows buys a 25-cent stamp he becomes a Puff. He qualifies as a Breeze with \$25 worth, a Gale at \$50, a Storm at \$75 and a Hurricane with \$100. Official scorekeeper for the outfit is Lt. Comdr. Richard H. Briner, of the Accessories Division of Assembly and Repairs, where the idea originated.

BY THE time personnel officers at this Station had finished questioning Seaman Walter E. Svoboda about his past they were willing to call it a day. As a Russian parachute trooper Svoboda made three jumps behind the Finnish lines during the Russo-Finnish war and seven behind the Polish lines when Germany and Russia overran that country. Besides that, he's a graduate of a Russian school for guerrillas and snipers. But right now he's training to be an Aviation Machinist Mate at Jacksonville. Here is how come:

Svoboda's father, of Czech descent but a native of that part of Russia which became Poland after the last war, emigrated to this country a long time back and settled in Detroit to become an engineer. With other American engineers he went to Russia in 1929 under a five-year contract from the Russian government, and son Walter, at the age of twelve, joined him in 1932. Walter went through high school but couldn't get into college because he wasn't a citizen. Meantime his father's contract expired but the government wouldn't allow the family to leave Russia. So—with nothing else to do, Walter learned parachuting and sniping, a knowledge the Russian government was glad to make use of even though Svoboda wasn't a citizen. When Poland disappeared Walter was discharged from the army and in March, 1941, the family returned to America by way of Siberia and Japan. After eight years in Russia Seaman Svoboda speaks Russian and Ukrainian and understands Polish and Czech, all of which has been duly noted in his dossier for possible future reference.

NAVAL SUPPLY DEPOT, Seattle, Wash. Last fall, when Lt. Knox Woodruff went on duty at this base on the world's longest pier, which the Navy had just bought from the city, the on-the-scene staff consisted of the lieutenant, a storekeeper and two civilian workers. Somebody asked Lt. Woodruff how much more help he'd need. "Not more than two men," he guessed. Today the site is the Navy's fifth hugest supply depot, with Naval personnel, Marines and civilian help numbering hundreds (it takes more than 100 Marines alone to patrol the place).

Lt. Woodruff, who admits he's one of the 130,000 Americans who didn't know last November that Pearl Harbor was just around the corner, is the unofficial historian of the depot; he has a complete log of the depot's progress, and the comings and goings of ships. Amidst a bunch of statistical detail there's one entry for a patrol craft: "Detected peculiar odor. Investigated same. Found the tide was out."

Unfortunately for secrecy, a big overhead bridge connecting one of the fashionable residential districts with downtown Seattle bisects the depot area. The Navy at first planned to close the bridge, then changed its mind after briefly considering the quandary into which it would put thousands of peninsular residents. The bridge itself is so situated that it should offer a swell view of the city's skyline, but because of some designer's quirk that has made Sunday drivers grouse for years, passing motorists can't see over the rails. This ill wind blew good for the Navy, though; people in cars can't see most of the Navy's secret activities down on the pier.

Depot supply officers are proudest, perhaps, of a junk pile comprising stuff stripped from boats converted in Puget Sound shipyards to Navy use. Every time a Naval vessel puts in at the pier, the supply boys invite the crew to help themselves. An engineer finds a tube he needs for an engine-room repair; somebody else grabs some cable, or whatnot. The pile is about gone now, and the supplymen are boasting they haven't wasted a thing.

FORT LAWTON, Seattle. The rules prohibit posting any advertising in mess halls, but one cigarette company puts out such a snappy electric clock (with the brand name neatly lettered on the face) that one outfit here hung it up anyway. To be nonpartisan about the business the mess sergeant draped a large sign underneath the clock. The sign: NO SMOKING.

FORT MCPHERSON, Ga. Sgt. Harry J. Lassiter, who sorts the mail for this Reception Center's P. O., offers two examples of how not to address soldiers' mail. The first he calls the understatement address: Leon Lafell, Cavalry (I think), Camp Something, Atlanta, Ga. The other extreme is even more of a headache to post office clerks: The Very Private Robert L. Turnstall "Tod" Bober, French-Hornist De Luxe, 1st Chair, Horn Section, Company B, Re-

ceiving Battalion, Special Duty, Reception Center Band, Inc., Care Privates Sidney Ware and James Halford Williams, Reception Center, Fort McPherson, Ga., U. S. A. Both letters were delivered in spite of everything.

QUARTERMASTER DEPOT, Atlanta. Civilian sacrifice of rubber is helping the armed forces, but the armed forces are playing ball, too. Fourth Corps Area Quartermaster Col. James R. Alfante, for instance, is doing all he can to conserve the supply. Ten civilian inspectors now examine every tire coming off every Army vehicle and those once sold as junk are now repaired. Fourth Corps Area's monthly recapping job comes to an average of 10,000 tires.

ON AN even larger scale is the rubber-saving program of the quartermaster general. By changing the specifications for tires and tubes produced over a period of nine months, some 70,000,000 pounds of crude rubber have been made available for other purposes. This is enough to fill all the rubber requirements for 175,000 P-40's, or more than 30,000 four-engine bombers, or more than 450 battleships, or more than 140,000 additional Army trucks. An admirable project.

FORT EUSTIS, Va. Pvt. Jerome B. D'Agostino was on his way to becoming a veterinarian when the Army got him, which is why Patsy's progeny are alive today. Patsy was only an alley cat, but she was the pet of one of the battalions here, and when she was run over and killed by a car one morning recently, Pvt. D'Agostino, who was working in a near-by mess hall and who knew something of Patsy's history, grabbed a knife and ran to the street. Four of the five unborn kittens were delivered alive and are now thriving. Two are black, one is gray and the other's red. Pvt. D'Agostino has been feeding them milk from an eye dropper every two hours beginning at 3 A. M. and ending at 9 P. M. and it hasn't got him down yet.

Army pilots don't need big muscles, but co-ordination is essential. In the test shown above, Athletic Director Joe Holmes (right), of Brooks Field, has called, "Two-one!" and the flier, without looking down, is trying to put his foot in the proper square while the man at left times him. This test helps determine the exercises necessary to forestall muscular fatigue

are defenseless. Maybe if we can keep them submerged, afraid to show their noses, afraid to come up for air, they'll hate this coast and clear out. Life in the pig boats must be pretty tough when you're down there hiding for hours. Some of the boys say that we've made it so hot for them that they've gone south.

This patrolling would be a good thing, vital in the country's defense, even if we didn't see a submarine. It keeps them down under and makes life tough for them. It's a good thing for the Army and the Navy to know what goes on out here, too.

Funny about dolphins, how much like submarine they look. One of the English patrols hit a sperm whale. They certainly got their oil slick.

The radio operator sits and listens. The ship has three receiving outfits. One is always keyed to 500 kilocycles, the international distress band.

One by one, we pass ships. Some we know. With others, we find out pretty quick. And we know that everyone who identifies himself as "Friend" may not be a friend. For three days, the same ship has been in the same spot, going the same speed in the same direction. It won't ever do that again.

Wondering if the submarines really do get supplies and shore communication from some of these boats, tramps, tankers, even fishing boats.

Trouble Looks for Us

The radio operator tells us of the "lonely skies" these days. No gab. In the old days, there used to be a constant chatter. Now, just waiting, waiting for trouble.

Startled, he looks up and begins his ticking. Over his earphones, the pilot is getting the same message. A tanker has gone down—look for survivors—position—Mac gives orders over the interphone to acknowledge the instructions—"Pilot to Radio," "Radio to Pilot, go ahead," then, "Send departure from routine, that's all."

The course changes only a little. Mac "piles on the coal" as we head for trouble. No one has to move. We've been ready and waiting all along as we swept back and forward over the sea wastes. The navigator passes a slip to the pilot. It can't be far.

Over the interphone comes the bombardier's flash, "Raft three miles ahead... little to the right"... In a minute we're over it, a couple of pairs of drums lashed to a platform. No sign of life. There's a pear-shaped oil slick and a few little pieces of debris. We bank sharply and come back. Again we circle and climb a bit, then a wider circle. A Navy blimp is coming up off in the distance.

"Periscope straight ahead!"

"We're on it!"

"Open bomb bay!"

The retractable landing gear is lowered to cut our speed. The entire crew is rigid, expectant.

"Arm bombs!" into the phone.

"Bombs away!"

No. 1 egg hits the water, not really very close. Everyone knows that as the ship, flying over the explosion, bumps. The plane seems to have gone out of control as the altimeter flutters wildly and the compass spins dizzily. But the blimp has arrived with her nose down, hot on the scent and, to mark the target for our return she drops a yellow "bubble ball" practically on the sub's nose as the periscope and its sea-green belly crash-dive in a burst of sea foam.

Now we return in an unhurried and sure approach like Joe Louis moving in.

Again, "Bombs away." Another bank, short and quick—the blimp goes down, drops her marker—and again, "Bombs away."

We can see an oil slick and a bubble come up—from a sick sea wolf, we hope.

Once more, and we give it the depth bomb. A smothered kind of roar and the water lifts up, not like one of those geysers you see in the movies, but just a heavy, tired gurgle. It must have hit the yellow ball, for it isn't there any more.

There are two oil slicks now, and plenty of bubbles. The big slick takes the shape of a sea horse.

Curious, not a word was spoken beyond the bomb-discharge commands.

Mac says, "Maybe it was and maybe it wasn't, but if it was, it ain't." Texas talk.

At five hundred feet or so, we begin wide sweeping circles. All of us, six pairs of eyes, light on a boat and a raft at the same time. The raft is the same kind that we saw a few minutes ago, the same platform roped to oil drums. Three cold-looking men are huddled in a bunch. They not only look cold—they look wet. In the boat there are perhaps fifteen. Unlike the men on the raft, who made no move as we swept down, the men in the boat wave, and even though we can't hear them, we can see their lips move in a yell.

As we circle, our report to shore goes out. Position. Survivors. Details.

We come down over the water so low that the altimeter indicates that we are under water. That's because it has zero set at the airport level, which is ninety feet. When you fly that low, you realize how fast you're going—too fast to see much.

We get a quick glimpse of those tired faces below us that have just gone through the gamble of these wartime seas, the gamble every one of them has to take. Those boys have had a bad shake, but have recovered.

We circle for a while in the early twilight haze. Help is on the way from the Coast Guard, we know.

The men of our bomber look at one another in a kind of a satisfied way, a way that vaguely suggests gratitude and affection. "Just right, kid," they seem to say, but don't say it. That's a mighty

good thing, when a proud of one another they're good.

After a while, we drop and then a slow-burn away for a few miles. be seen for four or five the empty raft. Wond of the men who don't be more terrible. Wh guys be? Did they e they ready? They mu Another flare; this o but only because it ha Buzz yells up, "De right, sir."

Sure enough, it is,

...his machine how the
...ct in light.

...the prototype—the first ship

—is ready, and Frank Davis takes it
up. And takes it up. And takes it up.
Small flaws appear. There's a bug here
and an instrument that needs changing
there. As the plane flies, it automatically
radioes to men in a laboratory on the
field just how its parts are standing the
strain. Performance of wings and rivets
and braces is recorded permanently,
though the plane is miles away flying at
300 miles an hour. Pretty wonderful.

Talking about strain: It's almost im-
possible for a pilot to wreck a plane in
the air by overtaxing its strength. When
the pilot is strained to the limit by
speed and changes in direction, the
plane still has a 100 per cent safety
factor.

Even while the prototype of the Ven-
geance was being tested, ships were
coming off the production lines. The
plane actually is manufactured by doz-
ens of subcontractors and subsubcon-
tractors, all over the country.

The outer wing panels and the tail,
for example, are made in the Midwest,
the center section in the South, and so
on. All these parts are then shipped to
the big plants for final assembly. The
Vengeance, by the time it rolls out onto
the runway for its tests, is really an all-
American product.

People educated to mass production,
with things rolling off assembly lines by
the scores of thousands, wonder why
you can't produce warplanes that way.

It is uneconomical, and may actually
be slower, to set up mass production as-
sembly lines if you are going to roll out
only a few thousand units of a terrifi-
cally complicated piece of machinery,
because you have to divide the cost of
this line, and the time it takes to build
and set up the machines, into the num-
ber of units you build. While you're
waiting for weeks for a system to be
set up and machines to be made and in-
stalled, you might be making planes by
simpler methods.

There always will be a tremendous
amount of hand labor in plane building
—as there still is in car building, for that
matter. Incidentally, on the Vengeance
and our other warplanes, much of this
hand labor is being done now by girls,
whose fingers often are defter than
those of men. You can see them at work
on the production lines, proud of their
ability to do a job exactly right in the
so many seconds or minutes allotted
before the line moves on. And the girl
who hasn't completed her job while the
part she's working on is at her station
gets a nice quiet razzing from the others.

Making Good—with a Vengeance!

Reports from the British say the
Vengeance is making good. Just how
good is a secret—but you can judge a
little from the fact that the Stuka has
a range of about 500 miles, fully loaded.
This is enough for the Germans, flying
from French bases close to England, but
not enough for the British, who must fly
from England to Germany; or for us, who
must perhaps fly over oceans eventually.

The Vengeance, the British report,
does its job with ease and speed. It car-
ries bigger loads of sudden death farther
and faster than any Stuka in the air or
on the drafting table.

It may cheer you to know, too, that
plane production is a lot farther along
than you think. Planes are rolling as
fast or faster than pilots can be trained
to fly them. The production problem is
about licked. The big news now is, the
Vengeance (hundreds of them) is ready
to blast dictatorship from the earth.

Newsboys unwittingly aid Axis indoctrination by vigorous pushing of pro-Nazi El Pampero. They get this paper free

Invaluable aid to hemisphere defense would be Argentina's navy, now immobilized by her dubious neutrality. Fleet includes 2 battleships, 3 cruisers and

Radical Paul Tabodra leads middle-class businessmen, bulk of opposition to Castillo's pro-Axis conservatives

This, the second of two articles on enemy influence in Argentina, where Nationalism plus Axis pressure and profiteers' greed add up to neutrality. The first of these articles appeared, under the same title, in Collier's for April 18th

OF THE twenty-two nations in this half of the world, only two are isolationist. One of these, Chile, may yet enter the war on the side of the Allies, or she may come part way eventually by divorcing the Axis. The other, Argentina, doesn't believe in divorce. She'll stay tied to the Axis and call it neutrality and she'll cling to that policy as long as it continues profitable and safe and otherwise expedient. That's the Argentine way.

You can lay this to the influence of Axis money and propaganda and the presence in Argentina of the most powerful fifth column in South America. You can attribute Argentina's neutrality to her blood bonds to Madrid and Rome. More than two thirds of Argentina's 13 million people are of Italo-Spanish stock.

But the real reasons for Argentina's isolationism go beyond all the obvious ones to a cause as old as Argentina herself. The policy of neutrality proclaimed by the congenitally pro-Axis government of Conservative Ramón Castillo is rooted in nationalism. Argentina hasn't a corner on this superpatroitic commodity. Nationalism flourishes in most South American countries.

In Argentina, however, you have the only country in this hemisphere where nationalism and the conditions that breed it and feed it exist simultaneously. It's the only South American country where it's almost impossible to distinguish nationalism from the politics of the party in power. Nationalists pack the cabinet, the civil service, the Senate, the Chamber of Deputies and the provincial and city administrations. Nationalists dominate the army, navy and air forces.

Nowhere else on this continent is it as difficult to tell a Nationalist from a Nazi. Their opponents, the enfeebled Radicals, call them Nazionalistas instead of Nacionalistas. Not all of the Conservatives are Nationalists, but nearly all Nationalists are Conservatives, and unanimously the Nazis, Fascists and Fa-

Ablest journalist in South America—as well as leading Nationalist—is Enrique Osés, who edits the violently pro-Nazi El Pampero

langists who flourish in Argentina. They number approximately 250,000, an enormous bloc in a country where a vote at a national election seldom exceeds a half.

The Nationalist party line is a speech by Adolf Hitler, an oration by Benito Mussolini or the editorials of Goebbels. It preaches hatred of Americans and cates anti-Semitism and provokes Communists, and in Argentina, where the social system is in the Middle Ages, anybody who asks for a peso a week more than he's getting is a Communist.

The Nationalists teach that democracy and that government of and for the people is a perished political philosophy. Their platform of Argentine Nationalism is identical with those of Nazi-Socialism, Italian Fascism and Spanish Falangism. It's complete doctrine is the Nazi-Fascist dogma of racial superiority. They boast of all Argentines, whether Argentine or not, that they are the only uncontaminated race in the Western Hemisphere. The pride of the conquistadors flows in their veins.

Axis agents have stirred in the appetites for empire. "Our right to empire has become the battle cry of the Argentine as it was the war theme of the Italian Fascists and German Nazis. Their demand for the British-held Falklands Islands projects. Some demand the reversion of neighboring countries to the Argentine of more than a century ago, but she wasn't really Argentine then, she was a British vassal.

It is this Axis-inspired campaign at this critical moment in the Hemisphere, is the most dangerous activities to (1) peace in Latin America (2) defense of the Hemisphere unity (3) defense of the Hemisphere against the offensive Allied war effort. The Axis fits in with the Nationalist's desire to keep it alive through newspapers subsidized by the Nationalist government. El Pampero, a daily with about 75,000, edited by Enrique Osés, a Nationalist in South America and a leader of the Nationalist movement, keeps it alive through newspapers subsidized by the Nationalist government. El Pampero's work.

Experienced Allied military officer I talked in Rio de Janeiro, Santiago drew a blueprint of possible event which challenge the High Command of the United Nations, but particularly the armed forces of the United States. The State Department of the United States reasoned that the Axis has not overestimated the situation in South America, destroying hemisphere unity and power.

Deprived of quantities of rubber and of considerable oil by events

A Signature
THAT STANDS FOR THE
STRICTEST WHISKEY STANDARD
IN THE WORLD

*THE standard was first fought for by the late
Col. E. H. Taylor Jr. who had it written into law.*

*And since this came about, no other
kind of whiskey has ever been made
in the Old Taylor distillery.*

*It produces a costlier whiskey. But
we believe it is worth it. And millions
of men who know fine bourbon
heartily agree.*

Blood, Sweat and Tears -- *and a Leaven of Humor*

TO CHURCHILL'S "blood, sweat and tears," we say a fervent "Amen!"

Collier's readers know the courage and candor and vision of that great Briton who wrote so prophetically for Collier's in pre-war years.

Of the Prime Minister's prescription, unfortunately, there will be more than enough to go around. And America will have its full share of the seamy side. Main Street will have to take it.

But to America's millions fighting on the home front, Collier's promises the mind-saving breaks—a leaven of humor, escape into fiction, comic relief.

We'll continue to bring you the war—vividly, accurately, speedily and firsthand. Our staff correspondents on the fronts around the world will keep you informed.

We'll report, too, and as authoritatively, the war behind the war—the daily battles of the vast civilian army that may never fire a shot. This means facts—as immunity against the poison peddlers, and as antidote for their poison.

Keep on looking to Collier's, as millions do, for the clear, concise "low-down" on home-front plans, battles and strategy—whether they concern sugar or skirt lengths, diet or defense, priorities or production.

But one of the inalienable rights we're fighting this war for is our right to the enjoyment of a smile or a grin or even a belly-laugh when the going is rough. And Collier's won't forget that, either.

"YOUR SUGAR BOWL BLOWS UP"

You can go easy on the sugar with better spirit after reading Frank J. Taylor's article in the current issue of Collier's and learning that sugar cane is needed for smokeless powder. And Collier's makes the saving easier, too, with a 36-page book of recipes for the use of sugar substitutes. Week after week Collier's anticipates the needs of the vast home army. Watch for its authoritative, high-spot articles on the war on all fronts.

"Regardless of what you saw in the movies, Alfred, not every woman in a long, black dress is the secret agent of a foreign power."

HOW'RE YOU DOING, MR. ADVERTISER?

War dusts off and brings back old neighborly instincts—revives the curiosity people have about other people—breeds binding friendships. What are you doing in the war? or Jim? or Mary? or Slim who used to run the gas station?

These are the questions they're asking each other in the big home army of 130,000,000 Americans.

And, Mr. Advertiser, you're one of the old friends they're asking about.

You can give your answer to millions of these friends and customers of yours any week, every week, in Collier's.

And from the way readers have been clamoring for reprints of our articles on home-front news we're certain there's no better way to reach the greatest number of the most active among them.

Collier's — *for People of Action*

brought into line with a complete embargo on automobiles, tires, manufactured goods and gasoline.

Great Britain has already cracked down on Argentina. Despite Axis propaganda to the contrary, she sells little or nothing in Argentina and buys Argentina's beef largely because there's none available elsewhere.

I tracked down three stories of British competition with American firms in South America and found all three to be false. One concerned the sale of British-made airplanes in Brazil and Argentina. Another said that British machinery made with Lend-Lease materials was being marketed in Argentina. A third accused the British of whispering to Argentine merchants that they shouldn't forget Argentina's real friends were the English and that the Americans were interlopers who wanted to grab the Argentine market for themselves. I talked with scores of American and British businessmen and none could produce proof of Anglo-American commercial competition in that country. There was such competition in the early stages of the war when it was still the phony war, before it became the people's war. It ended with Dunkirk

"Now, now, Mrs. Cressington . . . the man leads"

JOHN A. RUGE

and with the purge of the appeasers in Churchill's cabinet.

Small British ships put into Buenos Aires once every four to six weeks. These occasional five- and six-thousand tonners couldn't possibly carry enough goods into that country to offer the United States anything like serious competition. But the anti-Allied propaganda persists despite the efforts of American Ambassador Norman Armour in Buenos Aires and British Ambassador Sir Noel Charles in Rio de Janeiro to kill it. The propaganda stems from sources like *El Pampero*.

Both business and military men say that brutal as a policy of economic sanctions against the country may seem, it is the only language Argentines will understand at this point.

The hardships which sanctions would entail for hundreds of thousands of Argentine workers would bring pressure on the Castillo government and cause it either to modify its policy in respect to the Allies or to quit. Despite Nationalism and Castillo's political machine, the average man of Argentina—including even the peons and pamperos and gauchos who live and work on the big ranches but must vote as their bosses demand—is pro-democratic.

The editor of a leading afternoon newspaper in Buenos Aires told me that the Argentines buy newspapers only when the Allies are winning. Circulation falls off when the news is bad—i. e. when the Axis is winning. The editor interpreted this to mean that the average man is on our side. He, like Ambassador Armour and several prominent members of Castillo's government, also declared that only a hard-boiled cracking-down policy by the United States can prevent Argentina from going completely over to the Axis side.

They recognized that severe measures against Argentina might hasten the swing over to the enemy's side. But, they argued, what has the United States to lose? Delay in the application of economic sanctions against Argentina will only delay the inevitable date of a show of hands all around, and meanwhile Castillo will strengthen his position with the Axis and with those people in Argentina who believe the Allies are fighting a losing war.

Appeasement Won't Work

As in the case of Vichy France and Spain, the tendency of the State Department has been to "go slow" with Argentina in the vain hope of winning Castillo over. President Roosevelt, however, appears to recognize the urgency of the Argentine problem. Immediately after Argentina became one of the holdouts of the Rio de Janeiro Conference he reportedly cabled Castillo that Argentina would receive Lend-Lease aid and the supplies of munitions and airplanes she demanded, only when the needs of the Allies and loyal friends in South America had been filled. At the present rate of production and allocation, that means never. Castillo, nevertheless, went about Buenos Aires bragging he'd made Roosevelt knuckle down.

Whatever hopes the State Department might have entertained about the possibility of winning over Castillo must have received a rude wallop the other day. In Madrid, Foreign Minister Serrano Suñer, stooge for the Axis, announced completion of a Hispano-Argentine trade agreement calling for exchange of \$40,000,000 worth of Argentine food products for "Spanish manufactured goods."

In the first place, Spain is not a manufacturing nation. Secondly, her factories are still mere wrecks from the civil war. Her "manufactured goods" will very obviously come from Germany and Italy, and just as obviously the food Argentina sends to Spain will go largely to Germany and Italy. Italy is almost as close to starvation as are Poland and Greece.

The pact also called for establishment of a Madrid-to-Buenos Aires air line and the increase of shipping facilities between Argentine and Spanish ports. If these terms are fulfilled, existing channels for the transfer of Axis agents from Europe to this continent, the interchange of goods, the importation of weapons and a general betterment of communications between the enemy and this hemisphere will be not merely doubled or tripled but squared. Proportionately, the dangers to Argentina (already the potential Norway of South America), to the American continent and to us will increase. And perhaps some of that tungsten which Argentina produces and has promised us will find its way, along with nitrates from Chile, into the factories of the arms makers of the Axis.

Politically the Hispano-Argentine trade pact establishes at least one fact: Castillo is thinking in terms of making a deal with the Axis and not with the United Nations. He must be sure the Axis will win the war. He's taken a step

A SPECIAL PREPARATION FOR SHAVING

FOR THE 1 MAN IN 7 WHO SHAVES DAILY

It Needs No Brush
Not Greasy or Sticky

Modern life demands at least 1 man in 7 shave *every day*—and men in service must shave *cleanly*, too. Yet daily shaving often causes razor scrape, irritation.

To help men solve this problem, we perfected Glider—a rich, soothing cream—not greasy or sticky.

SMOOTHS DOWN SKIN

You first wash your face thoroughly with hot water and soap to remove grit and the oil from the skin that collects on whiskers every 24 hours. Then spread on Glider quickly and easily with your fingers. Never a brush. Instantly Glider smooths down the flaky top layer of your skin. It enables the razor's edge to *glide* over your skin, cutting your whiskers close and clean *without scraping or irritating the skin*.

ESPECIALLY FOR THE 1 MAN IN 7 WHO SHAVES DAILY

For men who must shave *every day*—doctors, lawyers, businessmen, service men—Glider is invaluable. It eliminates the dangers frequent shaving may have for the tender face and leaves your skin smoother, cleaner. Glider was developed by The J. B. Williams Co., makers of fine shaving preparations for over 100 years.

SEND FOR GUEST-SIZE TUBE

If you want to try Glider right away, get a regular tube from your dealer. But if you can wait a few days, we'll send a generous Guest-Size tube for only a dime. It's enough for three weeks, is handy for traveling.

On this test we rest our case entirely—for we are positive that Glider will give you more shaving comfort than anything you've used.

Don't delay—send your name and address with ten cents *today* to The J. B. Williams Co., Dept. EG-07, Glastonbury, Conn. Offer good in U. S. A. and Canada only.

Ernest B. Hurlburt
PRESIDENT

SOOTHES AND REFRESHES

which will cause Nationalists and Conservatives to cheer. The Minister of War and the Minister of Marine, the Minister for Public Works and the Chief of Police of Buenos Aires are all Nationalists. Here, perhaps, is the first concrete evidence of direct Nationalist influence in Argentine foreign relations. The negotiations began eight months ago, which means that Castillo, despite occasional lip service to Pan-Americanism and *solidaridad* and to the memories of San Martín and Simon Bolívar, has had it in his heart and mind for a long time to do business with Hitler rather than with Roosevelt.

It doesn't occur to the Nationalist followers that they might be betraying their country by embarking upon an imperial adventure. I asked two representative Nationalists what they would do if it suddenly became clear to them that they were being used by the Axis to further the ends of Germany and Italy rather than those of Argentina. "Ah," they replied vaguely, "in that event, we shall know how to die." Undoubtedly some few Nationalists are fervently, sincerely patriotic, but their leaders are not. They see in the present state of world affairs a wonderful opportunity for self-gain and power and glory.

The trouble Argentina could cause in South America is considerable. Argentina has a good navy. It includes two battleships, two heavy cruisers, one light cruiser, sixteen destroyers, three submarines, ten mine sweepers and four auxiliary vessels. Its army is the largest and best trained in South America and comprises 48,100 active troops with 281,000 trained reserves. The air force has 470 planes, about 100 of which are first-line light bombers of our Martin type. This might not seem like much of an army compared to the modern fighting machines of the Allies and the Axis today but against, say, Bolivia, Paraguay and Uruguay it would have a power comparable to that which the Japs threw against Luzon.

The Approaching Storm

Realistic observers are convinced that the Axis will instigate a Nationalist uprising in Argentina at the proper psychological moment. This moment, they believe, is rapidly approaching with the coming weeks. The Axis isn't concerned with Argentina's imperial ambitions; it seeks only to set in motion the forces necessary to obstruct an effective Allied offensive.

The Axis has plenty of friends in the Nationalist movement. One of these is retired General Juan Bautista Molina. He's the granddaddy of the Nationalists. He's been a Conservative, a Radical and is now a Conservative again. He heads the biggest Nationalist organization, the Alianza de la Juventud Nacionalista and commands the biggest block of votes for Castillo in the Nationalist camp. Mesmerized by German military power and efficiency, he's a pro-Nazi. Comes *der Tag*, he'll be in there swinging. In 1940, when Argentina was popularly anti-German and pro-American, he gave a de luxe luncheon party for German Ambassador von Therman. At that particular time, France had fallen and Britain appeared to be on the verge of collapse. Molina is a pleasant-looking man in his early sixties, with a genial smile, horn-rimmed eyeglasses and a pair of cold, black, piercing eyes.

Another prominent Nationalist is General Domingo J. Martínez. He's young for a general, and ambitious. As a young officer he switched his loyalties from Radical President Irigoyen to Conservative Uriburu and then to the liberal Radical General Justo. He advanced a grade with each switch. He

dropped Justo for C sees Molina aging leadership. Martine in an arrogant, pom pick it up. Castillo Martínez chief of p capital, which is m it sounds. More th gentina's 13 million

y alive?" Everett Smith
usly. It made him more
to show quickly the girl

moved to get away from his talk, and
yet he had to try, desperately, not to let
her go right out of his life. "My name
is Everett Smith, from Texas. May I
come to see you some time? Do you
live near here?"

"No," Tulsa said flatly. "A long way
off."

"Please!" said Everett Smith, but
Tulsa didn't want to be laughed at. She
walked right by Everett and all the way
home told herself she had a right to cry
if she felt like it and had a headache
from the sun.

"Keep yourself to yourself," she
warned her heart. "At least then nobody
can laugh at you, on top of everything
else. He's probably laughing at you
right this minute."

But somehow she knew he wasn't and
Everett Smith was the name she fas-
tened to all the confused dreams of her
lonely, hungry life. It was a wonderful
name.

"This is Saturday night," Tulsa re-
minded herself, looking down at her
book. "Everybody but you has a date
and if he comes here, he'll have a date,
too."

One reason she had been glad to work
for the Danielses on their remote ranch
was that she was a long way from town
and wouldn't have to face these sham-
ing, blank, Saturday nights, but tonight
Molly had made her come along.

She said, "There's no reason for you
to stay home when we're taking the kids.
There must be things you want to do."

MOLLY DANIELS was a brisk, brown
little woman, not unlike the prize
turkeys she and her husband raised.
She wasn't too brisk for tact, however,
and she was careful not to say, "Or
people you'd like to see." Sometimes
it worried her, the way Tulsa tried to
hide when somebody new came to the
ranch, huddling down like a scared bird
inside her feathers until they left. But,
since the Danielses had someone who
worked like two and was glad to do it
because they were all Tulsa had to care
about in the world, they didn't try to
change her. She was easy with them
and talked along in a low voice about
the turkeys and the feed and the eggs,
or talked softly to the children as she
put them to bed.

That was how they knew even as
much about Tulsa Brann as they did,

place always seems so big and lonely, when they all leave"

**BOY! HOW THEY
APPRECIATE OUR
SHALER "HOT PATCH"
TUBE REPAIRS, NOW**

**These Small Bits of
Rubber Make Your
Tubes Last Longer
CONSERVE RUBBER**

Now when every patriotic American must con-
serve rubber, take no chances on tube repairs.
Punctured tubes need not be thrown aside and
wasted—a fraction of an ounce of rubber, a Shaler
"Hot Patch", will keep the tube serviceable for
many, many miles. Just a small bit of pure para
rubber but it *saves pounds* of rubber.

A Shaler vulcanized repair *welds* the "Hot
Patch" to the tube so that it becomes an integral
part of the tube itself to stay there permanently

Look for this
sign

SHALER "HOT PATCHES"

**STOP GAS AND
OIL WASTE**

**Banish Motor GUMS and CARBON
Free "sticky" Valves**

A clean engine, free of power-robbing gums and
carbon stops waste—saves gas and oil.

Karbout-Rislone "Tune-ups" are putting mil-
lions of car, truck, and tractor engines in condition
to operate with higher efficiency, minimum waste.
Gums are dissolved;—sticky, lagging valves freed;
lost compression and power restored; sluggishness
banished; efficiency increased; over-all lubrication
improved; more costly motor servicing eliminated.

Karbout and Rislone are made only by The Shaler
Company—there are no substitutes. Stop waste
now—go to your car dealer, garage or ignition ser-
vice station and ask for a quick Karbout-Rislone
"Tune-up."

SHALER

KARBOUT-RISLONE "TUNE-UP"

KARBOUT
and RIS-
LONE are avail-
able in a dual-com-
partment package for
complete "Tune-up." RIS-
LONE is also put up in fa-
ceted drums of 5-, 15-, 30-
and 50-gallon capacity.

Shaler "Hot Patches" keep tubes in serv-
ice, just as road-worthy as new tubes.
The "Hot Patch" has accurately meas-
ured fuel to develop and hold the correct
vulcanizing temperature for permanently
welding the pure para rubber of the
"Hot Patch" to the tube. By the use of
65,000,000 Shaler "Hot Patches" over
45,000 long tons of rubber are saved
for service.

and not slide away from the puncture it seals, regardless of the
heat and flexing of driving. "Hot Patches" not only save tubes
but because they do not let go, they prevent unnecessary damage to
precious tire casings.

To make sure that your tires last longer, see that every puncture
is repaired with a Shaler "Hot Patch". . . . Over 156,000 garages
and service stations are equipped with Shaler "Hot Patches" and
Vulcanizers to serve you. THE SHALER COMPANY, Waupun,
Wisconsin and Toronto, Canada.

from her talking in the evenings to the children, who slept in a big room off the kitchen. Tulsa sat in a high-backed old rocker, with the two-year-old done up into a bundle of blanket on her lap, and creaked the chair while she told the children that she was named Tulsa because her grandfather had pioneered to Oklahoma and how she had chosen the name of Victory on the map, and how she had nobody in the world to care about, only the Danielses.

"It was a fortunate day your mother found me," she began the story. "Otherwise I do not know what would have happened to me. Indeed I do not."

TULSA had a formal way of talking because she talked as though she were reading. She read all the time she wasn't working; she read everything.

"I was so lonely," Tulsa said, "from being ugly. And a girl had been very mean to me that day, until I wanted to run away, far out on the desert, until I was lost."

"Are you the ugly duckling?" little Molly would ask and Tulsa always said, "Yes, I am the ugly duckling, only I can't turn into a swan."

As a matter of fact, Tulsa wasn't ugly, which is something striking and sometimes even attractive; what she was was plain and nondescript.

Danny always said, "When I grow up and have children, I'll name them all cities, like you, Tulsa. Tulsa is a lovely name."

"Thank you," Tulsa answered.

"Tell about your mother," little Molly always asked, though here the story was sad and the happy ending only started after grandma and the Danielses got into the story.

"My mother was beautiful," Tulsa said dreamily, creaking back and forth in the rocker and patting little Cora. "Very beautiful. My father loved her and they were happy when I was born—my grandmother always reminded me of that so I would not worry. But I am a serious and worrying kind of person. When I was only a little older than Cora here—"

Her arms would fold tighter and Molly, listening from the kitchen as she darned stockings, could tell the children were listening, too. "We moved to Halifax, which is a great seaport, because my father built ships and there was that other war. One day there was an explosion and a lot of things were blown up, including our house. My father never came home to find out."

"It worried me that my mother who was beautiful died and that I lived. But my grandmother, who raised me, was very kind to me and covered apples with red candy and knitted me sweaters. She used to say—" And here Tulsa's voice would fall until it sounded like a sleepy wind, and the children would be very still. "She used to say, 'There's someone for everyone, Tulsa, and there's someone in the world for you, never fear. You just go about your business and be a good girl and they'll surely find you.'"

AFTER the grandma died, there were bad times and hard jobs and finally a job in the Victory cement plant.

"One sad evening," Tulsa said, her voice quickening for the end of the story, "a lady named Daniels came by and said, 'Maybe you're not so pretty but you look nice and good to me, so come and work on my turkey ranch.'"

"So you came," the children chorused, "and you liked all the Danielses, every one of them, and they liked you, so your grandma was right and you'll stay here forever and ever, amen."

"Amen is for prayers," Tulsa said, getting up to put Cora into her crib by the window. "Not for stories."

Molly went on darning but she wondered if Tulsa's grandma had only meant the Danielses for her. How must it be for Tulsa to have only a home and

children that weren't her own and only work for other people? And yet what would the Danielses do without her?

"Time to worry when it happens," Molly thought. She called, "Come on, Tulsa, have some coffee with me now the young ones are asleep." Because it wasn't going to happen to Tulsa, even though her dropped spoon meant company coming.

There was a noise at the door of the Green Spot and Tulsa looked to see if this was the Danielses but it was a group of soldiers tanned deeper than their uniforms by the desert sun that had made little lines around their eyes and sweated them lean. One leaner than the rest. He stopped beside Tulsa's table, while the rest went on to the tableful of waiting girls at the end, one of whom was Tulsa's enemy, Eileen.

Everett Smith said, "I've looked everywhere to find you."

Tulsa could see Eileen watching them, laughing and making a joke out of it. "Look at the old maid trying to get herself a man," she'd say, and she might tell an old story about Tulsa. Tulsa couldn't look at Everett Smith, who might even be in on the joke. How did she know?

"What is your book's name?" Everett asked urgently.

Still she wouldn't answer.

In a lower voice Everett said with sudden sad urgency, "Talk to me, Miss Brann! Please!" He paused a second before he went on as he had been told to do. "A fellow I know said no girl could stand me more than an hour, on account of the way I talk so much. I've bet two months' pay I could get a date this Saturday night and make it last until eleven o'clock. The fellow goes with a girl named Eileen Fornoy. Why, they're practically spending my money right now, they're so sure nobody'd talk to me that long."

"Eileen Fornoy?" Tulsa said. She said it with such quiet fierceness Everett was surprised. "Sit down," Tulsa said, "if you want to." She smiled at him timidly. "It is just a book on Inca civilization I happen to be reading," she said.

Everett said eagerly, "I have read a little about Inca civilization myself, as it happens." Everett had, and he absorbed other facts and figures like a willing blotter; the trouble was, nobody else cared. Nobody ever seemed to care about the total volume of water in Lake Mead, or what happened to the target when a rifle sight was one one-thousandth off. Except Tulsa was interested. It warmed him to see her sitting there quietly listening, not clicking her nails

together, or breaking up

restlessness. "Laughing!" Tulsa said later. "People are I never know what Everett had been in long, instructive listen to forever as more than smile o Tulsa feel easy wit

"People very se talk," Everett said. "Maybe you ha early, when you're "Otherwise you do not speaking of some people have."

know about, and she moved softly and
easily now that she had stopped think-
ing about Eileen. Her eyes had the
smoothness of green water, her hair the
soft shine of pine needles.

"Some girls, who always lived with
other people's things, well, they'd cher-
ish everything that had belonged to him
or his family for a long time back. It
would make them feel good just to touch
those things with their fingers."

Everett Smith said, "Do you guess
that's really right, Tulsa?"

"Yes," she said absently, but Eileen,
dancing near, shouted to her partner,
"Come on, let's go some place else! This
dump's dead and it's way past eleven!"
Tulsa's coach turned into a pumpkin
and she stopped dancing abruptly,
though she had almost forgotten.

"Thank you very much, Mr. Smith,"
she said, in a loud, clear voice, so that
Eileen would hear and take notice.
"I've enjoyed it, but since it is after
eleven, I must hurry and go."

WHEN she walked back to the table,
Molly saw that the light had gone
out behind Tulsa's face and she thought
maybe her idea had been a bad one
after all. Maybe she had given Everett
too much credit for sense. Maybe he
didn't appreciate Tulsa.

"Come along, Tulsa," she said kindly.
"Time to be getting home."

Her husband, just beginning his sec-
ond beer, stared at her in astonishment.

"Why, we just got here!" he bellowed,
and even Everett, following Tulsa,
jumped at the sound. "What's got into
you tonight, Mamma?"

Everett turned wretchedly to Tulsa,
who stood a little away from the family-
crowded table with nowhere to hide.
"You have a kind heart, as Mrs. Daniels
told me," he said miserably. "You talked
with me and danced with me to save me
losing some money—so you thought—"

"It was to spite Eileen," said Tulsa
flatly.

"But you got so tired of me you
wouldn't go one minute overtime, would
you?" Everett asked. "I thought may-
be—"

Molly suddenly had her inexplicable
impatience again. "Go on outside and
talk, you two," she said. "After all, why
should we be interested?"

Tulsa walked out into the street,
blindly, because if Molly wouldn't help
her, nobody would. She climbed up into
the back of the truck, and Everett stood
beside it.

"There wasn't any bet," he told her.
"I found out you worked for the Dan-
ielses, and Mrs. Daniels said you were
kind, you would talk to me, but you
were shy, so she advised me to make up
a reason. She said she would occupy the
others buying shoes—but it didn't do
any good. You didn't want to stay with
me one minute longer than you had
to, and I don't blame you, a wonderful
girl like you, with a mind and all."

There he was, he knew dismally.
Talking, talking, when any other fellow
would take a girl in his arms and it
would all work out.

But there was Tulsa looking at him,
as if a hand had suddenly hung out the
sun in front of her eyes and she was
dazzled trying to see through the sud-
den strong light that was shining in Vic-
tory at half past eleven at night.

"There wasn't any bet?" she said.
"You just wanted to talk to me on pur-
pose?"

"Why, yes," said Everett Smith.
"Anybody'd be proud to!"

"Then my grandma was right," said
Tulsa. There were tears in her eyes as
Everett climbed up beside her and val-
iantly put his hand over hers, but a
chime of bright words sang inside her:
"Tulsa, there's someone for you, never
fear."

THE END

The grasshopper isn't regarded as much,
But boy! can he spring at the slightest touch!
And if you'd like to pep up each step that you take,
Wear live Goodyear Heels—see the difference they make!

Look at YOUR heels!

Have no fear when you wear Goodyear Heels that you are using any of the nation's precious supply of crude rubber. For Goodyear Heels are now made entirely from Regenerated Rubber by a special formula resulting from Goodyear's vast resources and matchless skill. They are live, springy, long-wearing. And they wear down evenly. Get a pair today!

Continued from page 17

was about to be married to, come January."

"Oh! I'm sorry." She continued to blink faster than ever until Mary, feeling somehow responsible, began to feel sorry for her. "But I dare say it's quite for the best. How old are you, Mary,"

"Going on thirty, miss."

"Ah! Well, it's hard to settle into a new walk in life at thirty. Marry young if you marry at all. That's my motto, and I may say I've followed it. I'm bold to think that time will prove I'm right."

"I dare say, miss. Thank you, miss."

"And maybe, if things go right—mind you, I promise nothing!—maybe you might stay on here at the Castle. I shan't lay off everybody, even after Christmas."

Mary felt her heart beat an excited tattoo in her side and then jump into her throat, where it beat even faster. Reprove herself as she would with the simultaneous thought of Jared still and dead, she could not deny her sudden happiness.

"Thank you, miss. There's nothing I'd like so much."

"Then work for it!" said the manageress sharply. "A girl that's slack can go and pack. That's my motto. Bess Jago dealing out humbugs to Boots, and Doris coloring her own face! I won't stick such goings-on, and there's an end to it! And openings aren't plentiful these days in England like the black currants."

"Quite so, miss."

"Oh, and one thing more, Mary."

FROM the shelf beneath her desk she drew a large red book, the sight of which made Mary's beating heart still suddenly with fear. Now that her decision to go to Jared's burying had cut away all hope of buying an identical book—a hope which she had cherished since Easter—could it be that she was to find herself deprived of her greatest joy?

"I take it you read this book."

"Yes, miss, but only at night after all the guests have gone to bed. And I'm that careful of it I cover it with an apron, miss. I like the stories in it, and I bring it down early. And the candles I burn for reading I bought myself, miss."

"Well, I'm not saying as how you shouldn't, am I?" snapped the manageress. "Better read than run to cinemas, I say, as though sixpences were sea-pinks. Only take care no one's wanting it, and more care that you don't go about leaving things in it."

As she spoke, she drew from between two of the pages a thin envelope and handed it to Mary, whose cheeks flushed with sudden recognition. It was her last letter from Jared Treknow. She had placed it quite in the midst of the story of Sir Tristan and the Fair Iseult in the hope that somehow it might take upon itself something of the splendor of their love. But even as she looked upon its cramped address, even as she realized that Jared would write no more, she knew that within and without it remained as stodgy and as inarticulate as ever.

"That's all," said the manageress. "Just keep a quicker eye to things. That's all."

That night after the hotel was still, after Mary's pound and half-pound notes, folded in a clean handkerchief, were sewed securely in her bosom with much redoubling of threads, she tiptoed down the four flights of stairs for the red book. Her need and desire for it just now were greater than they had ever been. She did not want to go to

Land's End for Jared Treknow's burying; she did not want to see his mother, querulous and alone, nor to follow his body as it was borne along that somber highland path through the bracken to the churchyard. Above all, now that a larger perspective had magically opened before her eyes, she did not want to be plunged even for a few hours into the drab, nagging perplexities of the village in which she had lived for the past six years.

Nevertheless, though she had never wanted Jared as he had wanted her, she had given her word to marry him, and her sense of duty toward him was strong. Lastly, from Susan Glover's card it was evident that she wished her to come; and Susan was the one person in the world whom Mary really loved, toward whom her sense of loyalty was tenacious and secure.

The red book did not fail her. Wrapping its covers carefully in an old apron, she sat hunched in her one chair, and read for hours beneath her candle. From

the red book and the storied Tintagel cliffs where all these loftier deeds had once taken place, she had suddenly become a different person, with other and far different demands and satisfactions.

Before she took off her shoes and dress for a brief nap until the morning came, she placed her lighted candle in her one narrow window. Thus, she reflected as she stood behind its flickering and listened to the thunder of the seas meeting at high tide in Merlin's Cave—thus had done the fair Iseult for the sake of Sir Tristan, the Lady Guinevere for Lancelot of the Lake.

DURING the long journey down the coast she chose to sit with the driver, whom she knew a bit, rather than among the tourists, with whom she felt shy and out of place. As the great, lumbering car hurtled along the black roads, she watched the Cornish country change, the late foxgloves and campion grow more sparse in the hedges, the hedges themselves give place to solid

instead of Jared, she was able to love him as thoughts, she who hated the less moving of the cuary?

"They say, too, that Michaelmas, 'e always wanted,"

"Oh," said Mary. Now she was in a labyrinth of perplex confused, and her sight.

"I'd call 'im a fool the boy with the twenty-one. 'It's n worth all that."

It was long past the charabanc at lane leading between the Treknow cottage borhood had gathered procession. Their more somber the g under a heavy sky. from the sea beyond land fields and bill blankets spread up to dry.

five months of daily absorption she knew the stories by heart, but there was always the charm, the atmosphere, the transcending truth to be recaptured and made again her own. For these great passions, these high old loves and noble hatreds, this scorn and carelessness of death, this readiness to sacrifice, had pushed far into the background the dull world of Mary Penrose and created for her another, unbelievably satisfying in its romance, its dignity. What wonder that she feared the necessary interchange, even for a day, of this new life for the old! In the negative patience of the thwarted lives she had known, there had been at best only pathos. And pathos, though it might and often did break one's heart, could not command one's respect, fire one's imagination, leave one satisfied with the ultimate fitness of things, tragic though they were.

NOT that Mary Penrose in her Castle tower for one moment analyzed the gray narrowness of the world from which she had come or the glamorous largeness of the world in which she now moved. She only knew that because of

walls of stone. Gone were the purple veronica, the rose and white valerian of sunnier Tintagel; gone were the high, many-colored little fields of corn and grass. Gorse and bracken began to usurp the hart's-tongue and osmunda of the glades, the moors to usurp the meadows. Only the cliffs, now near at hand, now farther as the road curved inland, remained substantially the same. And the sea, ever hurling itself against them, partook of their permanence, even in its changefulness, now purple in the white-sanded harbor of St. Ives, now green as the coast descended in its precipitous tumble toward the end of England.

The driver turned to Mary: "Yesterday at Land's End they tol' me as 'ow a fellow drowned 'isself. They couldn't talk of nothin' else down there."

With this added news thus supplementing Susan's laconic message Mary felt her hair rise. She heard Jared's tired, half-sulky voice begging her to marry him at Michaelmas; she heard her own refusal. Was she, then, to hold herself responsible for this unexpected wicked act? Was she perhaps the wrongdoer

COUNT *THIS* ARMY IN!

THERE'S a trained army more than a million strong working to back up the men in uniform.

It's the army of railroad men, on duty day and night in every state in the Union.

For more than twenty years—ever since the last war ended—this army has been supplied with better and better equipment. And railroads, military authorities and shippers have worked out plans to get more service out of each piece of equipment—to get the most use out of every facility of the world's greatest transportation system.

That's why this railroad army is meeting emergency demands—why, for every minute of the day and night, it is moving *a million tons of freight a mile*—an all-time record for this or any other transportation system in the world.

All this veteran army needs, to meet future challenges, is a flow of new equipment great enough to match the rising tide of America's war production.

ASSOCIATION OF
AMERICAN RAILROADS

WASHINGTON, D. C.

Your fleet may be only ONE CAR!

TO MANY OF US, the question of picking the right oil for a car is a new question. It has seemed so important only since prolonging the life of a car is so vital.

But there are men who devote their business lives to keeping fleets of trucks and cars continuously on the road. It is not a new problem to them—and their very jobs depend on reducing cost of wear and repairs, saving on gasoline, and preventing the replacement of parts.

For instance, the Nevins Drug Company of Philadelphia operates 5 tractors and 25 salesmen's cars. In nine months "it was not necessary to do a carbon or valve job. Our oil consumption is less than with other oils. Gas consumption has dropped 10.9%," they write us.

When the Supreme Baking Company of Los Angeles, operating from 40 to 55 trucks and automobiles, kept actual records using RING-FREE exclusively for five years, they found they saved money on gasoline consumption, mechanical repairs and keeping their fleet on the road continuously.

When Shannahan Brothers, general contractors of Huntington Park, California, report that a Diesel-powered shovel has operated for nearly four years "without an overhaul job of any nature," it means something to know that RING-FREE has been used exclusively.

IN letter after letter, we are told by fleet owners, contractors, and other users of gasoline and Diesel equipment that savings in fuel consumption as high as 10% are not uncommon; that the repairs and overhauling bills are decidedly lower.

Company after company, on a straight business basis, has adopted Macmillan RING-FREE Motor Oil for all of its equip-

ment after the most exhaustive competitive tests on equipment in actual use.

You may not be an expert on lubrication. The maintenance engineers of these companies are experts. You can rely on their findings for your car which is just as important to you as their fleets are to them.

Now is the time for you to investigate Macmillan RING-FREE Motor Oil!

Try it at OUR risk! Macmillan RING-FREE Motor Oil removes carbon, cleans the motor, saves gasoline, reduces wear—or your money back. RING-FREE Motor Oil is guaranteed to make your motor run smoother, give more miles per gallon of gasoline, reduce wear and repair; because it removes carbon, cleans the motor and reduces friction fast, by thorough lubrication. Try one fill, and if you are not satisfied that RING-FREE is doing these things, your money will be refunded by your dealer immediately.

Ask your independent dealer for "What You Can Expect from Macmillan RING-FREE Motor Oil," our new circular, or write us for it direct.

that only single words and phrases were now and then audible: "Man that is born of a woman . . . he fleeth as it were a shadow . . . earth to earth . . . blessed are the dead who die in the Lord!" The wind swept the unkempt grass of the grave mounds and smote the granite crosses standing here and there, placed deep in the earth against the fury of the open Atlantic. It even stirred the dry brown soil of Jared's grave and caused little brown swirls of dust to rise and float away.

Then Mary, Susan and Jared's mother walked silently back to the cottage for a cup of tea. They had scones and Cornish cream that some neighbor had left behind for them. Susan sobbed as she drank and ate. It seemed to Mary, herself still tearless, that she could never stop crying. Jared's mother was the only one who spoke, and Mary wondered in the dimness of the kitchen if she knew what she was saying to them.

"'E might ha' married either of you. I'd not ha' minded, not I. 'E never brought me much cheer since 'e come back from the war, you might say. I'm not for staying 'ere by meself. Once things are settled up, I'm goin' along o' me sister near St. Ives. With all these strangers passin' to and fro on the roads there's a livin' to be 'ad by bed and breakfast at six shillings the night. I'll not be homesick, not I."

Mary was glad when she and Susan could take their way in the wind along the black road toward the Red Lion. She longed to be of help to Susan. She longed more to be through with it all and on her way back to the Castle Hotel and the red book. That evening she helped in the public room, drawing beer and ale from sticky wooden casks into tall, ungainly mugs and carrying them to the men who talked in low tones of Jared at the tables and in the corners. It seemed an endless succession of hours before she and Susan were in Susan's bed beneath the eaves of her sloping room.
